Supportive Statements

American Legion

"Family Life Education" was the 1968 theme of the Legion's Child Welfare Division.

Minnesota Congress of Parents and Teachers, Inc.

The Position Statement on Family Life and Sex Education adopted by the State Board of Education is supported.

It was resolved that local PTA units should implement the resolution adopted in convention, October 11, 1966, and work with their school boards, school administrators, and community leaders in the development of comprehensive family life and sex education programs for K-12.

. . . from a news release issued April 1, 1968, by the publicity chairman of the Minnesota PTA

National School Boards Association and American Association of School Administrators

"The Joint Committee of the National School Boards Association and the American Association of School Administrators is aware of the present emphasis on sex and family life education, as well as the pressures from the many other specialized interests in the health field.

"The Committee is unanimous in its firm belief that the only effective way in which the school can fulfill its responsibility for meeting the health needs of youth is through a comprehensive program of health education in grades K through 12. Such a program establishes the organizational framework for meeting the health needs, interests, and problems of the school-age group as well as preparing them for their role as future parents and citizens.

"Including sex and family life education with the other categorical health topics in one sound, interrelated, and sequential program not only saves time in an already-crowded curriculum, but assures that all topics will be part of a long-range program and will receive more complete and detailed consideration at the appropriate level of the student's development.

"Such a comprehensive approach should be supported by groups interested in a single health area because it assures an orderly and progressive consideration of the separate topics in the context of total health and, hence, offers more effective student exposure through the grades. It avoids 'band wagon' approaches, crash programs, and piecemeal efforts focused on one or a few topics

3502

that happen to be enjoying popularity or extensive press coverage at a particular time — an approach which on the basis of past experience has proved to be largely ineffective.

"The Committee wishes to emphasize that it must be recognized that the school curriculum is already overloaded. Literally if something new goes in, something must come out. There is neither time nor justification for separate courses in any of the categorical areas advocated by specialized interest groups.

"Health is a unified concept. It must be approached with consideration of the total human being and the complexity of forces that affect health behavior. It is concerned with the health attitudes and behavior of the individual, his family, and the community. It is concerned with knowledge, attitudes, and practices — that is, health behavior in its totality. This cannot be achieved with a piecemeal approach.

"The Committee recommends a coordinated attack on all health problems with a comprehensive health education program extending from K through 12 and encompassing the total scope of such a program.

"Such a program places a responsibility on local school boards and administrators, state departments of education, and teacher training institutions to provide qualified teachers, adequate time for instruction, authoritative and up-to-date materials, and supervisory assistance for health education commensurate with other curriculum offerings."

. . . from *Health Education and Sex/Family Life Education,* a statement by the Joint Committee of the National School Boards Association and the American Association of School Administrators

Minnesota Council of Churches

"The Executive Committee of the Minnesota Council of Churches has spoken out in favor of both public schools and churches in Minnesota conducting programs in sex education and have urged congregations to create a favorable climate of public acceptance of such courses. . . .

"The Executive Committee of the Council adopted the following resolution:

A. That we acknowledge our appreciation to the Department of Education, State of Minnesota, for including representation from the major religious faiths on its Coordinating Committee on Sex Education.

B. That we affirm that the primary place for sex education of children and youth is in the home, but insist that the schools and churches must complement the home in this effort. We commend the public schools, churches and other agencies which are actively seeking to carry out sex education programs. We call upon our churches to help create a favorable climate of acceptance for these endeavors.

3503

C. That we encourage congregations to familiarize themselves with the programs of sex education carried on in the public schools in their respective communities, so that the church's supplementary programs can be coordinated with the school's program."

. . . from a news release issued by the director of communication for the Minnesota Council of Churches

American Medical Association

"The American Medical Association should inaugurate and support programs of health education, including good maternal and child health practices, family life and sex education and the appropriate use of health care resources."

. . . from a Board of Trustees report approved at a San Francisco meeting, June 1968, by the House of Delegates of the American Medical Association

DESCRIPTORS - *CURRICULUM GUIDES; TEACHING
METHODS; EDUCATIONAL INNOVATION; *INDUSTRIAL
ARTS TEACHERS; *INDUSTRIAL ARTS; RESOURCE
GUIDES; *ELECTRICITY; *FLUID POWER EDUCATION;
ENGINES; AFFECTIVE OBJECTIVES; COGNITIVE
OBJECTIVES; PSYCHOMOTOR OBJECTIVES

ABSTRACT - Prepared for industrial arts
teachers, this curriculum guide has been
organized for efficient utilization of
several newer methodological approaches to
teaching. The order in which material is
presented places the psychomotor, cognitive,
and affective domains of learning on a
continuum with implementation procedures.
Arranged in three sections on electronics,
mechanical power, and fluid power technology,
the guide presents material in the categories
of: (1) Skills Students will be Able to
Perform, (2) Concepts Students Will
Understand, (3) Appreciations Students Will
Develop, and (4) Implementation Suggestions.
Sources of resource materials are included.
Two related documents are available as VT 012
371 and VT 012 372, also in this issue. (JS)

FOREWORD

Industrial arts students live in a dynamic, ever-changing society. Preparations for their future place multitudinous demands upon education. The numerous changes occurring in our accelerating technology levy demands upon industrial arts teachers. It is simply not enough to train the students to live in a changing world; it is also necessary to transmit to the student a sense of values and the worth of participation in the technological process which is such a vital part of our society. Industrial arts, as an integral part of education, must provide opportunities for individual fulfillment, individual achievement, and individual freedom.

The success of the industrial arts program in providing these opportunities depends upon several factors, of which the course content and the approaches to teaching are vital aspects. Two main purposes of this guide are, therefore, to offer newer content and to suggest several newer approaches to teaching.

Assistant Commissioner of Education,
Division of Instruction

ACKNOWLEDGMENT

Grateful appreciation is extended to Mr. Harold E. PaDelford for his help in coordinating materials for the resource guides on "Visual Communication Technology," "Mechanical and Electrical Technology," and "Materials Technology."

INDUSTRIAL ARTS CURRICULUM DEVELOPMENT IN MINNESOTA

The State Department of Education has maintained a continuing effort to keep teachers and administrators informed of phenomenal technological and educational advances. The most recent revision of Curriculum Bulletin No. 13, *A Guide for Instruction in Industrial Arts,* was made in 1962.

In the spring of 1967, an effort was initiated to bring industrial arts teachers the latest methods of instruction. Industrial arts education has been under constant evaluation and it was the intent of the steering committee appointed at that time to enlarge upon and bring up to date the content of Curriculum Bulletin No. 13. The committee chose the content, instructional design, and methods used in this guide. Writers were engaged to specifically challenge industrial arts teachers to gain knowledge of and to use the newer approaches to instruction.

The guide has been divided into three issues. These issues are (1) "Visual Communication Technology" with units in drafting and graphic arts, (2) "Mechanical and Electrical Technology" with units in electricity, electronics, and power, and (3) "Materials Technology" with units in woods, metals, and plastics.

3519

3213

PURPOSE AND VALUE OF THIS GUIDE

This guide has been organized for efficient utilization of several newer methodological approaches to teaching. The primary purpose of the guide is to so arrange the course content that the instructor may more easily adapt his teaching to these new approaches. The order in which material is presented places the psychomotor, cognitive, and affective domains of learning on a continuum with implementation procedures. The psychomotor skills (column one) that students should be able to perform include operations, jobs, problems, and activities. Cognitive understandings (column two) include basic principles, concepts, generalizations, and guidance information. Affective values (column three) involve awareness, organization, attitudes, and appreciation. Implementation suggestions (column four) cover teaching methods and techniques, resources, and expedients. Column four provides the cohesive force for columns one, two, and three. Instructor's notes (column five) provides a place for the instructor to keep his plans and thoughts regarding the units.

This guide is not intended to be a "cook-book" approach. It is intended to serve as a guide and resource for effective teaching. The needs of each particular teaching situation should determine the material that will be used.

METHODOLOGICAL APPROACHES TO TEACHING INDUSTRIAL ARTS

Methodology has sustained the teaching of industrial arts as a subject in general education with several approaches carrying the burden of instruction. However, industry and technology have undergone vast changes in recent years. In an attempt to interpret industry more realistically, several new approaches have been promulgated. Emphasis has been placed on industrial and technological functions and practices. In order to make learning more meaningful, the committee wishes to encourage the use of up-to-date methods of instruction. Complete materials are not available on all approaches, but information is available from the American Industrial Arts Association, the American Vocational Association, and from current publications. Several methodological approaches, each with a short explanation, are presented in the following list.

Mass Production. This is a group undertaking with the intent of understanding industry through the production of a product. Mass production would encompass personnel organization, purchasing, production processes, accounting, and sales. This usually involves the entire class and can be used at any grade level and subject area.

Anthropological Approach. The anthropological approach involves the historical relationships of tools, processes, and products. It can be used as an introduction to a unit of study or as the unit of study. It gives an insight into the massive technologies of the modern industrial complex.

Construction Industry. This approach is a group undertaking to discover the problems in the design and construction of a project. This method would encompass personnel organization, material testing, fastening, and material processing. Students can be grouped into any size of unit according to the complexity of the project.

Unit Method. The unit method employs a limited set of educational experiences. Emphasis is placed on individual achievement through the student's own initiative. Emphasis is also placed on vicarious learning — a sharing of experiences with other students through reports, demonstrations, and other methods of communiation. The unit method allows the student to be creative and unique.

Line Production. The line production technique usually consists of a short production run of a product. The production line, jigs and fixtures, and product are set up with student activity. It is usually a short unit used to teach one aspect of mass production.

Individual Project. The individual project emphasizes the engineering approach and craftsmanship. Experiences are not usually shared with other students. The individual project offers the student an opportunity to see through to completion something of his own making.

Individual Study. Some scheduling systems permit an individual approach to study. Open laboratories, libraries, and other media enable the student to have freedom in his pursuit of knowledge.

Conceptual Approach. To gain an understanding of the technology in industry, concepts are taught with each concept enforcing the next one. This approach relies heavily on the cognitive behavioral patterns. Concepts learned are usually reinforced with some type of followup activity.

Research and Experimentation. The research and experimentation approach enables the student to discover and develop technological advances. The process is much used in industry. Materials testing and new product development are techniques used in the schools. The students usually share their experiences with classmates. Access to source materials is a necessity.

Services. The service industry is large and growing. Students gain an understanding of problems involved in the maintaining and repairing of all industrial products. With the increase of mechanized products in the home and on the farm, every individual needs an understanding of the service industry.

Interdepartmental Approach. Involvement of two or more laboratory activities can be used to advantage in enhancing motivation and improving learning situations. This approach enables students to study and construct a more complex problem or project.

MECHANICAL AND ELECTRICAL TECHNOLOGY

The materials in this guide have been divided into the three areas of electricity — electronics, mechanical power, and fluid power technology. The section on electricity — electronics was written by Lyle Rahn, Instructor, St. Louis Park Public Schools, with assistance from Eugene P. Jereczek. Melvin Johnson, Instructor and Graduate Student, University of Minnesota, prepared the section on mechanical power technology. The section on fluid power technology was prepared by Marlin E. Meyer, Instructor, Waconia Public Schools. These three areas have been grouped in this guide because of similarity and for convenience.

This guide has been arranged so that the instructor, in planning for the teaching of industrial arts, can draw objectives from the first three columns. These objectives can then be achieved by using the suggestions in column four. Some of the implementation suggestions will be considered as startling and provocative procedures. This was intended as the steering committee sought procedures that were forceful, useful, and stimulating. It was further intended that this guide serve as an aid to improve the methodology and content of industrial arts. Methodology has, through the years, sustained industrial arts. Innovations in both content and methodology are offered.

No definite order has been established for the presentation of material. It is more important that each instructor select the particular material which is appropriate for a given teaching situation. The instructor is encouraged to use as much of the appropriate material as possible. Material sufficient for several years of work has been provided. It is hoped that this guide will help the instructor to teach more effectively.

INTRODUCTION TO ELECTRICITY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify common electrical components. Identify electrical component symbols. Draw and label schematic diagrams. Connect simple circuits from schematic diagrams.	Schematic diagrams: 1. Symbols for components 2. Lines to represent wires 3. Subscripts and codes 4. Diagram layout	Be conscious of the potential danger of electricity. Be conscious of good safety practices and procedures.
Demonstrate the presence of an electrical charge. Explain the basic rules for attraction and repulsion.	Electrostatic: 1. Electrons and charges 2. Static discharge 3. Nuisance problems	Perform shop personnel duties in a workmanlike manner.
Measure DC current.	Nature of current: 1. Electrons in motion 2. Direction of electron movement 3. Use of an ammeter	
Measure DC voltage.	Nature of voltage: 1. Excess of electrons 2. Deficiency of electrons 3. Potential differences 4. Polarity 5. Use of voltmeter

DC CIRCUITS AND POWER

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Construct a primary cell. Construct a secondary cell. Connect dry cells in series and parallel.	Power sources: 1. Action of a primary cell 2. Action of a secondary cell	Follow necessary precautions when performing electro-chemical experiments.
Construct a thermocouple crystal and photocell circuit.	Power sources: 1. Action of a thermocouple 2. Action of a crystal cartridge 3. Action of a photocell	
Read resistor color code. Measure resistance with an ohmmeter.	Use of an ohmmeter. Resistor color code.	Always check a circuit before closing switch.
Prove Ohm's Law.	Circuit essentials: 1. Power source 2. Voltage distribution 3. Controls, switches, fuses	
Connect a series circuit. Connect a parallel circuit. Connect a series-parallel circuit. Varify Kirchhoff's current and voltage laws.	Series circuits: 1. Current same for all parts 2. Voltage drops additive 3. One current path 4. Resistance additive Parallel circuits: 1. Voltage same for all parts 2. Current drops in branch circuits 3. More than one path 4. Parallel power sources 5. Individual control possible Power: 1. Unit of power 2. Calculate power 3. Power in series and parallel circuits	Ask for help if in doubt about a circuit. Be conscious of the potential danger of electricity if improperly handled. Always check to see if a circuit is "hot" before working with circuit components.

TEST INSTRUMENTS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Connect basic meter circuitry: 1. Voltmeter 2. Ammeter 3. Ohmmeter	Characteristics of a DC meter movement.	Take necessary precautions when handling a DC meter movement.
Measure or calculate the proper resistances for the different meter ranges.	Development of the basic DC meter movement: 1. Use of multiplier resistors in voltmeter circuitry 2. Loading effect of a voltmeter 3. Use of shunt resistors in an ammeter circuit 4. Effect of meter resistance on current measurements 5. Develop an ohmmeter from a DC meter movement.	Always check circuit before energizing.
Operate an oscilloscope for AC voltage measurements.	Function of the operating controls on an oscilloscope. AC voltage wave forms and measurements. Comparison of DC and AC current and voltage measurements. Graphic development of the sine wave. Common uses of an oscilloscope.	Observe cautions in instruction booklet. Use appropriate instruments for desired measurement.
Operate an audio oscillator to produce desired audio signal.	Function of the operating controls on an audio generator. Use of Lissajous patterns. Characteristics of a square wave. Common uses for an audio oscillator.	Observe proper care in handling test instruments. Take the precaution of checking circuit for proper meter application. Take measurements with care and accuracy.
Operate a volt ohm milliammeter (V.O.M.) and a vacuum tube voltmeter (V.T.V.M.) for AC and DC circuit measurements.	Operation of a V.O.M. and V.T.V.M.: 1. Function of controls 2. AC and DC measurements 3. Use of construction of V.O.M. and V.T.V.M. 4. Comparison of V.T.V.M. and V.O.M. for voltage measurement

MAGNETISM—MOTORS—GENERATORS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Perform experiment to observe magnetic laws. Identify magnetic materials. Test the effects of a magnetic field.	Permanent magnets: 1. History 2. Materials common 3. Shape and polarity 4. Attraction and repulsion 5. Electron theory of magnetism 6. Care of magnets	Remove wristwatch when working with strong magnetic fields. Store magnets in proper manner.
Control the strength of an electromagnet. Prove the factors which affect the strength and polarity of an electromagnet.	Electromagnets: 1. Core materials 2. Ampere - turns 3. Current flow and polarity 4. Coil diameter and distance between turns	
Connect a buzzer, relay, circuit breaker, and solenoid.	Applications of electromagnets: 1. Relay 2. Buzzer 3. Solenoid 4. Circuit breaker	
Identify motor parts. Assemble commutator motor. Make a motor operate as a generator.	Principles of generation: 1. Moving coil 2. Moving magnetic field 3. Control of voltage 4. Generating AC 5. Generating DC	Treat motor and generator parts with care. Use only cleaning solvents and abrasives supplied by instructor.
Control speed and direction of commutator motor. Connect a permanent field motor. Operate a series connected motor on AC and DC. Connect and operate a commutator motor with series, shunt, or compound fields. Connect and operate a synchronous motor.	Motors: 1. DC 2. Universal 3. Shunt and compound 4. Synchronous	
Perform experiment to study effect of various loads on motor and generator operation.	Motor and generator loading: 1. Series 2. Shunt 3. Compound

INTRODUCTION TO INDUSTRIAL ELECTRONICS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Make correct use of the more complicated measuring and testing instruments. Identify common symbols used in industrial electronics. Connect circuits to study parameters of thyratrons, silicon control rectifiers (S.C.R.), thyrectors, thermistors, solid state photoelectric cells, phototubes, humidity sensors, strain gauges, and switching transistors.	Power control circuits: 1. Rectification 2. Power transfer 3. Thyratron characteristics 4. Thyratron control 5. DC to DC concerters 6. Voltage regulation and control 7. Zener diode applications 8. S.C.R. characteristics 9. S.C.R. power control 10. Thyrectors	Be able to correlate theory and lab work. Have an interest in all noncommunication possibilities of electronic devices.
Connect and analyze with proper test equipment the following circuits: 1. DC to DC converter 2. Thyratron control 3. Power supply output control 4. S.C.R. control 5. Photoelectric control		
Connect and analyze with proper test equipment the following sensing circuits: 1. Strain gauge 2. Humidity measurement 3. Noise level measurement 4. Counter	Sensing circuits: 1. Thermistors 2. Strain gauges 3. Humidity sensor 4. Noise level measurement 5. Photoelectric counters 6. Photoelectric control	Develop quality as well as quantity of work.
Connect and analyze with proper test equipment the following timing circuits: 1. Time-delay relay 2. S.C.R. timer 3. Capacity-actuate relay	Timing circuits: 1. Relays 2. Time constants 3. Time-delay relays 4. Capacity-actuated relays 5. S.C.R. timers	Use isolation transformer when working on AC-DC circuits.
Connect and analyze with proper test equipment the following switching and pulse circuits: 1. Transistor 2. Wave shaping 3. Schmitt trigger 4. Pulse generator 5. Pulse frequency divider	Switching and pulse circuits: 1. Transistor switching characteristics a. Common emitter b. Common base c. Common collector 2. Pulse generation 3. Pulse frequency division 4. Wave shaping 5. Schmitt trigger	Use proper and safe work habits.

INTRODUCTION

Since the beginning of time, man has struggled to conquer and control his environment. This conquest has been most facilitated by harnessing the various power sources in the natural environment. Today, the construction of powered implements is so great that an exhaustive list would be pages long. The manufacture and service of these labor-saving devices has become an important part in our economy and, in one way or another, affects almost every industry in existence. For example, the largest and most influential industry is probably that of the automobile, a powered implement. Because of the far-reaching economic and industrial connections and the commercialization of power utilization, it seems essential that the American youth should be acquainted with the development, construction, design, and maintenance of the products which use or produce power.

This resource guide on mechanical power contains sixteen units or divisions. The first unit is a developmental or historical approach to the coverage of power in general. It is designed for use mainly as a junior high course or, in brevity, as an introductory unit in an automobile, small engine, or fluid power course. The internal combustion engine and the transmission of its power are the main concern in most of the units.

Because a course of study is usually dictated by the availability of space and equipment, there has been no attempt to divide the material into teaching units. Rather, common content divisions which may or may not be teachable in a given situation have been used. It is hoped that, on the basis of time, space, and equipment, an instructor can utilize portions of any or all of the units in meeting his unique teaching objectives. The unit on small gas engines shows such an approach in that portions of several of the other units have been utilized. Other courses could be organized around an automobile or truck engine, an entire automobile, or any separate systems such as the drive train or brake system. Much of the activity in a power shop is similar to that of the service trades. Many operations are somewhat routine and teaching is best expedited through teacher demonstrations and pupil practice.

3547

3548

HISTORY AND DEVELOPMENT OF POWER

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
List the methods by which energy is derived from the sun.	The sun is the origin of most energy sources.	Realize why primitive man often worshipped the sun.
	Man's first energy source was his own muscle power.	
Identify the classes of levers.	The utilization and adaptation of the simple machines: 1. Lever 2. Wheel and axle 3. Pulley 4. Inclined plane 5. Wedge 6. Screw	Appreciate early civilization's struggle to control the environment.
Solve problems of mechanical advantage.	The physical principles of simple machines. The relationships between work, energy, and power.	Realize the improvements available to man through the use of mechanical advantage application.
Identify animals used as energy sources rather than as a source of food.	The domestication of animals for their muscle power.	
Determine horsepower requirements to move objects or rotate a shaft.	The origin, meaning, and methods of measuring horsepower: 1. Physical definition 2. Taxable 3. Brake	Realize the misconceptions often associated with the term "horsepower."
Describe the physical principles involved in sailing.	The methods of utilizing the wind as a power source.	Appreciate man's first use of nonmuscular energy.
Demonstrate how pitch affects power and speed.	The principle of pitch.	
Identify types of water wheels and water turbines.	The utilization of water as a power source.	Appreciate the importance of contemporary hydroelectric power generation.

3548

HISTORY AND DEVELOPMENT OF POWER

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Compile lists of direct and indirect products of the sun's energy.	
Construct various simple machines and measure or calculate the mechanical advantages with spring scales.	
Research a simple machine and identify its applications in contemporary mechanisms.	
Compile a list of the simple machine applications in a modern complex device such as a typewriter.	
Have a group discussion on the necessity of mechanical advantage in contemporary technology.	
Report on the unusual animals used for power in foreign countries or within our nation's history.	
Construct a Prony brake. Measure horsepower by use of a Prony brake. Measure horsepower by use of a spring scale.	
Construct sail boats or windwheels.	
Research or report on the windmill's impact on the development of the Western United States.	
Measure the speed of a fan at various blade pitches.	
Construct model water wheels or water turbines and measure their power.	

3549

HISTORY AND DEVELOPMENT OF POWER—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Solve problems of heat and the expansion of gases.	The principles involved in utilizing steam as an energy source.	Realize the potential danger in steam pressure.
Sketch the relationships between valves and piston engine.	The operation of a steam piston engine.	Appreciate the impact of steam power on industrialization.
Calculate the efficiency of a power source.	The sources of power loss in steam engines.	Realize need for more efficient sources of energy.
Compare the disadvantages and advantages of steam piston engine and steam turbines.	The operation of a steam turbine.	Realize need for more efficient power source.
	The utilization of steam turbines in nuclear power plants.	Respect the potential speed of a turbine.
Sketch the four cycles of a four-stroke cycle engine.	The operation of a four-stroke cycle engine.	
List the advantages of internal combustion engines.		
List the applications of internal combustion engines.	The basic necessities of internal combustion: 1. Carburetion 2. Compression 3. Ignition	Recognize the vast areas of application and the versatility of the internal combustion engine.
	The common fuels and lubricants used in internal combustion engines.	Appreciate the adverse effects of friction by using proper lubricants.
List the regulations for handling fuel.	The power potential of fuels.	Always handle fuel with care.
Identify natural resources which have been depleted as power sources.	The limited supply of petroleum and its products.	Realize the present drain on the natural petroleum resources and the limitations of future use.

3550

HISTORY AND DEVELOPMENT OF POWER—continued

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Demonstrate and measure the expansion of water when heated and vaporized.	
Explode a container under controlled conditions.	
Report on the impact of railroad steam engines on civilization.	
Visit an old locomotive or a modern steam generation plant.	
Measure directly the horsepower and efficiency of a model steam engine.	
Compare the stress and friction efficiency of a steam piston engine and a steam turbine engine.	
Construct or demonstrate a model of Hero's aeolipile.	
Demonstrate four-stroke cycle theory with cutaway engine.	
Report on the history of the automobile.	
Students determine displacement increase by reboring a typical engine.	
Trace the petroleum refining process from well to service station.	
Ignite fuel in tube which is open on one end, demonstrating the power effect of fuel.	
Research past and present natural resources.	

3551

HISTORY AND DEVELOPMENT OF POWER—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Calculate compression ratios and piston displacements.	The relation between displacement compression and horsepower.	
Recognize the physical differences in two- and four-stroke cycle engines.	The operation of a two-stroke cycle engine.	Respect the heat produced in an air-cooled engine.
List the advantages of a diesel engine.	The operation of a diesel engine: 1. Two-stroke cycle 2. Four-stroke cycle	Realize the heat and pressure developed in a diesel engine.
Enumerate the engineering problems presently thwarting gas turbine production and utilization.	The operation of a gas turbine.	Appreciate the potential impact on the auto industry of a major change in power source.
Compare the jet engine with the piston engine.	The operation of a jet engine.	
Solve problems of force and reaction.	The basic principles of rocketry.	Realize the potential of space exploration through rocket travel.

1221
3552

HISTORY AND DEVELOPMENT OF POWER—continued

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Compare actual physical weights of identical horsepower two- and four-stroke cycle engines.	
Measure the external temperature of an operating engine.	
Demonstrate how heat is derived through pressure to cause an explosion. Research or report on the applications of diesel engines.	
Present recent articles on gas turbine experimentations and use.	
Compare the various methods of thrust.	
Report on the use of the jet airplane for travel and freight transportation.	
Follow current events in rocket development and the space program.	

3553

TOOLS, EQUIPMENT, AND ATTACHMENTS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify thread and bolt sizes.	The various fastening devices and their relation to material strength, harness, and application.	Use tools safely and carefully.
Select and use proper hand tools.	Hand tool construction.	Recognize quality tools.
Look up manufacturers' torque specifications.	Torque as related to threaded devices.	Properly torque all threaded devices.
Use threading equipment and repair faulty threads.	The function of threading equipment and thread repair systems.	Appreciate the need to avoid stud breakage.
Measure accurately with such instruments as the micrometer, dial indicator, or feeler gauge.	Decimal and fractional measuring systems.	Recognize the need for accuracy in repair.
Solder, braze, and weld various metals.	Methods of bonding and fusional attachment as related to various metals.	Realize the advantages in joining metals through a heat process.
Use and care of cutting tools.	Cutting tools: 1. Drills 2. Saw 3. File 4. Chisel 5. Reamers 6. Hones	Respect sharp edges of tools.

3554

TOOLS, EQUIPMENT, AND ATTACHMENTS

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Display fasteners and illustrate the thread systems. Demonstrate the shear strength of various bolt designs.	
Demonstrate use, care, and nomenclature of common hand tools.	
Have student drill and tap a piece of scrap aluminum and also properly torque a stud in the aluminum. Later have student determine stripping torque. Have student thread a rod.	
Demonstrate proper method of using taps and dies.	
Overhead transparencies, filmstrips, and programed instructions are available on use and care of micrometer. Student should practice measurement on actual spare engine components.	
Utilize machine shop facilities and instruments demonstrating the various methods of heat attachment.	
Student should experience use of each cutting tool.	

3555

INTERNAL COMBUSTION ENGINE

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
List implements powered by internal combustion engines, such as: 1. Automobiles 2. Trucks 3. Airplanes 4. Lawn mowers 5. Motorboats	The adapability, versatility, and mobility of internal combustion engines as compared to other power sources.	Appreciate the social and economic influence on our society.
Recognize various alloys and base metals.	The material construction of engine components.	
Compare spark and compression ignition systems.	The transfer of heat energy to motion through compression and combustion.	Appreciate the heat buildup through compression.
Recognize the basic components of a four-cycle engine, such as: 1. Block and cylinder 2. Piston and rings 3. Connecting rod 4. Crankshaft 5. Valves and camshaft	Four-stroke cycle theory: 1. Intake 2. Compression 3. Power 4. Exhaust	Realize the complexity in a modern high-speed engine.
Compare valve train efficiency in various engines.	Valve arrangements: 1. I head 2. L head 3. F head 4. T head	Appreciate the need for precision of the parts of an engine.
Recognize the physical differences in two- and four-cycle engines.	Two-stroke cycle theory: 1. Reed valves 2. Rotary valves	
Recognize the physical differences in cylinder arrangements.	Engine design and applications: 1. In-line 2. V 3. Rotary 4. Opposed	Realize the purposes in various engine designs.

3556

INTERNAL COMBUSTION ENGINE

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Compile lists of devices powered by internal combustion engines. Research other power sources used on mobile units and compare advantages and disadvantages.	
Display sample alloys and base metals. Experiment with the testing of hardness and wear qualities.	
Explode fuel through compression in controlled cylinder using various fuels, or check burning temperature of various fuels.	
Use cutaway engine and individual parts showing entire mechanical process; identify and relate each part to the other. Also note power flow and expanding gas.	
Examine engines and identify valve arrangement from external clues.	
Compare physical weights, acceleration, horsepower, and r.p.m. output of two- and four-cycle engines.	
Determine the space requirements and reasons for various engine applications.	

3557

COOLING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
List types of cooling systems: 1. Air 2. Liquid 3. Oil	Heat transfer and losses: 1. Convection 2. Conduction 3. Radiation	Realize relationship between engine operating temperature and cooling system capacity.
Trace airflow and clean passage on an air-cooled engine.	Air movement and cooling fins in air system.	Respect hot engine components.
Change and check coolant in liquid system.	Antifreeze and other coolant systems.	Use antifreeze and temperature controls in cold weather.
Check operation of a thermostat.	Function of a thermostat.	Run engines at appropriate temperature.
Check a pressure cap.	Pressure systems.	Allow cooling system to cool before removing cap.
Replace a water pump.	Water pumps.	
Reverse flush a radiator.	Formation of rust and sludge.	Use anticorrosive solutions in cooling systems.
Pressure test a liquid system for internal and external leaks.	Heat circulation.	Use only low pressure to find leaks in cooling system.
Change cooling system hoses.	Coolant hose and clamp installation.	
Recognize faulty fan belt and change belt.	Belt tension and causes of belt failure.	Keep hands and clothes away from running belts.

3558

COOLING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Experiment with the cooling of metal by various methods and determine efficiency. Display components damaged by excessive heat.	
Check engine temperature at various points with heat indicators.	
Weigh water and antifreeze solutions to display the testing system. Demonstrate hydrometer.	
Observe opening and closing of thermostat in heated water.	
Boil water at various pressures to determine boiling temperature.	
Allow water to stand in a metal container for a period of time and examine sediment formation and oxidation.	
Observe the circulation of liquid in glass tubes as hot water seeks a higher level.	
Demonstrate pressure methods of locating cooling system leaks.	

3559

LUBRICATION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Differentiate between the wear and load qualities of various metals.	Friction and wear.	Become aware of heat buildup from friction.
List various petroleum products.	Crude oil products such as: 1. Gasoline 2. Kerosene 3. Fuel oils 4. Motor oils	
Select proper oil for an engine by determining its use and requirements.	The viscosity of oil. The Society of Automotive Engineers (S.A.E.) system of identification which includes Motor Light (M.L.), Motor Moderate (M.M.), and Motor Severe (M.S.).	Use manufacturer's recommended or better oil in personal engines.
Change crankcase oil.	The purpose of oil additives.	Check oil level before starting any engine.
Change oil filter.	Oil filter systems: 1. Full-flow 2. By-pass	
List oil contaminates.	Oil contamination and sludge formation.	Relate engine life to crankcase contamination.
Check oil pressure.	Types of lubricant systems: 1. Pressure 2. Splash 3. Fuel mixture 4. Combination	Recognize advantages of different systems.
Change a positive ventilation crankcase (P.V.C.) valve.	Crankcase ventilation.	
Purge an oil line.	Oil lines and galleries.	
Check oil pump for wear.	Types of oil pumps: 1. Gear 2. Rotor 3. Piston or plunger 4. Vane	
Lubricate automobile chassis.	Bearing and antifriction device construction.	Regularly lubricate all equipment.
Service bearings. Diagnose bearing failure.		

3560

LUBRICATION

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Experiment with heat transfer on different metals with torch and temperature devices. Observe the effects of friction on various metals and various surfaces.	
Trace the refining process. Visit a refinery if possible.	
Check viscosity by timing oil flow through a controlled orifice.	
Test oil for temperature at breakdown of different grades. Boil away and examine residue of several brands of oil.	
Compare internal components of different oil filters.	
Check oil pressure at various points on an operating engine. Compare pressures of different pump types.	
Run test engine with sealed crankcase and observe results. Compare exhaust emission with various systems of crankcase ventilation. Trace oil systems through various engine blocks.	
Diagnose worn pumps.	
Display worn bearings, especially ones burned from lack of grease or oil.	

3561

FUEL

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Select proper fuel base for engine requirements and applications.	Gasoline and diesel fuel: 1. Octane rating 2. Volatility	Do not use open fire around explosive fuel.
	Condensation in storage tanks.	Use deicing additive in cold weather.
Repair a fuel tank.	Methods of removal and repair.	Observe safety precautions when handling fuel tanks.
Recognize fuel systems: 1. Gravity 2. Siphon 3. Pressure 4. Diaphragm	Methods of fuel movement—the advantages and disadvantages.	
Change a fuel filter.	Fuel filtration.	Store fuel in clean containers.
Check fuel pump: 1. Pressure 2. Vacuum 3. Capacity	Mechanical fuel pump operation.	
Determine the fuel delivery needs of an engine.	Vacuum pump operation.	
	Fuel pressure regulators.	
	Electric fuel pumps.	
Clean an air cleaner.	Air filtration: 1. Oil bath 2. Dry element 3. Oil-wetted element	Realize the need for clean air and the adverse effects of the content of impure air.
Replace muffler, tail exhaust pipe, and manifold.	Exhaust systems: 1. Pipe 2. Muffler 3. Resonative 4. Manifold	Recognize the lethal danger in exhaust gases.
Check exhaust emission for hydrocarbon content.	Exhaust emission control devices.	

1035562

FUEL

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Check flash point of different types and grades of fuel.	
Condense vapor in glass bottle by changing temperature of outside.	
Explode a fuel container under controlled conditions.	
Research characteristics, disadvantages, and advantages of each system.	
Check sedimentation and contamination in raw fuel.	
Disassemble and reassemble a variety of fuel pumps tracing the fuel flow. Diagnose pump problems in malfunctioning pumps.	
Check vacuum variation at manifold and at windshield wiper on engine equipped with double action pump under various engine speed and load conditions.	
Filtrate ordinary room air through filter paper, demonstrating constant existence of foreign material.	
Research current developments in exhaust emission control. Compare methods of control.	

3568

CARBURETION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify pressure areas in a venturi.	The venturi principle.	
	Carburetor fundamentals: 1. Atomization 2. Distribution 3. Metering	
Trace the circuits in a carburetor, recognizing worn or broken parts.	The circuits, functions, and adjustments of a carburetor: 1. Float 2. High speed 3. Idle 4. Low speed 5. Acceleration 6. Power 7. Choke	Check carburetor manual for determining adjustments and circuits.
Adjust an automatic choke.	Choking and priming methods.	
Clean and adjust a carburetor.		Avoid contact with carburetor cleaning solutions; realize importance of following manufacturers' specifications.
Free a heat riser.	Manifold heating: 1. Exhaust 2. Water	Realize effects of preheating on engine performance.
Adjust a carburetor on an operating engine.	Air-fuel ratio requirements in relation to engine load and speed.	Avoid overtightening adjustment needles.
Adjust the load r.p.m. of operating engine.	Function of a governor: 1. Air vent 2. Centrifugal 3. Electronic	Run engine at recommended r.p.m.
Relate engine performance to carburetion.	Exhaust emissions relation to carburetion.	

3564

CARBURETION

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Show liquid movement by air pressure with soda straws, perfume atomizer, or fly sprayer.	
Trace the circuitry through various carburetors while disassembling, reassembling, and making all necessary adjustments.	
Faulty carburetors are often available through distributors. An ordinary carburetor on which each student can practice expedites learning and maintains interest.	
Compare engine performance with cold and warm manifolds; also check exhaust emission.	
Check engine's performance on dynamometer with different loads while making carburetor adjustments.	
Plot the throttle opening or air flow of governed engine as load is varied.	
Diagnose engine malfunction with "bugged" carburetor.	

3565

ELECTRICITY AND ELECTRICAL EQUIPMENT

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Determine current flow.	Magnetism and atomic structure.	
Calculate voltage drops in a circuit.	Ohm's Law.	
Test a lead-acid storage battery. Charge a battery.	Lead-acid storage cell chemical action.	Use caution when handling sulfuric acid.
	Specific gravity.	Avoid sparks or fire around a charging battery.
Check and service generator fields, commutators, brushes, and bearings.	Generator function and construction: 1. A circuit 2. B circuit	Motorize generator after service.
Adjust current, voltage, and cut out on regulator.	Generator regulation.	Realize the need for precision in adjustment.
Check the diodes and the field, stator, and regulator.	An alternator: 1. Y 2. △	
Check fields, armature connection, and brushes. Repair as necessary.	A starter motor.	
	Ring gear.	
Replace the starter drives.	Starter drives: 1. Bendix 2. Overrunning	
Adjust head lamps.	Electrical equipment such as: 1. Horn 2. Lights 3. Motors 4. Relays 5. Solenoids	Utilize good connections and avoid unnecessary resistance in electrical equipment.
	Wiring systems: 1. One wire 2. Two wire	

3566

ELECTRICITY AND ELECTRICAL EQUIPMENT

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
See electricity guide for theoretical aspects of electricity.	
Measure voltage drops and calculate resistance in various parts of electrical system.	
Cut old battery apart, showing internal construction. Weigh acid from charged and uncharged battery to demonstrate testing principle. Test capacity of different amp-hour-rated batteries with carbon pile and voltmeter.	
Construct model generator. Have students check actual generators with known problems, turn and undercut commutators, and replace brushes.	
Check gear ratios between ring gears and starter drives on various models.	
Display types of drives.	
Model can be made which includes all of the wiring in an automobile providing circuit study and diagnosis for student.

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

SPARK IGNITION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Test an ignition coil.	Ignition coils.	Avoid secondary shocks.
Adjust or replace points.	Contact points.	
Check spring tension.	Dwell angle and cam rotation.	
Check spark advance.	A distributor.	
Time an engine.	Spark advance system: 1. Centrifugal 2. Vacuum	Set timing to recommended degree.
Install ignition wire in proper order.	Firing order.	
Check secondary leakage.	Resistance wire.	
Clean spark plugs.	Spark plugs: 1. Heat range 2. Thread size and reach 3. Resistance	Remove all abrasive material from plugs before reinstallation.
Diagnose combustion chamber condition through spark plug condition.	Spark plug polarity.	Avoid touching hot spark plugs.
Check ignition system voltage drops.	Bypass resistors.	
Adjust armature air gap.	Magneto ignition.	Use care in handling flywheels with magnets.
	Transistor ignition.	

35567
63568

SPARK IGNITION

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Construct coils with nail, fine wire, and storage battery.	
Construct ignition system from basic parts.	
Observe voltage buildup in condenser with an ohmmeter.	
Demonstrate distribution on ignition simulator.	
Check engine performance with various timing. Display piston burned from early timing.	
Check service manuals for various firing orders and placements of cylinders.	
Experiment with effect of ignition on radio and TV.	
Trace heat transfer from center electrode of plug to engine cooling system.	
Demonstrate polarity with lead pencil or voltmeter.	
Display spark plugs from engines with varied combustion chamber conditions.	
Check and compare secondary voltage with and without bypass resistors.	
Compare voltage outputs of various magneto and battery systems at different speeds.	
Compare transistor voltage to magneto and battery systems.	

3570
3569

VALVES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Remove valves and seats. Replace valve seats.	Valves and seat function and construction.	Appreciate need for good combustion chamber seal.
	Valve cooling.	
Check spring tension.	Valve springs.	
Check stem clearance and concentricity.	Valve guides and stem seals.	Realize the need for precision in valve repair.
Replace valve guides.		
Ream rocker arms.	Rocker arms and shafts.	
Adjust valve clearance.	Solid tappets and push rods.	
Test hydraulic lifters.	Hydraulic lifters.	Appreciate the speed of valve operation.
	Valve rotators.	
Check alignment and lobe wear. Replace bearings.	Camshaft.	
Change camshaft gears and chain.	Camshaft drives: 1. Gear 2. Chain	
Align camshaft with crankshaft.	Valve timing.	Use care in handling fiber and aluminum gears.
Check and adjust reed valves.	Reed valves.	
	Rotary valves.	
Check cylinder compression.	The causes and effects of valve failure.	Realize the limitations of compression.
Check valves with cylinder leakage test.	Relationship between compression leakage and engine performance.	

3570
3363

VALVES

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Collect and display burnt valves, showing various failures.	
Display oil burning engine with good compression. Show function of oil control rings by pulling oil through guides.	
Measure valve clearance on cold and hot engines, comparing differences.	
Trace oil flow in valve mechanisms.	
Observe engine performance with loose and tight valves.	
Compare engine performance with valve timing off "one tooth."	
Do comparative tests on engines with various valve problems to determine cause-effect relationship.	

OVERHAUL

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Expand pistons.	Design, construction, and function of pistons.	Mark connecting rods and pistons during disassembly.
Regroove pistons.	Function and construction of rings: 1. Compression 2. Oil control 3. Expanders	
Fit piston pins.	Wrist pin construction, attachment, and bearing methods.	Appreciate the stress placed on engine components.
Ridge, ream, hone, or rebore cylinder.	Blocks and cylinder walls.	
Check for cracks. Weld if necessary.		
Align rods and pistons.	Function and construction of connecting rods.	
Check bearing wear and clearance.	Function and construction of bearings: 1. Connecting rod a. Solid b. Insert c. Roller d. Ball 2. Main bearings a. Insert b. Solid	Realize the need for accurate measurement and proper fit of all components.
Diagnose bearing failure.	Causes of bearing failure.	
Check bearing surfaces, balance, and run out.	Crankshaft.	
	Crankshaft seals.	
	Flywheel.	
	Vibration damper.	
Replace head gasket.	Cylinder head.	Use proper sequence and torque when tightening cylinder heads.

13572

OVERHAUL

IMPLEMENTATION SUGGESTIONS

The overhaul of the internal components in an internal combustion engine is best facilitated through actual performance of the operations. The use of actual engines which need repair is greatly preferred to pseudo-operations or new or display engines. The engines to be worked on may be those of the student or those often available through local distribution or even junk yards, depending on the type included in the course. In addition to an explanation of the reason for the operation, all operations should be demonstrated to the class.

INSTRUCTOR'S NOTES

3573

FRICTION DEVICES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Replace a clutch disc and a pressure plate.	A clutch disc.	Realize heat buildup and wear in a friction device.
	Pressure plates: 1. Coil springs 2. Diaphragm	
Adjust pedal. Change throwout bearing.	Clutch release mechanism.	
	Backing plate attachment springs and anchorage.	Maintain properly adjusted brakes in personal automobile.
Turn drum surfaces.	Brake drums.	Avoid cutting drums beyond safety limit.
Reline brake shoes. Arc shoes.	Converted brake shoes and linings.	
	Braking ratio.	
Adjust brakes.	Disc brakes.	
	Emergency brakes.	

35[illegible]

FRICTION DEVICES

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Construct a friction drive device and measure wear and heat quantities of various materials. Calculate frictional pressures necessary to drive specific load without slippage.	
Check temperature of operating brake.	
Determine braking ratio of various automobiles.	

3575

DIRECT POWER TRANSFER

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Types of transmissions: 1. Rotary 2. Linear	Realize the need to transfer power from source to implement.
Calculate mechanical advantages.	Mechanical advantages: 1. Torque 2. Speed 3. Power 4. Efficiency	
Check shaft balance.	Shaft drive.	
Pack universal joints.	Universal joints.	
Replace belts.	Belts and pulley: 1. Flat 2. "V" 3. Notched or tooth	Avoid loose clothing around belts and pulleys.
Adjust chain drive tension.	Chain and sprocket.	
Check gear lash.	Gear drives: 1. Spur 2. Helical 3. Bevel 4. Herringbone 5. Internal and external	
Adjust shift linkage.	Shifting mechanisms: 1. Direct engagement 2. Constant mechanism	
	Synchromesh mechanisms.	
Calculate drive speeds through various planetary configurations.	Planetary drives: 1. Overdrive 2. Automatic transmission	Appreciate the complexity in a transmission device.
	Sprag clutches.	

3576

DIRECT POWER TRANSFER

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Examine and list transmission methods used on contemporary devices.	
Compute the mechanical advantage of a simple machine constructed by the student or in a typical automobile drive train.	
Demonstrate balance and imbalance through the use of tire balance; relate to shafts and rotary mechanisms.	
Display damaged and worn belts.	
Old transmission and overdrive can be obtained from scrap yard for student work or for display.	

87577

FLUID POWER TRANSFER

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Recognize the symbols and nomenclature of fluid power. Solve such problems as fluid flow and expansion pressure.	Principles of fluids: 1. Pascal's Law 2. Conversation energy 3. Bernoulli's Principles	
Check viscosity at ambient temperature. Select proper fluid for application.	Fluids: 1. Types 2. Viscosity 3. Storage 4. Filtration 5. Incompressibility Fluid couplings and torque converters.	
Check pressure and volume of pump at various r.p.m.	Fluid pumps: 1. Piston 2. Vane 3. Gear 4. Centrifugal	Realize the danger in high pressure due to explosion.
Measure efficiency of pumps.	Pump ratings: 1. Pressure 2. Capacity	
Compare power loss between motor and pump.	Rotary motors: 1. Piston 2. Valve 3. Gear Rotary motor control.	
Repair leaks in cylinder.	Liner pistons and cylinders.	
Identify valve requirements in specific system.	Controls: 1. Pressure 2. Flow 3. Direction	
Select valve control needed for given application.	Valve controls: 1. Manual 2. Automatic	Realize the use of various actuators and how energy is transmitted in each.
Design and connect up a fluid system to perform a specific job.		

178578

FLUID POWER TRANSFER

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Most pieces of apparatus for demonstrating basic laws of fluids are available in high school physics and chemistry labs.	
Check viscosity by using container with fixed orifice; time flow with a stopwatch.	
Cut away an old converter available at a junk yard.	
Build small power unit with engine and pump so that experiments can be run.	
Cylinder and valves are often available through government surplus. Also, old power steering units make excellent test units.	
Present student with work problem and have him design hydraulic apparatus to perform job.	

3579

3580

SMALL GAS ENGINES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Become familiar with equipment driven by small engines and manufacturers of such equipment, including: 1. Lawn mowers 2. Snowblowers 3. Chain saws 4. Motorboats 5. Snowmobiles		Appreciate the small engine influence on society.
Select and use proper hand tools.	The need for varied tools on different fastener applications.	Use tools safely and carefully.
	Torque requirements.	Properly torque all threaded devices.
Measure accurately with micrometer.	Decimal and fractional measuring systems.	
Recognize the various metal alloys used in small engine construction.	The causes of friction and wear.	
Mix two-cycle fuel. Change crankcase oil.	Fuel and lubricants: 1. Octane rating 2. Fuel storage 3. Oil viscosity 4. Oil classification	Use care in handling explosive liquids. Clean up any spilled oil which may cause slipping.
Check lubrication system.	Lubricating systems: 1. Pressure 2. Splash 3. Fuel mixture	Reasons for assuring adequate lubrication before starting an engine.
Clean cooling fins, cowling, and passages. Flush a cooling system.	Cooling systems: 1. Air 2. Water	Respect the danger of being burned on an operating engine.
Recognize the external difference in two- and four-stroke cycle engines.	Basic four-stroke cycle and two-stroke cycle theory.	
Recognize fuel system: 1. Gravity 2. Siphon 3. Pump 4. Diaphragm		

3580

SMALL GAS ENGINES

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Demonstrate use and care of common hand tools. Indicate appropriate nomenclature.	
Have student drill and tap a piece of scrap aluminum, then torque a stud in the aluminum. Allow student to strip bolt out, demonstrating the need for accurate torqueing.	
Use overhead projector or filmstrip to show micrometer measuring system. Practice on miscellaneous engine parts and use available programed learning materials.	
Display such things as scored pistons and burnt bearings. Experiment with heat transfer of various metals by using torch and heat indicators. Cut apart such pieces as salvaged cylinders, pistons, and rods in order to show design and metals used.	
Trace the petroleum industry from well to service station.	
Demonstrate check-off procedure before starting any engine. Engine should have fuel and lubrication and should be securely mounted.	
Measure engine temperature at various points with heat indicators.	
Cutaway or model engines with moving parts allow good demonstrations of reciprocating cycles.	
Students research characteristics and advantages of various systems.	

3581

SMALL GAS ENGINES—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify pressure areas of a carburetor.	The venturi principles.	
Clean and adjust a carburetor. Recognize worn or damaged parts in carburetor.	The circuits of a carburetor: 1. Float 2. High speed 3. Idle 4. Choke	Use care in handling the carburetor cleaning solutions and the air pressure.
Clean an air cleaner. Adjust carburetor on operating engine.	Abrasive effect of dust particles. Air-gas ratio requirements as related to engine load and speed.	
Diagnose carburetor malfunction in engine's performance.	Relationship between carburetion and performance.	
Adjust governed speed and idle speed with tachometer.	Governor speed control: 1. Air vane 2. Centrifugal	
Trace current flow in magneto coil.	Basic electricity.	
Check a coil and condenser.	Condenser action.	
Adjust armature air gap.		
Adjust points and set timing.	Breaker points and timing.	Observe manufacturer's recommendation of proper timing.
Measure secondary voltage.		
Clean and adjust spark plugs.	The function of a spark plug.	
Analyze combustion chamber by observing spark plug condition.		Use only correct heat range plugs.

3582

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Demonstrate atomization with perfume atomizer, hand sprayer, or soda straws and water.	
With dismantled carburetor, have student trace fuel flow through circuits and make internal adjustments.	
Filter air through cleaning element to show dirt collection. Operate an engine and with the use of dynamometer, if available, change the fuel-air ratio while recording power change.	
Demonstrate faulty circuits with malfunctioning carburetor on engine connected to dynamometer.	
Demonstrate engine speed control with tachometer and varied load.	
Demonstrate magnetic lines of force, electron flow, and induction.	
Measure secondary voltage with varied armature air gap.	
Students experiment with (or teacher demonstrates) engine performance with various engine timings.	
Plot the firing voltage of plugs in various conditions with constant pressure on plug tester.	

3584
3582
3583

SMALL GAS ENGINES—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Repair a cylinder: 1. Ridge ream 2. Deglaze 3. Rebore	Causes of cylinder wear and taper: 1. Heat 2. Grit from air 3. Lack of lubrication	
Determine piston and ring condition; replace if necessary.	The function of pistons and rings.	Use extreme care when removing or replacing rings.
Replace a piston pin.	Function of a piston pin.	
Measure connecting-rod bearing clearance.	Connecting-rod bearing system: 1. Integral 2. Insert 3. Needle	Use care in the measurement and handling of all internal parts.
Remove flywheel. Check crankshaft end-play with dial indicator.	Function of a crankshaft.	
Determine main bearing clearance; replace main bearings and reline bore.	Function of main bearing: 1. Integral 2. Insert 3. Needle 4. Ball 5. Sleeve	
Check camshaft bearings and gears. Check cam lobes.		
Repair valves: 1. Grind valve 2. Grind seat 3. Rebush or replace guide Adjust valve clearance.	The function of proper valves.	
Adjust or replace reed valves.	The function of reed valves.	
Replace the common seals and gaskets.	The purpose of seals and gaskets.	
Prepare an engine for storage.	Engine storage requirements: 1. Summer 2. Winter	Carefully prepare personal engine for season change.

3584

3283

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
To facilitate the experiences with internal components, an engine should be disassembled and reassembled. Students will usually have old engines available to work on; actual repairs facilitate the learning of many of the operations that are not practical on demonstration engines. Often small engine distributors will contribute warranty engines to a school. This will allow the student to observe malfunction and perform repair operation. Student sketch of components before the disassembling will expedite proper replacement. Along with the various repair demonstrations, filmstrips and charts on operations are available from most manufacturers.	
Collect several bad valves of known malfunction. Label for students' identification of valve problems.	
Display various reed plate and box designs.	
Review manufacturer's recommendations on storage.	

3585

ROCKETRY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The history of aerospace technology.	The contributions of pioneers in the development of rocketry. An interest in the aerospace program.
	The process of space vehicle development.	Knowledge of the various technologies involved in the aerospace program. Knowledge of the vast occupational opportunities which exist in aerospace.
	The science of aerodynamics.	The evolution of aerodynamics. How the science of aerodynamics contributes to aerospace technology.
	The function of guidance and control in rocketry.	The relationship between the function of guidance and control in aerospace and in aeronautics.
To develop the ability to test model rocket engines to determine parameters such as total impulse so they may be related to the rocket's propulsion ability. Compute problems coping with gravity (mass and weight).	Propulsion systems used in aerospace technology.	To gain insight into remote electrical ignition, staging, cluster firing, and safety as related to the launching of a rocket. Laws of force and action-reaction.
Mathematics as applied to rocketry.	Tracking of rockets.	Use of mathematics. Use of photography.
Design and construct streamers and parachutes.	Recovery of rockets.	Importance of recovery. Problems involved in recovery.
Use of drafting techniques. Use of construction techniques.	Structural design of rockets. Functioning of components.	The forces of aerodynamics. The intricate problems of design. The practicality of design. Cost problems. Safety procedures.

3586

ROCKETRY

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Students write a report on the contributions made by pioneers. Students collect pictures depicting applications of aerospace technology.	
Students write a report on occupational opportunity. Students prepare charts and diagrams of space vehicle development.	
Lecture with visuals. Students sketch ideas involved in aerodynamics.	
Discuss guidance and control.	
Discuss aerial photography, test stations, and firing of rockets. Graph rocket flights and distance/velocity/acceleration/time relationships. Discuss types of propulsion systems. Use scale models. Discuss trajectory. Discuss weather conditions. Compute momentum, thrust, and velocity.	
Discuss the use of single-station and two-station tracking systems.	
Discuss the different designs employed in recovery.	
Students will design and construct a rocket, manufacturing as many parts as possible. Students will fire the rocket, observing trajectory, performance, and recovery.

INTRODUCTION

Fluid power provides man with a dynamic extension of his own physical power. It is a system of transporting, controlling, and storing power by means of pressurized liquids or gases. The system is based on a group of physical laws governing the effects of pressurized liquids. The application of fluid power has in recent years drastically altered the concepts of materials handling and machine control, especially in the areas of aerospace, agriculture, and construction.

The study of fluid power involves history, power input, controls, conductors, applications, testing, and service. Equipment need not be elaborate or expensive. Most shops contain sufficient equipment for practical applications. Fluid power can be correlated with other subject areas such as drafting, machine shop, electricity, or physics. Many books and publications are available to the student and teacher. Examples of fluid power applications are readily accessible for study.

Student activity is important for stimulating interest and knowledge. Student activities could include disassembly and assembly of equipment, circuit construction, hydraulic control applications, experimentation, machine tool cutaways, and group projects. In a technical industrial world which relies heavily on the applications of fluid power, every opportunity to study this technical aspect should be offered. The student should view fluid power in the relationship of design, manufacture, application, and service.

3592

3293

BASICS OF FLUID POWER

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Definition of fluid power: 1. Hydraulics 2. Pneumatics 3. Fluidics	The student will know the difference between the three types of fluid power.
Write a short paragraph about a number of the scientists and inventors.		The fluid power field of industry is not a new field but one that has recently made its impact in our industries.
Gather pictures that emphasize the use of fluid power applications.	Future potential of fluid power.	Have an awareness of the future of the fluid power industries.
	Applications and limitations: 1. Industrial a. Production machines b. Material handling c. Construction and earth moving d. Agriculture 2. Aerospace a. Missiles and rockets b. Aircraft	The many applications of fluid power today.
Investigate such items as jacks, hoists, and presses. Become familiar with the basic laws, theorems, and principles of hydraulics.	Fundamentals of fluid power hydraulics: 1. Fluids at rest 2. Fluids in motion 3. Pascal's Law 4. Bournelli's Law 5. Pressure 6. Force 7. Work 8. Power	A better knowledge of the basic formulas for hydraulics which include electric horsepower, torque, speed, displacement, volume, force, work, and velocity.
	Mobile applications: 1. Dump trucks (braking, steering, lifting) 2. Forklifts (pushing, pulling, lifting) 3. Bulldozers (steering, lifting, pushing) 4. Cranes (lifting) 5. Back hoe (pumping, pulling, pushing) 6. Farm tractors (lifting, pushing, pumping) 7. Front-end loaders (lifting, pushing)	The many and varied uses of power.
	Industrial applications: 1. Presses (pushing) 2. Machine tools (pumping, motoring, pushing, pulling) 3. Transfer machines 4. Rolling mills (pumping, motoring, pressing, tensioning) 5. Extrusion presses 6. Vibrators (pushing, pulling, rotation)	

3593

BASICS OF FLUID POWER

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Have reference books available in the industrial arts library or in the main library within the school.	
Subscribe to related magazines such as *Hydraulics and Pneumatics* for good, practical applications.	*Hydraulics and Pneumatics* Magazine. Published monthly. $12.00 per year. Available from Industrial Publishing Company, 812 Huron Road, Cleveland, Ohio 44115.
Have basic formula sheets made up in quantity for distribution to students. Hydraulic calculators are available from companies, in some cases at no charge.	
Provide hydraulic symbol sheets for circuit design. Be certain that both the Joint Industry Conference (J.I.C.) and the American Standards Association (A.S.A.) symbols are provided.	
Have basic formula sheets available for each student.	
Become familiar with as many local application examples of hydraulics as possible. A field trip will be very valuable in getting practical applications presented to the students.	
Discuss the importance fluid power plays in the operation of tools, machines, and various pieces of equipment. These applications are just some of the many ways in which hydraulics can be used and students should be able to add others to the list.	
Make a list of the applications of hydraulics the students have at home, on the farm, and in their immediate area.	

3594

BASICS OF FLUID POWER—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Marine applications: 1. Rudder pull motor (rotation) 2. Anchor hoist (motoring) 3. Cargo handling equipment (pushing, pulling) 4. Elevators (pushing, pulling, rotation, motoring, cushioning)	
	Aerospace applications: 1. Landing gear (pushing, pulling, shock) 2. Rudder controls (pushing, pulling) 3. Elevators and trim tabs (pushing, pulling) 4. Bomb bay controls (pushing, pulling) 5. Standby power supply (motoring, pumping) 6. Missile guidance system (motoring, pushing, pulling) 7. Missile launching equipment (pumping, motoring, pushing, pulling) 8. Missile fuel transfer (pumping, motoring)	
Become familiar with J.I.C. specifications and also A.S.A. specifications. This primarily involves circuit symbols which students should learn as early as possible for help in constructing basic circuitry. Later students will be able to develop more difficult circuits after gaining more experience.	Reservoir type circuits: 1. Integral 2. Dual purpose 3. Separate Reservoir design: 1. Volume 2. Location 3. Screens and filters 4. Size 5. Heat 6. Mounting	
Calculate a practical set of dimensions for various reservoir capacities.	Maintenance of hydraulic fluid type circuits: 1. Oil petroleum base 2. Fire resistant 3. Glycol 4. Phosphate esthers 5. Water and oil emulsion	Know the nature of fluids and the advantages and disadvantages of the various fluids. Also know characteristics of the oils. Safe handling precautions.
Draw basic circuits from problem sheets presented by the instructor. These will be basic circuits written in paragraph form from which the students will develop graphic circuits using symbols recognized by the J.I.C. and A.S.A. organizations.	Chemical and physical characteristics: 1. Viscosity 2. Pourpoint 3. Flashpoint 4. Demulsibility 5. Stability 6. Rust inhibitors	

3595

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
A handy pocket guide that gives the new A.S.A. standard fluid power symbols is provided by the Parker Hannifin Corporation.	Parker Hannifin Corporation, 500 South Wolf Road, Des Plaines, Illinois 60016
When involving the students in circuit design problems, it is a good practice to have the students work in a drafting room setting if possible. Be certain to have an adequate number of circuit problems available for students to work. A good source for prospective problems is the Bellows-Valvair Company. They have a *Field Engineers' Hydraulic Circuit Selector Handbook* that is very helpful.	*Field Engineers' Hydraulic Circuit Selector Handbook*. Rev. ed. 1965. Available from Bellows-Valvair Company, Division of International Basic Economy Corporation, 200 West Exchange Street, Akron, Ohio 44309.

3596

BASICS OF FLUID POWER—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Know how to buy and properly prescribe oils for a particular system. Service filters and strainers. Name and explain the basic concepts of hydraulic filtration. Know the proper filter locations within a fluid circuit. Give the advantages and disadvantages of the locations. List the possible sources of hydraulic system contaminants.	Fluid cleaning devices: 1. Intake screen 2. Magnetic plug 3. Filters a. Full flow b. Bypass c. Screen d. Fuller's earth e. Paper f. Fabrics Filter selection: 1. Rating a. Micron size b. Gallons per minute 2. Maintenance 3. Compatability 4. Location	Know the importance of proper filtration within a hydraulic system.
Identify the types of pumps and know the various characteristics of each. Have the ability to use graphic symbols for pumps in circuit design. Be able to identify some of the common problems encountered with hydraulic pumps within various systems. Disassemble and assemble the various pumps.	Pump classification: 1. Constant displacement 2. Variable displacement Pump types: 1. Centrifugal 2. Gear 3. Vane a. Balanced b. Unbalanced 4. Piston a. Radial b. Axial 5. Series 6. Pressure compensated 7. Parallel	The care and maintenance of hydraulic pumps. A pump is like a heart; without it, the system will not function.
Disassemble and assemble hydraulic cylinders. Use the proper symbols when diagraming actuators within a circuit. Properly mount the various types of cylinders. Change seals in cylinders. Calculate actuator force. Calculate cylinder ratings and sizes to develop a given force.	Actuators: 1. Piston cylinder a. Single acting b. Double acting c. Fixed rod end d. Tandem 2. Telescoping 3. Mounting	The many applications of actuators within a system. The many types of actuators available from suppliers.

FOREWORD

Industrial arts students live in a dynamic, ever-changing society. Preparations for their future place multitudinous demands upon education. The numerous changes occurring in our accelerating technology levy demands upon industrial arts teachers. It is simply not enough to train the students to live in a changing world; it is also necessary to transmit to the student a sense of values and the worth of participation in the technological process which is such a vital part of our society. Industrial arts, as an integral part of education, must provide opportunities for individual fulfillment, individual achievement, and individual freedom.

The success of the industrial arts program in providing these opportunities depends upon several factors, of which the course content and the approaches to teaching are vital aspects. Two main purposes of this guide are, therefore, to offer newer content and to suggest several newer approaches to teaching.

Assistant Commissioner of Education,
Division of Instruction

3630

ACKNOWLEDGMENT

Grateful appreciation is extended to Mr. Harold E. PaDelford for his help in coordinating materials for the resource guides on "Visual Communication Technology," "Mechanical and Electrical Technology," and "Materials Technology."

INDUSTRIAL ARTS CURRICULUM DEVELOPMENT IN MINNESOTA

The State Department of Education has maintained a continuing effort to keep teachers and administrators informed of phenomenal technological and educational advances. The most recent revision of Curriculum Bulletin No. 13, *A Guide for Instruction in Industrial Arts,* was made in 1962.

In the spring of 1967, an effort was initiated to bring industrial arts teachers the latest methods of instruction. Industrial arts education has been under constant evaluation and it was the intent of the steering committee appointed at the time to enlarge upon and bring up to date the content of Curriculum Bulletin No. 13. The committee chose the content, instructional design, and methods used in this guide. Writers were engaged to specifically challenge industrial arts teachers to gain knowledge of and to use the newer approaches to instruction.

The guide has been divided into three issues. These issues are (1) "Visual Communication Technology" with units in drafting and graphic arts, (2) "Mechanical and Electrical Technology" with units in electricity, electronics, and power, and (3) "Materials Technology" with units in woods, metals, and plastics.

PURPOSE AND VALUE OF THIS GUIDE

This guide has been organized for efficient utilization of several newer methodological approaches to teaching. The primary purpose of the guide is to so arrange the course content that the instructor may more easily adapt his teaching to these new approaches. The order in which material is presented places the psychomotor, cognitive, and affective domains of learning on a continuum with implementation procedures. The psychomotor skills (column one) that students should be able to perform include operations, jobs, problems, and activities. Cognitive understandings (column two) include basic principles, concepts, generalizations, and guidance information. Affective values (column three) involve awareness, organization, attitudes, and appreciation. Implementation suggestions (column four) cover teaching methods and techniques, resources, and expedients. Column four provides the cohesive force for columns one, two, and three. Instructor's notes (column five) provides a place for the instructor to keep his plans and thoughts regarding the units.

This guide is not intended to be a "cook-book" approach. It is intended to serve as a guide and resource for effective teaching. The needs of each particular teaching situation should determine the material that will be used.

3634
3635

METHODOLOGICAL APPROACHES TO TEACHING INDUSTRIAL ARTS

Methodology has sustained the teaching of industrial arts as a subject in general education with several approaches carrying the burden of instruction. However, industry and technology have undergone vast changes in recent years. In an attempt to interpret industry more realistically, several new approaches have been promulgated. Emphasis has been placed on industrial and technological functions and practices. In order to make learning more meaningful, the committee wishes to encourage the use of up-to-date methods of instruction. Complete materials are not available on all approaches, but information is available from the American Industrial Arts Association, the American Vocational Association, and from current publications. Several methodological approaches, each with a short explanation, are presented in the following list.

Mass Production. This is a group undertaking with the intent of understanding industry through the production of a product. Mass production would encompass personnel organization, purchasing, production processes, accounting, and sales. This usually involves the entire class and can be used at any grade level and subject area.

Anthropological Approach. The anthropological approach involves the historical relationships of tools, processes, and products. It can be used as an introduction to a unit of study or as the unit of study. It gives an insight into the massive technologies of the modern industrial complex.

Construction Industry. This approach is a group undertaking to discover the problems in the design and construction of a project. This method would encompass personnel organization, material testing, fastening, and material processing. Students can be grouped into any size of unit according to the complexity of the project.

Unit Method. The unit method employs a limited set of educational experiences. Emphasis is placed on individual achievement through the student's own initiative. Emphasis is also placed on vicarious learning — a sharing of experiences with other students through reports, demonstrations, and other methods of communication. The unit method allows the student to be creative and unique.

Line Production. The line production technique usually consists of a short production run of a product. The production line, jigs and fixtures, and product are set up with student activity. It is usually a short unit used to teach one aspect of mass production.

Individual Project. The individual project emphasizes the engineering approach and craftsmanship. Experiences are not usually shared with other students. The individual project offers the student an opportunity to see through to completion something of his own making.

Individual Study. Some scheduling systems permit an individual approach to study. Open laboratories, libraries, and other media enable the student to have freedom in his pursuit of knowledge.

Conceptual Approach. To gain an understanding of the technology in industry, concepts are taught with each concept enforcing the next one. This approach relies heavily on the cognitive behavioral patterns. Concepts learned are usually reinforced with some type of followup activity.

Research and Experimentation. The research and experimentation approach enables the student to discover and develop technological advances. The process is much used in industry. Materials testing and new product development are techniques used in the schools. The students usually share their experiences with classmates. Access to source materials is a necessity.

Services. The service industry is large and growing. Students gain an understanding of problems involved in the maintaining and repairing of all industrial products. With the increase of mechanized products in the home and on the farm, every individual needs an understanding of the service industry.

Interdepartmental Approach. Involvement of two or more laboratory activities can be used to advantage in enhancing motivation and improving learning situations. This approach enables students to study and construct a more complex problem or project.

3636

MATERIALS TECHNOLOGY

The materials in this guide have been divided into the three areas of woods, metals, and plastics technology. Iver Johnson, Associate Professor at Mankato State College, prepared the section on woods technology. The section on metals technology was written by Daniel Beal, Instructor, Roseville Public Schools. Plastics technology was prepared by Dr. Harlan Scherer, Professor at Bemidji State College. The three areas have been grouped in this guide because of similarity and for convenience.

This guide has been arranged so that the instructor, in planning for the teaching of industrial arts, can draw objectives from the first three columns. These objectives can then be achieved by using the suggestions in column four. Some of the implementation suggestions will be considered as startling and provocative procedures. This was intended as the steering committee sought procedures that were forceful, useful, and stimulating. It was further intended that this guide serve as an aid to improve the methodology and content of industrial arts. Methodology has, through the years, sustained industrial arts. Innovations in both content and methodology are offered.

No definite order has been established for the presentation of material. It is more important that each instructor select the particular material which is appropriate for a given teaching situation. The instructor is encouraged to use as much of the appropriate material as possible. Material sufficient for several years of work has been provided. It is hoped that this guide will help the instructor to teach more effectively.

INTRODUCTION

The need for providing students with tangible and meaningful information concerning woods technology is apparent. A program dealing with the technology of wood, issued as a challenge and of vital interest to the individual, is necessary. Woods technology topics worthy of exploration are the main concern in this resource guide.

Vast strides and improved technology in recent years have provided a good deal of new and vital information in such areas as lamination, veneering, adhesives, and finishing. Developments such as infra-red, laser, and electronic gluing should have meaning for the student. It is important that teachers convey this type of information to students. Conservation, a topic which too often is given little more than lip service, needs new emphasis. Innovations in construction, residential or otherwise, continually develop due to the ever-increasing demands of modern society. Students should be aware of what is happening in the field of construction. It is true that most teachers have had little formal course work in this area; however, if teachers teach only that which they have been taught, they are outdated before they start. The woods industry today is faced with modernization and automation. The teacher must relate these changes to those who will be directly or indirectly involved at some not-too-distant date.

The success of the woods technology program could well depend upon the teacher's ability to attract students with experiences in the basic sciences. The chemical industry today is growing at a rate three times the average of all other industry. It has been reliably estimated that sixty percent of the harvested tree is subject to chemical processing. Through chemistry, wood has been combined with such materials as glass, plastics, and metals.

It is the teacher's responsibility to make a concerted effort to train students in the method of inquiry in order that they may become accustomed to using the tools of knowledge and that they may come to realize today's facts are not ultimate truths. Without question, today's technology is tomorrow's history.

3640

WOODS AND WOOD TECHNOLOGY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify and compare different species of wood for beauty, usefulness, and consumer application. Make an intelligent choice according to the variety of woods available.	The physical structure of a tree. How a tree grows. The botanical division of woods. Structure, identification, and common species of softwoods (conifers). Structure, identification, and common species of hardwood (deciduous). The nature of grain in wood (open and closed).	An appreciation for the beauty inherent in the grain, color, and texture of various kinds of woods.
	Past and present technology concerning lumbering. Lumber production: 1. Past 2. Industrial applications today 3. Automation Utilization to include plain and quarter sawing techniques. Effect of moisture in lumber: 1. Relationship to value 2. Detrimental possibilities 3. Air-dried lumber and allowable moisture 4. Kiln-dried lumber and allowable moisture 5. Lumber storage procedures	An awareness of the technical advances in lumbering and the effect of these advances on the forest. A basic knowledge of lumbering and lumber production as related to research of forest use and the application to community and industrial relationships.
Use proper terminology in reference to lumber. Select materials intelligently.	Lumber terminology and abbreviations. Defects and surface characteristics of lumber. Boards, planks, and timbers. Common softwood grades: 1. Criteria for grading 2. Consumer recommendations Common hardwood grades: 1. Criteria for grading 2. Consumer recommendations	A basic concept concerning differences in lumber and why costs can vary so greatly.
Compute board feet. Prepare an order for lumber indicating proper material specifications.	Computations of board feet and definition of same. Measurement of lumber. Sale of hardwoods. Sale of softwoods. Considerations when ordering lumber, such as: 1. Quantity 2. Size 3. Grade 4. Species 5. Product seasoning 6. Surface 7. Rule

3641

WOODS AND WOOD TECHNOLOGY

IMPLEMENTATION SUGGESTIONS

Introduce forestry in the industrial arts curriculum.

Microscopic comparisons.

Use research and experimentation approach related to the study and understanding of wood. Note such things as effects of temperature, moisture, and species.

Wood sample board complete with comparative technical information on reverse of each sample.

Wood samples in milled state, samples in bark state, and samples of leaf and needle structure.

Class development of a scale model lumber mill. Extent of this project limited only by time and imagination. Students do research and reports relevant to problem.

Samples of plain and quartered wood.

Experiment with wet thin samples to show comparative stability.

Experiment with weight samples prior to and after drying in an oven to determine moisture content.

Class tour of papermill or lumbermill.

Demonstration of the porous nature of woods by ability to absorb stains.

Display a variety of graded lumber samples to compare grades, defects, and surface differences.

Field trip to a lumber company.

Bulletin board of abbreviations and lumber terminology.

Variety of ungraded samples for student grading activity.

Have a local lumber company manager or purchasing agent discuss the role of the lumber company in relation to the community and the consumer.

Set up sales desk where pupils prepare specification sheets; other students can fill the order.

Problem involving board foot computation.

WOODS AND WOOD TECHNOLOGY—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Conserve our natural and human resources.	Conservation: 1. Philosophy and practices in modern forestry 2. Aesthetic elements 3. Recreational considerations	An awareness of the agencies of government that manage our forests and range lands. An awareness of the need for all persons to be concerned with our natural and human resources.
Make proper inquiries concerning the various fields affiliated with woods and wood technology.	Occupation opportunities such as: 1. Research and development 2. Production 3. Sales 4. Wood technology 5. Wood utilization 6. Product engineering 7. Merchandising 8. Construction 9. Packaging 10. Furniture 11. Manufacturing 12. Paper and pulp technology 13. Forestry	A more tangible look at occupations. The ability to make occupational comparisons and to direct energies concerning future employment possibilities.
Identify a variety of wood products. Select and specify wood products for a variety of applications. Experiment with materials and make comparative evaluations.	Related wood utilization consisting of the use of 60% of the harvested tree in chemical applications such as distilling, extraction, finishing, gluing, drying, plasticizing, preserving, dissolving, and fireproofing. The variety of wood products available, including particleboard, hardboard, impregnated wood, paper laminations, insulation, plastic laminates, and many building applications.	A favorable attitude toward the role that wood assumes in the lives of all persons. An awareness of the need for educational activity in sciences and mathematics relative to better and more complete utilization of wood. Research and exploration techniques.
Recognize the major classifications of plywood. Purchase plywood according to the situation dictated by intended use. Effectively conceal edge grain in plywood, using a variety of tools and treatment techniques.	Differences in classification as related to interior, exterior, and marine grades of plywood. Knowledge of fabrication techniques relating to plywood core, lumber core, and particle core and the relationship of each to adhesives used in manufacture. Comparative factors involved in plywood pricing. Surface characteristics of plywood showing rotary, flat, and quarter sliced veneers. How hardwood and softwood plywoods are graded, showing criteria and use factors.	An awareness of the amount of available information on plywood that can be helpful to the prudent consumer. An awareness of the aesthetic and emotional reactions that a selection of plywood samples can produce. Acute awareness of material differentiation. Confidence in ability to select and work with plywood. Avocational interests.
Specify plywood.	How plywood is manufactured. Specifications relative to consumer purchasing and use. Plywood fabrication techniques to include edge treatment.	

3643

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Have conservation officer discuss conservation practices today, also history and responsibilities of the conservation department.	
Discussion of occupations by qualified person or persons. Student reports concerning relevant occupations.	
This is an ideal education situation for research, experimentation, and product development problems. Use of team teaching which utilizes science personnel and facilities if available. Bulletin board showing a variety of products resulting from wood chemistry. Experiment with polyethylene-gylcol treatment of wood.	
Field trip to a source containing a variety of sheet size display sheets of beautiful and lesser species of woods. Broad selection of plywood samples. Bulletin board showing plywood construction. Discuss design criteria for using plywood. Comparative experiments with samples of differing plywoods. Discuss plywood use in the home.	

3644

DESIGN AND PRODUCT DEVELOPMENT

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Relationship of design to craftsmanship.	An appreciation of the need for skill and craftsmanship in following designs.
Develop planning and organizational proficiency.	The design analysis method of problem solving: 1. Statement of problem 2. Analysis and research 3. Possible solutions 4. Experimentation 5. Final solution	An awareness of the need for careful and directed activity in design problems. Use of design as a means of communication with other humans.
Develop material selection proficiency. Develop tool and machine selection proficiency.	Basic concepts relating to functional, material, and visual consideration concerning product design.	Value of foresight in the use of woods and related materials.
Develop a degree of design proficiency.	Design techniques to include partial, redesign, and total design.	A basic understanding of the role of the designer. Self-understandings. Self-criticisms (positive).
Apply the golden mean rectangle to problem situations.	Use of the golden mean rectangle.	An awareness of how the golden mean rectangle has been applied in daily life.
Apply design elements to the partial or total development of a product.	The relationship of balance, proportion, harmony, texture, and form to the product involved.	An appreciation for the beauty which design can bring into our daily lives.
	Occupations concerned with designing in the woods industry.	Awareness of occupational opportunities in design.

3645

DESIGN AND PRODUCT DEVELOPMENT

IMPLEMENTATION SUGGESTIONS

Class analysis of variety of products concerning design.

Individual students redesign a consumer product.

Small group development of a teacher assigned problem.

Total group development of a given problem situation.

Small group interaction to problems dealing with partial design and redesign techniques.

Individual problem situations based upon the design analysis method.

Class discussion concerning design of the past, also student reports dealing with a similar topic.

PLANS, PROCEDURES, MATERIALS, AND SPECIFICATIONS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Apply drafting and design techniques and applications. Develop plans.	The concept of planning.	An appreciation of the importance of having completely developed a working drawing.
Write specifications.	How to write product specifications.	
Read and interpret plans.	The nature of plans and blueprints.	
Develop ability to relate a variety of factors into one composite plan. Solve problems as the need dictates.	The need to coordinate kind of wood, design, basic tool and machine processes, and safety into the development of a workable plan of procedure for a given problem.	The overall perspective of what can be involved in planning for the construction of a usable object.
Develop a materials list.	A materials listing.	
Determine product cost.	Cost analysis and estimating factors.	Consumer appreciation of material values.
Innovate, invent, and design jigs and fixtures.	Mass production planning: 1. Jigs and fixtures 2. Quantity purchasing 3. Job analysis 4. Product development 5. Manufacture	Appreciation for orderly procedures in industry. Awareness of the scope of industrial readiness to produce a product.
	The planning of a product.	Foresight in the operations concerned with production of a product.

3646
3647

PLANS, PROCEDURES, MATERIALS, AND SPECIFICATIONS

IMPLEMENTATION SUGGESTIONS

General class discussion of planning considerations.

Problem solving pertaining to individual or group product problems.

Individually developed plan of procedure for assigned problem.

Individual or group development of materials listing and cost estimation for assigned problems.

Individuals develop plans, plan of procedure, materials list, and cost estimate for a given project.

Set up a corporation to sell stocks and to design, manufacture, advertise, and retail a mass-produced group product or products.

ADHESIVES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The history and development of adhesives.	The roles adhesives play in our daily living.
	The composition of adhesives.	Consumer awareness.
Perform adhesion tests. Use proper terminology.	The nature of adhesion and the terminology pertaining to adhesion.	A tangible awareness of the relationship of adhesion to adherend.
Prepare a variety of adhesives for use.	The classification and use of adhesives, both natural and synthetic.	An interest in the many different adhesives available to the consumer.
Make an intelligent consumer purchase regarding adhesives.	Selection criteria for acquisition of the proper adhesive for a given problem including cost factors.	Confidence in ability to make decisions concerning desirability of a variety of adhesives available for a given situation.
	Joint design for adhesive applications.	Awareness of the vast number of possibilities of joint structure available to the craftsman.
	Bonding applications which include plywood, laminated timbers, panels, metals to wood, plastics to wood, and electronic.	Knowledge concerning scope of applications for adhesives.
Transfer knowledge of industrial processes for own purposes.	Industrial processes using adhesives.	Awareness of adhesives industry.
Apply the mechanics of adhesion to a variety of materials.	The nature of recent developments in the adhesives industry and insight into the need for new adhesives for new technology.	Awareness of high frequency gluing, adhesive tape, plastic laminates, and other recent adhesive applications.

3649

ADHESIVES

IMPLEMENTATION SUGGESTIONS

Wide range of adhesive samples available to students.

Small group problems dealing with discovery of adhesive characteristics, using a wide variety of materials.

Individual research concerning one or more adhesives.

Utilize both science and industrial arts facilities.

Field trip to any local merchant who manufactures or displays a variety of adhesives.

Have representative from local construction industry discuss how adhesives are used in building industry.

Student reports on adhesives.

Discuss the comparative strengths of adhesives, using a variety of materials.

ABRASIVES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The nature and composition of abrasives.	Appreciation for the many products provided for consumer use.
Use comparative testing procedures and evaluation of same.	The types of abrasives in use today, both natural and artificial.	Awareness that abrasives are not just "sandpaper," but a product of research and technology.
	The basic manufacturing techniques used in creating electric furnace abrasives. Knowledge concerning modern abrasive technology.	An interest in the abrasives industry.
	How industry produces abrasives for industrial and consumer use.	Industrial awareness.
Select abrasives intelligently.	Technical information about abrasives, including: 1. Grading grains 2. Grit size 3. Types of backings 4. Adhesives used 5. Flexural nature 6. Grain spacing 7. Wet application 8. Color codes	Intelligent consumer selection and use of abrasives.
Write specifications for abrasives desired.	Specifications concerning abrasives.	Awareness of product differences.
	Why one abrasive will cost more than another.	Consumer awareness of cost factors.
Prepare a wood surface for finishing purposes.	The forms abrasives are manufactured in for given production problems.	
Employ proper sanding techniques. Select suitable sanding devices or machine for problem at hand.	Proper application of a selected abrasive to a given problem or project.	Confidence in ability to approach abrasive phase of a problem.
Properly apply abrasive theory to a given problem.	The theory of abrasive action.	

0238 3651

ABRASIVES

IMPLEMENTATION SUGGESTIONS

Bulletin board display on the manufacture, uses, and types of abrasives.

Students experiment to check cutting characteristics of the many abrasives available. Use a variety of substances, including wet-use abrasives.

Show variety of samples and applications.

Transparencies to show industrial manufacture of abrasive products.

Field trip to manufacturer of abrasive products.

HARDWARE AND FASTENERS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	How industry produces the vast variety of hardware products, including: nails, tacks, staples, screws, hollow wall fasteners, joint fasteners, t-nuts, hanger bolts, repair plates, and cabinet hardware.	An appreciation for industrial technology related to the manufacture of hardware. An interest in manufacturing. An awareness of hardware products available to the consumer.
Develop tool and machine proficiency. Utilize application techniques and tricks.	Procedures for the application of hardware. The function of tools and machines related to the application of hardware.	Hardware selection criteria. Awareness of tools and machines used by the trades and industry to fabricate a variety of products. Awareness of problems involved in the selection and application of a given piece of hardware for a given problem.
	Safe working procedures. The scope of hardware products available to the consumer.	Desirable safety practices. The initiative to challenge a problem situation.
Write specifications relative to hardware.	Hardware specification, including size, type, style, design, finish, and materials.	Further awareness of the need for more than surface knowledge concerning consumer products.
Determine costs.	Cost factors related to hardware manufacture and sale.	Purchasing awareness.
	The nature of occupations related to hardware.	Awareness of occupational preparation, activity, and responsibility.

HARDWARE AND FASTENERS

IMPLEMENTATION SUGGESTIONS

Display of hardware samples.

Students experiment to compare characteristics of a variety of fasteners.

Show application to student designed project or problem.

Individual and/or group reports concerning hardware areas such as history, applications, new products, and occupations.

Library literature available concerning occupations.

JOINERY AND ASSEMBLY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Construction principles related to fabrication of woodworking products.	An ability to choose wisely facets of fabrication relevant to the problem situation.
Acquire tool and machine skills and knowledge.	Joint design and strengthening devices.	Awareness of joinery possibilities.
Apply practical knowledge to situations involving clamping devices, joint construction, adhesive preparation, and laminate application.	Factors related to the selection, application, and curing of adhesives. The nature of clamping devices and their proper selection and application.	An awareness of the need for planning and order in the fabrication of a product.
	Industrial joinery, bonding, and lamination practices, including electronic and blanket curing of adhesive.	A working interest in industry as pertaining to an individual or group problem situation.
Properly care for, clean, and maintain tools and devices related to joinery and assembly activities.	Materials, tools, and technology for lamination, bending, and veneering.	An awareness of the design possibilities that lamination, bending, and veneering can lend to a product.
	The nature and function of plastic laminates.	An awareness of the role that plastic laminates have in our way of living.
Design forms for lamination problem.	Nature of jigs and fixtures for lamination problems.	Need for creative thought and expression. Safety awareness.

JOINERY AND ASSEMBLY

IMPLEMENTATION SUGGESTIONS

Demonstrations dealing with joint construction, lamination, bending, veneering, and plastic laminate application.

Exhibits and/or samples of joints, lamination, bending, veneering, and plastic laminates.

Discuss and demonstrate clamping and bending devices.

Research and experimentation dealing with laminates, adhesives, jigs, and fixtures.

Construction of jigs and fixtures.

Video tape replay of difficult joinery principle (dovetailing).

HAND AND PORTABLE TOOLS AND MACHINES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Historical development of tools and machines and their contribution to our present society.	Appreciation for the design and function of present day industrial apparatus.
	The physical and mechanical nature of hand, portable, and machine tools.	An awareness of possibilities and knowledge that tools can provide in a problem-solving situation.
Demonstrate a degree of proficiency in the use of tools and machines, including: 1. Setup procedures 2. Maintenance 3. Safe operational practices 4. Lubrication practices 5. Sharpening 6. Adjustment 7. Product fabrication 8. Tool and accessory identification 9. Inspection	The function and operation of tools and machines, including: 1. Drive mechanisms 2. Accessories 3. Cutting sequence 4. Jigs and fixtures 5. Safety consciousness 6. Theory of cutting tools 7. Measurement and inspection devices	Self-discipline. Initiative. Cooperative attitudes. Safe attitudes and practices. Interest in achievement. Awareness of the need for orderly performance. Awareness of the need for proper drawing and design in product to be built. Knowledge of operation of tools and machines. Avocational interests.
	Industrial practices and procedures, both historical and contemporary.	Interest in industry. Production techniques.
Specify correctly a desired tool or tools. Select, care for, and use tools and machines wisely.	Criteria for selection and purchase of tools and machines for personal use.	An appreciation and respect for high quality tools properly maintained.

FURNITURE AND CABINETMAKING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	History and development of furniture and cabinetmaking.	An appreciation for the value placed on antique furniture.
Identify a variety of period styles of furniture.	Historical periods and furniture styles.	Awareness of the many talented artists and craftsmen responsible for beautiful furniture of the past. An appreciation for the craftsmanship of the past and the continuing need for craftsmanship today.
Plan and design a product for actual construction.	Principles of selecting and designing furniture and cabinets.	Design and planning appreciations.
Discuss facets of furniture and cabinets with trade craftsmen.	Furniture and cabinetmaking terminology.	An ability to relate or communicate with people in furniture and cabinetmaking roles.
Identify, select, and use woods, materials, tools, and machines in project construction.	Woods, materials, tools, and machines used in fabrication of furniture and cabinets.	An ability to intelligently determine which product, tool, or machine best fits a specific need.
Engage in actual construction of a project using one or more types of furniture or cabinet construction.	Types of furniture and cabinet construction.	Ability to select the process that best fits the job to be done. Knowledge of furniture construction. Initiative and resourcefulness in meeting practical situations.
Totally fabricate an article employing any or all of specific cabinet and furniture details mentioned.	Specific details of furniture and cabinet construction including panel construction, layout, standard sizes, edge treatment of plywood, fastening tops, leg and shelf installation, drawer construction and guiding, doors and application, hardware and trim, and built-in detailing.	Self-discipline. Cooperative attitudes. Safe practices. An interest in achievement. Avocational interests.
More wisely determine occupation of interest.	The nature of occupations engaged in the furniture and cabinetmaking trades.	Awareness of occupational opportunities.
Adapt industrial techniques to school shop applications.	Industrial processes and equipment in use today.	An interest in industry and industrial processes and materials.

3661

FURNITURE AND CABINETMAKING

IMPLEMENTATION SUGGESTIONS

Bulletin board depicting historical development of furniture and cabinetmaking and/or bulletin board dealing with furniture styles.

Student development of a booklet classifying furniture styles and facets of each style.

Implement design analysis method.

Individual students develop and construct a major piece of furniture or cabinetry, employing as many experiences as possible.

Class can mass-produce a less-complex piece of furniture.

Display samples of furniture and cabinet construction.

UPHOLSTERY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Recognize and classify varying pieces of furniture.	Upholstery classifications and construction principles to include pad seat, tight spring seat, and over-stuffed applications.	An appreciation for the comparative features of differing construction relative to cost and quality.
Identify and classify tools and materials.	The nature of upholstery tools, materials, and frames.	Concepts concerning the intelligent use of tools and materials.
Discuss upholstery, using trade terminology.	Upholstery terminology.	
Perform tasks relative to reupholstery work. Build upholstered furniture.	Upholstery techniques and procedures.	Skills. An interest in the upholstery industry. Cooperative attitude. Safe practices. An interest in achievement. Awareness of the need for careful, organized planning.
	The history and manufacture of upholstery materials.	An appreciation for the value placed on antique furniture.
Repair furniture. Restyle furniture. Make slipcovers.	Concepts and applications for repairing, restyling, and slipcovers.	Construction and value of some older furniture. Cost comparisons related to new furniture versus repair of old.
Use modern approaches, tools, and materials in upholstery work.	The nature of modern materials and methods used in upholstery.	An awareness of new materials, tools, fabrics, and methods used in the fabrication of furniture today.

3665

UPHOLSTERY

IMPLEMENTATION SUGGESTIONS

Students study styles and construction of upholstered furniture.

Mockup showing construction features.

Display of upholstery tools and materials.

Bulletin board relating terminology to use or function.

Students build small upholstered item, using pad seat construction.

Students plan and build larger upholstered item, using advanced upholstery techniques and modern materials.

Field trip to industry where upholstered furniture is made.

Students repair, restyle, slipcover, or reupholster a piece of furniture.

Class mass-produces some small upholstery item.

Upholstery materials sample kits.

PATTERNMAKING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The theory of the foundry and how patternmaking is basic to the foundry process. Patternmaking and mold building as related to other industrial functions.	An awareness of the relationship of one industrial area (wood) to another (such as metals or plastics).
Discuss foundry and patternmaking.	Patternmaking terminology.	
Identify and use patternmaking tools and equipment.	Tools, materials, equipment, and supplies used in patternmaking.	Awareness of new tools, equipment, and materials designed for use in a specific area of industry.
Design, plan, and construct patterns and molds for use in related areas.	Procedure used in the fabrication of patterns.	Craftsmanship. Another facet of industry. Safety habits and attitudes. Awareness of patternmaking procedures.
	Patternmaking as an occupation.	An appreciation for patternmaking as an occupation.

PATTERNMAKING

IMPLEMENTATION SUGGESTIONS

Bulletin board display of foundry-patternmaking relationship.

Sample patterns showing all patternmaking techniques.

Students build patterns and molds for later use in foundry and plastics applications.

Display of tools, materials, and equipment used in patternmaking.

Video tape interview with a patternmaker.

Transparencies of patternmaking processes.

RESIDENTIAL CONSTRUCTION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Select a vacant lot in the city suitable for residential development.	Considerations relevant to acquisition of property: 1. Neighborhood transportation such as city bus 2. Proximity to schools, churches, and stores	Need for proper evaluation of all factors prior to purchase of property. Comparative cost factors concerning pricing of residential property.
Examine and compare different soils for home and garden applications.	Soil conditions.	Basis for comparison with other lesser or better soil conditions.
	Adjacent property value.	
	Zoning restriction: 1. Residential 2. Commercial 3. Industrial	Familiarity with the variety of zoning situations present in total city development.
	Traffic considerations relevant to property.	
Demonstrate a degree of skill in the use of the transit. Develop a plot plan showing contour factors.	Lot shapes and such factors as elevations and angles.	Need and appreciation of accuracy in determining elevations for later cost factors.
Work with budgets, styles, and tangible functional aspects of home selection.	Considerations relevant to residential design, including budget, style, and function.	A basis for future considerations involved in the actual acquisition of a home.
	Home financing.	Knowledge of a variety of fiscal factors to be considered in the selection and purchase of a home.
	The role of the lawyer and the need for legal advice when considering building a home.	An awareness of legal factors relevant tc acquisition of property and letting of bids.
	Basic legal terms related to acquisition and sale of property.	Familiarity with terminology concerning building restrictions, easements, deeds, title, search and opinions, warranty and quit claim deeds, liens, and surveys.
Work with building plans.	Building plans and specifications.	Interpretation of a set of architectural drawings, details, and specifications.
Draw up basic specifications for bidding purposes.	Procedures used to acquire competitive bids for total construction of a residence.	An awareness of the many different vocations responsible for the total development of a house.

RESIDENTIAL CONSTRUCTION

IMPLEMENTATION SUGGESTIONS

Students are to select a vacant lot in the city and totally research the given piece of property.

Students do soil tests in cooperation with science or agriculture departments.

Consult city zoning ordinances and regulations.

Group discussion pertinent to property involved.

Group work with transit to determine property contours.

Individual and group problems dealing with budget, styling, and functional aspects of planning.

Discussion with real estate agent, banker, or other loan agent relevant to mortgage factors.

Talk by lawyer on pertinent factors such as deeds, title opinions, and easements.

Problems in reading and interpreting house plans and details. Talk by architect on pertinent factors.

Review and evaluate bid specification forms.

Students draw up specifications and bid forms.

Group analysis of student designed specifications and bids.

RESIDENTIAL CONSTRUCTION—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Interpret plans relevant to electrical heating, cooling, and plumbing symbols.	The nature of electrical, plumbing, heating, and cooling systems.	Cooperative attitudes between building trades. Awareness of the work and planning required of the different building trades.
Use the transit. Set grade stakes. Determine building elevation with respect to adjacent buildings and surrounding terrain.	How a building is located on a given piece of property. The procedures used to stake out for excavation.	A real interest in building layout. Planning proficiency as the need for orderly performance is justified. Cooperative attitudes. Understandings of the problems involved when locating a building.
Process building components to scale. Utilize shop machines and tools.	Terminology, materials, and procedures used or related to the fabrication or placing of footings and foundation walls.	Knowledge of masonry and related materials used in basement construction.
Develop a degree of proficiency in the use and care of tools relevant to construction.	Tools for the construction industries—their functions, applications, utilization, and safety.	An awareness of the vast variety of general- and special-purpose tools and machines used by modern day craftsmen.
Identify and specify lumber for building purposes.	Lumber used for construction.	Awareness that a variety of approaches is available to the builder, depending on design and function.
Effectively discuss the development of a home in terms of the tradesman.	Terminology for the total residential development.	Vocabulary proficiency relative to building terminology and construction.
Select type of construction suitable to individual problem.	Differing types of construction, including: 1. Platform frame construction 2. Ballroom frame construction 3. Plank and beam construction	Awareness that a variety of approaches is available to the builder, depending on design and function. Understandings of the variety of building materials available.
Frame a house, developing a degree of skill in the use of all tools and machines related to the fabrication of a project of this scope. Read, interpret, and use building plans. Specify building materials for given building problems.	Floor framing, including: 1. Sill on foundation wall 2. Sill on piers 3. Beams and girders 4. Selection and placing of joists 5. Bridging 6. Framing opening in the floor 7. Notching and boring joists 8. Support for partitions 9. Floor overhang 10. Sub-flooring	Consumer awareness of construction materials to include comparative knowledge relating to cost, use, effectiveness, and suitability. An active interest in the construction industry and in the methods and procedures used in this industry. An awareness of and an appreciation for quality in craftsmanship.
	Exterior wall framing, including: 1. Stud selection, size and spacing 2. Framing openings 3. Header criteria 4. Gable and walls 5. Wall sheathing 6. Building paper or barrier	Self-reliance, self-discipline, and resourcefulness in problem situations. A new insight into the necessity for cooperative habits and attitudes required in group undertakings.

IMPLEMENTATION SUGGESTIONS

Electricians, plumbers, and climate-control persons discuss occupations and their individual role in residential construction.

Class field trips to home under construction.

Video tapes made on site, including interview, observations, or demonstrations of processes.

Students and instructor combine efforts in actually staking out a building on a vacant lot near school. (It is assumed that permission for use will be obtained.) Mathematics or agriculture instructor could serve as resource person dealing with basics of survey techniques.

For a group project, students start construction of a home to scale 1½″=1′0″. Layout of foundation on a sheet of plywood. Basement development optional.

Samples of various species and grades, complete with cost information.

Field trip to local lumber supplier.

Use of transparencies showing building components and component relationship.

Use of scale models to show components.

Use scale cutaway model to show construction principles.

Students can attempt different types of construction.

Field trip to homes under construction.

As suggested previously, a scale model home (scale 1½″= 1′ 0″) is thought to be an effective learning device. Many of the materials used by the carpenter can be simulated in the school shop. A mass production approach using jigs and fixtures will stimulate group activity and individual responsibility. Students can be challenged to design and develop solutions to a number of construction problems as the need dictates.

Individuals and small groups may choose to develop alternate methods for fabrication such as hip roof vs. gable, post and beam vs. platform, varied types of stair construction, varied exterior finishes, window styles, and roof materials.

RESIDENTIAL CONSTRUCTION—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Interior wall framing, including: 1. Bearing partitions 2. Nonbearing partitions 3. Openings for doors and built-ins 4. Backing 5. Stairways	Safety consciousness. An interest in personal and group achievement. Performance proficiency. Skills.
	Ceiling and roof framing, including: 1. Terminology 2. Types of roofs 3. Use of the framing square 4. Rafter layout 5. Ventilation 6. Collar beams 7. Trussed rafters 8. Flat roofs 9. Roof sheathing	
	Exterior finishing materials and application: 1. Window selection and placement 2. Door selection and placement 3. Siding and related materials 4. Cornice construction and materials 5. Roofing materials and application	
	Comparative information relating to insulation — installation, effectiveness, and types available.	
	The function of a vapor barrier.	
	Interior finishing materials: 1. Drywall 2. Plaster 3. Paneling 4. Masonry applications 5. Plastics and glass 6. Trim and moldings 7. Wood flooring materials 8. Masonry flooring materials 9. Resilient flooring materials 10. Plastic laminates	
	The basics of concrete slab construction with consideration for: 1. Independent slabs and walls 2. Vapor barriers and insulation 3. Heating and plumbing 4. Floor construction	

3673

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Field trips to construction sites in varying stages of completion.	
Class discussion with tradesmen.	
Instructor-developed transparencies for presentation on rafter framing.	
Bulletin boards on rafters, building components, and window and door styles.	

3674

RESIDENTIAL CONSTRUCTION—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Develop jigs and fixtures for prefab construction.	The prefabricated home: 1. History 2. 20th century prefab 3. Unicom construction	
	The basics of modular design and the advantages and disadvantages.	Understandings related to the manufacture and flexibility of modular design and construction.
	Current innovative thoughts and procedures related to construction industry.	Awareness of the need for continued educational activity as relates to individual success.

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Students can prefabricate components to be used with scale model house.	
Student experimentation with techniques used in modular construction.	
Teacher should always be aware of new developments in the field. It is desirable for teacher to have name on industry mailing list.	

INDUSTRIAL PRODUCTION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Develop basic skills in the use of tools, machines, and materials.	Mass production concepts, including: 1. Historical development 2. Major facets 3. Advantages 4. Disadvantages 5. Terminology	An ability to interpret industrial materials. An awareness of methods of production.
Apply knowledge learned from association with materials, processes, and products of industry.	Corporation structure dealing with: 1. Corporation formation 2. Corporation operation 3. Business organization 4. Departmental breakdown a. Board b. Sales c. Accounting d. Production e. Research and development f. Advertising g. Legal-stock sale	Consideration for industrial life and the role of industry in our society. Problem-solving abilities through activities relating to the utilization of materials and processes of industry.
Make intelligent decisions concerning mass-produced consumer goods.	How a product is produced, including: 1. Selection and design 2. Pilot models 3. Cost analysis 4. Production ideas 5. Operational analysis 6. Jigs and fixtures 7. Operation flow charts 8. Equipment layout 9. Production line operation 10. Materials handling 11. Inspection 12. Safety The sale and distribution of a product. Profit and loss considerations: 1. Preferred stock 2. Common stock	Recognition of and adaption to the demands of living and contributing in a dynamic industrial and technological society. Concern for and awareness of safe production practices.

3677

INDUSTRIAL PRODUCTION

IMPLEMENTATION SUGGESTIONS

Class members form a corporation.

Students produce and merchandise a product or products. Corporation structure suggests a team teaching approach which includes:

1. Economics — corporation structure
2. Business education — accounting
3. Math — computation of costs and dividends
4. Science — physics' principles in design of jigs, fixtures, and product
5. English — minutes of meetings, prospectus, articles and reports, and advertising

Samples of consumer products.

Individual development of models and mockups.

Fabrication of jigs and fixtures.

Display stock certificates.

Field trip to industry.

WOOD FINISHING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The nature of wood finishing tools and materials.	Awareness of materials available for finishing purposes.
	The historical development of wood finishing materials and finishes.	An appreciation for and an awareness of the vast amount of technology involved in modern day materials.
Transfer knowledge of industrial processes to solution of a given problem. Use proper terminology.	Industrial finishing applications such as industrial spraying, roller coating, curtain coating, flow coating and dipping, tumbling, force drying (infrared), and conveyor techniques.	An interest in industrial finishing procedures. Occupational awareness. An awareness of possibilities for individual problem solving. Safety awareness.
Select, prepare for, and apply a variety of finishing materials. Write specifications for a variety of finishing materials. Select proper device for material application using brush, rag, roller, spray, and industrial pr dures.	Working characteristics and application of finishing materials such as stains, bleaches, sealers, fillers, glaze and shading elements, paints, enamels, varnishes, oils, waxes, and lacquers.	Self-reliance and confidence. An interest in achievements. An awareness of the need for organized, complete, and efficient performance of a given finishing problem. A knowledge of finishing materials and techniques. Finishing skills.
Maintain and care for finishing equipment and materials.	Importance of proper maintenance related to the finishing process.	An awareness of the necessity for proper maintenance and care of equipment and supplies. Cooperative attitudes. Safety awareness.
Experiment with a variety of products to test for things such as hardness, abrasion resistance, and moisture resistance.	The nature and importance of recent developments of consumer and industrial products in the finishing industry.	Knowledge of current product availability.
Apply knowledge obtained from personal problems.	Refinishing procedures and materials.	Confidence in ability to challenge difficult problems.
Select and carefully use a variety of volatile materials.	The nature and application of solvents. The dangers of solvents to occupational health.	Awareness of the need for a variety of solvents in wood finishing operations. Desirable habits and attitudes with respect to health and safety.

WOOD FINISHING

IMPLEMENTATION SUGGESTIONS

Samples of finishing materials.

Bulletin board relating finishes to solvent selection.

Variety of wood samples indicating a variety of finish applications for each species of wood.

Group and individual research and exploration concerning the characteristics of a variety of finishes.

Student application of finish to a project of own choosing.

Field trip to any industry using a variety of industrial finishing techniques.

Student writes procedures for proper application of finish to project.

Local painter can discuss construction finishing materials and techniques with class.

Video tape interviews and/or industrial techniques for presentation to class.

INTRODUCTION

The study of the metals industry provides an ideal setting for several of the newer methodological approaches such as problem solving, research and experimentation, and creativity-design. This resource guide has been formulated toward a student-oriented process in teaching. Typical in this approach are the following steps:

1. Teacher presents the stated problem for design.

2. Student designs project within the framework of the stated problem.

3. Teacher demonstrates possible stock, machines, and hand tools available for project construction.

4. Teacher presents several methods of fabrication and finishing.

5. Student experiments with various possibilities and is guided in research methods.

6. Student selects from total possibilities in planning his project and construction procedures.

Group work may be introduced in any or all of the steps listed. The student-oriented approach may be directed to all levels of student activity. Teachers are encouraged to plan and utilize new procedures in this approach which keeps in mind the fact that students learn according to what they conceive as meeting their goals.

3692

METALS IDENTIFICATION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Students may experiment with metals, answering questions on provided research sheet.	Basic differences such as degree of hardness, color, and aesthetic appeal of the metals.	A motivating interest in metal characteristics.
Identify metals by shape, chemical classification, method of forming, and size.	Some of the identifying characteristics of metals as they are classified.	An appreciation of the great number of types of metals available.
Evaluate the need for using different metals in different situations, such as nonferrous for outdoor furniture or ferrous for tools.	The broad use of metals in industrial society.	An interest in the many possibilities for adapting metals to common use.
Match lists of projects and metals with explanations for choice.	The need for correlating metal to individual projects.	An insight into the selection of stock for individual characteristics.

3693

METALS IDENTIFICATION

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Present class with samples of the metal varieties available to them. Encourage examination. (It is advisable at this point to introduce a checksheet of characteristics to watch for in metals.)	
Explain the need for classifying metals. Have students suggest reasons.	
Discuss industrial applications by having students make suggestions. Groups may compete by listing metal products used in the house.	
Review the correlation of metal types to products. Have students use the list of metal products and match each product to a possible metal, giving an explanation of the reasons for use.	

3694

COST AND PRICE COMPUTATIONS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Correctly fill out checks and maintain accurate bookkeeping.	The basic principles of finance and record keeping.	A motivating interest in the economic aspects of class materials.
Suggest ways in which product cost can be ascertained by including such factors as materials, labors, and average market.	The breakdown of product cost according to marketing and manufacturing investments.	Recognition of the need for an accurate procedure in cost evaluation.
Follow mathematical procedures for figuring cost of project; then fill out check for cost.	The application of arithmetical calculations in an actual selling-buying context.	An attitude of careful figuring in mathematical computations.

3695

COST AND PRICE COMPUTATIONS

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Present each student with a duplicated sheet of simulated checks with a claimed account of approximately ten dollars and describe the use of checks.	
Have students make an estimated bid on a small, class-constructed project and fill out a check for same. Discuss the wide variation of estimates and the need for better accuracy.	
Instruct students in price-cost calculations (square and lineal footage multiplied by price and number of pieces).	

3696

SHEET METAL FASTENING METHODS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Research in historical methods.	Historical development of fabrication procedures. The basic methods of joining sheet metal.	An apprecation of man's innovation in fabrication.
Participate in group discussion of desired qualities in joining sheet metal.	Basic procedures in joining.	Understanding of the concepts of design as applied to joining sheet stock.
	Industrial methods of joining stock.	A knowledge of the demands of production upon joining techniques.
Design and operate testing facilities. Make a strength-comparative study presentation.	Relation of the following: 1. Kind and size of rivets to strength 2. Variation of time to pressure on spot welding 3. Design of seams to strength and ability to hold liquids	Pride in one's own testing procedures. An awareness of direct procedures necessary for presentation of factual material.
Apply knowledge gained to the needs in construction procedures for individual projects.	The basic principles of sheet metal fabrication.	An application of orderly procedures in selection of construction steps.

3697

SHEET METAL FASTENING METHODS

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Introduce the problem. Students offer possible methods for joining of sheet stock. Trace the history of fastening from hand rivets to pop rivets and from soldering to spot welding. (Soldering will require a separate lesson.)	
Present examples of common types of demonstrations. Discuss use in relation to design, strength, and degree of difficulty. Students may discuss qualities they feel are pleasing in design of joining methods.	
Show film on modern industrial fabrication. (Range of films available varies from bridge riveting to automobile spot welding.)	
Lead discussion on possible testing procedures for experimenting in areas of fabrication strength. (Students may design and build their own testing facilities.)	
Guide students in selection of method best suited to their project design.	

3698

ARC WELDING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The concept of current passing through the resistance of air to form an arc.	A motivating interest in the basis for arc welding.
Sketch a basic schematic of an arc welding process.	The use of metal to be welded as positive and negative terminals through which current will pass.	An insight into basic electric welding concepts.
Name and describe parts and functions of welder.	The use of proper equipment such as helmets, glasses, and shields.	A respect for the safety procedures necessary.
Demonstrate in a "dry run" the ability to correctly set up welder.	Proper arc welding procedure and the method's potential for project fabrication.	Application of scientific developments in the welding field.
Make a horizontal bead.	Heat dispersion on nonferrous stock.	Difficulties encountered by the introduction of "exotic" metals. (This includes contamination, heat, and finishing.)
	Welding with a permanent electrode (TIG).	
	Protecting the weld from atmospheric contamination (TIG and MIG) by use of inert gas.	

3699

ARC WELDING

IMPLEMENTATION SUGGESTIONS

Demonstrate an arc by sparking hot wires from a 6- or 12-volt supply. Encourage discussion as to what is occurring.

Discuss the heat generated by the resistance and have students suggest methods of using it for joining metals.

Introduce a filmstrip or sketch of the arc welder and its necessary components, emphasizing safety precautions.

Discuss basic procedure, electrode size, amperage settings, slant of rod, zig-zag method, and arc distance.

Have individual demonstrations and guidance on procedure.

Present information on gas-shielded (MIG), tungsten inert-gas (TIG), and electron beam (EB) welding.

INSTRUCTOR'S NOTES

Reference Books

Walker, John R. *Modern Metalworking*. Goodheart-Willcox, 1965. $6.96 (671)

Giachino, J. W., and others. *Welding Skills and Practices*. 3rd ed. American Technical Society, 1967. $5.50; study guide, $1.50 (671)

3700

GAS WELDING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The need for close observation during demonstrations.	A stimulating interest in observing correct set-up steps in welding.
	The dangers involved in not following correct welding procedure.	A safety-conscious attitude toward welding.
Follow a step-by-step process in setting up the gas welder.	A knowledge of the welder parts and functions of them.	
Demonstrate ability to turn on, adjust, light the torch, and turn off the unit while naming each part and explaining procedure.		An enlarged vocabulary and an interest in the functions of each component.

3701

GAS WELDING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Motivate class interest through use of demonstration. Class should be instructed to watch carefully in order to write a step-by-step procedure from observations.	
Have class compare their lists of welding procedure. Stress the need for exact steps in setup.	
Demonstrate once more, having students list correct steps as they are being performed. Specify accuracy in naming of parts and purpose of each.	
Evaluate each student's setup ability individually.	

3702

HAND TOOLS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Match names and tools that are familiar.	That new experiences will be based upon the foundation already possessed.	A stimulating interest in the tools that will be used.
Correctly list and name all of the tools needed.	A basic knowledge of the use of tools.	
Students apply their knowledge of tools to actual operations.		An attitude of respect for tools and their functions.
Clean and preserve tools in the correct manner.	The correlation between accuracy and well-cared-for tools.	A proper regard for conscientious tool use.

3703

HAND TOOLS

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Evaluate students' experiences with hand tools by having a paper test with pictures of tools that are to be matched with their names. Allow space for a description of each tool's use.	
Students will check their own results during demonstration of use of each hand tool. Notes should be taken on functions.	
Have students make suggestions as to which tool they would use on various operations of their projects.	
Discuss care and safe use of tools.	

3704

CUFE

HAND-OPERATED MACHINES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Perceive and name many of the machine operations by listing them after examining projects.	Some of the many machine operations available.	A motivating appreciation of the time- and labor-saving devices designed in industrial society.
	The basic machine differences by name and operations.	An insight into the many potential operations from which a project may be chosen.
Know the machines by name and function.	The correlation of machine possibilities to project needs.	A stimulated interest in machine operation by comparison of lists of possible machine operations.
Analyze and suggest safety rules for each machine.	Potentially hazardous aspects of each machine.	A respect for the correct and safe operational procedures of machines.
Do correct machine operations. Perform with care and accuracy.	The correlation between machine operation and exactness of layout.	A knowledgeable basis for expanding project designs.

3704

3705

HAND-OPERATED MACHINES

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Allow students to examine several class-made projects. Discuss the various operations required for construction.	
Tour the shop, naming and discussing briefly each machine available for students' use.	
Have students compare and match lists of operation to machines that will be used.	
Demonstrate each machine, asking for student suggestions on safety rules.	
Allow students to follow (in groups or individually) the list of correlated operations and machines on small assigned projects or scrap pieces in order to become familiar with them.	

3706

THREADING WITH TAPS AND DIES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Organize thoughts to solve a relatively new problem.	That many of the accepted machined parts can be constructed through the use of hand tools.	A motivating interest in handmade threads.
Recognize and label thread sizes.	The size by diameter and threads per inch.	Appreciation of the need for separation of threads by classification.
Correctly choose and apply the threading tools needed for projects.	The hard and brittle characteristics of the threading tools.	An attitude of careful work habits while making threads.

3707

55 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

THREADING WITH TAPS AND DIES

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Have a large picture of a bolt and nut on the chalkboard or overhead projector and ask students to write briefly their ideas on how these could be made in the shop.	
Discuss with students their suggestions on how to tell one threaded bolt or nut from another.	
Demonstrate the cutting of threads with taps and dies. Emphasize the need for lubrication and freeing of the chip.	
Evaluate students' progress through individual demonstrations.	

C3708

MACHINING OF METAL

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Solve problems. (Student designs tool which will perform the described function.)	Basic principles of design.	Self - reliance, resourcefulness, and imagination.
Learn basic research by experimenting with metal capabilities.	Basic properties of metal. Adapting metal to project needs. Differences in chemical types of metals.	Appreciation of experimentation and research.
	Operations and possibilities of machines.	An understanding of the usefulness of machines in industrial society. Machine safety features.
Do necessary measurements. Do research on types of measuring such as metric, miscroscopic, and light.	Various measuring devices.	Appreciation of accuracy.
Apply previously learned concepts to plan and pattern.	Concepts of drafting, layout, and procedure.	Value of organizing work.
Apply basic skills in the use of machines.	The potentials of the machine.	An active interest in the industry that uses this machine.

OTS 83709

MACHINING OF METAL

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Describe the design problem. (Example: A center punch could be described as a tool which will guide the point of a drill bit.)	
Present and discuss metals that can be machined.	
Give demonstration of a machine's possibilities. (Transparencies, films, texts, and machines can be used.)	
Discussion of measuring devices such as micrometers and calipers.	
Provide guidance for individual students.	

3710

MASS PRODUCTION TECHNIQUES

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Join in class discussion by suggesting methods of improving goods production.	The historical trend of goods production from cottage industry to contemporary methods.	An appreciation of the basic procedures followed in mass goods production.
Design and construct project along class-decided specifications.	The slower "cottage industry" approach to production.	An overview of all the necessary operations of the product to be mass produced.
Plan a flow chart of materials for individual projects with personal assignments to typical job operations.	Use of flow charts and personal assignments in industry.	Appreciation for orderly procedures in industrial production.
Do basic research into areas correlated with the functions of industry.	The complicated facets of production and marketing of goods as the economic basis of our industrial society.	An appreciation for the procedures necessary in production and marketing.

3711

MASS PRODUCTION TECHNIQUES

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Guide students in discussion of suggestions for producing products efficiently. Speed, accuracy, and exchange of duplicate parts would be analyzed.	
Class may decide upon product to be manufactured or choose and change a developed idea.	
Form mock companies with members selected on basis of sociogram. Three companies of approximately eight members each will facilitate competition for speed, accuracy, and other contemporary concepts of marketing and production.	
Guide students in research in the areas of patents, advertising, cybernetics, marketing, and industrial financing.	

3712

HOT METAL FOUNDRY—CASTING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	The progression of metal from the molten stage to the useful end product.	Recognition that castings are fundamental to our economy.
	Importance of the foundry industry.	Size of the industry (over 5,000 foundries located throughout North America).
Temper sand by mixing, testing for crumbling.	Types of sand used.	Importance of safety precautions in relation to properly tempered sand.
Know the various steps in preparation for actual casting.	Tools and procedures for molding.	Proper procedures result in holding to close specifications.
Know the various steps for casting: 1. Melting, checking of temperature, and skimming 2. Skimming of oxides from the top of the melt 3. Pouring a steady stream to prevent flow lines in the casting 4. Cleaning and cutting of sprue and risers 5. Sanding and finishing of casting	Oxidation and reduction gases in relation to the melting points of metals: Metals — F Degrees Solder ..... 400 Pewter ..... 429 Tin ..... 449 Babbitt ..... 462 Lead ..... 621 Zinc ..... 787 Aluminum 1218	Accuracy needed in melt conditions for various metals. The best pouring temperature is usually the lowest that the casting metal can be poured without encountering a mis-run. (Heavy castings should be poured colder than thin, light-walled castings.)
	Negative results occurring because of dross and gas absorption.	Necessity of preventing dross, air, or gas while casting.

3713

HOT METAL FOUNDRY—CASTING

IMPLEMENTATION SUGGESTIONS

In order to emphasize the importance of casting, ask students to name one thing that is not a casting or does not have casting directly responsible for its manufacture.

Casting steps:

1. Tempering sand
2. Molding procedure, using parting board, drag, pattern, parting dust, riddle, ram, strike off bar, cope, sprue and riser pins, molding spoon, vent pin, and finishing trowel
3. Melting of metal and pouring
   a. It is important that any scrap metal used be clean, dry, and grease-free.
   b. Follow furnace instruction for pre-heating before charging. (Usually 10 to 15 minutes.)
   c. Hold crucible close while pouring to maintain a full sprue.

Safety notes:

1. Clothing
   a. Face shield
   b. Wrist-tight asbestos or leather gloves
   c. Heavy apron
   d. Leggings
2. Wash thoroughly after foundry work.
3. Separate foundry area from rest of shop.
4. Keep floor area clean.
5. Have fire extinguisher handy.
6. Flammables and water should be kept out of area.
7. Do not pour on a wooden floor.
8. Check moisture content of sand before pouring.
9. Use extreme caution while removing castings from flasks.
10. Provide adequate ventilation.

3714

OCCUPATIONS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Demonstrate interview abilities.	Vocational training required.	Early interest in vocations.
Apply understanding of hiring procedures, application techniques, and hierarchical structures within business.	Potential of self for future advancement.	Working conditions such as hazards, special tools, environment, lighting, and air conditioning.
	Wages and salaries.	
Use the school facilities for information on work and occupations.	Special skills or attitudes needed: a. Semiskilled b. Skilled c. Technical d. Professional	Recognition of the relationship of the world of work to society.
	Apprenticeship.	Appreciation of advanced training.

3714 A 88

OCCUPATIONS

IMPLEMENTATION SUGGESTIONS

Cooperate with the guidance department. Suggest class visitation by counselor, parents, and potential employers.

Use recorded interviews on employment such a *A Man's Work*.

Use role-playing for interview techniques.

Discussion Questions

I. What is the world of work? How can you find out about it?

A. Available information

1. *Dictionary of Occupational Titles*
2. *Occupational Outlook Handbook*
3. Occupational files

B. Part-time jobs

C. Personal interviews

1. What purpose do they serve?
2. How are such interviews planned?
3. What questions would you ask?

II. What do you need to know about yourself?

A. Abilities, interests, and special skills

1. Means of measuring
   a. Differential Aptitude Test
   b. Kuder Preference Test
   c. General Aptitude Test Battery
   d. Minnesota Scholastic Aptitude Test
   e. American College Testing
   f. Scholastic Achievement Test
2. Uses of scores

B. Relationship between your record in school and the world of work

1. Grades
2. Attendance
3. Citizenship
4. Extra activities
5. Test results

INSTRUCTOR'S NOTES

Instructional Materials

A Man's Work. 50 records. 100 recorded on-the-scene interviews with men talking about their jobs as they work. Jobs were selected to present a balanced appeal to the average non-college bound male youth. Categories: office and sales occupations; consumer occupations; production occupations; structural occupations; miscellaneous occupations. McGraw-Hill Book Company, 330 West 42nd Street, New York, New York 10036. $258.50

INTRODUCTION

Modern man lives in a world of plastics, a state of affairs brought about by a materials revolution unprecedented in history. In a little less than forty years, the use of plastics in the United States has increased over a thousandfold. This spectacularly steep curve promises to continue far into the foreseeable future as improved plastics take over more and more of the roles previously assigned to heavier and harder-to-work materials. The size and future potential of this industry dictates representation in the curriculum of any industrial arts program that is based on industry. There can be little doubt that plastics is here to stay and will continue to expand its frontiers into the future.

In using this resource guide on plastics, it is desirable that the teacher select experiences that will be appropriate for the age level and background of the students. No attempt has been made to "pick out" a prescribed set of experiences for a given grade level or to designate a certain period of time for the activity. A wide span of activities and problems are presented to enable the instructor to select those which best meet the needs of the students.

It is strongly recommended that a variety of activities be included in the course of study with emphasis upon the industrial nature of the activity. It is not intended that this curriculum resource material be the "last word" in the field of plastics; rather, it should function as a base upon which the instructor may build.

An essential reference that should be secured for greater implementation of this resource guide is the *Plastics Education Guide* which is available for $2.50 from the Society of the Plastics Industry, Inc., 250 Park Avenue, New York, New York 10017. This book contains valuable information concerning equipment, additional references, and films available for the plastics area.

3718

CASTING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Cast various plastic materials.	Properties of various plastic casting materials.	Awareness of the variety of resins available and appreciation of their properties.
Design with casting plastics.	Principles of color and coordination.	Appreciation of color mixing.
Embed or encase with plastic materials.	Effects of various embedding resins on other materials.	Safety attitudes in working with plastic resins.
Construct simple molds for casting embedments.	Various methods of containing plastic resins.	Interest in the recreational possibilities of casting resins.
Cast with elastomers.	Types and characteristics of elastomers.	Awareness of the industrial applications of elastomers.

3719

3750
3719

CASTING

IMPLEMENTATION SUGGESTIONS

Cast titles.

Embed various materials.

Pot electrical components.

Cast various elastomers in molds.

Fabricate casting molds and clay molds.

Fabricate casting resins by using dish, tin, clay, or cup molds.

Have a class discussion of casting applications for potting electrical components.

Use cast decorative objects for an introduction.

Design a giveaway item that can be produced by mass production procedures.

13720

FABRICATION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Sawing, cutting, and shearing.	Methods of shaping and fabricating plastics.	Relationships of plastic fabrication processes to similar processes used for other materials.
Drilling and machining.		Awareness of the fabrication processes used by the plastic industries.
Brake forming, milling, and tapping.		
Blanking and punching.		Discrimination in selection of surface textures.
Sanding, ashing, and polishing.	Methods of polishing. Methods of surface preparation.	Perception in selecting plastic coatings and finishes.
Antistatic coating.	Types of coatings and finishes.	
Foil stamping.		Safe attitudes when handling finishes and solvents.
Finishing and decorating.	Characteristics of finishes and solvents.	

03721

FABRICATION

IMPLEMENTATION SUGGESTIONS

Apply various fabrication techniques as needed in other areas of plastic processing to complete the product.

Attempt different methods of decorating or finishing plastic products.

Experiment with various surface textures on plastic materials.

Compare in-mold decoration processes with post-mold decoration processes.

REINFORCED PLASTICS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Open-mold processes: 1. Hand lay up 2. Spray up	Nature and structure of reinforced plastics.	Consideration for the interests and needs of others.
Filament winding. Encapsulation. Bag molding.	Types of resins, catalysts, and promoters. Types of reinforcing materials and fillers.	An appreciation of the materials used for reinforced plastics.
Closed-mold processes: 1. Matched die 2 Premix molding	Molding principles and processes.	An awareness of the reinforced plastics industry and its place in general industry.
Injection molding. Continuous lamination.	Necessity of safe procedures for handling and working with reinforced plastic materials.	Safe practices in working with reinforced plastic materials.
Finishing methods: 1. Fastening 2. Bonding 3. Surfacing	Basic design considerations and rules that apply to reinforced plastic structures.	An awareness and appreciation of the vast design potential of reinforced plastic materials.
Test reinforced plastic materials: 1. Resin and glass content 2. Tensile strength 3. Hardness 4. Impact strength	Testing procedures and properties of reinforced plastics.	An awareness of the limitations and expectations of reinforced plastic materials.

3723

REINFORCED PLASTICS

IMPLEMENTATION SUGGESTIONS

Hand lay up such articles as clipboards, lamp panels, placemats, and trays.

Construct jigs and fixtures for production line work in other areas.

Construct molds for other plastic materials.

Make up a process chart on the production of fiberglass.

Experiment with filament winding.

Close mold with reinforced plastic materials.

Make up test samples using various methods of processing reinforced plastics. Evaluate properties of each sample.

Make up a strength chart on reinforced plastics with various resin-to-glass ratios.

Determine resin and glass content of a small reinforced plastics layup.

Compare impact strength of reinforced plastics with other materials.

Visit a local reinforced plastics industry.

Spray up molds and products with reinforced plastic materials.

INJECTION MOLDING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Injection molding with thermoset plastics.	Injection molds for thermoplastics. Product design for injection molding.	An understanding of an industrial method of molding thermoplastics.
Proper handling of molding materials and scrap.	Design capabilities of injection molding. Injection molding materials.	Relationships between heat, pressure, and time and the resultant effect on injection molding.
Injection mold construction.	Types of injection molds.	
Troubleshooting injection molders.	Principles of injection molding.	Basic proficiency in injection molding.
	Safety procedures to be observed when injection molding.	Attitude of safe work performance when injection molding.

3725

THERMOFORMING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Drape forming.	Types of thermoforming equipment.	An awareness of the thermoforming methods of packaging and fabrication.
Vacuum forming.	Design factors for thermoforming.	An appreciation of the industrial uses of thermoforming.
Free forming.	Thermoforming techniques.	Proficiency in basic thermoforming processes.
Blow forming.		Discrimination in the selection of thermoformed products.
Troubleshooting thermoforming processes.	Properties of materials for thermoforming. Mold design for thermoforming.	Safe working habits while thermoforming.
Thermoforming mold construction.	Types of thermoforming molds.	

3727

THERMOFORMING

IMPLEMENTATION SUGGESTIONS

Drape form a wall plaque.

Construct a drape-forming mold.

Vacuum form a tackle box.

Experiment with heating methods and devices.

Experiment with various vacuums and pressures.

Experiment with the deep-draw process.

Construct a trimming jig for a vacuum or drape-formed article.

Construct textured molds for forming.

Compare thermoforming with other molding processes.

THERMOFUSION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Fluidized-bed coating.	Types of materials used for fluidized-bed coating.	Appreciation of the fluidized-bed coating process.
Rotational molding.	Rotational molding process variables. Principles of rotational molding. Advantages of rotational molding.	Concept of rotational molding and appreciation of industrial applications.
Powder molding.	Industrial methods of processing powdered polyethylene and vinyl dispersions. Designing for powder molding. Factors involved in powder coating with various types of plastics.	Appreciation of industrial methods for processing plastic powder.
Mold plastisols and organisols.	Methods of molding plastisols and organisols. Formulations of plastisols and organisols.	Discrimination in the selection of plastisol and organisol products.
Construct rotational mold.	Design consideration for rotational molds.	Insight into rotational molding design.
Plastisol mold construction.		Basic thermofusion molding skills.

3729

THERMOFUSION

IMPLEMENTATION SUGGESTIONS

Coat a product using the fluidized-bed coating process.

Rotational mold a plastic product.

Experiment with the design of a rotational molder.

Powder mold a funnel.

Make up a chart on different powder molding processes.

Slush mold an article.

Construct a rotational mold.

Compare costs and mold construction of rotational molding with injection molding.

Test various plastic powders for fluidized-bed coating or rotational molding.

EXTRUSION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Sheet extrusion.	Basic parts and functions of the extruder. Basic processing functions of the extruder.	Appreciation of the industrial methods of plastic extrusion and blow molding.
Extrusion coating.	Essential instruments that control the melt of the extruder.	
Tubular film extrusion.	Auxiliary equipment and accessories used with the extruder.	Insight into extrusion potential through the uses of auxiliary equipment.
Pipe extrusion.	Economic consideration in extruding.	
Maintenance of extrusion and blow molding equipment.	Basic safety rules for extrusion and blow molding.	Safe habits when working with extrusion and blow molding equipment.
Blow molding.	Blow molding methods. Structure of the blowing mold. Blow molding techniques. Characteristics of blow molded products.	Insight into the industrial and consumer applications of extrusions and blow molding.

3731

EXTRUSION

IMPLEMENTATION SUGGESTIONS

Blow mold an article.

Construct blow mold.

Compare extrusion with injection molding techniques.

Form a parison with an injection molder and blow to shape.

Examine various products made by blow molding.

Compare blow molding, extrusion molding, and injection molding and show how each can be identified.

Extrude various plastic shapes for further product use.

Examine and compare various films made by extrusion.

3732

COMPRESSION MOLDING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Compression-mold thermosets.	Types of machines and equipment for compression molding. Types of molding compounds.	A knowledge of the history and importance of compression molding.
Transfer molding.	Advantages of the transfer molding process.	An acquaintance with the materials and equipment used in compression and transfer molding.
Design a compression-molded product.	Characteristics of thermosetting molding compounds.	Relationships of transfer molding to compression and injection molding.
Test compression moldings.	Mechanical and physical properties of molding compounds.	Appreciation of the design limitations and design possibilities of compression and transfer molding methods and materials.
Construct a compression mold.		An acquaintance with the products and occupational opportunities pertaining to this phase of the plastic industry.
	Types of compression molds.	Basic mold construction skills.

3733

COMPRESSION MOLDING

IMPLEMENTATION SUGGESTIONS

Make a case for a miniature checker board.

Test various plastic materials using different times, pressures, and temperatures.

Make a simple mold for compression molding.

Transfer mold an article.

Compare transfer and compression molding.

Mold impregnated reinforced plastic materials.

FOAMS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Mold resin foaming systems.	Types of resin foaming systems.	Competency in molding with plastic foams.
Mold pellet foaming systems.	Methods of molding pellet foams.	Awareness of the future potential of foam plastic.
Mold syntac foaming systems.	Techniques of processing syntac foams.	Interest in the plastic foam industry.
Design with plastic foam materials.	Materials used for molding plastic foams.	Insight into the many applications of foam products in industry and in the home.
Safely handle foam materials.	Proper procedures for handling foaming systems.	Safety habits when processing plastic foams.
	Theory of plastic foams. Properties of plastic foams.	

3735

FOAMS

IMPLEMENTATION SUGGESTIONS

Examine a number of foam articles to determine the type of foam and how it was molded.

Display of various foam products.

Experiment with foam density and related factors.

Mold articles with pellet foam systems.

Foam an article with urethane foam.

Use a syntac foam system to form a backing for a mold.

TOOLING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Plaster mold construction.	Types and properties of plaster for mold construction.	Competency in plaster molding.
Design mold and mold clamping devices.		Judgment in mold design.
Laminate plastic tools.	Plastic tooling materials. Reinforcements for tooling plastic.	Concept of plastic tooling and its value in industry.
Mass and surface cast tools.	Major categories and basic techniques of plastic tooling methods.	
Spline master model construction.	Model- and mold-making materials.	Interest in the plastic tooling industry.
Repair plastic tools.	Tooling resins and their properties, characteristics, and uses.	
Die construction with pattern wax.	Plastic applications in the foundry.	Appreciation of industrial applications of plastic tooling.
Spray epoxy materials and metal fibers.	Precautions in the use of epoxy resins.	Safety attitudes when working with tooling materials.

TOOLING

IMPLEMENTATION SUGGESTIONS

Discussion of advantages of plastic tooling.

Group design of plastic tools.

Fabricate molds for injection molding, vacuum forming, or compression molding.

Resurface damaged molds.

Construct mockups and models of plaster.

Fabricate original models and patterns.

DESIGNING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Select proper materials.	Properties and characteristics of plastic materials.	Awareness of material properties and their effect upon product design.
Select proper molding process.	Location of parting lines, knockout pins, and undercuts.	Insight into relationships between product design and molding processes.
Consider environmental problems.	Environmental conditions and their effects on plastics.	Foresight in the use of plastic products and materials.
Select tolerances on molded articles.	Shrinkage and standards for tolerances on molded articles. Warpage, draft, taper, and wall thickness for plastic moldings. Fillets, radii, ribs, and bosses for plastic.	Proficiency in designing plastic products.
Mix and match color for plastic materials.	Theory of color and color systems.	Discrimination in the selection of plastic products.

3741

DESIGNING

IMPLEMENTATION SUGGESTIONS

Redesign a plastic article already on the market, using a different production process than that for the original.

Design a plastic giveaway item for the school and compare production costs using several production techniques.

Compare plastic property materials with regard to such qualities as heat resistance, weatherability, and strength.

Design a portable fishing tackle box that will be made as a production line item in the class.

Design a simple holder for napkins that can be mass-produced.

Design a paperweight for mass production that could be used as a souvenir for advertising the school's industrial arts program.

3742

TESTING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Analytical tests.	Identification of plastic materials.	Insight into plastics identification.
Mechanical tests: 1. Hardness 2. Tensile 3. Flexural 4. Impact	Types of mechanical tests applicable to plastics.	Inquisitiveness concerning the performance properties of plastics.
Thermal tests: 1. Softening point 2. Deflection temperature 3. Flow rate 4. Flammability	Meaning and interpretation of test data. Methods of testing plastic materials.	Relationships between the structure of plastic materials and test performances.
Performance tests: 1. Weathering 2. Fading 3. Stress 4. Water absorption	Properties of different plastic materials.	Awareness of the industrial applications of materials testings.
Electrical tests.	Importance of testing plastic materials.	Appreciation of the need for standards.

3743

TESTING

IMPLEMENTATION SUGGESTIONS

Discuss the necessity of testing materials.

Apply tests to plastic materials.

Students devise simple methods of making testing devices for plastic.

Test and compare various materials.

Identify unknown samples of plastic.

3744

STRUCTURE

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Solution polymerization with polyethylene.	Basic materials and elements that make up plastics.	Awareness of the effect chemical structure has upon the physical properties of plastics.
Formation of nylon.	Plastics classification.	
Cellulose acetate cast film.	Structure of matter.	Insight into the relationships of materials structure.
Formation of polyesters.	Methods of manufacturing plastic materials.	Appreciation of the importance that research and development have in the plastics industry.
	Chemical structure of plastics.	Appreciation of the raw material producers of plastics and their relationship to the plastic industry.

3744

STRUCTURE

IMPLEMENTATION SUGGESTIONS

Experiment with melting temperatures of various plastics.

Compare chemical resistance of various plastics.

Chemically make polyethylene.

Make a polyester resin.

Determine the effects of various fillers in plastic resins.

Experiment with copolymerization of plastics.

Make a plastic by condensation.

FOREWORD

Industrial arts students live in a dynamic, ever-changing society. Preparations for their future place multitudinous demands upon education. The numerous changes occurring in our accelerating technology levy demands upon industrial arts teachers. It is simply not enough to train the students to live in a changing world; it is also necessary to transmit to the student a sense of values and the worth of participation in the technological process which is such a vital part of our society. Industrial arts, as an integral part of education, must provide opportunities for individual fulfillment, individual achievement, and individual freedom.

The success of the industrial arts program in providing these opportunities depends upon several factors, of which the course content and the approaches to teaching are vital aspects. Two main purposes of this guide are, therefore, to offer newer content and to suggest several newer approaches to teaching.

Assistant Commissioner of Education,
Division of Instruction

3754

ACKNOWLEDGMENT

Grateful appreciation is extended to Mr. Harold E. PaDelford for his help in coordinating materials for the resource guides on "Visual Communication Technology," "Mechanical and Electrical Technology," and "Materials Technology."

CURRICULUM DEVELOPMENT COMMITTEE

Harold E. PaDelford, Chairman ..... Instructor, Roseville Public Schools

A. E. Pagliarini, Consultant ..... Supervisor of Industrial Arts Education, State Department of Education

Ronald L. Anderson ..... Instructor, Austin Public Schools

Charles Jahn ..... Instructor, Circle Pines Public Schools

Dr. William Kavanaugh ..... Professor, Trade and Industrial Education, University of Minnesota, Minneapolis

John Mitchell ..... Formerly Instructor, Upsala Public Schools

Sterling Peterson ..... Consultant, Minneapolis Public Schools

Dr. John Warford ..... Division Head, Business and Industry, Bemidji State College

INDUSTRIAL ARTS CURRICULUM DEVELOPMENT IN MINNESOTA

The State Department of Education has maintained a continuing effort to keep teachers and administrators informed of phenomenal technological and educational advances. The most recent revision of Curriculum Bulletin No. 13, *A Guide for Instruction in Industrial Arts,* was made in 1962.

In the spring of 1967, an effort was initiated to bring industrial arts teachers the latest methods of instruction. Industrial arts education has been under constant evaluation and it was the intent of the steering committee appointed at that time to enlarge upon and bring up to date the content of Curriculum Bulletin No. 13. The committee chose the content, instructional design, and methods used in this guide. Writers were engaged to specifically challenge industrial arts teachers to gain knowledge of and to use the newer approaches to instruction.

The guide has been divided into three issues. These issues are (1) "Visual Communication Technology" with units in drafting and graphic arts, (2) "Mechanical and Electrical Technology" with units in electricity, electronics, and power, and (3) "Materials Technology" with units in woods, metals, and plastics.

3758

3129

PURPOSE AND VALUE OF THIS GUIDE

This guide has been organized for efficient utilization of several newer methodological approaches to teaching. The primary purpose of the guide is to so arrange the course content that the instructor may more easily adapt his teaching to these new approaches. The order in which material is presented places the psychomotor, cognitive, and affective domains of learning on a continuum with implementation procedures. The psychomotor skills (column one) that students should be able to perform include operations, jobs, problems, and activities. Cognitive understandings (column two) include basic principles, concepts, generalizations, and guidance information. Affective values (column three) involve awareness, organization, attitudes, and appreciation. Implementation suggestions (column four) cover teaching methods and techniques, resources, and expedients. Column four provides the cohesive force for columns one, two, and three. Instructor's notes (column five) provides a place for the instructor to keep his plans and thoughts regarding the units.

This guide is not intended to be a "cook-book" approach. It is intended to serve as a guide and resource for effective teaching. The needs of each particular teaching situation should determine the material that will be used.

3759

METHODOLOGICAL APPROACHES TO TEACHING INDUSTRIAL ARTS

Methodology has sustained the teaching of industrial arts as a subject in general education with several approaches carrying the burden of instruction. However, industry and technology have undergone vast changes in recent years. In an attempt to interpret industry more realistically, several new approaches have been promulgated. Emphasis has been placed on industrial and technological functions and practices. In order to make learning more meaningful, the committee wishes to encourage the use of up-to-date methods of instruction. Complete materials are not available on all approaches, but information is available from the American Industrial Arts Association, the American Vocational Association, and from current publications. Several methodological approaches, each with a short explanation, are presented in the following list.

Mass Production. This is a group undertaking with the intent of understanding industry through the production of a product. Mass production would encompass personnel organization, purchasing, production processes, accounting, and sales. This usually involves the entire class and can be used at any grade level and subject area.

Anthropological Approach. The anthropological approach involves the historical relationships of tools, processes, and products. It can be used as an introduction to a unit of study or as the unit of study. It gives an insight into the massive technologies of the modern industrial complex.

Construction Industry. This approach is a group undertaking to discover the problems in the design and construction of a project. This method would encompass personnel organization, material testing, fastening, and material processing. Students can be grouped into any size of unit according to the complexity of the project.

Unit Method. The unit method employs a limited set of educational experiences. Emphasis is placed on individual achievement through the student's own initiative. Emphasis is also placed on vicarious learning — a sharing of experiences with other students through reports, demonstrations, and other methods of communiation. The unit method allows the student to be creative and unique.

Line Production. The line production technique usually consists of a short production run of a product. The production line, jigs and fixtures, and product are set up with student activity. It is usually a short unit used to teach one aspect of mass production.

Individual Project. The individual project emphasizes the engineering approach and craftsmanship. Experiences are not usually shared with other students. The individual project offers the student an opportunity to see through to completion something of his own making.

Individual Study. Some scheduling systems permit an individual approach to study. Open laboratories, libraries, and other media enable the student to have freedom in his pursuit of knowledge.

Conceptual Approach. To gain an understanding of the technology in industry, concepts are taught with each concept enforcing the next one. This approach relies heavily on the cognitive behavioral patterns. Concepts learned are usually reinforced with some type of followup activity.

Research and Experimentation. The research and experimentation approach enables the student to discover and develop technological advances. The process is much used in industry. Materials testing and new product development are techniques used in the schools. The students usually share their experiences with classmates. Access to source materials is a necessity.

Services. The service industry is large and growing. Students gain an understanding of problems involved in the maintaining and repairing of all industrial products. With the increase of mechanized products in the home and on the farm, every individual needs an understanding of the service industry.

Interdepartmental Approach. Involvement of two or more laboratory activities can be used to advantage in enhancing motivation and improving learning situations. This approach enables students to study and construct a more complex problem or project.

3760

VISUAL COMMUNICATION TECHNOLOGY

The materials in this guide have been divided into the two areas of drafting and graphic arts technology. The section on drafting technology was written by Thomas Kitto, Instructor, Minneapolis Public Schools. Will Wachtler, Instructor, South St. Paul Public Schools, prepared the section on graphic arts technology. These two areas have been grouped in this guide because of similarity and for convenience.

This guide has been arranged so that the instructor, in planning for the teaching of industrial arts, can draw objectives from the first three columns. These objectives can then be achieved by using the suggestions in column four. Some of the implementation suggestions will be considered as startling and provocative procedures. This was intended as the steering committee sought procedures that were forceful, useful, and stimulating. It was further intended that this guide serve as an aid to improve the methodology and content of industrial arts. Methodology has, through the years, sustained industrial arts. Innovations in both content and methodology are offered.

No definite order has been established for the presentation of material. It is more important that each instructor select the particular material which is appropriate for a given teaching situation. The instructor is encouraged to use as much of the appropriate material as possible. Material sufficient for several years of work has been provided. It is hoped that this guide will help the instructor to teach more effectively.

3763

INTRODUCTION

Drafting has long been considered an integral part of the industrial arts curriculum. Although maintaining an identity of its own, drafting utilizes content materials from each of the other industrial areas. Drafting's main function is to give graphic representation to materials, parts, and assemblies ranging from nuts and bolts to completed buildings. An understanding of symbols and schematics is vital in electronics, fluid power, and architecture.

This resource guide was developed to help the teacher organize both the content and the methodology of drafting. The guide is not to be considered a complete course of study in itself. Some junior high school and senior high school courses may utilize only portions of a unit or some whole courses may be built around a single suggested unit. The teacher is encouraged to select that material which is appropriate for the individual classroom needs.

When properly presented through problems and applications, drafting becomes both dynamic and relevant to the student. It should be noted that drafting is needed by designers, manufacturers, consumers, and service personnel.

3764

LETTERING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Form single stroke gothic letters.	The strokes and proportion of gothic letters and numerals. Lettering styles.	The habits of forming letters carefully.
Compose letters into words and sentences.	Spacing requirements and rules for compositions.	An appreciation of good, legible lettering.
Letter with an acceptable degree of speed and quality.	Lettering techniques which influence speed. The influence of pencil grade and drawing surface on speed and quality of lettering. The influence of reproducibility on lettering lineweight and size of letters.	An awareness of the need for continued practice to increase speed and accuracy. A habit of practicing lettering in short, frequent sessions.
Letter using ink. (This is included largely as an avocational skill. See "implementation" column for practical use of this skill.)	The importance of strokes in ink lettering. The applications of ink lettering.	An acceptance of ink lettering as a skill of diminishing industrial importance.
Letter using templates and mechanical devices.	The variety and application of mechanical devices for lettering. Related lettering procedures such as typing and computerized lettering.	An appreciation of mechanical lettering devices as useful aids when precise lettering is required.

PART 3765

LETTERING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Have students form each letter on a worksheet as it is demonstrated on the overhead projector or board.	
Have students practice composition as it is demonstrated.	
Provide samples of good lettering by students and from industry on bulletin board.	
Evaluate lettering thoroughly on prepared form.	
Require one or two lettering plates at this time and one each week until student becomes proficient. Time is saved if these are prepared by the teacher or are commercially available practice exercises. Letter for 5 to 10 minutes at start of each class and encourage periodic practice outside of class.	
Demonstrate ink lettering on the overhead projector using matte film. Have students letter a cover page for a drawing storage *notebook*. This cover will protect drawings throughout the year. Notebook provides effective opportunity to discuss drawing value and engineering costs.	
Mechanical lettering is not an essential skill, so it can be used as an enrichment item for faster students, or included later in the course at appropriate points such as on electronic drafting.	

3766

SKETCHING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Sketch vertical, horizontal, and oblique lines.	Which hand positions are best suited for drawing these straight lines. That straight lines should be drawn by watching the destination, not the pencil point.	An appreciation of these basic strokes as fundamental building blocks for all sketching.
Sketch circles and arcs.	The construction steps necessary for making well-proportioned circles and arcs.	An awareness that curve construction is a basic skill for all sketching.
Sketch simple two-dimensional forms in proportion.	The principle of proportion in sketching.	Good habits relative to using essential construction steps in making presentable sketches.
Sketch with an acceptable degree of speed and quality in each area studied throughout the course. (See "implementation" column.)	The influence of pencil grade and drawing medium on lineweight and speed.	A desire for further experience with this useful drawing form. An acceptance of sketching as a useful avocational skill as well as an industrial procedure.

3767

SKETCHING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Present the drawing of these lines, using the overhead projector, and follow up with skill demonstrations to small groups.	
Demonstrate the techniques of sketching to small groups with emphasis on hand positions, lineweight, construction procedures, and neatness.	
Have students sketch several problems which encourage constructing and proportioning the sketch.	
It is not possible to achieve complete sketching proficiency at this time. However, sketching should be utilized in the development of each succeeding unit so this goal can be accomplished. Such areas as orthographic projection, dimensioning, sectioning, and pictorial drawing can all employ sketching to good advantage. Using sketching throughout the course develops the student's ability with this skill and increases the number of experiences which can be included in a given time spent on each unit.	
Encourage further interest in sketching by displaying a bulletin board showing examples of student and industrial sketches. The latter can be procured by contacting local industries.	

3768

GEOMETRIC CONSTRUCTION AND INSTRUMENT USAGE

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Draw horizontal, vertical, and oblique lines with a drafting machine. "Direct draw" lines to scale and finished lineweight using a drafting machine.	The function and advantages of the drafting machine. The concept of drawing lines directly to finished lineweight (direct drawing) whenever possible.	The attitude that "direct drawing" with a drafting machine is a time-saving procedure worth exploring throughout the course.
Draw horizontal, vertical, and oblique lines with a T-square or parallel rule and related tools. Draw lines to scale length.	How basic drafting tools can be used to draw horizontal, vertical, and oblique lines. What pencil weight and drawing paper options are available. The procedures necessary to center a drawing. Scale measurement.	Good work habits and a constructive attitude toward drawing neatness and accuracy.
Draw arcs and circles.	Relationship of radius and diameter. The function of center lines.	
Make basic straight line constructions such as bisecting a line or dividing a line into a given number of parts.	The variety of geometric constructions utilized in drafting. The interrelationships of these construction procedures.	An appreciation of the application of geometric construction in technical drawing.
Construct arcs tangent to straight lines and/or other arcs. Construct basic geometric forms such as the triangles, hexagon, octagon, and pentagon. Construct more complex geometric configurations such as the ellipse and helix.	Plane geometry fundamentals and terms. The utilization of instruments in technical drawing. Which geometric shapes are most commonly used. The terminology associated with geometric forms. The application of these geometric constructions in technical drawing.	A realization of the importance of correct procedures and sequential relationships in geometric construction. The habit of employing these constructions to solve drafting problems. An increased awareness of the role of instruments in drafting.

3769

GEOMETRIC CONSTRUCTION AND INSTRUMENT USAGE

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
NOTE: Is is important not to extend this unit beyond the point necessary for understanding the structure and pattern of geometric construction and instrument usage at this time. *Students will better appreciate the usefulness of what they have learned if the constructions or procedures are presented at a point in the course when they will be promptly used in a practical application.* Therefore, practice with as many as possible of these skills should be deferred until a more appropriate time.	
Demonstrate basic skills to small groups.	
Use a job sheet to determine a student's ability to measure accurately.	
Have students make a simple, straight line drawing to acquaint them with basic tools.	
Display a bulletin board showing alphabet of lines and drawing using these lines.	
Have several students stand around a drawing table and draw circles with a compass as the skill is demonstrated. Student may leave when he has shown that he can perform the skill. Have students make a drawing involving arcs and circles.	
Display a bulletin board showing the uses of these constructions in industry.	
Have each student perform the constructions on a worksheet as they are demonstrated.	
Have students make drawings using some of these constructions.	
Select problems throughout the course which use these constructions.	

3770

ORTHOGRAPHIC PROJECTION AND BASIC DIMENSIONING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Sketch two- and three-view orthographic drawings.	The concept of othographic projection. View positions and alternate positions. Sketch proportion and view alignment. View selection and front view determination.	An appreciation of the role of orthographic projection in industry. The ability to discern the best view relationships for representing an object.
Make simple orthographic drawings mechanically. Project a side view using a 45° line. "Direct draw" views on a drafting machine.	The alphabet of lines. How to position views on a drawing. How to achieve lineweight distinction.	An appreciation of line configuration and weight.
Sketch and *dimension* orthographic drawings.	The concept of size description. The significance of size and location dimensions. Basic dimensioning rules for dimension selection and placement. How to measure objects to be drawn using only basic measuring tools.	An awareness of the need for careful dimension selection. An awareness of the role which size description plays in technical drawing.

3770
3771

ORTHOGRAPHIC PROJECTION AND BASIC DIMENSIONING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Job sheets or workbooks for missing line or missing view completion are desirable, if they are available.	
Sketch orthographic views from pictorial representations of objects.	
Have students sketch simple machine parts or prepared "blocks." (Provide a large selection of these parts or blocks as the choice of an interesting item may motivate student.)	
Encourage some sketching outside of class.	
Show film on orthographic projection.	
A plexiglass "projection box" with hinged sides can be used for demonstrations to large groups and for individual problems by drawing views on it with water-soluble pens.	
A comprehensive selection of overhead projection transparencies is available on this topic.	
Simple two- or three-view drawings are enough to introduce the basic ideas of mechanical orthographic drawing. Extensive treatment can follow when size description is added.	
Have students make several drawings which are representative of a variety of dimensioning problems and which utilize some geometric constructions in order to add significance to that unit.	
Demonstrate drafting skills and techniques thoroughly to small groups of students.	
Present a bulletin board showing industrial drawings of simple parts.	

3772

SECTIONING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Sketch problems using the following types of sectional views: 1. Full section 2. Half section 3. Off-set section 4. Broken out section 5. Aligned section 6. Revolved section 7. Removed section Dimension sectional views. Identify cutting plane and sectional view.	The concept of sectioning. How sectioned areas are indicated by section lining. Conventional practices in sectioning related to drawing of such things as ribs, webs, and unsymmetrical views. The principles for dimensioning a sectional view.	Insight about the use of sectioning to show internal detail. An appreciation of the use of conventional symbols to save time or increase clarity.
Make mechanical drawings using the preceding section views.	The alphabet of lines (continued). The order of penciling lines (continued).	
Make a mechanical assembly drawing with a sectional view showing adjacent parts and miscellaneous hardware.	The section lining of adjacent parts. Conventional treatment of such items as shafts, bolts, and keys in section. That code section lining exists but is no longer very widely utilized in machine drawings.	An increased appreciation of the abstraction of sectioning which allows many variations in order to increase clarity.

3773

SECTIONING

IMPLEMENTATION SUGGESTIONS

Assign enough sketches to insure coverage of the various types of sections. These should be "finished" sketches. Less precise sketches, which plan required mechanical drawings, may also be requested.

Films on sectioning are available; although, as of this writing, they may be better for review than for original presentation.

Saw open a large casting or small gas engine to demonstrate sectioning. (The latter can show how such things as screws and shafts are not sectioned.) Outstanding overhead projection transparencies are available on this topic.

The structure and concept of sectioning can be developed by sketching, so it is not necessary to draw all of these sectional views mechanically at this time. Some may be incorporated later in the course in such units as "advanced dimensioning" or "the industrial methods."

A bulletin board showing industrial prints with sectional views emphasizes their importance.

Present this topic, but incorporate it in later units such as "fasteners" (using a prepared assembly drawing with the fasteners missing) or "industrial methods" on an assembly drawing.

The small gas engine previously mentioned demonstrates this well. It also makes a good measuring and drawing problem for advanced students.

INSTRUCTOR'S NOTES

3774

FASTENERS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Draw a semiconventional representation of an American standard screw thread.	The historical development of fasteners. The theory of the screw thread: 1. Inclined plane 2. Helix Screw thread terms. The function of the various thread forms. The relationship of screw size and pitch. The relationship of pitch and lead. Screw thread callouts and their interpretation.	A perception of the historical significance of fasteners. An appreciation of the utility and adaptability of threaded fasteners.
Draw conventional thread symbols mechanically. Sketch and dimension typical threaded parts using conventional symbols.	Conventional thread symbols.	An appreciation of the timesaving advantages of using conventional symbols.
Sketch and identify a variety of fasteners including head and point variations. Draw a hex head bolt and nut mechanically. Draw semiconventional threads having an uneven number of threads per inch. Draw machine and cap screws mechanically, some with templates. Draw assorted other threaded fasteners mechanically, showing them in appropriate applications.	The categorizations of threaded fasteners. The function and application of various threaded fasteners. The necessary geometric constructions to draw fastener heads and uneven thread pitches. How sizes of fasteners can be found in tables in reference books.	An awareness of the tremendous variety of threaded fasteners. A desire to select fasteners carefully to suit the required application. An appreciation of the useful purpose served by tables which provide sizes for common fasteners.
Sketch and draw mechanically a variety of non-threaded fasteners such as keys, pins, rivets, and springs.	The categorization of nonthreaded fasteners. The function and application of nonthreaded fasteners. Semiconventional and conventional spring symbols.	An awareness of the tremendous variety of nonthreaded fasteners. A desire to select fasteners carefully to suit the required application. An appreciation of the useful purpose served by tables which provide sizes for common fasteners.

56 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

FASTENERS

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Demonstrate the theory of threaded fasteners on the overhead projector. Excellent transparencies are commercially available.	
Have students make a mechanical drawing of a threaded fastener using semiconventional thread symbol.	
Assign sketches which require that threads be drawn on parts indicative of the utilization of a particular thread form. (Example: Sketch vise screw showing square thread.)	
Have students draw these symbols on exercise sheets or draw parts other than "common fasteners" which will be studied later.	
Sketch machine parts, adding thread symbols and dimensions.	
Demonstrate fastener categories, using the overhead projector. Transparencies are available and actual screw profiles exemplifying categories or head and point variations can be projected.	
Provide an ample assortment of fasteners for students to see. These can be organized into teaching aids as a student assignment.	
Give skill demonstrations on the geometric constructions necessary and the use of templates.	
A slide series of fasteners in use can be made by photographing pictures in trade journals. A call to an available engineering office will usually provide an ample supply of journals. (The opaque projector can be used if camera isn't available.)	
An assembly drawing with voids at points where fasteners are to be drawn emphasizes application. Students can trace the assembly and add fasteners.	
A slide series on nonthreaded fasteners is effective.	
A collection of machine parts with fasteners in place emphasizes application.	

3776

SHOP PROCESSES AND ADVANCED DIMENSIONING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Convert common fractions to decimals and vice versa. Study a drawing and determine the tolerance on each dimension.	The evolution of dimensioning from common fractions, through decimals, to a prediction for the future. The concept of tolerance: 1. Bilateral tolerances 2. Unilateral 3. Limit dimensions How tolerances are expressed. The significance of assigning both general and specific tolerances. General tolerances: 1. Assigned by note 2. Common fractions and decimals mixed (fractions for rough process, decimals for machining) 3. Varied decimal positions a. one place (0.0) rough process b. two place (0.00) rough machine c. three place (0.000) finish machine Specific tolerances: 1. Supersedes general tolerance note 2. Examples a. Bilateral 1.500 ± .001 or 1.500 + .002 — .003 b. Unilateral 1.500 + .001 — .000 c. Limit 1.500 1.501	An appreciation of the concept of limiting permissible error by specifying tolerance limits.
Identify rough forming processes. Identify finished machining operations. Determine how part features could be machined. Determine the degree of precision to which a part feature can be fabricated or machined. Measure machine parts, using precision tools. Dimension parts made by various rough processes. Dimension features machined by various methods.	The shop processes used in rough forming parts: 1. Process characteristics 2. Process degree of precision 3. Relative cost of process The machining processes used to finish parts: 1. Machine functions and characteristics 2. Machine limitations or degree of precision 3. Relative cost of machine operations Precision measurement and inspection procedures for checking accuracy of shop processes.	An appreciation of the diversity of rough processes and machine functions available for part fabrication. An awareness of the draftsman's role in production control through tolerance assignment. The habit of determining sizes accurately when measuring parts to be drawn. An appreciation of the exactness of modern machined tools.

3777

SHOP PROCESSES AND ADVANCED DIMENSIONING

IMPLEMENTATION SUGGESTIONS

The lectures on this concept should be replete with examples and illustrations of tolerance utilization in industry. The overhead projector works well to implement presentation of these lectures.

Present an ample assortment of fabricated parts to provide examples of how tolerances control production. Student participation should be provided for through job sheets or workbooks requiring the location, interpretation, and specification of tolerance callouts.

Slide series of processes and machines are very helpful in presenting this unit. These can be photos of actual machines or copies of pictures cut from trade journals. (These may also be shown in an opaque projector.)

Films from industry are valuable for this unit.

Have students indicate on job sheets what operations could be used to machine specific features.

Have students accurately measure machined parts and dimension them including probable tolerances.

INSTRUCTOR'S NOTES

NOTE: With a basic understanding of the tolerance concept and an introduction to the fundamental processes of the shop, the student is now ready to comprehend some of the more complex aspects of tolerancing.

3778

SHOP PROCESSES AND ADVANCED DIMENSIONING—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Determine tolerances and assign them to dimensions.	The effects of tolerance buildup.	An appreciation of the timesaving tables with which a draftsman works.
Calculate the basic sizes, allowance, and tolerances for mating cylindrical parts.	Base line dimensioning.	The habit of assigning tolerances which guarantee part function without unnecessarily raising cost.
	Why positional tolerances are more difficult to maintain than size or form tolerances.	An appreciation of the exactness of modern machine tools.
	Basic-hole and basic-shaft systems of tolerances for mating cylindrical parts.	
	Classes of fit.	
	Process principle vs. function principle of dimension selection and toleranc-ing.	
	Tolerance effect on part interchange-ability.	
	Industrial terminology related to tol-erance size. (Example: "plus or minus a tenth" means ±.0001.)	
Compose and assign feature control symbols.	The concepts and symbols connected with tolerancing form.	An appreciation of form and position tolerancing as a technique useful mainly for large production applica-tions.
Assign modifiers, such as M which means maximum material condition, to control symbols.	Composite form tolerances such as are used in cylindrical and runout measurement.	An awareness of the possible money-saving benefits of this tolerancing system.
Determine and identify datums and relate them to each other.	The concepts of "regardless of feature size" and "maximum material condi-tion."	An appreciation of this system as a supplement to convention dimension-ing.
Relate features and surfaces to datums.	The principles governing the selection of datums.	
Assign true position tolerances.	The concept of "true position" toler-ancing.	
	The compatibility of true position and conventional tolerancing.	
	Why "functional gaging" procedures are used to inspect true position tol-erances.	

3779

IMPLEMENTATION SUGGESTIONS

INSTRUCTOR'S NOTES

Students will dimension and tolerance a small assortment of interrelated parts. Discuss function of parts and assign tolerances to guarantee part interchangeability. This basic problem may be further studied by utilizing the "form and position tolerancing" mentioned later.

These sketches may be employed as a foundation for the mechanical drawings required in the next unit.

Job sheets are useful for teaching this unit. One sheet for each phase of form and position tolerancing provides an exposure to each idea.

A problem such as the one previously described should be used so that the student has an opportunity to control tolerances which relate to one another. These sketches can then be used for the next unit.

3780

INDUSTRIAL METHOD

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Make detail drawings of machine parts to commercial drafting standards. Make a general assembly drawing. Complete a title block. Make as many as possible of the other drawings specified at the right.	The characteristics and function of the various types of drawings used in industry to control production, including: 1. Design sketch 2. Layout (design assembly) 3. Detail drawings 4. General assembly drawing 5. Working assembly drawing 6. Flow charts 7. Specification control drawing The contents and importance of a drawing title block: 1. Part numbers (importance, sequence) 2. Scale 3. Material 4. Drawing title 5. Signatures 6. Finish The function of engineering in the production sequence. The employment opportunities, job characteristics, and earning potential possible in drafting and engineering.	An appreciation of the manner in which different kinds of drawings used in industry have characteristics and functions which meet specific needs. An awareness of the importance of engineering records such as the drawing title strip. A desire to determine for oneself whether or not drafting or engineering would make a suitable career.
Locate and interpret descriptions of engineering materials and finishes in reference books such as *Machinery's Handbook* by E. Oberg and F. D. Jones. Select materials to suit part requirements. Select finishing materials and/or processing to suit part requirements. Select heat treatments, if any, necessary to meet part requirements.	The characteristics and composition of common engineering materials. The necessity for corrosion control and the materials and/or processes available to accomplish this. How and when to use engineering reference books. How heat treatment changes the characteristics of metals. The processes and terminology of heat treatment.	A habit of using reference books to guide engineering decisions. A feeling of responsibility for part control beyond its size and shape description.
Determine and specify dimensions and tolerances which guarantee part interchangeability and function. Compose and position notes on a drawing. Determine and specify surface quality requirements.	The concepts and procedures for size control through tolerancing. (This understanding should have been well developed in previous units and given an opportunity for thorough application at this time.) How notes control certain production functions. The application and positioning of both general and specific notes. How surface quality is controlled by microinch specifications.	An awareness of tolerance important to a higher degree of sophistication. An appreciation of the function which notes perform on a drawing.

3780

3781

INDUSTRIAL METHOD

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Illustrate the "industrial method" through a lecture replete with examples of how an industrial problem could be solved. An overhead transparency with a flow diagram showing how an idea passes through engineering would provide structure for this lecture. Examples of the types of drawings employed at each phase of engineering could then be shown.	
A guest lecturer could be utilized to present employment possibilities, job characteristics, and earning potential for draftsmen and engineers.	
Select a drawing problem which includes several detail drawings such as a sub-assembly drawing and a general assembly drawing. Faster students might also draw a specification control drawing, an installation drawing, or drawings in any other category which would be useful for solving the problem selected.	
Discuss part requirements and how to use reference books. Have students determine materials, finish, and/or heat treatment, as required.	Oberg, Erik, and F. D. Jones. *Machinery's Handbook*. 18th ed. Industrial Press, 1968. $16.00; text ed., $13.00; Use of Handbooks, Tables, Formulas, $3.00
A variety of notes can be used on the drawings included in this set. Most assemblies of parts involve many surface quality requirements. This set of drawings should provide for several surface quality callouts.	
This set of drawings should provide ample opportunity for tolerance determination and tolerance buildup analysis.	

3782

AUXILIARY VIEWS AND REVOLUTIONS

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Draw or sketch primary auxiliary views. Complete principal views from auxiliary views. Develop an inclined curved surface in a principal view. Dimension an auxiliary view drawing.	How auxiliary views are used to show true size and shape of inclined surfaces. The selection and positioning of reference planes for symmetrical and unsymmetrical auxiliary views. The relationship of the various auxiliary surfaces to the principal surfaces: 1. Elevation auxiliary surface (top auxiliary) 2. Right or left auxiliary surface (front auxiliary) 3. Front or rear auxiliary surface (side auxiliary) The procedure for developing curved surfaces which do not present their true shape in a principal view. Rules for dimensioning auxiliary views.	An appreciation of auxiliary views as useful additions to the techniques available for graphic problem solving. An awareness of the need to describe all surfaces in their "characteristic" shape.
Draw a secondary auxiliary view. Transfer a curve from a secondary auxiliary view to a principal view.	That secondary auxiliary views are used to draw true size and shape surfaces not perpendicular to any of the principal planes or projection. How secondary auxiliary surfaces are projected: 1. Rotation planes 2. Development of view The method used for transferring curves from a secondary auxiliary view to a principal view.	
Draw a revolution about one axis. Draw a revolution about two axes.	The selection of a rotation axis or axes for revolution of a view or a part of a view. The development of succeeding views by projection.	An appreciation of the value of "revolutions" in determining otherwise obscure true lengths and surface configurations of inclines.
Develop true length of inclined lines and true size and shape of inclined surfaces.	How true lengths of inclined lines can be found by revolution. How true sizes and shape of inclined surfaces can be determined through revolutions.	

3783

AUXILIARY VIEWS AND REVOLUTIONS

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
A film on auxiliary views is an excellent device for teaching this difficult concept.	
A "projection box" with an auxiliary surface is also useful.	
Excellent transparencies on this topic are available for the overhead projector.	
A bulletin board with industrial drawings which include auxiliary views can provide motivation for learning this concept.	
It can be expedient to dimension these auxiliaries with a dimensioning system which has not been studied elsewhere, such as "speed dimensioning, limit dimensions, or metric dimensioning."	
Transparencies for overhead projection are available on this topic.	
Sheet metal drafting can be used to provide a meaningful application of the revolution technique.	
This difficult concept has limited usefulness for the average student and can be utilized as an enrichment topic for faster students.	

3784

PICTORIAL DRAWING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Sketch objects in oblique. Make mechanical drawings in oblique, including cavalier and cabinet drawing. Dimension oblique drawings.	Oblique drawings: 1. Axes 2. Part orientation 3. Circle and arc treatment 4. Procedure for drawing 5. Dimensioning 6. Cavalier drawing 7. Cabinet drawing 8. Sketching procedure	An appreciation of oblique drawing as a simple, approximate form of pictorial drawing.
Sketch objects in axonometric, mostly isometric. Make axonometric mechanical drawings (isometric, dimetric, and trimetric). Draw a 4-point approximate ellipse. Construct an ellipse. Draw an ellipse using a template. Dimension an axonometric drawing.	Axonometric drawings: 1. Relationships of the three categories included — isometric, dimetric, and trimetric drawings 2. Axes for each category 3. Circle and arc treatment a. Template applications b. Approximate ellipses c. Plotted ellipses 4. Procedure for drawing 5. Dimensioning 6. Sectioning 7. Sketching procedure	An awareness of the variations in axonometric positions and the flexibility of this drawing form because of this. An appreciation of the timesaving advantage of templates.
Sketch objects in parallel and angular perspective. Make mechanical drawings of objects in parallel and angular perspective. Develop circles and arcs in parallel perspective. Develop an ellipse in angular perspective.	Perspective drawings: 1. Principles of perspective concept 2. Terms used in perspective drawing 3. Parallel perspective (one point) a. Drawing procedures b. Determination of variables c. Circle treatment 4. Angular perspective (two point) a. Drawing procedures b. Determination of variables c. Circle treatment 5. Sketching procedures	An appreciation of perspective drawing as a form useful in representing large objects as they would appear to the eye.
Pencil shade a pictorial drawing. Air brush shade a pictorial drawing. Make an exploded pictorial drawing.	Shading: 1. Pencil 2. Air brush Exploded view drawings.	A basis for comparison of the pictorial drawing forms studied.
Select the pictorial drawing form best suited for solving a particular problem.	The advantages, limitations, and applications of each of these pictorial drawing forms.	The habit of selecting the pictorial form best suited to solve a drawing need.

3785

PICTORIAL DRAWING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Demonstrate oblique drawings, using the overhead projector or blackboard.	
Start students sketching simple objects and build up to a "term sketch" of some household or industrial item suitable for oblique representation.	
Assign some mechanical oblique drawings.	
Excellent transparencies of this topic are commercially available.	
Have students sketch a series of objects from simple blocks to a "term sketch." Begin with a grid, but do some sketches without it. It works well to have students make the first sketch on grid paper while the instructor sketches it on the same grid placed on an overhead projector.	
Assign mostly isometric drawings, using dimetric and trimetric for faster students or advanced classes.	
Have students sketch a series of objects.	
Students usually enjoy measuring and drawing objects from the room, such as their desk or a blueprint machine.	
Demonstrate pencil shading and air brush shading to small groups.	
Air brush work can be used as enrichment for faster students.	
Shade objects previously drawn in this unit.	
Have students make an exploded drawing.	
Develop a worksheet of objects to be drawn pictorially and have students indicate the best pictorial form for each instance.	

3788

ELECTRONIC DRAFTING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify electronic symbols. Describe the function of each electronic component studied. Draw electronic component symbols without templates. Draw electrical component symbols using templates.	The function and identification symbols of basic electronic components. That there are typical patterns for placing these components in a circuit. That templates are readily available for making electronic drawings.	An appreciation of the role of symbolism in electronic drafting. An awareness of how electronic circuits can be reduced to individual component functions by groups of components.
Draw a wiring diagram. Draw a block diagram. Draw a logic diagram. Draw a schematic diagram.	The variety of electronic drawings in use and the application of each: 1. Wiring diagrams 2. Block diagrams 3. Logic diagrams 4. Schematic diagrams a. Tube circuits b. Transistor circuits Layout procedures for the preceding drawing forms: 1. Spacing requirements 2. Standards governing electronic drawings 3. Construction steps Drawing procedures for the preceding drawings: 1. Lineweights 2. Template applications 3. Mechanical lettering applications 4. Inking procedures	An appreciation of the need for drawings to control and record the planning, production, and assembly of electronic devices. The habit of making electronic drawings neat and well-proportioned. An awareness of the role of national standardization organizations in electronic drawing.
Lay out component positions on a printed circuit board. Tape a printed circuit board.	The function of printed circuits in electronics. Layout procedures for printed circuit artwork: 1. Spacing requirements 2. Taping procedures 3. Computerized board layouts The types of circuit boards: 1. Single side 2. Two side 3. Laminated How printed circuits are made. Computerized board layout.	An appreciation of the simplicity of printed circuit boards as compared to hand-wired assemblies. The habit of laying out printed circuit boards carefully and accurately.
Make the drawing for an integrated circuit.	What integrated circuits are and how they are made. What drawings are required to make an integrated circuit.	An appreciation of the potential applications of integrated circuits.

3787

ELECTRONIC DRAFTING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Develop job sheets for component identification and for adding symbols to voids in schematic diagram.	
Demonstrate how to draw component symbols with and without templates.	
Provide charts with actual components shown next to their symbols.	
There are a variety of wiring diagrams in use today. Select a common form to draw, but point out how it resembles other forms available.	
Block diagrams are very simple and can be used as exercises for inking lines or mechanical lettering.	
Logic diagrams provide an opportunity to inject some computer study into the course.	
Have students make a mechanical schematic from a complete sketch.	
Have students revise a schematic which is crowded or poorly arranged.	
Have faster students ink a schematic.	
A field trip to an electronics firm gives meaning to these drawings.	
Position components on a printed circuit board and have students interconnect them according to a schematic provided.	
Have students position components and tape a printed circuit board from a schematic or logic diagram. This is more meaningful if it is a schematic previously drawn.	
Demonstrate board taping to small groups.	
Take a field trip to a printed circuit manufacturing company.	
Provide samples of printed circuit boards for students to study.	

3788

PROCESSES FOR CREATIVITY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Solve problems independent of direct teacher control.	The problem solving method. Design steps. The use of library resources.	Resourcefulness in solving problems independently. An appreciation of the usefulness of a step-by-step procedure for solving problems. An appreciation of the value of a library as a source of reference material.
Design a product and make the necessary drawings to control its production. Create tooling to implement production of the designed product. Develop process sheets and flow charts to route production through the shop. Create inspection tools. Make and record revisions on a drawing. Organize a company to promote the manufacture of the designed product.	The types of drawings used to control production. Engineering records, other than drawings, which control production. How tooling can be used to expedite production and improve interchangeability of parts. Inspection tools and procedures. Mass production techniques. How a company is formed and operated. The role of capital in our economy.	An appreciation of industry. An increased awareness of economics in industry.
Design a piece of tooling.	The fundamentals of tool design. The procedural steps in drawing a tool. (Problem solving as related to tool design.) How to locate and select steels and standard parts from suppliers' catalogs.	A desire to participate in creative functions of industry. An appreciation of how large problems can be solved by working with one small portion at a time.
Modify an existing product or design a new product.	The steps employed in product design (problem solving as related to product design). The fundamentals of aesthetic design. Material characteristics. Fabrication processes.	An appreciation of the complexity of product design. A desire to participate in the creative functions of industry. An appreciation of the desirability of studying related subjects such as math, science, and other industrial education courses.

3789

PROCESSES FOR CREATIVITY

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
The fields of engineering and drafting are too diverse to make it possible to include all of them in the drafting curriculum. Such topics as topographic drafting, aeronautical drafting, road and bridge drafting, product design, and patent drafting are samples of the fields which are available. This unit works exceptionally well with advanced or enriched classes.	
This unit is ideal for team teaching with some other shops. Design and draw up the product in drafting; have another shop build it.	
Films on mass production techniques are readily available from industry.	
A variety of guest speakers on related topics can be used at this time. (Labor unions, management, engineering, and economics are some of the topics on which speakers could be invited to talk.)	
Demonstrate tool design principles such as locating and clamping.	
Have design drawings and actual tools or pictures of tools available for study by students. (Contacting local industries can usually provide drawings and obsolete tooling; otherwise industry may allow you to photograph tooling which they must retain.)	
Have catalogs on steel and tooling components available.	
Use many films. They are available on such topics as aesthetic design, industrial designing, a variety of materials, industrial processes, and creativity.	
There are many ways to approach this problem such as: 1. Present a product to the class which has not been well designed; have them improve it. 2. Present a problem to the class and have them design a product to solve it. 3. Let each student determine his own product to design.	
Students can be grouped into teams with the better individuals designing and others detailing.	

3790

ARCHITECTURAL DRAWING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Identify those occupations which need to read and interpret architectural plans.	How tradesmen, contractors, estimators, and inspectors use architectural plans in their work.	An appreciation of a set of architectural drawings as a thorough plan for constructing a building.
Identify architectural periods.	What kinds of information are included in a complete set of house plans. What factors influence various architectural periods.	An appreciation of period styles of architecture.
Plan rooms individually. Assemble plans of each room into a floor plan arrangement. Make a finished sketch of the floor plan, including furniture. Determine room sizes and overall dimensions for house.	The function, characteristics, orientation, and size of each room in a contemporary home. Room organization by areas: 1. Living 2. Service 3. Sleeping Traffic patterns. Sketching procedures and techniques.	An appreciation of the desirability of developing a floor plan to suit the needs of a particular family. A desire to employ contemporary design principles in room planning.
Read and interpret a plot plan drawing. Position the house design on a lot. Position such details as walks, driveway, and utilities. Redesign lot contour if necessary to suit design.	Location plan functions: 1. Plot plans 2. Landscape plans 3. Survey plans Location plan symbols. Dimensioning procedures. Rudiments of surveying. House orientation relative to sun. Local property values. Local building ordinances dealing with structure orientation.	An appreciation of the aesthetics of matching an architectural design to the property characteristics. A desire to consider all factors before determining house orientation. An appreciation of the factors influencing property values.
Draw and dimension a floor plan.	Architectural lineweights. Floor plan symbols. Architectural scales. Architectural lettering. Floor plan drawing sequence. Floor plan dimensioning.	An appreciation of scale drawing. An appreciation of architectural symbolism.

3791

3790

ARCHITECTURAL DRAWING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Use a movie or a slide series showing how various occupations use information included in a set of plans.	
Have sets of building plans available for students to study.	
Show slide series of architectural periods.	
Discuss traffic patterns as well as function and characteristics of the various rooms. Slides or magazine pictures (shown on opaque projector) can stimulate student's creativity in room planning.	
Provide furniture "cut-outs" and grid paper for room layout.	
Cut out room designs and assemble into floor plan best suited to room designs.	
Introduce students briefly to those factors in house construction (such as load-bearing walls or trusses) which may influence design.	
Students can finalize plan with a sketch of entire plan with furniture positioned.	
Provide students with a plot plan of an interesting piece of property. (Local architects can provide one.) Have students position house to take advantage of property assets.	
Remind students to consider the effects of such things as contour and orientation on basic elevation design.	
Have students make a completed drawing of their plot plan.	
A field trip to an interesting building site can arouse imagination.	
Use a slide series of some houses which blend well into their surroundings and some which don't.	
Arrange for a landscape architect to talk to the group.	
Students who have trouble drawing an entire floor plan may draw one room at a time and later incorporate them into a complete plan.	
Provide students with sets of local architectural plans to study.	

3792

ARCHITECTURAL DRAWING—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Determine fundamental elevation best suited to floor plan design. Determine roof type best suited to evaluation design. Locate openings on elevation and blend into design effect. Develop elevation emphasis with color and material accents. Draw various elevations mechanically.	The fundamental elevation shapes such as one story, split level, and bilevel. The basic roof types such as shed, flat, hip, and gable. The characteristics of materials which emphasize elevation. How consistent horizontal or vertical emphasis lines are created. The effects on balance of mass, light, shade, and landscape.	An imaginative approach to solving elevation design problems. A desire to experiment with different solutions to an elevation design.
Identify building materials and their symbols. Draw a transverse section showing necessary dimensions and sizes of structural members.	The characteristics and applications of common building materials. Foundation types. Residential skeleton framing. Cornice variations. Nonstandard construction: 1. Post and beam framing 2. Steel framing 3. Thin shell concrete construction Structural ties (sheathing and bracing). Protective coverings (siding and roofing).	An appreciation of house construction methods and material applications. An awareness of the influence of construction requirements on design.
Draw standard details: 1. Kitchen 2. Bathroom 3. Stairs 4. Windows 5. Fireplace	How kitchen cabinets are constructed. Standard sizes for detailed items such as cabinets, windows, and doors. Template applications in detailing. Bathroom accessories. Stair construction. Window construction. Fireplace construction.	The habit of planning thoroughly by detailing all areas not completely described in the floor plan or section. The habit of using templates whenever possible.

SERL 3793

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
A series of slides showing houses which are well designed and which are poorly designed.	
Excellent transparencies are available on elevation design.	
Discussion of builders' brochures which are projected with the opaque projector. Pictures from magazines can be used in the same way.	
Provide samples of building materials to show students.	
A slide series of houses in various stages of construction helps students understand the fundamentals of house construction.	
Have students build a model house using scale components.	
Have students locate items (such as appliances, windows, and bathroom fixtures) detailed in suppliers' catalogs or Sweet's catalogs.	*Architectural Catalog File: A Classified Collection of Manufacturers' Catalogs.* 10 to 15 volumes in a set. Available from Sweet's Catalog Service, F. W. Dodge Company, Division of McGraw-Hill, 330 West 42nd Street, New York, New York 10036.
Use templates and drawing underlays as much as possible.	
A trip to a cabinet shop or school woodworking shop helps students understand cabinet construction.	

3794

ARCHITECTURAL DRAWING—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Develop a door and window schedule. Develop a materials schedule. Develop the necessary specifications.	How to specify windows and doors on a schedule. How a schedule can be used to control material specification in room finishing. Building codes. Function or specifications. What is included under specifications.	An appreciation of how schedules are used to insure that finishing is completed as planned. An appreciation of how specifications are used to control construction requirements.
Design, draw, and render an exterior perspective of a house. Make a model of the house designed.	Steps in making a perspective drawing. Rendering principles and techniques. Model building procedures.	A desire to see one's design in a three-dimensional state, either as a model or a pictorial drawing.

3798

INTRODUCTION

Graphic arts technology has extended from hand set printing to processes which include photography, static electricity, and the computer. Minnesota has become a leading center of the graphics industry. Because of the impact that graphic arts has on the life of the individual, every student should be encouraged to participate in at least one course.

This resource guide presents some of the processes used in the graphics industry. Certain innovative procedures to be used in presenting the material to the students are also included. Because of the ever-changing nature of graphic arts, each individual unit must be considered as a starting point for ideas. The teacher is encouraged to select as much material as possible from this guide and to enlarge the unit to meet the needs of students in their particular classroom situation.

Creative activity by the student is to be encouraged and emphasized. Situations can be developed in which creativity enhances student interest and activity. Equipment and supplies need not be expensive or elaborate. It is important both that the student experience the processes involved in graphic arts and that the student know the impact of graphic arts on modern society.

BASIC COMPOSITION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Illustrate parts of type.		Appreciation for standards in type sizes.
Understand and use printer's measurement.	Units of measurement for graphic arts.	Awareness of measurement other than metric or linear.
Handle spacing material.	Ratio of spacing material, smallest to largest.	Ease in justification.
Use California job case.	Functional layout of type case.	Proficiency.
Practice typesetting.	Necessity of reading lines in stick before final justification to avoid errors.	Checking techniques.
Typesetting.	Direction and markup have to be followed exactly for perfect copy.	Work procedures.
Justification.	Spacing is based on a percentage system on the em space. Proper justification can avoid "rivers of white."	Spacing and justifying techniques.
Composition using spacing rules.	Excellent typography is based upon the effective use of space.	Appreciation for the effective use of white space.
Proofing.	Need for type on its feet. Excess ink will cause smudging. Reproduction proofs should just have a slight amount of impression. Dried ink on type will cause imperfect proofing.	Appreciation for clean proofs.

BASIC COMPOSITION

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Sketch, freehand, a piece of type. While drawing freehand, hand out 72-point piece of type. Use the relationship of parts to the parts of the human body. For testing, provide outline of type (just the corners) and have students fill it in.	
Measure type, rules, and slugs. Provide worksheet on such problems as changing picas to points and inches to picas.	
Illustrate the proportional idea of spaces. Combinations can produce larger or smaller spaces as the case may be. Set row of each size of space in composing stick, nicks up.	
Provide blank outlines of California job case. Place the symbols of the lower alphabet in their proper compartments. Caps are in order except J and U. Define ligatures. Aid learning by nonsense sentences such as "Be careful driving elephants into small Ford garages" and "Let me now help out your punctuation with commas."	
Set up a practice typesetting sheet of approximately 10 lines. Lines should include various spaces, centering left and right, quotation marks, and caps. Justify lines.	
Set three complete names and addresses—one centered, one flush left, and one flush right. Place large quads on the outside with the 4 or 5 em spaces near the letters. Demonstrate setting up, stone and galley proofing, and distribution.	
Demonstrate justification by changing spacing to larger or smaller sizes. The line has been justified when it will stand alone in composing stick. Emphasize that all lines should be about the same degree of tightness.	
Review spacing rules concerning sentences, between word spacing, and paragraph indentation. Show "rivers of white" sample of poor spacing. Close spacing is better than wide-open spacing. Letter spacing is used on some occasions to aid in justification.	
Demonstrate correct proofing. Stress that washing solvents have to meet the fire department's approval.	

3801

3801

BASIC COMPOSITION—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Proofreading.	Need for printer's shorthand. Symbols are almost universal in use. Final OK from customer is usually necessary.	Speed and accuracy.
Mitering.	Mitering produces corners that are well joined and show no breaks. Some rules and borders require premeasuring so one will not miter on a center of a design.	Precision measurement.
Simple composition using markup.	Markup will give all the details necessary to produce correct composition. Design usually follows a pattern such as formal, informal, or modern. Using more than two type families causes poor typography.	Appreciation for good type design.
Multiple justification.	Multiple justification cuts composition time. Corrections usually require rejustification except for numbers. Accurately cut slugs are needed when doing this.	Appreciation for labor-saving techniques.
Type classification.	Type identification is usually based upon the shape of the letter. Type faces are generally divided into six major classifications.	Recognition ability for various types.

3802

3801

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Discuss and illustrate proofreader's marks. Use on all corrections. Test memory by sight as well as meaning.	
Demonstrate mitering machine; use slow even strokes against the rules or borders. Space out with solid material when possible. Corners fit better when rules are cut one-half point larger.	
Specify a small name card or business card. Use cut when possible and appropriate. Produce six thumbnail sketches of job before starting final one. Instructor and student pick out the best one. Go over type sizes and width measurements and the reasons for them. Have samples of past work produced. Break form for color if desired.	
Design a job that has two or more alignments in single line. Numbers and headings work well. Use local election results by wards or county results by townships or cities. Can also use the names and legislative districts of state representatives or senators.	
Illustrate parts of the face which usually aid in identification, such as serifs, full body strokes, and shape. Use several pages of magazines to identify the six classes of type.	

3804

3803

BASIC DESIGN

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Lay out dummy booklet.	Basic design follows rules and patterns.	
Modern layout.	Concept of white space. Modern design contains contrast but with simplicity.	Aesthetic appeal.
Formal and informal layouts.	Major differences between both styles. Shape of design helps to create style.	Recognition ability.
	Unity and proportion complement each other in good design. Contrast is an effective method of obtaining pleasing design.	Awareness of golden proportion.
Add subtle effects to printed piece.	Rules, borders, or decoration add dignity to a printed piece if used adroitly.	
Select type faces.	End use of job is the major factor in determining type selection. Each type has its own personality.	Appreciation for good type styling selection.
Do a pasteup from a dummy copy.	Dummies serve as guidelines for finished work. Pasteup serves as copy ready for camera. Correct alignment of all parts of ad is essential; one crooked line will spoil entire job.	"Eye" for alignment.

3804

3803

BASIC DESIGN

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Produce 16-page dummy book from 25 x 38 sheet of book paper. Use contrasting construction paper to represent illustrations and another color to represent block of type. Strive for effective use of white space and formal, informal, and modern design.	
Have samples of modern layout. Show effective use of bleed cuts and unusual size-space relationships.	
Produce simple ads using both formal and informal design. Use the same copy for both; compare. Illustrate the use of lines which are horizontal, vertical, off center, split, cut in, and unjustified.	
Show samples of printing which is out of proportion or uses too much reverse plate. All display is no display. Mixture of too many faces is difficult to read.	
Illustrate and display what borders can do for a job. Borders that are too heavy will outdraw copy. Get sample from weekly newspaper.	
Distribute type catalogs and have students select type for a relatively large job. Pick out headings, body copy, or lead-in lines. Go over selections. Show markup techniques.	
Paste up on hard-surfaced stock so the fibers do not lift off with the adhesive in case some copy must be lifted. Mark all guide lines. Put some copy in using a French curve or circles.	

3805

3805

PLATEN PRESSWORK

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Historical background of letterpress printing equipment.	Appreciation for technical progress.
Practice feeding by hand.	Function and operational capacity of platen presses.	Safety feeding habits.
Imposition.	Proper lockup procedures. Use of sinkers to avoid workups. Dummies aid in placing the forms in the proper sequence.	
Change packing.	Different jobs require different packing according to length of run and stock printed. Cutting corners on tympan sheet will aid in drawing it up tight.	Judgment for selecting proper packing.
Ink press.	Split ink disc aids in even distribution of ink. To avoid buckling in ink fountain, start settings from center.	Correct procedures.
Placing form and obtaining position.	Necessity of checking form for lift before removing from stone. Bottom guides are best set one-fourth of way from end of stock.	Appreciation for proper lockup.
Set and seal pins.	Pins should only go through tympan sheet. Excess sealing wax causes inability to move sliding tongue.	
Placing of grippers and fingers.	Fingers and grippers aid in stripping the stock from the form. Their use increases the safety factor.	Caution when using press aids.
Makeready.	Proper makeready is indicated by smooth, even impression on reverse of sheet. Excess impression wears out the type. Sometimes it is necessary to build up behind the type form.	Appreciation of a proper makeready job.
Feeding printing stock.	Each kind and finish of stock will feed differently. Small lifts will help to avoid offsetting. Sandpaper placed on operator's fingers reduces the chances of smudging with fingers.	Sense of "feel" for a variety of stocks.

3806

PLATEN PRESSWORK

IMPLEMENTATION SUGGESTIONS

Using overhead projector, show illustrations of old type presses, platen as well as rotary and mechanically fed presses.

Individual instruction on feeding. Emphasize that misregistered sheets or sheets that have fallen from pins are NOT to be retrieved.

Demonstrate two types of lockup—chaser and furniture. Point out sections that usually cause binding and spring. Practice elementary lockup with old cut first rather than with type.

Show why anchor sheet has to be held securely to hold makeready sheet. Filler sheets should be cut smaller than platen size. Use just a few fill sheets, more can be added later as impression requires.

Demonstrate inking the disc. Start with a small amount of ink as it is easier to add more.

Mark off paper for width of form and fold to balance the side margins. Estimate top and bottom margins. Mark lines with pencil on tympan.

Start pins one-fourth inch below the line to have pins snug when in proper position. Seal pins with sealing wax.

Show visually the alignment of grippers placed to miss the form. Tighten nuts securely as vibration may loosen them. Because grippers close before the platen does, remove hand quickly.

Show stab marks in tympan while sheet is resting on its three guides. Use enough pressure to mark anchor sheet only and not through to metal platen. Draw makeready patches on reverse side of sheet. Build up with proper weight of stock; paste in open areas only if possible.

Give individual attention during the running of the first few live jobs. Emphasize safety factors. Stress quality on later jobs.

INSTRUCTOR'S NOTES

3807

PLATEN PRESSWORK—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Mechanical feeding of printing stock.	Feeding setting must be accurate to feed properly. Thickness of stock requires changing of pile high gauge. Doubles can be avoided by using a low pile and ample air separation.	Appreciation for fine adjustments on feeding mechanisms.
Proper hand washup.	Proper care during washup will result in a longer life for press rollers. Ends of rollers are the most important parts to clean as dried ink buildup rapidly appears here. Place solvent on cleaning rag to avoid "drippings" on the inner parts of the press. Power must be off during cleaning for safety. Solvents used must meet fire department's approval.	Cleanliness during cleaning operations.

3808

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Feed through several lifts of various types of stock with the use of a form. Watch for doubles.	
Demonstrate proper hand washup. Use semiclean and semidirty rags to get most of the ink off. Finish up with a small new rag for final touchup. Fold rags so palm of hand does not get full of ink; refold rag so dirty spot is inside. Pour solvent on rags only, not directly on press rollers. Show proper storage of rags and reason for it. Limitations to amount of solvent kept in shop are determined by fire department regulations or suggestions.	

3810

3809

PAPER AND INK

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Historical development of the process of papermaking.	Appreciation for advancement of techniques in papermaking.
	Difference between offset and letterpress printing inks.	Selectivity.
Test for grain direction. Test humidity.	Fibers determine quality and use of paper. Folding qualities of sheet should be noted. Also note reaction of humidity on stock.	Test techniques.
	Grain direction creates bindery problems mainly because of bulk at seam.	
	Use of various types of paper. Final use often determines the type of paper used.	
Paper calculations.	Mathematical formula is used.	Accuracy.
Cost procedures.	Pricing. Packaging from mill in standard lots. Value of standard size and weight.	Purchasing requirements.
	Purpose of watermarks and laid paper; how they are made. Subtle watermarks add dignity.	
Simple design.	Simplicity is effective design.	
Production of sample paper book.	Paper classifications.	
Mixing and matching of inks.	Ink colors do not act the same as the light spectrum. Need for different ink for color harmony.	

3810

PAPER AND INK

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Schedule report or early paper manufacturing. Group students in pairs to work on separate periods, such as 1850 to 1900, European or American.	Contact any large paper company's public relations department about the possibility of obtaining a brochure on their papermaking process. Arrange a field trip if possible.
Absorb ink into sized and unsized paper stock. Use several varieties of ink and colors. Note rate of drying.	
Draw fibers to illustrate how they appear under a microscope. Compare bond, book, kraft, or other types of paper.	
Fold various types of paper to determine grain direction.	
Show samples of different methods of printing on many grades and weights of paper. Stress finish.	
Stress calculating and cutting to avoid waste.	
Price a complete job. Give formula to get weight of number of sheets. Stress suppliers' breaking point on cost of materials.	
Collect samples of various watermarks.	
Have students create and sketch a watermark of their own design.	
Divide booklet into major paper classifications such as book, bond, cover, and specialty. State standard size, weight, color, and finish. Test with open book test and from sample book; later test just by sight and feel alone.	
Produce color wheel; provide blank outline form. Show colors made from mixing two secondary colors. Students should learn dimensions of color—hue, value, and chroma—and also know about modern matching of ink by light reflection.	

3811

PAPER AND INK—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Process color work.	Importance of dot structure. Ink density. Alignment.	Press cleanliness.
	Need for proper sequence.	Plate-marking techniques.
Handle ink correctly.	Oxidation, penetration.	Ink-saving techniques.
Add ink additives on proper occasions.	Need for ink adjustments. Specially compounded inks are sometimes needed.	
Overprinting and underprinting.	Transparent and opaque inks. Gold and silver inks have unique structure. Covering power of inks.	Creative effects by the use of various inks.

3812

3811

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Produce a process color job. Watch density of ink on first two colors. Press has to be absolutely clean. Wash for color at least once.	
Run colors in the wrong sequence or two of the process colors for the wrong plate.	
Show proper skimming of ink can.	
Purposely add extra amount of modifiers at end of run to show dramatic effect of their overuse.	
Show correct mixing of gold and silver ink. Show samples of same that were not mixed properly. Give reason for the ink not being premixed.	

3814

3813

BINDERY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Stock estimating.	Cost and time factors in estimating. Allowances for machine preparation. Breaking point in purchasing stock. Obtaining the greatest number out.	Habits of accuracy.
Simple embossing.	Male and female dies and their relationship. Blank embossing adds effective design. Much pressure is required which may break the fibers.	
Perforating and slitting.	Necessity of solid base to obtain sharp separations. Hand operation more difficult as well as dangerous. Grippers and fingers are usually necessary during operation.	Safety habits with grippers and fingers.
Drilling and punching.	Sharp tools are a necessity. Most machines can be set up for step and repeat work with adjustable guides. Accurate stock positioning is necessary.	
Die cutting.	Metal sheet under tympan will save platen and produce better work. Great amount of pressure is needed to go through certain types of stock.	Safety habits with production techniques.
Stitching.	Types of adjustments necessary to change from saddle to side stitch. Cutters on machine must be sharp so wire will be driven through stock. Heavier stock requires a stronger wire.	Fastening techniques.
Collating.	Hand collating is costly. Stock can be obtained that is already in sequence. Money can be saved by farming out to those that have the proper equipment.	

3814

BINDERY

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Estimate several sample jobs. Include an extra amount for spoilage. Figure the breaking point on paper purchase. Each operation will require extra sheets to get machine in proper operation.	
Set up embossing dies, male and female. Check alignments. Do not leave press lock on impression. Look up press recommendation on how to handle this properly.	
Explain the various uses of type high, over type high, and under type high perforating rules. Place thin metal strip under packing to aid in making perfect separations. Teeth are numbered in units per inch. Rules are made from carbon steel.	
Set up card that has several sizes of holes spaced at a predetermined distance. Demonstrate hand sharpening of drills. Avoid undue stress on paper stock.	
Place thin metal sheet under packing when die cutting in order to produce sharper cuts. Nick rule with screwdriver so stock will remain on sheet while in press; press out later.	
Produce booklet with side and saddle stitching. Make sure stitches are not in trim line. Stitches should just about touch when bent over. Booklet could be preprinted with copy so one can check such things as folds.	
Collate several forms in sequence. Have sheets numbered and in different colors. Can use expandable rack or show position on gathering table for best results.	

3815

3816

PHOTOGRAPHY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Construct pinhole camera.	History and evolution of photographic instruments.	Appreciation for technical progress.
Handle film correctly.	Sloppy habits cause additional problems later on.	Patience.
Check camera f-stops and lens.	Need for accurate records of settings.	Test techniques.
Develop negative and print black and white photograph.	Kinds and types of developers. Depth of field. Focal length. Understand use of a variety of light meters, American Standards Association (A.S.A.) ratings, and exposure value scales.	Self-reliance. Habits of cleanliness. Correct work procedures.
		Sense of appreciation for quality photography. Knowledge of the great photographic masters.
Flash photography.	Kinds of flashes and reflectors. Advantages and disadvantages of each. Electronic and bulb type. Recharging procedures.	Caution when using bulbs.
Enlarge photographs.	Relationship between light and distance. Use of test strip. Need for different kinds of papers, weights, and finishes. Polycontrast.	Caution when working with chemicals. Resourcefulness.
Take abstract or free form photographs.	Necessity of accurate focusing. Use of cable release.	Creativity.
Time exposure photography.	Why distance from light source is important. Wide angle lenses for certain types of photography.	A sense of eye appeal in photographic composition.
Still life photography.	Klevin degrees and types of lenses for variety of work. Need for different kinds of film. Role of shadows in design. Bounce techniques.	Display and set up techniques. Photographic imagination.
Available light photography.	Changing A.S.A. ratings via different developing with Aquafine or Dinafine.	Unusual camera techniques.

3816

PHOTOGRAPHY

IMPLEMENTATION SUGGESTIONS

Diagram parts of camera or construct simple pinhole camera.

"Dry run" the feeding of film in camera and developing canisters. Load in daylight and in total darkness. Repeat until done effectively.

Show the interrelationship of the f-stop and time. Suggest use of tripod to be able to test slower speeds without camera movement. Record exposure for each picture. Use same copy for all photographs. Develop and check with magnifying glass.

Detail first camera assignment. Stress design. Suggested subjects include people at work, kids at play, contrasting shadows, architecture details, buildings of unusual design, or churches.

Review the works of some great photographers.

Show samples of the various types of flash. Demonstrate electronic flash.

Form pendulum with pen light on string in darkroom. Change pattern by placing tension on string.

Take a night photo with tripod. Suggest public buildings, churches, traffic patterns, airports, or homes. Parts of buildings can be subjects also.

Use two to five lights with reflectors, diffusion panels, and bounce techniques. Photograph products such as glassware, clothing, or other unique items. Two or three students can work on job together.

Take classroom pictures or pictures of people at work. Open up lens to short depth of field. Need higher speed to avoid "human wiggle."

INSTRUCTOR'S NOTES

Many free technical aids for instructors and students are available. Ask to be placed on the mailing list of:

Eastman Kodak Company
School and Youth Services Department
343 State Street
Rochester, New York 14650

3817

PHOTOGRAPHY—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Color photography and developing.	Nature of reversal film. Color harmony. Proper background.	Accurate temperature control. Design arrangements.
Presentation mounting.	Pleasing mounting adds to finished product.	Informal design in mounting.

3818

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Choose colorful subjects such as flowers, lake scenes, sunrise and sunset, neon sign at night, abstracts, or double exposure.	
Practice design with colored pieces of paper for mounting on white sheets for proper positioning. Stress unusual arrangements; anyone can do formal arrangements. Can use small cards that are proportional in size.	

3819

PHOTOLITHOGRAPHY

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Historical evolution of photomechanical method of reproduction.	Appreciation for rapid progress in this field.
Draw image on direct image master.	Transfer process. Ink and water balance. Need for replacing direct image type of drawing.	Drawing technique.
Copy preparation. Cold type pasteup with wax and rubber cement.	Various adhesives used in copy preparation.	Pasteup techniques.
Pull reproduction proofs.	Need for sharpest copy with no fuzziness.	Critical "eye."
Accurate positioning.	Guide lines and gutter marks. Use of blue lines.	
	Effective use of white space.	Sense of balance and harmony.
Guide lines for multiple copy.	Step and repeat copy.	Accuracy.
Use preprinted rules, borders, artwork.	Art services and cold type aids increase productivity as well as increase effective design.	Type style.
	Clean copy for photography lessens the chance for pin-holes.	Habits of cleanliness.
Shoot offset test copy.	Action of light on silver bromide. Emulsion and base side.	Camera test. Range of camera limitation.
Shoot regular copy.	Chemical action during developing. Time relationships and f-stops.	Darkroom procedures.
Enlarge and reduce copy.	Reduction and enlarging scales. Use of ground glass to check image.	Proportion and estimation techniques.
Halftone photography.	Magenta screen. Dot structure and highlights. Flash and bump step.	Precision camera technique.

3820

PHOTOLITHOGRAPHY

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Show original litho stone. Emphasize its limitation because of size and weight.	Clipper Arts Service Dynamic Graphics, Inc. 6707 North Sheridan Road Peoria, Illinois 61614
Draw simple image using litho crayon. Copy drawings if necessary.	
Paste up dummy ads using several types of adhesive.	
Pull repro from letterpress job. Check impression.	
Practice rearranging copy before pasting up.	
Demonstrate cleaning lens with tissue. Use old lens; show what not to do. Brush off excess rubber cement or wax from copy.	
Show sample of copy shot clean and then shot when the copy was not properly handled.	
Paste up all kinds of copy—typewritten, light and dark reproductions, and printed copy. Shade off at 5-second intervals.	
Shoot copy. Handle film on corners. Stress consistency of procedures.	
Assign jobs that have to be reduced to a certain percentage.	
Use photograph that student has printed. Glossy print is required. Figure range of density from darkest part to highlights.	

3821

PHOTOLITHOGRAPHY—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Separate copy.	Filters will only let certain colors through.	
Shoot autoscreen film.	Dot structure preprinted in film. Partial development and then still development.	Tray developing techniques.
Strip and opaque.	Emulsion side important. Preruled masking sheets reduce positioning time.	Taping and opaquing procedures.
Two or more colors from single negative.	Simple techniques can produce separate plates for various colors.	Plate covering and opaquing procedures.
Produce presensitized plate.	Kinds of coatings on plate. Perfect contact needed during exposure. Newton rings appear. Moisture on fingers will cause breakdown of diazo layer.	
Plates with platemaker's guide.	Guide use to obtain accuracy. Method of quality control. Guide checks the sharpness of the camera.	Quality control standards.
Develop plate.	Separate chemicals are needed to do different steps in developing. Desensitize both sides if using a two-sided plate as this will avoid lacquer pick-up.	Hand motion during developing.
	Overdeveloping and plugging. Image can be removed and done over.	Plate-saving techniques.
Gum plate.	Protection of nonimage area most important. Gum binding on press is caused by not wiping the plate down properly. Water is only product that will remove gum.	Proper gumming procedures.
	Other types of plates are deep grained, subtractive, and wipe on.	

3822

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Separate copy using filters. Also separate by using two negatives and opaque or cover with goldenrod.	
Demonstrate practice shot. Accurate time for development is a necessity.	
Strip on unruled and ruled masking sheets. Show where tape is placed to the best advantage, butting techniques, and paste in of halftones.	
Cut out part of the masking sheet to get one color. Small items can be opaqued and then removed for another shot. Save cutouts of masking sheet so they will drop in place.	
Demonstrate correct hand motion for plate developing. Water may be added during development to avoid plugging or a dry surface. Developing requires even pressure on developing pad.	
Place platemaker's guide in gripper area. Develop to manufacturer's recommendation. Give guide area some type of development. Varying power supply will cause overexposure or underexposure.	
Demonstrate proper motion of developing a plate. Use flat surface near water supply. Large clipboard works well for holding the plate.	
Remove image with acetate; start over.	
Place light coating of gum on plate. Rub down with an almost dry cheesecloth which will remove gum from image area and still protect the nonimage area.	
Discuss the other types of plates available such as additive types and subtractive types.	

3823

OFFSET PRESSWORK

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Historical aspect of offset printing machines.	
Clean and oil press.	Dirt and grime act as an abrasive against moving parts. Manufacturer's recommendation on oiling must be followed.	Appreciation for clean, well-running equipment.
	Offset transfer principles using one, two, or three cylinders.	
Install offset plate.	Different types of fastening plates. Necessity of even tension on plate. Front and tail clamp will have different locking devices because of direction of cylinder.	
Ink press and set dampening unit.	Ink spoilage can be reduced by evenly removing ink from the entire surface of the can. Emulsification caused when water (fountain solution) mixes with ink. Excessive pressure on dampening rollers causes plate wear and scumming problems.	Sense of "feel" for settings.
Positioning job on stock.	Presses provide adjustment controls that will take care of slight miscalculations on stripping table. Adjustment controls have to be tight and firm because if they loosen during run it will cause a misregister.	
Maintain quality run.	Proper ink and fountain solution balance control affects quality. PH factor in fountain must be checked. Constant sheet inspection is necessary during run for high quality work.	Visual quality control.
Change for process color or light bright colors.	More than one washup is sometimes necessary to obtain true color. Process color inks require an even layer of ink; too much will cause a muddy print.	Color changeover techniques.
Wash press.	Unremoved dried ink will glaze. Wash blanket with water to remove particles of gum and rewash with proper solvent. Dampening rollers should be cleaned with detergent to remove particles of ink. Gum metal rollers to avoid oxidation if press is to set over a long period of time.	Proper attitude towards cleaning press.

38:4

OFFSET PRESSWORK

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Present background material on presses. Show photographs of some early model presses. Note change from stone to metal plates.	*How To Be a Smooth Operator.* Filmstrip and booklets. Available from Minnesota Mining and Manufacturing Company, Printing Products Division, 3M Center, Building 235 — D142, St. Paul, Minnesota 55101.
Show oiling chart for individual press. Demonstrate oiling and wiping down press.	
Draw direct image with only one transfer to show that one more transfer is needed to get the right reading image. Follow a few sheets through the press while turning the flywheel by hand to watch the cycle.	
Show the various types of clamps such as pin bar, slotted, and straight cut. Demonstrate on press.	
Demonstrate how improper feeder settings will cause trouble. Observe results of settings that are too tight or too loose. Increase and decrease suction and blast, showing action of paper stock. Feed sheet by hand, showing movement of side guide and gripper action.	
Check position against copy position by folding or by cutting apart with paper cutter. Demonstrate mechanism that raises or lowers copy by moving cylinder. It is sometimes necessary to cock plate in order to obtain exact position, especially on process color work.	
Demonstrate on press things to watch for in checking quality printing. These include even ink coverage and density. Soften ink if halftones keep filling. Remove stock in small lifts to avoid offsetting, especially on coated stock.	
Run a few copies off on just the first washup and then compare copies printed after the second washup. Post copies of process jobs that were produced with inks too strong or just one color too light.	
Demonstrate proper procedure for washup. Show what happens when excessive cleaning fluid is used. (It drips to various parts of the machine and causes stock to get dirty on its way through press.) If machine has washup feature, pick up spots it missed by hand, with power off. Store rags in proper closed metal container. Glaze can be removed with lye or special glaze removing solvent. Show that a glazed roller loses its affinity for ink.	

3825

SCREEN PRINTING

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	History and development of process screen printing.	
	Four areas of printing—relief, intaglio, planograph, and screen.	
Select material for screen.	Cotton, linen, nylon, organdy, copper, brass, and stainless steel can be adapted well to certain situations. However, silk is usually used in industrial arts. Numbers 10, 12, 14, or 16 are suitable for most work.	Variety of screens aids in creativity.
Change screen.	Proper tacking or stapling is necessary for quality results. Woof and warp should be at right angles on frame.	Perfectly stretched screen.
Select screen ink.	Particles of all the different kinds of ink must pass through screen without causing difficulty or without plugging.	Proper consistency of ink according to the mesh of the screen and the material upon which it is used.
	Drying is a four-part process — oxidation, evaporation, polymerization, and fusion.	Adequate space for drying. Appreciation for well-designed racks.
Register form.	Distance of screen to base will approximate thickness of object being screened.	Accuracy.
Color registration.	Register marks are placed on bleed portion for additional colors. Semi-transparent inks can be overprinted to produce various shades. Opaque inks can cover hairline registration separations. Pins have to be set accurately and securely to maintain registration.	Importance of perfect alignment.
Knife-cut film.	Shellac and lacquer types of films have different properties. Care must be used on corners. A hard, smooth surface should be placed on the underside when cutting.	Knife handling.

3826

SCREEN PRINTING

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Report on early beginnings of screen printing; assign small groups to present the subject orally or by discussion.	
Note in detail the characteristics of screen printing. Observe ink patterns and density of ink with a magnifying glass.	
Inspect samples of material printed by a variety of screens. Objects can be brought from home too. Cosmetic and soft drink bottles are usually screened. Look for registration point of container.	
Demonstrate the placing of the screen.	
Display work with ink too thin or too thick and with ink that has been stretched too much or doctored with the wrong extenders or varnish.	
Set up test of ink, comparing drying times of the various types. Add driers and record time. Control drying temperatures if possible.	
Demonstrate the setting of guides. Show the relationship of the different guides (tape, adjustable, V-groove, and commercial) to the type of material that is used.	
Assign simple design problem.	

3827

SCREEN PRINTING—continued

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
Process of adhering and removing film.	Different adhesives or solvents used in the process. Combustibility of lacquer and many other solvents.	Safety in the use of solvents.
Block out plates.	Lacquer, water, and oil resists are used to block out plates. The kind of resist used depends upon type of ink used and length of run.	Proper selection of material.
Screening on decals.	Special stock with decal backing permits transfer of design to other surfaces.	Suitability of other surfaces for decals.
Special effects in screening.	Flocking adds a distinctive effect on screen work. Glue sizing used as base; flocking is done by hand or air gun. Test amount of glue and flocking it will hold.	Place for prerun testing.

3828

SCREEN PRINTING—continued

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Demonstrate placing of screen, checking edges carefully. Block out areas with blocking materials; two thin coats are best.	
Improper storage of used cleaning rags can cause fire hazard. Use closed metal containers for storage. Empty frequently. Work in well-ventilated place with no flames nearby.	
Run school seal in various sizes and transfer onto finished projects.	
Demonstrate the simplicity of flocking. Combine colors for effect.	

3829 3830

CAREER INFORMATION

SKILLS STUDENTS WILL BE ABLE TO PERFORM	CONCEPTS STUDENTS WILL UNDERSTAND	APPRECIATIONS STUDENTS WILL DEVELOP
	Nature of apprenticeship, its historical development. Present rules and regulations. State supervision of apprenticeship.	Appreciation for a time-tested method of instruction.
Fill out a legal contract.	Nature of contract between two or more parties enforced by law. Minor co-signed by parent.	Legal awareness.
Correctly fill out application forms.	Necessity of complete and accurate information.	Awareness of industrial personnel practices.
Interview.	Importance of personal interview. Necessity of presenting good grooming. Reasons for being asked certain types of questions.	Interview knowledge.
	School test results providing norm group and percentile ranking. Some industries depend upon these a great deal; others depend on successful past working experiences.	Appreciation for testing procedures and interpretation.
Obtain career and school information.	A wide variety of information is needed before a final decision can be made on further schooling. Financial considerations for schooling.	Inquiring techniques.
	School and industry recruitment personnel can provide the latest up-to-date information.	
	Location of job opportunities. Additional schooling may be needed. Financial aids usually can be arranged. Scholarships based upon need and ability.	Post-school awareness.

CAREER INFORMATION

IMPLEMENTATION SUGGESTIONS	INSTRUCTOR'S NOTES
Obtain several copies of apprenticeship contracts from the State Apprenticeship Bureau. Get one for each major graphic arts area.	
Reproduce several types of contracts. Fill out forms and review.	
Reproduce application form from a printing firm. Fill out in detail with proper references and personal section. Stress importance of obtaining permission to use certain names and information. Accurate dates are very important.	
Set up interview situation and prepare a list of questions usually asked. Stress importance of followup conversation or letter, information on resume, and answering "help wanted" ads.	
Review test given to students during school. Review other personality tests such as inventory tests, achievement scholastic ability tests, industrial personnel tests, MMPI, and graphic arts tests.	
Assign people to get information on a wide variety of schools such as colleges, private vocational schools, area vocational schools, and trade schools. Suggest resource people that one can contact for information.	
Participate in Career Days. Arrange for visiting personnel from industry or trade association.	
Have counseling information available to students in shop rather than just in counselor's office. Many excellent brochures are provided by graphic arts trade associations. Excellent sources of information are the *Dictionary of Occupational Titles* and the Marine, Army, and Navy career guides.	U.S. Employment Services. *Dictionary of Occupational Titles*. 3rd ed. U.S. Department of Labor, Manpower Administration, Bureau of Employment Security, 1965. Vol. 1, $5.00; Vol. 2, $4.25 Available from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

An Instructor's Guide for a Program in Electrical Services. Automotive Industries Occupations.

New York State Education Dept., Albany. Bureau of Secondary Curriculum Development.
MF AVAILABLE IN VT-ERIC SET.
The Publications Distribution Unit, State Education Department, Albany, New York 12224 (single copies available).
PUB DATE - 70 110p.

DESCRIPTORS - *TEACHING GUIDES; *TRADE AND INDUSTRIAL EDUCATION; *AUTO MECHANICS (OCCUPATION); *ELECTRICAL SYSTEMS; AUTO MECHANICS; ELECTRIC BATTERIES; SECONDARY EDUCATION; *ADULT VOCATIONAL EDUCATION; ENTRY WORKERS; BIBLIOGRAPHIES; TRANSPARENCIES

ABSTRACT - Developed by the Bureau of Secondary Curriculum Development, New York State Department of Education, from the suggested services listed in "Automotive Service Occupations" for automotive electric systems, this teaching guide may be used for secondary education classes or for preparing entry workers or adults already working as automotive mechanics. Units, arranged by content outline and teaching approaches, include: (1) Introduction, (2) Fundamentals of Automotive Electricity, (3) Automotive Storage Batteries, (4) Charging Systems, (5) Starting Systems, (6) Ignition Systems, and (7) Lighting and Electrical Accessories. Each unit contains objectives, review questions, textbook references, films, filmstrips, transparencies, and a summary of key points. A comprehensive objective final examination, glossary, bibliography, and directory for resource materials are appended. (FM)

Foreword

Electrical Services was developed from the suggested services for the basic automotive electrical systems as listed in the *Automotive Service Occupations*. The content may be used in secondary schools and adult programs to assist in preparing individuals who wish to enter the automotive field or to upgrade personnel already working as automotive mechanics. Greater employment opportunities and a higher income potential are possible for those who are willing to become knowledgeable in this specialized field.

Appreciation is expressed to Thomas Onderdonk, auto mechanics instructor at the Washington-Warren-Hamilton County B.O.C.E.S. Occupational Center at Argyle, for his efforts in developing the instructional materials. Assistance relating to content was provided by Edward Shattuck, Associate in the Bureau of Trade and Technical Education. The project was coordinated and the manuscript edited and prepared for publication by Nelson S. Maurer, Associate in the Bureau of Continuing Education Curriculum Development.

Message to the Instructor

Electrical Services is designed to prepare trainees for employment in a specialized area of automotive service. The units are planned to be presented in numerical order but the sequence may be altered with the exception of the unit on fundamentals.

Plan each lesson carefully before presenting it to the class. It will be necessary to consider classwork, discussion, demonstrations, and review. The left-hand column of each unit contains suggested topics. The right-hand column gives related information and teaching techniques, methods, and tips which should help to achieve a more effective presentation. Also, this column shows page references for selected textbooks for which the complete citations and symbols are given on page 98. Give a summary of the key points discussed at the conclusion of each unit. A suggested final examination is provided at the end of this guide. The questions are derived from the basic material and are in the form of completion and multiple choice.

Use the chalkboard, overhead projector, charts, diagrams, and other visual aids to clarify the material being presented. A list of suggested aids appears at the end of each unit. Excellent instructional materials are available from various automobile and automotive equipment manufacturers but order these materials well in advance of the scheduled lesson. Specific materials might be located in *Automotive Instructional Material* published by the Automotive Service Industry Association. Many teaching aids may be fabricated from samples or discarded equipment.

New instructional aids are constantly being made available to instructors. Current releases of audiovisual aids are usually listed in issues of such publications as the *American Vocational Journal*, *Industrial Arts and Vocational Education*, and *School Shop*. New information relating to the automotive industry is available from general trade magazines as well as publications distributed by specific manufacturers.

As experience is gained with this guide, it is hoped that suggestions will be sent to the Bureau for consideration in subsequent revisions.

BERTON P. PLUMMER, *Chief*
Bureau of Trade and Technical Education

JOHN E. WHITCRAFT, *Director*
Division of Occupational Education

Introduction

OBJECTIVES

- To understand the course requirements
- To understand the content that will be covered in the course

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Importance	There is an acute shortage of all types of competent auto mechanics but an even greater shortage exists in the areas of electrical diagnosis and service. The purposes of the course are: • To provide training in the field of automotive electricity for apprentices and vocational students • To permit individuals who are working as auto mechanics to expand their knowledge in the area of automotive electricity
II. Course Requirements	
A. Textbook	*If a textbook is to be used, give its name, price, and source. Arrange for a group order.*†
B. Notebook	*Indicate that a looseleaf notebook is necessary for keeping class notes, job information, booklets, and materials distributed during the course.*
C. Prerequisites	It would be advantageous for trainees to be knowledgeable in the following areas: • Basic mathematics • Science • Principles of operation of the internal combustion engine • Shop safety

†Textbook citations given at the end of each unit.

Introduction

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
III. General Safety	*Discuss the procedures for extinguishing small fires involving:* • *Liquids* • *Wiring* • *Upholstery*
A. Protective clothing	*State the school policy relative to coveralls or shop coats and, if required, suggest that trainees furnish their own protective clothing. Mention possible storage space for clothes, if any exists.*
B. Safety glasses	*Indicate the school policy relative to the wearing of approved safety glasses.* *Arrange for a group purchase of approved safety glasses for those who wish to have their own glasses.*
IV. Overview of Course	*Discuss the general subject matter that is to be covered in each unit of the course. Also, indicate such items as the length of each session, number of sessions, procedures to be followed in class, and what is expected of each class member.* *Indicate that a final examination will be given at the end of the course to point out any weak areas.* *Note that following the test there will be time for reviewing the examination and any other questions related to the course.*

3842

Fundamentals of Automotive Electricity

OBJECTIVE

- To understand the fundamentals of electricity as they apply to the automotive field

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Structure of Matter	All matter is composed of atoms. Each atom consists of protons, electrons, and neutrons. *(Ref. A, pp. 2-4; Ref. E, pp. 303-304)* *Explain the atomic structure of matter. Include such items as:* • *Protons* • *Electrons* • *Neutrons* The outermost electrons of many atoms are loosely held and are easily influenced by outside forces. *Demonstrate with a simple electroscope how some outer electrons of one substance may be transferred to another substance. (Ref. A, pp. 4-5; Ref. E, p. 303)*
A. Law of electrostatics	Objects that have like charges repel each other, and objects that have unlike charges attract each other. *Demonstrate with a simple electroscope that like charges repel and unlike charges attract. (Ref. C, pp. 8-9)* *Use films, film loops, and transparencies to assist in developing the topic of electrostatics. See Instructional Materials at the end of the unit.*
B. Electrification	Electrification occurs through the transfer of electrons.

3843

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain negative and positive electrification as an excess or a deficiency of electrons.
C. Movement of electrons	Free electrons tend to move away from each other as a result of a repulsive force. If a path is provided, electrons will move from an area of many electrons (negative) to an area of few electrons (positive). *(Ref. A, p. 6)*
	Explain the flow of current as the movement of electrons along a conductor. (Ref. C, pp. 10-11)
	Explain the meaning of direct and alternating current. (Ref. C, p. 20)
	Use films, filmstrips, film loops, and transparencies to assist in developing the topic of the electron theory. See Instructional Materials at the end of the unit.
1. Voltage	The more electrons there are at a terminal, the higher is the repulsive force or pressure between the electrons.
	Explain that voltage is the pressure of electrons, and show how this pressure is measured with a voltmeter. (Ref. A, pp. 15-16; Ref. C, p. 20)
2. Amperage	The more electrons there are moving along a material, the greater is the flow of current. *(Ref. A, p. 16; Ref. C, p. 20)*
	Explain that amperage is the amount of electrons flowing in a conductor, and show how this quantity is measured with an ammeter. (Ref. A, p. 16; Ref. C, p. 20)
3. Resistance	There is a force restricting the movement of electrons through a material.
	Explain that resistance is the force which restricts the movement of electrons through a conductor. Show how this restricting force is measured by an ohmmeter. (Ref. A, pp. 16-17; Ref. C, p. 21)

3844

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain how the resistance of a conductor is affected by its: • *Composition* • *Diameter* • *Length* • *Temperature* Resistance in a circuit reduces the voltage and is called voltage drop. This voltage drop reduces the flow of current. *Explain the causes of voltage drop. Include such items as:* • *Excessively small conductors* • *Bad connections* • *Defective contact points* • *Broken strands in a multistrand wire* *(Ref. C, pp. 26-27)* *Use films, filmstrips, and transparencies to assist in developing the topic of electric current. See Instructional Materials at the end of the unit.*
4. Ohm's law	The voltage, amperage, and resistance in a circuit have a definite relationship to each other. This relationship is known as Ohm's law. *Explain that Ohm's law is expressed as a mathematical formula as follows:* *E (volts) = I (amperes) x R (ohms) or* $R = \frac{E}{I}$ *or* $I = \frac{E}{R}$ *(Ref. A, pp. 20-22; Ref. C, pp. 22-23; Ref. E, p. 305)*

57 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Solve on the chalkboard several problems involving Ohm's law.
	Use the memory device below to help solve Ohm's law problems. Cover the unknown quantity and the remaining letters give the correct equation.

	Use films, filmstrips, film loops, and transparencies to assist in developing the topic of Ohm's law. See Instructional Materials at the end of the unit.
D. Conductors	A good conductor is a material that contains a large number of free electrons and the motion of these electrons within the substance is relatively unimpeded. *(Ref. C, pp. 11-13; Ref. E, p. 304)*
	Discuss the properties, uses, and examples of conductors.
E. Insulators	A good insulator is a material that has few free electrons and the motion of these electrons within the substance is greatly hampered. *(Ref. C, pp. 13-15)*
	Discuss the properties, uses, and examples of insulators.
	Use films, filmstrips, film loops, transparencies, and samples to assist in developing the topic of conductors and insulators. See Instructional Materials at the end of the unit.
F. Semiconductors	A semiconductor is a material that under certain conditions acts as a conductor and under other conditions acts as a nonconductor.
	Discuss the properties, uses, and examples of semiconductors.

3846

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
G. Capacitors	A capacitor is a device that stores an electrostatic charge. *Discuss the factors that affect the charge a capacitor can hold. Include such items as:* • *Area of the plates* • *Distance between plates* • *Nature of the insulating material separating the plates*
II. Magnetism	All objects are composed of molecules and in iron and steel these molecules are actually small magnets. *Explain the theory of magnetism. (Ref. A, pp. 6-7; Ref. B, pp. 362-365)*
A. Characteristics of magnets	*Discuss the characteristics of magnets. Indicate that all magnets:* • *Have a north seeking pole (N pole) and a south seeking pole (S pole)* • *Have lines of force* • *Attract ferrous materials* *Demonstrate the effects of the lines of force around a magnet. (Ref. B, p. 363)*
B. Types of magnets	There are two types of magnets: • Permanent • Temporary
1. Permanent	After being magnetized, the molecules of certain metals maintain their arrangement for a considerable length of time. Such metals are called permanent magnets. *(Ref. A, pp. 8-9)* *Discuss the properties and uses of permanent magnets.*

3847

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
2. Temporary	After being magnetized, the molecules of some metals maintain their arrangement for only a relatively short time. Such metals are called temporary magnets. *Discuss the properties and uses of temporary magnets.*
C. Law of magnetism	The law of magnetism states that like poles repel and unlike poles attract. *Demonstrate the law of magnetism. (Ref. A, pp. 9-10; Ref. C, pp. 29-33)* *Use films, filmstrips, film loops, and transparencies to assist in developing the topic of magnetism. See Instructional Materials at the end of the unit.*
III. Electromagnetism	A flow of electrons always produces magnetism or lines of force. Magnetism produced by an electric current is called electromagnetism. *Show the effects of a magnetic field around a conductor carrying direct current.*
A. Characteristics	As long as there is a flow of current through the conductor, the magnetism produced has the same characteristics as that produced by a permanent magnet.
B. Electromagnets	An electromagnet is a coil of wire wound around a soft iron core. As long as this device is energized with electricity, it exhibits the same properties as a permanent magnet. *(Ref. C, pp. 33-34)*
1. Strength	*Discuss the factors that affect the strength of an electromagnet. Include such items as:* • *Amount of current flowing in wire* • *Size of core* • *Kind of core* • *Number of turns of wire*

3848

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
2. Uses	Electromagnets are used in many automotive electrical devices. *Discuss such automotive electrical devices that utilize electromagnets as:* • *Relays* • *Circuit breakers* • *Horn circuits* • *Voltage controls* • *Current limiters* • *Solenoids* *(Ref. A, pp. 266-271; Ref. C, pp. 480-485)* *Explain the operation of an electromagnet by using a buzzer, a horn relay, or a cutout relay. (Ref. E, pp. 344-345, 438)* *Use films, filmstrips, film loops, and transparencies to assist in developing the topic of electromagnetism. See Instructional Materials at the end of the unit.*
IV. Circuits	*Explain the parts of a simple electrical circuit. Include such items as:* • *Source of current* • *Conductor* • *Control device* • *Load or energy dissipater* *Draw on the chalkboard a simple circuit composed of a battery, switch, and a lamp. Explain that the current needs a path from the source to the device and back to the source, and that the control device is usually located between the source of current and the load.*
A. Terms	*Explain and give examples of the following common electrical terms:* • *Common ground*

3849

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Short* • *Open* *(Ref. B, pp. 374-377)*
B. Types	There are three general types of electrical circuits: • Series • Parallel • Series-parallel *(Ref. A, pp. 23-28; Ref. B, p. 356; Ref. E, pp. 305-306)*
1. Series	A series circuit is arranged so that all of the current must pass through all of the electrical devices. *(Ref. A, pp. 22-25; Ref. C, pp. 24-25)* *Draw on the chalkboard several lamps connected in series, and point out the flow of current through the circuit.*
2. Parallel	A parallel circuit is arranged so that the current divides and flows through several branches. *(Ref. A, pp. 22-25; Ref. C, pp. 24-25)* *Draw on the chalkboard several lamps connected in parallel, and point out the flow of current through the circuit.*
3. Series-parallel	A series-parallel circuit is arranged so that some devices are connected in parallel and other devices are connected in series. *(Ref. A, pp. 23-25)* *Draw on the chalkboard several lamps connected in parallel, and have each lamp connected in series to its respective switch. Point out the flow of current through the several parts of the circuit.* *Use filmstrips, film loops, and transparencies to assist in developing the topic of electric circuits. See Instructional Materials at the end of the unit.*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
V. Switches	A switch is a device that opens and closes an electrical circuit. In the automotive field, switches are usually located between the source of current and the device. Switches may be operated manually or electromagnetically. *(Ref. A, pp. 259-266; Ref. C, pp. 478-485)*
A. Manually operated	*Display and explain the functions and operation of such manually operated switches as:* • *Push-pull* • *Rotary* • *Vacuum* • *Fuse* • *Circuit breaker* *(Ref. B, pp. 578-588; Ref. D, p. 431; Ref. E, p. 433)*
B. Electromagnetically operated	*Display and explain the functions and operation of such electromagnetically operated switches as:* • *Relay* • *Solenoid* *(Ref. A, pp. 13-14, 268-271; Ref. B, pp. 577-578; Ref. E, pp. 312, 352-431)* *Use films, filmstrips, film loops, and transparencies to assist in developing the topic of switches. See Instructional Materials at the end of the unit.*
VI. Meters	Meters are useful in diagnosing troubles. With proper instruments, it is possible to determine the source of the trouble and to make the required adjustments.
A. Voltmeter	Most voltmeters used in the automotive industry consist of a permanent magnet, a movable coil, and a pointer which moves across a calibrated scale.

3851

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Voltmeters are always connected in parallel in the circuit. *(Ref. E, pp. 473-474)*
	Explain the operation and uses of the voltmeter.
B. Ammeters	Most ammeters used in the automotive industry are similar in design to the voltmeter.
	Ammeters are always connected in series in the circuit.
	Explain the operation and uses of the ammeter.
C. Ohmmeter	The ohmmeter is similar in design to the voltmeter and also has a calibrated resistance, a variable resistance, and a self-contained battery.
	Before using the ohmmeter, adjust the indicating needle to the zero mark. When measuring the resistance of a circuit or a device, the source of current of the circuit or device must first be disconnected. Also, the ohmmeter may be used to test the continuity of a circuit or device.
	Explain the operation and uses of the ohmmeter.
	Prepare an electrical circuit consisting of various devices connected in parallel and each device drawing a different amount of current. Demonstrate how to determine the voltage of the circuit, the amperage of the circuit, the amperage of each device, and the resistance of each device.
	Demonstrate how to use the ohmmeter to test the continuity of a device or circuit.
	Use filmstrips, film loops, and transparencies to assist in developing the topic of meters. See Instructional Materials at the end of the unit.
	Have trainees connect and read meters until they acquire the proficiency necessary for an entry mechanic. Include such meters as: • *Voltmeter* • *Ammeter* • *Ohmmeter*

3852

QUESTIONS FOR REVIEW

1. Explain the general structure of the atom.
2. Explain the nature of an electric current.
3. What makes a substance an insulator?
4. Explain the law of magnetism.
5. What is the difference between a temporary and permanent magnet?
6. What is voltage and how is it measured?
7. What is resistance and how is it measured?
8. Explain the differences between a series and a parallel circuit.
9. What is an open circuit?
10. What are the advantages of an electrical circuit having a common ground?
11. What is a short circuit and why is it harmful?
12. Describe an electromagnet and give examples of its use.
13. Explain the operation and uses of the solenoid.
14. Explain the operation and uses of the relay.
15. Explain how to connect an ammeter in a circuit.

Automotive Storage Batteries

OBJECTIVES

- To understand the operation of the lead-acid storage battery
- To be able to test and service lead-acid storage batteries

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. General Information	
A. Function	A storage battery of a vehicle supplies current for the starting motor and ignition during cranking and for lights, radio, heater, and other accessories when the generator is unable to supply enough power. Also, the battery stabilizes voltage in the electrical system. *(Ref. A, pp. 51-52)*
B. Chemical action	The storage battery is an electrochemical device for changing chemical energy into electrical energy. The battery stores chemical energy not electricity. The chemical action is reversible so the charge of a battery may be restored. *(Ref. A, pp. 56-58; Ref. E, p. 443)* *Explain the chemical action of a lead-acid storage battery by using films, filmstrips, film loops, transparencies, and charts. See Instructional Materials at the end of the unit.*
C. Types	There are two types of storage batteries: • Wet charged • Dry charged
1. Wet charged	The wet charged battery is shipped from the factory with a full supply of electrolyte in each cell and is ready for service.
2. Dry charged	The dry charged battery is shipped from the factory without electrolyte and completely dry. The battery is placed into service by adding electrolyte to the cells.

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
II. Construction	
A. Plates	The basic unit of a battery consists of grids or plates filled with active materials. *(Ref. A, pp. 52-56; Ref. C, pp. 44-49; Ref. E, pp. 440-443)*
B. Separators	Plates are kept from touching each other by separators which are sheets of porous, non-conducting material.
C. Elements	The negative and positive plates and the separators form an element.
D. Case	The case of the battery is made of hard rubber with partitions. Each element is placed into a partition and connected in series with the other elements.
E. Covers	Covers are placed over cells and sealed. One-piece covers are used on 12-volt batteries to prevent leaking of current to ground.
F. Vent cap	Each cell cover has a vent cap which permits the electrolyte to be checked, water added, and gas to escape.
G. Electrolyte	The electrolyte in a lead-acid storage battery is a fairly concentrated solution of sulfuric acid and water having a specific gravity of 1.290 at 80° F.
H. Forming charge	The plates are activated by a forming charge which changes the lead oxide paste to lead peroxide in the positive plates and to lead in the negative plates.
	Explain the construction of a lead-acid storage battery by using films, filmstrips, transparencies, and charts. See Instructional Materials at the end of the unit.
III. Output	
A. Voltage	Each cell of a lead-acid storage battery develops two volts regardless of the number or size of plates.
	A six-volt battery requires three cells to be connected in series and a 12-volt battery requires six cells to be connected in series.

3859

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
B. Current	The amount of current produced by a lead-acid battery is determined by the area and weight of the active materials in the plates and the amount of sulfuric acid in the electrolyte. *(Ref. B, pp. 589-590; Ref. E, p. 444)*
IV. Battery Rating	Batteries are rated by performance standards established by the Society of Automotive Engineers (S.A.E.). Comparasions may be made only in accordance with S.A.E. standards. *(Ref. A, pp. 58-59; Ref. E, pp. 444-445)*
A. S.A.E. 20-hour rate at 80° F.	The 20-hour rating indicates the battery's ability to deliver current continuously over a 20-hour period and is expressed in ampere hours. The rating measures the amount of working material in a battery and indicates the lighting and accessory load capacity. *(Ref. C, pp. 55-56)*
B. S.A.E. 300 amperes at 0° F.	The 300-ampere rating indicates the battery's ability to deliver current at low temperature. The rating is expressed in minutes and measures the battery's cranking load capacity. *(Ref. C, p. 56)* *Explain how to select a battery using the S.A.E. ratings.*
V. Battery Tests	
A. Hydrometer test	A hydrometer measures the specific gravity of the electrolyte in a cell. This indicates the amount of unused sulfuric acid that remains in the electrolyte and is a convenient indication of the approximate capacity still available. *Demonstrate the procedures for testing a battery with a hydrometer. Include such items as:* • *Checking level of electrolyte* • *Drawing electrolyte into barrel* • *Reading scale* • *Correcting for temperature* *(Ref. A, pp. 59-61; Ref. C, pp. 62-65; Ref. E, pp. 442-446)*

3860

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Discuss the effects of temperature on hydrometer readings.
	Review the various specific gravities for a cell in different stages of charge with the electrolyte at 80° F.
B. Light-load test	The voltage of a cell varies slightly with the specific gravity of the electrolyte. Only use voltmeters that are very accurate and have an expanded scale. (*Ref. C, pp. 61-62; Ref. D, p. 22-6*)
	Demonstrate the procedures for testing a battery under a light load by the use of a voltmeter. Include such items as: • *Examining battery for physical damage or neglect* • *Adjusting level of electrolyte* • *Placing load on battery* • *Observing correct polarity* • *Reading and interpreting test* (*Ref. A, pp. 63-65*)
C. High-discharge test	The high-discharge test measures voltage while the battery is being discharged at a high rate. (*Ref. A, p. 66; Ref. C, pp. 66-68; Ref. D, pp. 22-5—22-6*)
	Demonstrate the procedures for testing a battery using the high-discharge test. Include such items as: • *Examining battery for obvious defects* • *Checking temperature of electrolyte* • *Adjusting level of electrolyte* • *Determining state of charge* • *Using variable resistor as a load* • *Reading and interpreting test*

Sage 3861

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
D. Cadmium test	The cadmium test is used to determine the voltage of individual cells of batteries with one-piece hard covers. *(Ref. A, pp. 69-71; Ref. E, p. 446)* *Demonstrate the procedures for testing a battery using a cadmium tester (if available). Include such topics as:* • *Adjusting level of electrolyte* • *Removing surface charge* • *Reading and interpreting test*
VI. Battery Charging	A battery is discharged when most of the available materials in the positive and negative plates have reacted with the electrolyte. The charge of a battery may be restored because the chemical action is reversible. *Review the chemical action of a battery during recharging. (Ref. A, pp. 56-58; Ref. E, p. 443)* A battery may be recharged by being connected to a source of direct current. Two commonly used methods of recharging batteries are: • Slow-charge or constant-current • Fast-charge or constant-potential *Explain the procedures for preparing a battery for charging. Include such items as:* • *Cleaning case and terminals* • *Adjusting level of electrolyte* • *Following manufacturer's specifications relative to vent caps* • *Connecting charger leads to battery*
A. Safety precautions	The sulfuric acid in the electrolyte of a battery is very corrosive and will react with most substances.

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Hydrogen and oxygen are produced during the charging process. An explosive mixture may accumulate and be ignited by a spark or flame.
	Discuss the safety precautions that need to be observed during the charging of a battery.
B. Slow charge	The slow-charge method uses a low, steady charging rate. (*Ref. A, pp. 75-76; Ref. C, pp. 93-94; Ref. E, pp. 447-448; Ref. D, pp. 22-6—22-7*)
	Trickle chargers are used to keep freshly charged batteries ready for use.
	Demonstrate the procedures for giving a battery a slow charge. Include such items as:
	• *Advantages of the method*
	• *Proper charging rate*
	• *Safe temperature for electrolyte*
	• *Condition of cells at end of charge*
	• *Effects of overcharging*
C. Fast charge	The fast-charge method uses a high charging rate for a short time. A fast charge should be followed with a slow charge for a few hours. (*Ref. A, pp. 73-75; Ref. C, pp. 94-96; Ref. D, p. 22-7; Ref. E, pp. 448-449*)
	Demonstrate the procedures for giving a battery a fast charge. Include such items as:
	• *Advantages and disadvantages of method*
	• *Safe temperature for electrolyte*
	• *Condition of cells at start of charge*
	• *Color of electrolyte during charging*
	• *Level of electrolyte during charging*
	• *Duration of fast charge based on specific gravity of electrolyte*
	• *Necessity of disconnecting cables when battery is left in vehicle*

3863

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
VII. Battery Service	
A. Inspecting	Periodic inspection and care of a battery will extend its useful life appreciably. *Demonstrate the procedures for making a periodic battery inspection. Include such items as:* • *Condition of cables and connections* • *Accumulation of dirt and corrosion* • *Defects in case and cover* • *Loose clamps* • *Level of electrolyte* *(Ref. A, pp. 77-80)*
B. Adding water	The level of the electrolyte must be kept above the tops of the separators. Add distilled water or clean tapwater that is low in mineral content. Excessive water requirements might indicate a malfunction in the charging system of the vehicle. *(Ref. C, pp. 75-76)* *Demonstrate the procedures for adding water to a battery to bring the electrolyte to the proper level. (Ref. D. pp. 22-1—22-2)*
C. Cleaning top and cables	Dirt and grime collect on top of a battery which may permit the battery to discharge slowly to ground. Battery cables, clamps, and terminals accumulate corrosion which may cause poor contact with a loss of voltage. *(Ref. C, pp. 77-80)* *Demonstrate the procedures for cleaning the battery top and cables and for protecting the terminals from corrosion.* Battery cables must carry high amperage with a minimum loss of voltage so cables should be at least No. 6 gage for 12-volt systems and at least No. 1 gage for 6-volt systems. *(Ref. B, pp. 385-388)*

3863

3864

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Demonstrate the procedures for checking and replacing battery cables.
D. Removing and replacing	Note the locations of the positive and negative terminals so the new battery may be placed in the correct position. *Demonstrate the procedures for removing and replacing a battery. Include such items as:* • *Using a case-type battery carrier* • *Cleaning battery holder* • *Checking condition of battery holder* • *Connecting cables and checking polarity* • *Protecting terminals from corrosion* • *Tightening holddown clamps* *(Ref. C, pp. 90-92; Ref. D, pp. 22-9—22-10)*
E. Activating a dry charge battery	A dry charge battery is activated for service by adding electrolyte to each cell. Safety glasses must be worn when pouring the electrolyte into the battery. *Demonstrate the procedures for activating a dry charge battery. Include such items as:* • *Opening electrolyte container* • *Adding electrolyte* • *Adjusting level of electrolyte* • *Testing charge of battery* • *Giving battery a quick charge* • *Disposing of electrolyte container* *(Ref. A, pp. 80-82; Ref. C, pp. 98-100; Ref. D, p. 22-8; Ref. E, pp. 444-450)*
F. Causes of failure	*Discuss the factors affecting battery life. Include such items as:* • *Low level of electrolyte*

6. What is the function of the plate separators?

7. What are the factors that determine battery capacity?

8. What precaution must be taken of a very weak battery in the wintertime?

9. What precautions must be taken when giving a battery a fast charge?

10. State five causes for a battery to rundown.

Charging Systems

OBJECTIVE

- To be able to diagnose and correct malfunctions in generators, alternators, and regulators

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Function	A generator is a device that converts mechanical energy into electrical energy. *Discuss the functions of the generator including:* • *Charging the battery* • *Supplying current for ignition, instruments, lights, and other electrical units* *(Ref. C, p. 197)*
II. Principle of Operation	Voltage is generated in a coil as it moves through a magnetic field. This effect is called electromagnetic induction. Voltage is also induced if the magnetic field moves and the coil of wire remaines stationary. *(Ref. A, pp. 311-314; Ref. C, pp. 198-204; Ref. E. pp. 316-320)* *Demonstrate the principle of electromagnetic induction by using a:* • *Coil of wire* • *Horseshoe magnet* • *Galvanometer* *(Ref. C, pp. 197-198)* *Use films, filmstrips, transparencies, and charts to assist in developing the topic of electromagnetic induction. See Instructional Materials at the end of the unit.*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
III. Direct Current Generator	The direct current generator produces current that flows in one direction. In automotive direct current generators, the conductor moves and the magnetic field remains stationary. *Use filmstrips, film loops, transparencies, charts, and the actual devices to assist in developing the topic of direct current generators. See Instructional Materials at the end of the unit.*
A. Armature	The armature contains many coils of wire and each coil is connected to a commutator segment. The whole assembly rotates in a magnetic field.
B. Brushes	Brushes contact the commutator segments and carry off the current induced in the coils.
C. Field coils	The field coils produce the magnetic field. The coils are held in place by pole shoes.
D. Frame	The frame holds the component parts of the generator in proper alinement and provides a means of mounting the generator to the frame of the automobile.
E. Drive	Most automotive generators are driven by the engine fan belt. A small fan on the drive end of the shaft provides ventilation which increases the amount of current a generator may produce.
F. Types	The fields of direct current generators are grounded through the regulator (standard duty) or the generator (heavy duty). *Explain the two basic types of direct current generators and show how to identify each. (Ref. D, pp. 22-12—22-13; Ref. E, pp. 330 331)* *Disassemble an automotive direct current generator and discuss the functions of the various parts. (Ref. A, pp. 314-324; Ref. B, pp. 465-467, 471; Ref. E, pp. 335-336)*
G. Inspection	Direct current generators should be inspected every 10,000 miles. *(Ref. A, p. 323; Ref. C, pp. 350-354)*

3869

3870

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Demonstrate the procedures for inspecting a direct current generator on the car and for adjusting or replacing defective parts. Include such items as: • *Cables, wires, and connections* • *Clamps, and holding devices* • *Belt and drive pulley* • *Commutator and brushes* • *Brush spring tension* • *Commutator riser bars* • *Lubrication (if needed)*
H. Malfunctions	*Discuss the reasons why a direct current generator fails to produce its rated output. Include such items as:* • *Loose or worn drive belt* • *Dirty commutator* • *Loose wires or high resistance* • *Shorted field coils* • *Defective armature* • *Defective cutout contacts* *Show the procedures for protecting the regulator while testing the generator.* *Demonstrate the procedures for testing and correcting both types of direct current generators for:* • *No output* • *Low or unsteady output* • *High output* • *Excessive resistance* • *Grounded field*

3871

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Open or short circuits* • *Noisy operation* *(Ref. C, pp. 338-345; Ref. D, pp. 22-10—22-14; Ref. E, pp. 330-334)*
I. Removal and disassembly	*Demonstrate the procedures for removing a direct current generator from a vehicle. (Ref. B, p. 469; Ref. C, pp. 358-359)* *Show the procedures for disassembling and inspecting a direct current generator. Include such items as:* • *Dowel pins or alinement marks* • *Brushes* • *Armature* • *Wiring and insulation* • *Bearings* • *Field coils* *(Ref. A, pp. 322-324; Ref. C, pp. 359-362; Ref. D, pp. 22-14—22-15; Ref. E, pp. 335-336)*
J. Service	Parts of a direct current generator that might need service include: • Armature • Bearings • Brushes • Field coils
1. Armature	Inspect the armature for both mechanical and electrical defects. *Demonstrate the procedures for testing an armature for shorts, opens, or grounds. (Ref. A, pp. 324-327; Ref. C, p. 363; Ref. D, pp. 22-15—22-17; Ref. E, p. 334)*

3872

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Show the procedures for turning down a commutator on a lathe and undercutting the mica. (Ref. A, pp. 327-328; Ref. D, p. 22-18; Ref. E, p. 336)
2. Bearings	*Demonstrate the procedures for checking, cleaning, and replacing bearings. (Ref. A, p. 333; Ref. C, pp. 363-364; Ref. D, p. 22-18)*
3. Brushes	*Demonstrate the procedures for checking the brush spring tension. (Ref. C, p. 364)*
	New brushes should be sanded to conform to the curvature of the commutator. *(Ref. C, pp. 371-373)*
	Show the procedures for testing, removing, and replacing brushes. (Ref. A, pp. 331-333; Ref. B, pp. 469-472; Ref. D, pp. 22-19—22-20)
4. Field coils	Field coils should be replaced when tests indicate a ground, short, open, or the insulation appears charred. *(Ref. C, p. 363)*
	Demonstrate the procedures for testing, removing, and replacing field coils. (Ref. A, pp. 328-331)
K. Reassembly	*Demonstrate the procedures for reassembling a generator. (Ref. A, pp. 333-334; Ref. C, p. 362; Ref. D, p. 22-20)*
	After servicing, check the output of a direct current generator to see that it is within the manufacturer's specifications.
	Demonstrate the procedures for testing a direct current generator by using a special test bench. (Ref. A, pp. 334-337; Ref. D, pp. 22-20—22-21; Ref. E, p. 336)
L. Reinstallation	After a generator has been repaired and reinstalled, it needs to be polarized relative to the battery circuit.
	Demonstrate the procedures for reinstalling and polarizing both types of direct current generators. (Ref. C, pp. 373-374; Ref. D, pp. 22-21—22-22; Ref. E, p. 336)

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
IV. Alternators	Alternators produce alternating current which is changed to direct current for use by the various automotive electrical units. *(Ref. A, pp. 339-340)* *Use filmstrips, film loops, transparencies, charts, and the actual devices to assist in developing the topic of alternators. See Instructional Materials at the end of the unit.*
A. Rotor	Alternating current generators have a moving magnetic field and the unit is called a rotor.
B. Stator	The conductors remain stationary and the unit is called a stator.
C. Sliprings and brushes	The current induced in the stator is collected by brushes in contact with slip-rings.
D. Diodes	Most alternators have built-in diode rectifers. A diode permits current to flow only in one direction. *(Ref. A, pp. 340-342)*
E. Drive	Alternators are usually driven by the engine fan belt. *Disassemble an alternator and discuss the functions of the various parts. (Ref. E, p. 358)*
F. Inspection	Alternators should be inspected about every 5,000 miles. *Demonstrate the procedures for inspecting an alternator on the car and for adjusting or replacing defective parts. Include such items as:* • *Cables, wires, and connections* • *Brushes and sliprings* • *Bearings* • *Belt and drive pulleys* • *Clamp, nuts, and screws* *(Ref. A, pp. 345-350; Ref. D, pp. 22-22—22-23; Ref. E, pp. 336-339)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
G. Tests	*Discuss procedures to avoid when testing an alternator. Include such items as:* • *Reversing the polarity* • *Grounding the system* • *Operating with an open circuit* • *Polarizing the alternator* *(Ref. D, pp. 22-22—22-23)* *Demonstrate the procedures for testing and correcting several common types of alternators for:* • *Low output* • *Overcharging* • *No output* • *High resistance in circuit* *(Ref. A, pp. 350-351; Ref. D, pp. 22-23—22-24; Ref. E, pp. 337-339)*
H. Removal and disassembly	*Demonstrate the procedures for removing an alternator from a vehicle. (Ref. D, p. 339)* *Demonstrate the procedures for disassembling and inspecting the common types of alternators. (Ref. A, pp. 351-352; Ref. B, pp. 493-498; Ref. C, pp. 364-371)*
I. Service	Parts of an alternator that might need service include: • Diodes • Rotor • Stator • Sliprings • Bearings *(Ref. C, p. 371)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
1. Diodes	*Demonstrate the procedures for testing, removing, and replacing diodes. (Ref. A, pp. 353-360; Ref. D, pp. 22-24—22-26; Ref. E, p. 340)*
2. Rotor	*Show how to test a rotor for open and shorts. (Ref. D, pp. 22-26—22-27; Ref. E, p. 339)*
3. Stator	*Demonstrate the procedures for testing a stator for an open circuit and continuity. (Ref. D, pp. 22-27—22-28; Ref. E, p. 339)*
4. Sliprings	*Show the methods of servicing rough or out-of-roung sliprings. (Ref. A, pp. 360-362; Ref. C, p. 371; Ref. D, p. 22-27)*
5. Brushes	*Show the methods of servicing brushes. (Ref. D, p. 22-26)*
6. Bearings	*Review the procedures for checking bearings for wear. (Ref. C, pp. 363-364)*
J. Reassembly	*Demonstrate the procedures for reassembling the common types of alternators. (Ref. A, pp. 363-429; Ref. C, pp. 364-371; Ref. D, pp. 22-28—22-29; Ref. E, p. 341)*
K. Reinstallation	*Demonstrate the procedures for reinstalling the common types of alternators.*
V. Regulators	A regulator is an electromagnetic device which controls the generator output and protects the battery, generator, and other units in the system from high voltage and current. *(Ref. A, pp. 435-437; Ref. B, pp. 476-477; Ref. C, pp. 226-229; 235-244; Ref. E, pp. 343-344)* *Explain how the regulator controls the voltage and current output of a direct current generator.* *Use filmstrips, transparencies, charts, and the actual devices to assist in the developing of the topic of regulators. See Instructional Materials at the end of the unit.*
A. Regulators for direct current generators	The units in a regulator for a direct current generator include: • Cutout relay

3876

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• Voltage regulator • Current regulator
1. Cutout relay	The cutout relay prevents the battery from discharging through the generator when the engine is stopped or running at a slow speed. *Explain the operation of the cutout relay. (Ref. A, pp. 437-439; Ref. B, 477-478; Ref. E, p. 344)*
2. Voltage regulator	The voltage regulator prevents the voltage from exceeding a predetermined value and also maintains a constant voltage in the system. *(Ref. A, pp. 439-440)* *Explain the operation of the voltage regulator. (Ref. B, pp. 478-479; Ref. D, p. 345)*
3. Current regulator	The current regulator prevents the current from exceeding a predetermined value. *Explain the operation of the current regulator. (Ref. A, pp. 441-443; Ref. B, p. 478; Ref. D, p. 345)*
4. Polarity	Regulators are designed for specific systems and polarity. *Explain the reasons for using a regulator with the same polarity as the system. (Ref. A, p. 452; Ref. E, 34[illegible])*
5. Variations	*Explain the different variations of the standard regulator such as:* • *Double-contact* • *Combined* • *Heavy-duty* • *Transistorized* *(Ref. C, pp. 239-244; Ref. D, pp. 22-29—22-30)*

3877

3879

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
6. Service	Many regulator troubles may be corrected just by cleaning the points of the voltage and current regulators. Manufacturer's instructions and specifications should be followed for all regulator adjustments. *Demonstrate the procedures for cleaning regulator contact points. (Ref. D, pp. 22-31—22-32; Ref. E, pp. 348-349)*
a. Preliminary checks	*Explain the precautions that must be followed when making generator-regulator checks. (Ref. B, pp. 480-481; Ref. C, pp. 279-281)* *Demonstrate the procedures for making preliminary generator-regulator checks for such conditions as:* • *Charged battery and a high charging rate* • *Discharged battery and a low charging rate* • *Noisy generator operation* • *High resistance in charging circuit* *(Ref. A, pp. 443-457; Ref. C, pp. 263-276)*
b. Cutout relay	Disconnect the battery when adjusting the air-gap and point opening to prevent damage to the unit by the accidental closing of the contact points. *Demonstrate the procedures for checking and adjusting the cutout relay of commonly used regulators including:* • *Amature airgap* • *Point gap* • *Voltage required to close contacts* *(Ref. B, pp. 481-489; Ref. C, pp. 281-305; Ref. D, pp. 22-32—22-33; Ref. E, pp. 346-363)*
c. Voltage regulator	*Explain how the operation of the voltage regulator is affected by the following malfunctions:* • *Oxidized points*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Broken points* • *Broken or open resistor* • *Excessive spring tension* • *Insufficient spring tension* • *Incorrect armature airgap* *Demonstrate the procedures for checking and adjusting the voltage setting of commonly used regulators including:* • *Instrument connections* • *Airgap* • *Spring tension* *(Ref. B, pp. 481-489; Ref. C, pp. 281-305; Ref. D, pp. 22-34—22-36; Ref. E, pp. 346-363)*
d. Current regulator	*Explain how the operation of the current regulator is affected by the following malfunctions:* • *Oxidized points* • *Broken points* • *Broken or open resistor* • *Excessive spring tension* • *Insufficient spring tension* • *Insufficient armature airgap* *Demonstrate the procedure for checking and adjusting the current settings of commonly used regulators including:* • *Instrument connections* • *Airgap* • *Spring tension* *(Ref. A, pp. 453-479; Ref. B, pp. 481-489; Ref. C, pp. 281-305; Ref. D, pp. 22-36—22-37; Ref. E, pp. 346-363)*

3879

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
B. Regulators for alternators	The regulator limits the voltage output. The diodes eliminate the cutout relay and the design of the alternator eliminates the current regulator. *(Ref. B, pp. 492-498; Ref. C, pp. 244-259)*
1. Types	*Display and explain the operation of the following types of regulators:* • *Single-unit* • *Two-unit* • *Three-unit.* Some regulators use transistors, diodes, resistors, and capacitors to control the field current and keep the voltage output at a safe level. *Explain the precautions that need to be followed when transistorized regulators are used.* *Use transparencies, charts, and the actual devices to assist in developing the topic of types of regulators for alternators. See Instructional Materials at the end of the unit.*
2. Service	*Demonstrate the procedures for checking and adjusting the settings of the commonly used regulators for alternators. (Ref. A, pp. 479-507; Ref. C, pp. 305-325; Ref. D, pp. 22-37—22-41; Ref. E, pp. 360-368)*
VI. Charge Indicator	The charge indicator shows whether the battery is being charged or discharged. An ammeter or an indicator light is used to indicate this action. *(Ref. B, pp. 614-615; Ref. C, pp. 217-218)*
A. Ammeter	An ammeter is used on vehicles equipped with direct current generators.
1. Operation	*Explain the functions and operation of an ammeter used as a charge indicator by using transparencies, charts, and the actual device. (Ref. A, pp. 289-290)*

3879

3880

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
2. Service	*Demonstrate the procedures for checking and correcting malfunctions relating to an ammeter and its associated circuits. (Ref. B, pp. 614-615)* *Demonstrate the procedures for removing and replacing an ammeter.*
B. Indicator light	An indicator light is used in place of an ammeter on vehicles that use either a generator or an alternator. *(Ref. A, pp. 290-291; Ref. B, pp. 615-616)*
1. Operation	*Explain the functions and operation of an indicator light when used with:* • *A direct current generator* • *An alternator*
2. Service	*Demonstrate the procedures for checking and correcting malfunctions relating to an indicator light and its associated circuits. (Ref. C, pp. 311-312; Ref. D, p. 22-41)* *Demonstrate the procedures for removing and replacing an indicator light.* *Have trainees service the charging systems of shop engines and live cars. Trainees should develop enough proficiency to be able to enter the field of automotive electricity. Include such jobs as:* • *Inspecting and correcting malfunctions of generators and alternators* • *Disassembling, servicing, and reassembling of generators and alternators* • *Testing and correcting malfunctions of regulators* • *Testing and correcting malfunctions of charge indicators*

3881

3885

Charging Systems

QUESTIONS FOR REVIEW

1. Why is it necessary to control the output of the generator or alternator?
2. Explain the function of the cutout control.
3. Explain the function of the voltage limiter control.
4. Explain the function of the current limiter control.
5. How does alternating current differ from direct current?
6. How is direct current removed from the armature of a d-c generator?
7. How is current removed from the armature of an alternator?
8. What part in an alternator is used to change the output to direct current?
9. Explain how to check and adjust the drive belt tension.
10. Explain how to check brush spring tension.
11. Explain how to polarize a generator with a "B" type circuit. Explain how to polarize a generator with a "A" type circuit.
12. Explain how to test diodes.
13. What is the function of the field relay on an alternator?
14. What is the maximum voltage recommended for a 12-volt system when making charging system tests?
15. Name at least five safety precautions to observe while testing a charging system.

Starting Systems

OBJECTIVE

- To be able to diagnose and correct malfunctions in starting motors and starting motor controls

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Function	The starting motor is a direct current motor that is capable of delivering high power for a short time. *Explain the functions of the starting motor.*
II. Principles of Operation	The starting motor is a device that changes electrical energy into mechanical energy. *(Ref. A, pp. 529-531, 533-535)* *Explain and demonstrate the principles of an electric motor by using a single wire loop suspended in the field of a horseshoe magnet. (Ref. C, pp. 110-113, 115-117)* *Explain the functions and operation of the following component parts of an electric motor:* • *Armature* • *Brushes* • *Field coils* • *Bearings* *(Ref. A, pp. 535-538; Ref. B, pp. 549-551; Ref. C, pp. 117-119; Ref. E, pp. 371-374)* *Use filmstrips, transparencies, charts, and the actual device to assist in developing the topic of electric motor operation. See Instructional Materials at the end of the unit.*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the operation of and uses for a: • *Series-wound electric motor* • *Compound-wound electric motor* *Explain the various internal connections used for starting motors including:* • *Four-poles, two-field coils* • *Four-poles, four-field coils* • *Six-poles, six-field coils* *(Ref. C, pp. 117-119; Ref. E, pp. 374-375)*
III. Starting Motor Controls	Starting motors draw several hundred amperes during cranking which requires special switches to handle this amount of current.
A. Manual switch	*Explain the functions and operation of a manually operated starting motor switch. (Ref. C, pp. 134-135)*
B. Solenoid switch	The solenoid switch completes the battery circuit to the starting motor by the use of electromagnetism. *Explain the functions and operation of the solenoid switch used on starting motors including:* • *Pull-in winding* • *Hold-in winding* • *Vacuum switch* • *Relay* • *Related electrical circuits* *Use filmstrips, transparencies, charts, and the actual devices to assist in developing the topic of starter motor controls. See Instructional Materials at the end of the unit. (Ref. A, pp. 551-554; Ref. C, pp. 135-142; Ref. E, pp. 380-381)*

3886

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
C. Neutral safety switch	The neutral safety switch prevents starting the engine while the transmission lever is in a position that would transmit power to the drive shaft. (*Ref. E, p. 382*) *Explain the functions and operation of the neutral safety switch.*
IV. Starter Drives	*Explain the functions of starter drives.* (*Ref. A, pp. 538-539; Ref. B, pp. 546-547, 551; Ref. C, pp. 119-121*)
A. Bendix drive	The Bendix drive provides an automatic means for meshing and demeshing the drive pinion with the flywheel ring gear. (*Ref. A, pp. 539-541; Ref. B, pp. 551-552; Ref. C, pp. 121-123; Ref. E, p. 375*) *Explain the functions and operation of the Bendix drive by using filmstrips, transparencies, charts, and the actual device. See Instructional Materials at the end of the unit.* *Explain the operation of several variations of the Bendix drive including:* • *"Folo-thru"* • *Friction-clutch* • *Barrel* • *Compression-spring* • *Rubber-compression* • *Spring-loaded friction-clutch* (*Ref. A, pp. 541-545; Ref. C, pp. 123-126; Ref. E, pp. 375-376*)
B. Overrunning clutch	The overrunning clutch transmits torque to the flywheel ring gear and allows the drive pinion to turn faster than the armature shaft after the engine has started. (*Ref. A, pp. 545-548; Ref. B, p. 548; Ref. C, pp. 126-130; Ref. E, pp. 378-379*) *Explain the functions and operation of the overrunning clutch by using filmstrips,*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	transparencies, charts, and the actual device. See Instructional Materials at the end of the unit.
C. Dyer drive	The Dyer drive gives positive meshing of the drive pinion and flywheel ring gear before the starting motor shaft starts turning. *(Ref. A, pp. 548-550; Ref. C, pp. 131-133)*
	Explain the functions and operation of the Dyer drive by using filmstrips, transparencies, charts, and the actual device. See Instructional Materials at the end of the unit.
V. Starting Motor Service	
A. Safety precautions	*Discuss the safety precautions that must be followed when servicing starting motors. Include such items as:* • *Putting transmission into neutral* • *Setting of parking brakes* • *Disconnecting and plugging parking brake vacuum line* • *Grounding of secondary lead* • *Operating starting motor for less than 30 seconds*
B. Inspection	The starting motor needs to be inspected at regular intervals. *(Ref. A, pp. 555-560; Ref. C, pp. 160-162)*
	Demonstrate the procedures for inspecting a starting motor.
	Show how to connect and use an auxiliary starting switch.
	Demonstrate the procedures for locating and correcting such starting motor malfunctions as: • *Starting motor inoperative* • *Starting motor cranks engine slowly*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Starting motor runs but drive pinion does not engage* • *Solenoid plunger chatters* • *Solenoid inoperative* • *Drive pinion does not disengage* *(Ref. A, pp. 562-563, 603-605; Ref. C, pp. 147-157; Ref. E, pp. 382-383)*
C. Oncar tests	Oncar tests indicate the necessity of removing the starter for further service. *(Ref. A, pp. 560-561, 564-567; Ref. B, pp. 552-553; Ref. D, pp. 22-42—22-43; Ref. E, pp. 383-384)* *Demonstrate the procedures for making oncar tests to determine:* • *Excessive resistance in the starting circuit* • *Amperage draw of starting motor* • *Actual readings compared with manufacturer's specifications*
D. Removal	*Demonstrate the procedures for disconnecting and removing a starting motor from the vehicle.*
E. Overhaul	The various component parts of the starting motor should be inspected mechanically and also electrically when appropriate.
1. Disassembly	*Demonstrate the procedures for disassembling a starting motor. (Ref. A, pp. 569-603; Ref. B, pp. 554-570; Ref. D, p. 22-45)*
2. Drives	*Demonstrate the procedures for disassembling and servicing the various types of starting motor drives. (Ref. B, pp. 570-573; Ref. C, pp. 171-183)*
3. Armature	*Demonstrate the procedures for testing and servicing an armature for:* • *Grounds*

3889

3890

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Opens* • *Shorts* *(Ref. C. pp. 184-188; Ref. D, pp. 22-45—22-46)* *Demonstrate the method of turning a commutator and undercutting the mica. (Ref. C, pp. 188-189; Ref. D, p. 22-46)*
4. Brushes	*Demonstrate the procedures for inspecting, servicing, and replacing brushes. (Ref. C, p. 175; Ref. D, p. 22-47)*
5. Field coils	*Demonstrate the procedures for testing and servicing field coils for:* • *Grounds* • *Opens* • *Shorts* *(Ref. C, p. 190; Ref. D, pp. 22-46—22-47; Ref. E, pp. 384-385)* *Demonstrate the procedures for removing, servicing, and replacing field coils. (Ref. C, pp. 190-191; Ref. D, pp. 22-46—22-47)*
6. Bearings	*Demonstrate the procedures for inspecting and replacing bearings. (Ref. C, p. 189)*
7. Reassembly	*Demonstrate the procedures for reassembling the various types of starting motors and their drive mechanisms. (Ref. A, pp. 569-603; Ref. B, pp. 556-570; Ref. D, pp. 22-47—22-48)*
8. Tests	*Show the procedures to make the following starting motor tests:* • *No-load* • *Stall* *(Ref. A, pp. 567-569; Ref. B, p. 573; Ref. C, pp. 162-170; Ref. D, pp. 22-43—22-45; Ref. E, p. 384)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
9. Solenoid	*Demonstrate the procedure for testing a solenoid including:* • *Plunger operation* • *Pull-in winding* • *Hold-in winding* • *Current draw* *Demonstrate the procedure for disassembling and servicing a solenoid including:* • *Plunger* • *Contact plate* • *Terminals* • *Return spring* *Show how to reassemble and reinstall a solenoid.*
10. Relay	*Demonstrate the procedures for testing and/or replacing a relay.*
F. Replacement	*Demonstrate the procedures for replacing and connecting a starting motor.* *Show how to test the operation of a starting motor on a:* • *Cold engine* • *Hot engine* *Have trainees service the starting motors and controls of shop engines and live cars. Trainees should develop enough proficiency to be able to enter the field of automotive electricity. Include such jobs as:* • *Inspecting and correcting malfunctions of starting motors and their controls* • *Disassembling, servicing, and reassembling of starting motors and their drives* • *Inspecting and correcting malfunctions of starting motor solenoids*

Starting Systems

QUESTIONS FOR REVIEW

1. State the function of the neutral safety switch.
2. Explain the function of the manifold vacuum switch.
3. Explain how to check the starting motor current draw.
4. Show how to check the resistance between the battery ground and the starting motor.
5. Explain the meaning of "hold-in winding" and "pull-in winding" and explain the functions of each winding.
6. Explain how to turndown a commutator and undercut the mica.
7. Tell how to remove and replace field windings.
8. Explain the operation of the "folo-thru" type of Bendix drive.
9. What is the difference between a solenoid and a relay?
10. What causes the overrunning-clutch type of drive to mesh with the flywheel?

INSTRUCTIONAL MATERIALS

Ignition Systems

OBJECTIVE

- To be able to diagnose and correct malfunctions in the component parts of the ignition system

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Function	The ignition system of an internal combustion engine provides the high-voltage surge to the spark plug at the correct time to ignite the air-fuel mixture in the cylinder. *(Ref. A, pp. 106-107; Ref. B, p. 398; Ref. C, pp. 397-398; Ref. E, pp. 387-389)* *Explain the functions of the component parts of the ignition system including:* • *Battery or generator* • *Switch* • *Coil and resistor* • *Distributor — points, advance mechanism, condenser, and rotor* • *Spark plugs* • *Primary and secondary wires* *Use films, filmstrips, transparencies, and charts to assist in developing the topic of the ignition system. See Instructional Materials at the end of the unit.*
II. Battery	The battery is the fundamental source of power for the primary circuit of the ignition system. *Explain the functions of the battery as a part of the ignition system.*
III. Spark Plug	The spark plug conducts the secondary voltage into the combustion chamber and provides the airgap which creates the spark. *(Ref. A, p. 225; Ref. B, pp. 403-404; Ref. C, pp. 413-414; Ref. E, p. 405)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the functions and operation of the various parts of the spark plug. Use films, filmstrips, transparencies, charts, and the actual device to assist in developing the topic of spark plugs. See Instructional Materials at the end of the unit.
	Explain how to use specification charts to select the correct spark plug for a specific engine.
A. Sizes	The size of a spark plug is controlled by the dimensional requirements of the specific cylinder head into which the plug is installed.
	Explain the reasons for different sizes of spark plugs.
B. Heat range	A spark plug has to operate hot enough to burn off the deposits of combustion and at the same time avoid becoming a source of preignition. *(Ref. A, pp. 226-229)*
	Explain the operation and uses of the different spark plug heat ranges.
	Display and explain the effects of using spark plugs with different heat ranges under such operating conditions as: • *Normal* • *Too cold* • *Too hot* *(Ref. B, pp. 425-426; Ref. C, pp. 453-454; Ref. E, pp. 405-407)*
C. Airgap	The airgap of a spark plug causes the secondary voltage to release its energy in the form of a spark.
	Explain the importance of having the spark plug airgap adjusted according to the manufacturer's specifications. (Ref. E, pp. 408-409)
D. Polarity	The high-tension current for the spark plugs should have a negative polarity. *(Ref. A, p. 231)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the advantages of a negative polarity for the high-tension current.
	Demonstrate the procedures for testing and correcting the polarity of the high-tension current. (Ref. A, pp. 232-233)
E. Fouling	Products of combustion may accumulate on the end of a spark plug and cause it to become inoperative.
	Display spark plugs with different types of fouling and explain the methods of correcting such fouling as: • *Carbon* • *Lead* • *Oil* *(Ref. B, p. 426; Ref. C, p. 455; Ref. D, pp. 21-23—21-26; Ref. E, p. 408)*
IV. Secondary Wires	The secondary wires connect the distributor cap with the coil and spark plugs.
	Explain the construction and uses of high-tension cables. (Ref. C, pp. 413-414)
	Explain the precautions to take when removing high-tension cables from spark plug terminals.
V. Ignition Coil	The ignition coil steps-up the primary voltage from the battery or generator to approximately 20,000 volts.
	Explain the construction and operation of the ignition coil including the resistor. Use filmstrips, transparencies, charts, and a cutaway model to assist in developing the topic of the ignition coil. See Instructional Materials at the end of the unit. (Ref. A, pp. 107-110; Ref. B, pp. 399-402; Ref. C, pp. 405-413; Ref. E, pp. 389-390)
VI. Ignition Distributor	The ignition distributor makes and breaks the primary ignition circuit and distributes the secondary voltage to the proper spark plug at the correct time. *(Ref. A, pp. 113-116; Ref. B, pp. 405-414; Ref. C, pp. 398-405; Ref. E, p. 392)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the functions of a distributor.
A. Contact points	The contact points open and close the primary circuit.
	Explain the function and operation of the ignition contact points.
1. Condenser	The condenser reduces arcing at the contact points.
	Explain the construction and operation of a condenser. (Ref. A, pp. 110-113; Ref. B, pp. 402-403; Ref. C, pp. 409-410; Ref. E, pp. 390-391)
2. Cam angle	The cam angle is the number of degrees through which the distributor cam rotates while the contact points are closed.
	Explain the importance of setting the cam angle according to the manufacturer's specifications. (Ref. E,pp. 394-395)
	Show the procedures for checking and setting the cam angle.
B. Ignition timing	The spark occurs in the combustion chamber at a specific time during compression stroke.
	Explain ignition timing and the effects of the spark occuring:
	• *Early*
	• *Late*
	(Ref. A, pp. 142-146; Ref. B, p. 447; Ref. C, pp. 438-441; Ref. D, pp. 21-21—21-22; Ref. E, pp. 401-402)
	Explain the reasons for adjusting the ignition timing to compensate for:
	• *Driving conditions*
	• *Octane rating of fuel used*
	• *Engine carbon deposits*
	• *Altered compression ratio*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Demonstrate the procedures and safety precautions for checking and correcting the timing of an engine with a stroboscopic timing light.
C. Advance mechanisms	The time the spark occurs varies according to engine load and speed. *(Ref. B, pp. 414-415; Ref. E, p. 394)* *Explain the reasons for varying the time at which the spark occurs.* Methods used to change the time of the spark include: • Centrifugal force • Vacuum *Use films, filmstrips, film loops, transparencies, charts, and the actual devices to assist in developing the topic of advance mechanisms. See Instructional Materials at the end of the unit.*
1. Centrifugal advance	The centrifugal advance uses the force developed by the rotating shaft to change the time the points open. *(Ref. A, pp. 117-120; Ref. B, pp. 415-416; Ref. C, pp. 415-416; Ref. E, pp. 392-393)* *Explain the functions and operation of the centrifugal advance mechanism.*
2. Vacuum advance	The vacuum advance uses the vacuum developed in the intake manifold to change the time the points open. *(Ref. A, pp. 122-124; Ref. B, pp. 416-418; Ref. C, pp. 416-418; Ref. E, pp. 393-394)* *Explain the functions and operation of the vacuum advance mechanism.*
3. Combined advance	Part-throttle operation requires more advance than is possible from centrifugal force alone. *(Ref. A, pp. 120-122; Ref. C, pp. 418-423)* *Explain the functions and operation of the combined centrifugal and vacuum advance mechanism.*

3898

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
D. Distributor cap and rotor	*Explain the functions and operation of the distributor cap and rotor. (Ref. E, p. 392)*
VII. Transistorized Ignition Systems	Transistorized ignition allows a small current to flow across the contact points and a high current to flow in the primary windings of the coil. *Discuss the advantages of using transistors in the ignition system. (Ref. B, pp. 456-461; Ref. E, pp. 419-420)* Transistors interrupt the primary circuit. Methods of controlling transistors include: • Contact points • Magnetic impulse
A. Contact points	*Explain the functions and operation of a transistorized ignition system controlled by contact points. (Ref. C, pp. 403-404; Ref. E, pp. 420-421)*
B. Magnetic impulse	*Explain the operation of a transistorized ignition system controlled by magnetic impulses. (Ref. C, pp. 400-403; Ref. E, pp. 421-422)*

VIII. Service	*Explain how failures of the ignition system may be related to:*
	
	• *Loss of energy in the primary circuit caused by:*
	  • *High resistance*
	  • *Defective transistor*
	  • *Defective condenser*
	  • *Improper point setting*
	  • *Discharged battery*
	  • *Grounded circuit*
	
	• *Loss of energy in the secondary circuit caused by:*
	  • *Defective wires*
	  • *Fouled spark plugs*
	  • *High-tension leaks*
	  • *Defective connections*
	
	• *Improper timing:*
	  • *Wrong setting*
	  • *Worn distributor shaft*
	  • *Defective advance mechanism*

Ignition Systems

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
A. Battery	The battery must be fully charged and posts, cables, and terminals clean and in good condition. *Review the procedures for checking and servicing a battery.*
B. Ignition switch	*Demonstrate the procedures for checking, removing, and installing an ignition switch. (Ref. D, p. 21-23)*
C. Primary wires	*Show the procedures for checking and correcting primary wires for:* • *Cracks* • *Corrosion* • *High resistance* *(Ref. D, pp. 21-1—21-3)*
D. Ignition coil	*Demonstrate the procedures for checking and correcting an ignition coil for:* • *Shorts* • *Grounds* • *Opens* • *Continuity* • *Polarity* • *Insulation breakdowns* • *Poor connections* • *Corrosion* • *Flashover* *(Ref. A, pp. 129-130; Ref. B, pp. 420-424; Ref. C, pp. 430-432; Ref. D, pp. 21-4—21-6)* *Show how to remove and replace an ignition coil.* *Show how to test and service the resistor in the ignition coil circuit.*

3900

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
E. Secondary wires	*Demonstrate the procedures for checking and correcting secondary wires for:* • *Breaks* • *Poor connections* • *Cracks* *(Ref. C, pp. 465-466; Ref. D, p. 21-7)* *Show how to arrange secondary wires to prevent crossfiring and damage from hot manifolds. (Ref. A, pp. 241-242; Ref. D, pp. 21-7—21-8)*
F. Distributor	*Demonstrate the procedures for checking and adjusting the distributor on the car including:* • *Cap* • *Advance mechanisms* • *Cam angle* • *Rotor* • *Contact points* • *Wires and connections* • *Condenser* *(Ref. A, pp. 130-135; Ref. C, pp. 458-465)* *Demonstrate the procedures for removing a distributor from a vehicle.* *Demonstrate the procedures and precautions to take for disassembling, cleaning, servicing, reassembling, and adjusting the commonly used distributors including:* • *Contact points* • *Advance mechanisms* • *Cam* • *Bearings* • *Shaft*

SOCE3901

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	(Ref. A, pp. 136-142, 146-161, 197-225; Ref. B, pp. 429-454; Ref. C, pp. 467-472; Ref. D, pp. 21-10—21-19; Ref. E, p. 394)
	Demonstrate the procedures for checking and adjusting a distributor on a test machine. (Ref. A, pp. 135-136; Ref. C, pp. 432-438)
	Demonstrate the procedures of reinstalling and adjusting a distributor on a vehicle. (Ref. C, pp. 472-474; Ref. D, pp. 21-19—21-22)
G. Spark plugs	*Explain that spark plug service depends on:* • *Engine design* • *Vehicle use* • *Type of fuel used* • *Remaining useful plug life*
	Demonstrate the procedures for removing and replacing spark plugs. (Ref. A, p. 239; Ref. D, p. 21-23; Ref. E, p. 410)
	Demonstrate the procedures for checking, cleaning, and adjusting spark plugs. (Ref. A, pp. 237-239; Ref. B, pp. 427-429; Ref. C, pp. 466-467; Ref. D, pp. 21-27—21-29; Ref. E, pp. 409-411)
	Review spark plug fouling and demonstrate the methods for correcting such fouling. (Ref. D, pp. 21-23—21-27)
H. Transistorized ignition	*Demonstrate the procedures and precautions for testing, servicing, and replacing component parts of a transistorized ignition system. (Ref. A, pp. 161-197)*
I. Test instruments	*Demonstrate the procedures for connecting and using instruments to check the condition, operation, and adjustment of the ignition system. Include such test instruments as:* • *Coil tester* • *Condenser tester* • *Dwell meter*

3902

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Oscilloscope* • *Tachometer* • *Vacuum gauge* *(Ref. A, pp. 129-142; Ref. C, pp. 430-441; Ref. D, pp. 21-30—21-32)*

J. Troubleshooting	*Develop with the trainees a troubleshooting chart of ignition problems and solutions including such situations as:*
	
	• *Engine cranks but does not start*
	• *Engine runs but misses in one cylinder*
	• *Engine runs but misses in different cylinders*
	• *Engine lacks power*
	• *Engine backfires*
	• *Engine pings*
	• *Advance mechanisms wear rapidly*
	• *Contact points become pitted*
	• *Contact points become oxidized*
	• *Defective spark plugs*
	
	(Ref. A, pp. 242-248; Ref. B, pp. 418-420; Ref. C, pp. 444-456)
	
	Have trainees service the ignition systems of shop engines and live cars. Trainees should develop enough proficiency to be able to enter the field of automotive electricity. Include such jobs as:
	
	• *Servicing:*
	  • *Ignition coils*
	  • *Distributors*
	  • *Spark plugs*
	  • *Transistorized ignition systems*

Ignition Systems

CONTENT OUTLINE

UNDERSTANDINGS AND TEACHING APPROACHES

- *Conducting tests using:*
  - *Coil tester*
  - *Condenser tester*
  - *Dwell meter*
  - *Oscilloscope*
  - *Tachometer*
  - *Vacuum gauge*

QUESTIONS FOR REVIEW

1. Explain spark plug heat range.
2. What is meant by spark plug reach?
3. How many windings are contained in an ignition coil?
4. What is cam angle?
5. What is the speed relationship of the distributor shaft to the camshaft and to the crankshaft?
6. Explain how to check the distributor contact point spring tension.
7. Why is a feeler gauge not recommended for checking the spacing of worn contact points?
8. Explain the function of a condenser, and list the procedures for testing a condenser.
9. Why should the headlights be turned on when adjusting idle speeds on alternator equipped vehicles?
10. What is the purpose of the resistor-type spark plug?

Lighting and Electrical Accessories

OBJECTIVE

- To be able to diagnose and correct malfunctions in the lighting systems and electrical accessories

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Wire	*Display and discuss the types and kinds of wires and cables used in automotive circuits. Include such items as:* • *Wire sizes* • *Resistance* • *Capacity* • *Insulation* *(Ref. B, pp. 385-387, 394-396; Ref. D, pp. 6-1—6-6; Ref. E, pp. 433-435)* *Demonstrate the use of a wire gauge and show how to select the required wire based on the expected load and distance from the power source.*
A. Connecting devices	A junction block serves as a common connection point for a number of wires. A terminal block serves as a supply of current for several circuits. *Display the various types of connecting devices and explain their use and how they are attached. (Ref. D, pp. 6-6—6-8)* *Demonstrate the procedures for installing and connecting wires. (Ref. D, pp. 6-9—6-10)*
B. Printed circuits	Printed circuits use conductor strips fastened to a nonconducting base. *Display and explain the functions of printed circuits.*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Demonstrate the procedures for making wire connections on printed circuits.
C. Electrical circuits	*Discuss the uses of the following as they relate to automotive electrical circuits:* • *Color-coded wire* • *Common ground* • *Parallel connections* • *Series connections*
1. Wiring diagram	A wiring diagram shows all the devices, connections, switches, and fuses of an electrical circuit. *(Ref. A, p. 98; Ref. B, pp. 374-381; Ref. D, p. 6-4)* *Show how to use a wiring diagram to trace a circuit and demonstrate the procedures for checking the continuity of a circuit. (Ref. D, p. 6-11)*
2. Voltage drop	The total voltage drop in any circuit is equal to the source voltage. *Explain how each unit in a circuit consumes some of the voltage and the total of these voltage drops is equal to the voltage at the source. (Ref. A, pp. 43-44)* *Demonstrate the procedures for measuring the voltage drop across several common automotive devices. (Ref. A, pp. 46-47; Ref. B, pp. 383-386, 393)* A higher than normal voltage drop indicates an excessive amount of resistance in the circuit. *(Ref. C, pp. 26-27)* *Demonstrate the procedures for measuring the voltage drop in an automotive circuit. (Ref. A, pp. 44-49)*
II. Lights	
A. Headlights	*Discuss the different types of headlights commonly used on vehicles. (Ref. A, pp. 85-87; Ref. C, pp. 494-496)*

3908

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the wiring diagram of a headlight circuit.
	Explain the functions and operation of the door mechanisms used for hidden headlights. (Ref. E, p. 430)
	Use transparencies, charts, and the actual devices to assist in developing the topic of automotive lighting. See Instructional Materials at the end of the unit.
1. Headlight relay	*Explain the functions and operation of a headlight relay. (Ref. A, pp. 270-271; Ref. E, pp. 431-432)*
	Demonstrate the procedures for removing and replacing a headlight relay.
2. Circuit breaker	*Explain the functions and operation of a circuit breaker. (Ref. A, pp. 265-268; Ref. C, pp. 479-480)*
	Demonstrate the procedures for removing and replacing a circuit breaker.
3. Switches	
a. Main	*Explain the functions and operation of the main lighting switch. (Ref. A, p. 259; Ref. E, p. 433)*
	Demonstrate the procedures for removing and replacing a main lighting switch.
b. Dimming	*Explain the functions and operation of the headlight dimming switch. (Ref. A, pp. 259-260; Ref. E, p. 429)*
	Demonstrate the procedures for removing and replacing a headlight dimming switch.
4. Aiming	*Demonstrate the procedures for aiming headlights including hidden headlights. (Ref. A, pp. 88-94; Ref. C, pp. 496-498; Ref. E, pp. 428-430)*
	Review the New York State inspection requirements for headlights.

3909

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
5. Automatic dimming	*Explain the functions and operation of the automatic headlight dimming device.*
	Demonstrate the procedures for removing, replacing, and adjusting the automatic headlight dimming device. (Ref. C, pp. 504-506)
6. Service	The headlight circuit needs to be inspected periodically for loose and corroded connections.
	Develop with the trainees troubleshooting procedures for malfunctions related to headlights. (Ref. A, p. 95)
	Demonstrate the procedures for checking and correcting the headlight circuit for resistance. (Ref. A, pp. 44-45; Ref. E, pp. 430-431)
	Demonstrate the procedures for removing and replacing a sealed-beam headlight. (Ref. E, p. 427)
	Demonstrate the procedures for replacing and adjusting a hidden headlight door mechansim.
B. Parking lights	*Explain the wiring diagram of the parking lights circuit.*
	Explain the methods used to protect the parking lights circuit from overloads.
	Explain the double-contact bulbs and show how to test the filaments.
	Demonstrate the procedure for replacing a bulb.
C. Taillights and license-plate light	*Explain the wiring diagram of the taillight and license-plate light circuits.*
	Demonstrate the procedures for testing the taillights and license-plate light circuits and for removing and replacing defective units.
D. Stoplights	*Explain the wiring diagram of the stoplight circuit and show how the turn signal system is tied into the stoplight system. (Ref. A, p. 97)*

3910

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the functions and operation of the stoplight switch. (Ref. A, pp. 261-262; Ref. D, p. 29-24; Ref. E, p. 433)
	Demonstrate the procedures for testing the stoplight circuit and for removing and replacing defective parts.
	Explain the functions and sizes of automotive fuses. (Ref. A, pp. 265-266)
	Explain the methods used to protect the stoplight circuit from overloads.
E. Signal lights	*Explain the wiring diagram of the signal light circuit and the operation of the:* • *No-turn position* • *Left-turn position* • *Right-turn position* • *Four-way emergency position*
	Explain the procedures for testing the signal light system and for removing and replacing defective parts.
	Explain the methods used to protect the signal light circuit from overloads.
1. Switch	*Explain the functions and operation of the turn signal switch.*
	Demonstrate the procedures for adjusting, removing, and replacing a turn signal switch. (Ref. A, pp. 97-98, 262-265; Ref. C, p. 503; Ref. E, p. 433)
2. Flasher	*Explain the functions and operation of the flasher unit.*
	Demonstrate the procedures for testing, removing, and replacing a flasher unit. (Ref. A, p. 265)
3. Four-way switch	*Explain the operation of the four-way emergency switch, and show how it is tested, removed, and replaced. (Ref. A, p. 265)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Demonstrate the procedures for installing an emergency flasher unit on vehicles not originally equipped.
F. Marker lights	*Demonstrate the procedures for testing the marker light circuit and for removing and replacing defective units.*
G. Backup lights	*Explain the wiring diagram of the backup light circuit.*
	Explain the functions and operation of the backup light switch. (Ref. A, p. 262)
	Demonstrate the procedures for testing the backup light circuit, and for removing and replacing defective units.
	Demonstrate the procedures for installing backup lights on vehicles not originally equipped.
H. Dome lights	*Explain the wiring diagram of the dome light circuit.*
	Explain the functions and operation of the dome light switch.
	Demonstrate the procedures for testing the dome light circuit, and for removing and replacing defective units.
III. Horns	Most vehicle horns consist of a diaphragm which is vibrated by an electromagnet. (Ref. A, pp. 291-292)
	Use transparencies, charts, and the actual devices to assist in developing the topic of automotive horns. See Instructional Materials at the end of the unit.
	Explain the wiring diagram of the horn circuit.
	Explain the functions and operation of the horn and horn relay. (Ref. A, pp. 268-270, 292-296; Ref. C, pp. 379-382, 480-481; Ref. E, pp. 436-437, 438)
	Demonstrate the procedures for testing, adjusting, removing, and replacing a horn and horn relay.

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain the functions and operation of the horn switch.
	Demonstrate the procedures for testing, removing, and replacing a horn switch.
IV. Windshield Wipers	Windshield wiper motors are generally shunt- or compound-wound motors and either single or two-speed. *(Ref. A, pp. 296-297; Ref. C, pp. 500-501)*
	Use transparencies, charts, and the actual devices to assist in developing the topic of windshield wipers. See Instructional Materials at the end of the unit.
	Explain the electrical circuit of a windshield wiper unit.
	Explain the functions and operation of a two-speed windshield wiper motor. (Ref. A, pp. 299-302; Ref. E, pp. 465-467)
A. Service	*Demonstrate the procedures for adjusting a two-speed windshield wiper motor. Include such items as:* • *Transmission and link assembly* • *Parking switch*
	Demonstrate the procedures for removing, repairing, and replacing a windshield wiper motor and transmission and link assembly. (Ref. A, p. 297)
	Show the procedures for removing, adjusting, and replacing the windshield wiper switch including washer button. (Ref. A, pp. 297-299)
	Explain the different types of wiper blade action.
	Demonstrate the procedures for removing, replacing, and adjusting wiper blades. (Ref. A, p. 297)
	Develop with the trainees troubleshooting procedures for windshield wipers including condition, cause, and correction. (Ref. E, p. 467)

3913

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
B. Windshield washers	*Explain the operation of different types of windshield washer pumps. (Ref. E, pp. 469-471)* *Demonstrate the procedures for removing, cleaning, and replacing a windshield washer assembly.*
V. Powered Accessories	*Explain the various types of electric motors and controls used to power accessories such as:* • *Seats* • *Windows* • *Antennas* *Explain the wiring diagrams of several powered accessories indicating switches, relays, and solenoids.* *Demonstrate the procedures for removing, replacing, and adjusting the electric motors and control units for several different powered accessories.*
VI. Speed Control	*Explain the functions and operation of different types of speed control devices. (Ref. E, pp. 458-463)* *Demonstrate the procedures for testing and adjusting the component parts of a speed control system.* *Demonstrate the procedures for removing and replacing defective parts of a speed control system.*
VII. Radios	Radio service is a specialized business but there are several checks and adjustments that an electrical serviceman can make that might restore the radio to operating condition. *(Ref. A, pp. 302-308; Ref. C, pp. 501-502)* *Demonstrate the procedures for:* • *Replacing a radio fuse* • *Checking, adjusting, and replacing a vibrator*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Locating the source of radio interference* • *Checking the antenna circuit*
VIII. Electric Clocks	Clock repair should be done by an authorized clock serviceman but the electrical serviceman could check the fuse. *Demonstrate the procedures for checking and replacing a clock fuse.* *Have trainees service the component parts of the automobile lighting system and electrical accessories. Trainees should develop enough proficiency to be able to enter the field of automotive electricity. Include such jobs as servicing:* • *Headlights and switches* • *Taillights* • *Stoplights* • *Signal lights* • *Backup lights* • *Dome lights* • *Horns* • *Windshield wipers* • *Powered seats, and windows* • *Speed control devices*

QUESTIONS FOR REVIEW

1. Explain the function of a voltmeter and give two examples of its use.
2. What is a rheostat? Indicate where a rheostat is used in the automotive electrical system.
3. Explain the operation of a relay and give two examples where relays are used in the automotive electrical system.
4. Explain how to adjust the vehicle's headlights.
5. Explain why heavy wire is used in some circuits while others use very light wire.

Final Examination

Final Examination Part I — Fill-In Statements

Directions: For each statement, write the item or phrase that, when inserted in the blank, will correctly complete the statement.

1. Automotive electrical circuits use, as the return path, the COMMON GROUND.
2. An electromagnet with a movable soft iron core is called a SOLENOID.
3. The quantity of electrons flowing in a circuit is called AMPERAGE.
4. Batteries hooked in SERIES will produce the same voltage as one battery.
5. The voltage of a wet cell is 2 VOLTS.
6. A magnet made of soft steel is called a TEMPORARY magnet.
7. When a storage battery stands in a discharged condition, the plates become SULFATED.
8. Material that opposes the flow of electrons is called an INSULATOR.
9. Unlike poles ATTRACT each other.
10. A generator containing sliprings produces ALTERNATING CURRENT.
11. If the resistance in an electrical circuit is increased without changing the voltage, the amount of current flow is DECREASED.
12. A device that has the ability to store electrical energy is called a CONDENSER.
13. A magnet made of hard steel is called a PERMANENT magnet.
14. The number of degrees that the contact points are closed is referred to as DWELL.
15. The amount of plate surface exposed to chemical action determines the capacity of the battery which is expressed in AMPERE-HOURS.
16. Like poles REPEL each other.
17. Regulation or control of the generator output is accomplished by controlling the strength of the generator FIELD.
18. When the generator output voltage exceeds the battery voltage, the circuit between the generator and the battery is closed by the CUTOUT RELAY.

8168917

Final Examination

19. Mechanical energy is converted into electrical energy by a GENERATOR.

20. A device in the ignition primary circuit which prevents arcing at the points is called a CONDENSER.

21. The mixture of sulfuric acid and water used in automotive storage batteries is called ELECTROLYTE.

22. An instrument used to measure the specific gravity of a liquid is called a HYDROMETER.

23. The ignition distributor is driven by the engine CAMSHAFT and rotates at ONE-HALF engine speed.

24. The device that advances the ignition timing as engine speed increases is called CENTRIFUGAL advance.

25. The distributor advance mechanism that changes engine timing in relation to throttle pressure is regulated by the engine VACUUM.

26. To check an armature for a short circuit, use a GROWLER.

27. To check an armature for a grounded circuit, use a TEST LAMP.

28. As the engine speed increases the coil output voltage will DECREASE.

29. The device that conducts the ignition current from the distributor cap center terminal to the secondary spark plug wire is called the ROTOR.

30. In an eight-cylinder engine, the breaker points will open and close 16 times for each four revolutions of the crankshaft.

31. The two circuits of the ignition system are the PRIMARY and SECONDARY.

32. The ignition points are in the PRIMARY circuit.

33. The electrical sending unit in the gas tank has a VARIABLE resistance.

34. A spark plug's designed operating temperature is referred to as its HEAT RANGE.

35. Voltage jumping over the outside of a spark plug insulator is called FLASHOVER.

36. The instrument for testing resistance between the battery ground and starting motor is called a VOLTMETER.

37. Incorrect battery polarity may damage the DIODES of an alternator.

38. Two causes of detonation are, low OCTANE fuel and too advanced ignition TIMING.

3918

39. The headlights should be turned on when adjusting idle speeds on vehicles equipped with ALTERNATORS.

40. The presence of black carbon deposits on spark plug electrodes indicates OIL FOULING.

Final Examination Part II — Multiple Choice

Directions: For each statement, place an X in the space to the left of the choice that most accurately completes the statement.

1. The difference in electrical pressure between two posts of a battery is called

   ____ (a) resistance
   ____ (b) amperes
   __X__ (c) volts
   ____ (d) ohms

2. A circuit in which all of the current passes through all of the devices is called

   ____ (a) an open circuit
   __X__ (b) a series circuit
   ____ (c) a short circuit
   ____ (d) a parallel circuit

3. A circuit which has several branches for the current to pass is called a

   ____ (a) combined circuit
   ____ (b) multiple circuit
   __X__ (c) parallel circuit
   ____ (d) series circuit

4. Two six-volt batteries connected in parallel will produce

   __X__ (a) 6 volts
   ____ (b) 12 volts
   ____ (c) 18 volts
   ____ (d) 24 volts

5. Two 12-volt batteries connected in series will produce

   ____ (a) 6 volts
   ____ (b) 12 volts
   ____ (c) 18 volts
   __X__ (d) 24 volts

3919

6. When the number of turns of wire are doubled in the primary coil of a transformer, the voltage produced by the secondary will

_____ (a) decrease
_____ (b) remain the same
__X__ (c) double
_____ (d) increase to 20,000 volts

7. As the temperature of copper wire increases, its resistance

_____ (a) is absorbed by the insulation
_____ (b) remains the same
__X__ (c) increases
_____ (d) decreases

8. A circuit breaker sometimes takes the place of a

_____ (a) solenoid
__X__ (b) fuse
_____ (c) relay
_____ (d) mechanical starter switch

9. Ohm's law states that the resistance of a circuit can be calculated by

__X__ (a) dividing the voltage by the amperes
_____ (b) dividing the amperes by the voltage
_____ (c) multiplying the ampers times the voltage
_____ (d) dividing the wattage by the amperage

10. The specific gravity of a fully charged battery is

_____ (a) 11.70
_____ (b) 12.75
_____ (c) 1.120
__X__ (d) 1.275

11. High voltage from poor battery connections may cause

_____ (a) instruments to read incorrectly
_____ (b) radio supression
_____ (c) fuses to blow
__X__ (d) headlamps to burn out

12. The unit that stabilizes the operating voltage of the generator is called a

_____ (a) current limitor
__X__ (b) voltage regulator
_____ (c) voltage amplifier
_____ (d) solenoid

13. The ground polarity of all American made passenger cars is

_____ (a) internal
_____ (b) either negative or positive
_____ (c) positive
__X__ (d) negative

14. The starting motor brushes contact the

__X__ (a) commutator
_____ (b) field coils
_____ (c) pole shoes
_____ (d) drive housing

15. The secondary voltage is produced in the

_____ (a) condenser
__X__ (b) coil
_____ (c) battery
_____ (d) distributor

16. Excessively advanced ignition timing may cause

_____ (a) burned contact points
_____ (b) crossfiring
__X__ (c) detonation
_____ (d) decreased coil voltage

17. A rich carburetor mixture may cause spark plugs to

_____ (a) run too hot
_____ (b) become sooty
__X__ (c) become oil fouled
_____ (d) operate at the wrong heat range

18. When adjusting a spark plug gap always bend the

__X__ (a) side electrode
_____ (b) center electrode
_____ (c) terminal tower
_____ (d) insulator

19. The cam angle is the number of degrees that the cam rotates while the contact points are

_____ (a) closing
_____ (b) opening
_____ (c) opened
__X__ (d) closed

3921

20. If the engine turns over at normal speed, but will not start, the trouble probably is in the

    _____ (a) battery
    __X__ (b) ignition system
    _____ (c) generator
    _____ (d) solenoid

21. When combustion occurrs in the cylinder before ignition, it is called

    __X__ (a) preignition
    _____ (b) detonation
    _____ (c) inductance
    _____ (d) pinging

22. The instrument that measures the current flow is called a (an)

    _____ (a) rheostat
    _____ (b) ohmmeter
    __X__ (c) ammeter
    _____ (d) voltmeter

23. The device in an alternator that allows current to flow only in one direction is called a

    _____ (a) slipring
    __X__ (b) diode
    _____ (c) commutator
    _____ (d) field coil

24. If the starting motor will not operate but the headlights stay bright, the trouble may be in the

    _____ (a) secondary circuit
    __X__ (b) neutral safety switch
    _____ (c) distributor contact points
    _____ (d) voltage regulator

25. At wide open throttle position, the distributor vacuum advance will be

    __X__ (a) 2 minimum
    _____ (b) 2 maximum
    _____ (c) 20° advanced
    _____ (d) 20° retarded

26. If the starting motor will not operate and the headlights go out, check the

    _____ (a) voltage regulator
    __X__ (b) battery terminal connections
    _____ (c) headlight connections
    _____ (d) current at the generator

3922

27. Reversing the polarity of the coil may

____ (a) have no effect on performance
____ (b) cause contact points to burn
__X__ (c) decrease the ignition secondary output voltage
____ (d) shorten the life of the condenser

28. The unit designed to present a picture of the ignition is called

__X__ (a) an oscilloscope
____ (b) a photoelectric cell
____ (c) a high-speed lens
____ (d) a stroboscope

29. When a battery remains discharged for some time,the plates become

____ (a) cycled
____ (b) undercharged
____ (c) overcharged
__X__ (d) sulfated

30. When using a fast charger,it is important to avoid

____ (a) low specific gravity readings
____ (b) tapering off the charge
__X__ (c) high battery temperatures
____ (d) self-discharge

31. If a battery requires water every few days,it is an indication of

____ (a) extreme hot weather operation
__X__ (b) overcharging
____ (c) overload
____ (d) sulfation

32. Solder being thrown out of the generator commutator usually indicates

____ (a) the generator is being driven too fast
____ (b) too much load on the electrical system
__X__ (c) the generator is exceeding its rated output
____ (d) the battery has become sulfated

33. The unit in the regulator designed to prevent the generator from exceeding its rated amperage output is called a

____ (a) cutout
__X__ (b) current limiter
____ (c) voltage limiter
____ (d) stabilizing unit

3923

34. A commonly used starter drive is a

_____ (a) constant mesh drive
_____ (b) magnetic drive
_____ (c) vacuum drive
__X__ (d) Bendix drive

35. The starter solenoid is used to

__X__ (a) engage the starter drive with the flywheel ring gear
_____ (b) close the neutral safety switch
_____ (c) drive the engine flywheel
_____ (d) disconnect the battery circuit when the engine is being cranked

36. The magnetism that remains in the generator's pole shoes when the generator is not operating is called

_____ (a) reverse current
_____ (b) electromagnetism
_____ (c) magnetic potential
__X__ (d) residual magnetism

37. Rapid flashing of a directional light indicator lamp on one side and normal flashing on the other side indicates

_____ (a) an overloaded circuit
_____ (b) a defective flasher unit
_____ (c) both bulbs burned out
__X__ (d) one bulb burned out

38. The diodes in an alternator are sometimes mounted in heat sinks which

__X__ (a) absorb and transfer heat
_____ (b) prevent reverse current
_____ (c) cool the alternator
_____ (d) change the polarity

39. For a 12-volt system a suitable wire size to use to connect the horns to the horn relay would be a

_____ (a) 24 gauge
_____ (b) 48 gauge
__X__ (c) 12 gauge
_____ (d) 2 gauge

40. In a 12-volt system, the voltage to the starting motor during cranking should be no less than

_____ (a) 4.5 volts
_____ (b) 13.2 volts
_____ (c) 12.0 volts
__X__ (d) 9.0 volts

3924

Using Audiovisual Materials

Audiovisual materials are both a tool for teaching and an avenue for learning. While no particular amount of time is recommended for using audiovisual materials, it is suggested that they be used with a variety of learning activities and that the instructor not devote an entire class session to the use of such materials.

Audiovisual materials lend themselves well to bring about a high level of involvement. When working with adults, it is well to remember that much can be learned from each other. It is with the idea of getting people involved and having them make contributions, that these comments are made.

The following suggestions may assist the instructor as he prepares an overall plan for the use of audiovisual materials. The ideas presented should allow for a comprehensive coverage of the content and the efficient use of class time. Steps to consider include:

- Plan the presentation (organization and methods)
- Prepare the equipment and materials
- Orient the class (background material)
- Present the lesson
- Summarize concepts and understandings
- Evaluate knowledges acquired
- Followup with opportunities to explore new knowledges
- Return the equipment and materials

Plan the Presentation (Organization and Methods)

Always preview any audiovisual material to become familiar with its content and to see that it correlates with the lesson. Adult students dislike "time fillers" and inappropriate presentations. While previewing, prepare comments which might answer such questions as:

- What is being illustrated?
- Why is the presented material important?
- What are the important terms and understandings being presented?
- What are some appropriate topics which could be used to stimulate class discussions?

Prepare the Equipment and Materials

Request the required equipment several days ahead of time from the director of adult education or person in charge of audiovisual equipment. Then see that it is delivered prior to the starting of the class. Before the class begins, practice using the equipment to become acquainted with its operation. Arrange the room so that everyone can see and is comfortable. Have a screen ready and place it so that the least amount of outside light

3925

3925

is reflected onto it. The wall may be used, but a screen is much more desirable. The larger the room and the larger the audience, the larger the screen that is needed. Be sure there is a table for the projector, an electrical outlet, an extension cord (the cord with the projector is usually short), and a spare projector lamp available in case the one in use fails.

If the class is held during the day, be sure the room can be darkened and ventilated. Check to see if the lights can be turned off without shutting off the power to the projector. At the conclusion of the presentation, allow the fan on the machine to cool the equipment for a few minutes before completely shutting off the power to the projector.

Orient the Class (Background Material)

Explain to the class what they will see. Discuss the more important terms used and indicate the main points to be presented.

Present the Lesson

Have the film threaded and the projector ready for use. Stop the film or filmstrip for discussion as the need arises during the showing instead of waiting until the presentation has been completed. A filmstrip offers flexibility for it may be used as a whole or as a part whichever is appropriate to the lesson. It may also be stopped at any frame for discussion or questions. At the end of the showing give your comments and encourage discussion and questions from the trainees.

Summarize Concepts and Understandings

Itemize the important learnings on the chalkboard as they are contributed by the class. Allow time for the trainees to raise other questions which may lead to a more complete understanding. Encourage trainees to keep some kind of notation for future review.

Evaluate Knowledges Acquired

Prepare a list of questions which might assist trainees to evaluate how well they have learned the important points of the lesson. One approach might be for the instructor to present the question and pause for a few moments to allow the trainees to form their answers before responding. Interest could be generated by asking the trainees to keep track of the number of their correct answers.

Followup with Opportunities to Explore New Knowledges

Introduce a few new topics for discussion which will motivate the trainees to project their understandings.

Return the Equipment and Materials

After the class is over make arrangements to return the equipment and school-owned audiovisual materials. For an item ordered from an out-of-school source, complete the required attendance report, prepare the material for mailing, and leave it so that it may be returned promptly.

Preparing and Using Transparencies

Materials for use on the overhead projector may be prepared by hand, the heat-transfer process, and the color-lift process. Each method is described briefly for those who might wish to make their own original transparencies.

General Suggestions

- Select only content that is appropriate for an overhead transparency.
- Keep content of transparency simple.
- Organize the content of the transparency carefully.
- Use multiple overlays (one transparency over another) for the development of a concept or to show steps.
- Keep master and overlays in register with crosshair registration marks in opposite corners.
- Use color to make the transparency attractive but only enough color for emphasis. Color-toned sheets or colored ink may be used to identify parts of a drawing or picture.
- Plan transparency for horizontal projection.
- Use letters and symbols that are at least $\frac{1}{4}$-inch high. Use a lettering guide or dry-transfer letters and symbols to produce attractive titles or labels.
- Leave a $\frac{3}{4}$-inch clear margin on all sides of the transparency.
- Use a pointer to identify a specific part and then remove it quickly or lay pointer on transparency for a hand-held pointer cannot be kept steady, and therefore, becomes distracting.
- Use a sliding or hinged mask to control the rate of disclosure when more than one step is included on a transparency.

Handmade Process

Produces a simple and inexpensive transparency.

Materials Needed

Plastic sheet or roll - clear or frosted

Markers - grease pencil or pen
Ink - transparent or india

Suggested Procedures

- Mark directly on the plastic sheet. This may be done in front of the class as the lesson is being given or may be prepared ahead of time.

- Remove materials placed on a handmade transparency with a sponge or cloth moistened with water or a special cleaning fluid. Then the transparency is ready to be used again.

Heat-Transfer Process

Produces a transparency from almost any original that is flexible and no thicker than a sheet of paper.

Materials Needed

Plastic sheets
Item to be copied
Copying machine

Suggested Procedures

- Material to be copied can be opaque or transluscent but should have a carbon-type ink base *(black)*.

- Follow the directions for the specific copying machine and use the recommended type of plastic sheets.

Color-Lift Process — Drymount Press

Produces a transparency by transferring the ink of a printed picture to a sheet of transparent film. Only material printed on a clay-based paper may be used.

Materials Needed

Special film
Detergent
Flat tray
Drymount press
Pressure boards
Item to be transferred

Suggested Procedures

- Select and test the picture to be lifted. Wet the fingertip and rub over an unprinted portion of the page. Clay-based papers will leave a white residue on fingertip.

- Dry the picture for 5 seconds in a drymount press set at 270° F.
- Put the picture on the coated side of the special film and place between pressure boards. Heat resulting sandwich for 2-3 minutes in a drymount press set for 270° F.
- Place picture and film in lukewarm water containing a liquid detergent. Soak for 2 minutes or until the paper pulls easily from the acetate.
- Wash clay coating from picture and dry film carefully.
- Spray ink surface with clear lacquer spray. Allow spray to dry then mount transparency.

PREPARING AND USING TRANSPARENCIES

3929

Glossary

a.c.: Alternating current; current that changes its direction of flow at regular intervals.

Active material: Lead paste used in the plates of storage batteries.

Advance unit: A device which moves the ignition timing ahead either mechanically or by vacuum.

Alternator: A generator that produces alternating current.

Ammeter: An electric meter used to measure the amount of amperes in a circuit.

Amperage: The amount of current flowing in a circuit.

Ampere: A unit of flow of electrical current.

Armature: The part mechanically moved through a magnetic field to produce current or moved by magnetism to produce rotation or torque.

Atom: The smallest particle into which matter can be divided.

Battery: A group of cells connected together.

Bendix drive: A type of starting motor drive.

Breaker points: Contact points that open and close the primary circuit of the ignition system.

Brush: A conducting unit which rests on the commutator or slipring of a motor or generator.

Cam: A device that controls or alters motion.

Cam angle: The number of degrees that the distributor shaft rotates during the time the contact points are closed.

Capacitor: A device that has the ability to absorb and retain surges of electricity.

Carbon pile: Carbon disks which decrease in resistance as they are compressed.

Cell: Two different metals suspended in an electrolyte and used to produce an electric current.

Cell connector: A lead strap used to connect the posts of adjoining cells of a storage battery.

Charging rate: Number of amperes being produced to either recharge or hold a battery in a state of charge.

Circuit: The path of an electric current.

Circuit breaker: A device that opens or closes an electrical circuit under specific conditions.

Commutation: The changing of alternating current induced in the armature windings to direct current by means of the brushes and a commutator.

Commutator: A device which forms the connection between the armature windings of a motor or generator and the brushes.

Condenser: A device that has the ability to absorb and retain surges of electricity.

Conductor: A material that will carry current.

Constant current charging: A method of charging storage batteries in which the amperage of the charging current is maintained at a constant rate.

Constant potential charging: A method of charging storage batteries in which the voltage of the charging current is maintained at a constant rate.

Contact points: Two points that complete a circuit when pressed together.

Current: The flow of electrons.

Current regulator: A device which prevents the generator from producing current in excess of its rated capacity.

Cutout relay: The unit which opens and closes the circuit between the generator and battery.

d.c.: Direct current; current that flows in one direction.

Diode: A device which allows current to flow in one direction only.

Distributor: The device that times and distributes the high-tension spark to the spark plug at the proper time.

Dry charge battery: A battery with plates charged but lacking an electrolyte.

Dwell: The numbered degrees that the distributor shaft rotates during the time the contact points are closed.

Electrolyte: A liquid of a mixture of sulfuric acid and water used in a lead-acid storage battery.

3931

Electromagnet: A coil of wire wound around an iron core which produces magnetism when energized with current.

Electron: A negatively charged particle that makes up part of the atom.

Field: An area filled with a magnetic force.

Field coil: The windings in a generator or motor that produce the magnetic field when current passes through them.

Filament: A fine wire used in a light bulb that heats to incandescence when current passes through it.

Flywheel ring gear: The gear on the outer edge of the flywheel.

Fuse: A protective device designed to open an electrical circuit when the circuit exceeds a specified amount.

Generator: A device for converting mechanical energy into electrical energy.

Grid: A lead screen containing the active battery material.

Growler: An instrument used in testing an armature.

Heat sink: A device usually used to protect diodes from absorbing an excessive amount of heat.

High tension: High voltage produced by the ignition coil.

Hydrometer: A device used to measure the specific gravity of a liquid.

Ignition coil: A step-up transformer that increases the low primary voltage to high secondary voltage.

Insulator: A material that will not conduct an electrical current.

Junction block: A common connection point for a number of wires.

Lines of force: Electrical energy surrounding permanent magnets and current-bearing conductors.

Magnetic field: The area encompassed by magnetic force.

Mica: An insulating material.

Motor: A device that changes electrical energy into mechanical energy.

Neutron: A neutral charged particle that is part of the atom.

Nonconductor: A material that will not conduct an electrical current.

Nucleus: The center portion of the atom.

Ohm: A unit of electrical resistance.

3931

3932

Ohmmeter: An instrument used to measure resistance in a circuit.

Open circuit: A break or interruption in the normal current path.

Oscilloscope: A testing device which uses a cathode-ray tube to reproduce the spark action of the ignition system.

Overrunning clutch: A type of starter drive which drives in one direction and freewheels in the opposite direction.

Parallel circuit: A circuit so connected as to allow all of its electrical units to function independently of each other.

Plate: A thin section in a battery which carries the active material.

Polarity: The state of a device with reference to the positive or negative terminals of the battery.

Polarization: The process of correcting the direction of current flow in a field coil of a generator to insure that the generated current will flow in the normal direction.

Pole shoe: A metal piece holding the field coil of a motor or generator.

Primary circuit: The low voltage part of the ignition system.

Primary winding: The winding in an ignition coil that carries the battery current and forms the magnetic field.

Printed circuit: An electrical circuit which uses lines printed on a panel as conductors.

Proton: A positive charged particle in the nucleus of an atom.

Rectifier: A device designed to change alternating current to direct current.

Regulator: A device used to control the output of a generator.

Relay: A switch operated by magnetism.

Resistance: The opposition to the flow of electric current.

Resistor: A device placed in a circuit to decrease the voltage or flow of current.

Rotor: The rotating field coil in an alternator; the rotating switch in the distributor that carries the high-tension current from the central terminal to the individual outlets.

Secondary circuit: The high-voltage part of the ignition system.

Secondary windings: The winding in an ignition coil in which the high-tension current is induced.

3933

Self-discharge: The action within a battery which causes it to discharge even though it is not supplying current.

Segments: The individual bars of a commutator.

Semiconductor: A material which acts as a conductor under some conditions and as an insulator under other conditions.

Separators: Sheets inserted between the positive and negative plates of a lead-acid battery.

Series circuit: A circuit so connected as to allow all the current to pass through all of the units. Failure of any one unit results in failure of all of the units in a series circuit.

Series-parallel circuit: A circuit so connected as to allow all the current to pass through certain units and permit other units to function independently of each other.

Short circuit: A circuit that is completed in such a way that the current bypasses part or all of the normal circuit.

Shunt: A parallel connection of a circuit.

Shunt wound: The field windings connected in parallel with the armature.

Slipring: The rotating connection between the armature and brush of an alternating current generator.

Solenoid: A coil of wire with a movable iron core which centers itself when the coil is energized.

Solid state: An electrical device which operates without mechanical function.

Specific gravity: The weight of an electrolyte relative to the weight of pure water.

Static electricity: A charge of electricity induced by friction.

Storage battery: A device with a reversible action that changes chemical energy into electrical energy.

Stroboscope: A device providing intermittent illumination of a moving object which gives the object the illusion of standing still.

Sulfation: The formation of lead sulfate on storage battery plates.

Tachometer: An instrument for measuring the number of revolutions of a device in a unit of time.

Terminal block: A source of current for several circuits.

3934

3933

Transformer: A device used to increase or decrease voltage.

Transistor: A semiconductor which can be used as an amplifer or switch.

Volt: A unit of electrical pressure.

Voltage drop: The reduction of voltage across a resistance.

Voltage regulator: An electrical device for controlling or regulating the voltage output of a generator.

Voltmeter: An instrument used to measure the voltage of a given circuit.

Watt: A unit of electrical power.

Wiring diagram: A drawing showing electrical units and the connections necessary for them to function.

Careers in Retailing.

Ohio State Council of Retail Merchants, Columbus.
MF AVAILABLE IN VT-ERIC SET.
Ohio State Council of Retail Merchants, 71 East State Street, Columbus, Ohio 43215.
PUB DATE - ND 29p.

DESCRIPTORS - *OCCUPATIONAL INFORMATION; *RETAILING; *DISTRIBUTIVE EDUCATION; *CAREER OPPORTUNITIES; *EMPLOYMENT OPPORTUNITIES; CAREERS; EMPLOYMENT QUALIFICATIONS

ABSTRACT - Prepared by the Ohio State Council of Retail Merchants, this pamphlet presents brief resumes on 45 different careers in retailing, grouped under nine major areas in the field. Areas covered are: (1) managerial and supervisory, (2) professional, including such careers as accountants, electronic data processing, decorators, various types of salesmen, watch repairmen, and printers, (3) advertising, including copywriters, artists, photographers, public relations, and protection, (4) display, including designers, graphic artists, fashion stylists, window trimmers, and painters, (5) office and clerical, such as auditors, secretaries, and business machines operators, (6) skilled craftsmen, including television and radio repairmen, appliance repairmen, furniture finishers, and tailors, (7) technicians, such as nurses, cash register repairmen, and draftsmen, (8) semi-skilled craftsmen, such as auto repairmen, truck drivers, seamstresses, cooks, and pressers, and (9) labor, including stockmen and warehousemen. Brief resumes provide information on duties, responsibilities, educational or training requirements, outlook for the future, and probable salary ranges for each occupation. (AW)

A MESSAGE TO FUTURE RETAILERS

Retailing, or "the store," is so much a part of our daily lives that most people don't give it a second thought.

Yet retailing is by far the biggest single industry in the United States and there are unlimited opportunities for capable men and women considering a retailing career.

Retailing is the indispensable link between manufacturers and customers. And, for many people, the concept of retailing stops right there—buying and selling. True, buyers buy from manufacturers and sales people sell to customers. This is a very significant and exciting part of retailing, but it is only half the story. More than 50 per cent of the people in retailing are behind the scenes in sales supporting jobs.

For example, retailers have business offices. They need secretaries, file clerks, typists, business machine operators. They need financial experts. They need programmers and systems designers for electronic data processing.

Retailers have advertising and display offices. They need copywriters, artists, carpenters, photographers, production people.

Retailers have employment offices. They need interviewers, counsellors, industrial relations experts.

Retailers have restaurants. They need cooks, waitresses, bakers.

Retailers service products. They need radio and television repairmen, major appliance repairmen.

In fact, there are very few occupations that aren't part of the retail industry.

That's why this booklet. We want you to know about retailing. It is a vital, exciting and growing business. This is an invitation to take a look at us. Perhaps you'll join us.

Harold Friedlander

President, Ohio State Council
of Retail Merchants

BUYING AND SELLING EXECUTIVES *Many people, performing many different jobs, are needed to keep the wheels of a retail store spinning. But at the core of the entire operation is the selling floor. What happens there means the difference between success and failure.*

The responsibility for much of the key work is in the hands of the buyers, department managers and assistant department managers.

When the average shopper sees something she likes, she probably will buy it. It's not that simple for the professional buyer.

The buyer must know what the store's customers will like, what they need, what they can afford and what they will buy. She must know what is too extreme for her store's customers and what is not fashionable enough. She must keep up with the latest styles and be able to judge whether or not her customers are ready for them.

To find the right merchand[illegible]yer goes into the "market," the factories and showrooms in the garment centers of the nation and even in foreign countries. The buyer must also be sure that what she buys in the market will sell at a profit for her store.

The department manager is in charge of the day-to-day operations of his particular area. He must run the merchandising and customer service activities in a way that will insure efficient and economical operations, promote good customer relations and achieve the volume of sales expected from his department. He works with the buyer and the sales force.

The assistant department manager aids both the buyer and the department manager in carrying out the goals of the department.

All three jobs require merchandising skill, an ability to innovate, enthusiasm for the job and the merchandise, a knowledge of the fundamentals of mathematics and, above all, common sense and the ability to get along with people.

Persons who eventually become buyers, department managers and assistant [illegible]ent managers are

MANAGER - SUPERVISER

trained for these jobs in the individual retail stores. But a trainee needs a solid educational background—either four years of college or two years of post-high school education with some actual retail experience, such as working as a sales clerk. Some two-year college graduates are accepted in the store training programs.

Almost any college degree is acceptable for a trainee, although human relations and marketing courses are of great assistance.

Trainees work approximately 40 hours a week. Of course, with moves into executive positions, such as managers or buyers, persons may have to work additional hours. This is especially true during peak periods such as Christmas and Easter. Obviously, a store must cater to the shopping hours demanded by the public.

There is money to be made in retailing. A survey of 7,000 executives in 20 major department and specialty stores indicated that more than 50 per cent of those persons in executive positions earn over $6,500 a year. Moving up the executive ladder, the survey showed that some 850 top personnel had earnings of between $10,000 and $100,000 annually.

One of the advantages in the expanding retail industry is the declining influence of geographical location on an individual's future progress. With branch and suburban stores springing up all over, most areas of the state, particularly in Northern Ohio, offer excellent opportunities for those who wish to enter a career in retailing.

careers in retailing

PROFESSIONAL

ACCOUNTANT *The accountant has two major functions. He prepares financial records of all kinds and he interprets them. Both duties are often done with the aid of a computer.*

The prime requisite for an accountant is an ability to work with figures. He must have specialized professional training, either in college or in a post-high school accounting school.

Depending upon the education background and aptitude, the beginning accountant can earn anywhere from $6,000 to $9,000 a year. Senior accountants can average $15,000 a year.

ELECTRONIC DATA PROCESSING *Retail stores are not strangers to the world of electronics and data processing. Computers perform a variety of jobs. Stores need people to run the equipment, to program it and to design and analyze systems.*

The equipment operator runs the machines, putting the proper tapes on the proper computers, following

3952

PROFESSIONAL

specific instructions and paying careful attention to the commands of the equipment. The job takes discipline and attentiveness. Most training is on the job and a good equipment operator can earn from $120 to $150 a week. A high school diploma is preferred.

The programmer creates the numerical instructions that tell the computer what to do. He gets the information from the system and translates it into program language. There is a critical shortage of programmers. Training can be obtained in special schools. There also are college courses in programming which are more sophisticated. Earnings average from $8,000 to $12,000 a year.

As the title suggests, the person in systems design and analysis creates the systems which the programmer feeds into the computer. They may be financial systems, record systems, merchandise information systems or any number of different systems.

Even though he doesn't program computers himself, he needs a knowledge of programming. The systems designer most generally is a college graduate. He may major in any field, but the main prerequisite is analytical ability. Salaries range from $12,000 to $18,000 a year.

INTERIOR DECORATOR *The interior decorator gives professional assistance to customers in furnishing their homes, offices or other business establishments. The decorator must know about all types of merchandise—china, fabrics, wallpaper, rugs, furniture—and be familiar with the manufacturers from which the best merchandise can be obtained. The decorator must be able to make estimates, draw layouts and devise color schemes.*

Educational background should include training in drawing, wood grains, furniture periods, fabric design, antiques and color harmony.

Most decorators work on straight commission or on a basic "draw" plus commission. The potential earnings and the outlook for the future are excellent.

3953

FURNISHINGS SALESMEN *Major purchases, such as furniture, appliances, carpeting and sewing machines are not idly made. The customer often relies on the expertise of the salesman to explain the difference between various brands and models and which product will best meet the family's needs.*

The salesman must know good selling techniques and when and how to close a sale. He must keep pace with the changes in models and colors. The goal is to create interest in the product for sale immediately or at a future time.

The educational requirements usually are a high school diploma plus on-the-job training. Many salesmen of the "big ticket" items work on commission. The better the salesman, the better his earnings.

READY-TO-WEAR SALESMAN *The person who enters a retail career as a ready-to-wear or apparel salesman has two avenues to travel. He can gain experience to become a well-paid professional salesman or use it as a foundation to move up to executive jobs.*

There is no formal training for salesmanship. The mechanics—writing sales slips, using the cash register, etc.—are learned on the job. But the salesman must bring to the job enthusiasm, alertness, a desire to help the customer and an ability to inspire confidence.

The good ready-to-wear salesman knows his merchandise, knows fashion trends and knows how to meet the needs of his customers.

Earnings vary, depending upon the background and potential of the person. For example, someone just out of school might start at the minimum wage or a little above it. A college graduate who majored in retailing might earn from $7,000 to $9,000 a year and quickly move into an executive position.

WATCH REPAIRMAN *The watch repairman must be able to disassemble and fix an assortment of time pieces. His educational background should include at least three years of apprenticeship under a qualified*

PROFESSIONAL

watchmaker or completion of an accredited school program.

The repairman must have good eyesight and good muscular coordination. Earnings are flexible, but on the average he can expect to earn $125 a week. Opportunities are excellent and training as a watchmaker is beneficial to persons interested in moving on to electronic instrument work.

PRINTER *Many large retail stores find it practical to operate their own print shops to produce such things as sale notices, flyers on special merchandise or various pamphlets.*

The printer must know how to run a press and all related printing equipment such as the cutter, folder, puncher and plate maker. He also should know about the various types of paper.

Educational background should include the technical training needed to operate the equipment. Salaries vary with individu

careers in retailing

ADVERTISING

COPYWRITER *Advertising copy, in a sense, is a letter to the customer. It tells him what's new or whether something special is going on at the store.*

Unlike writing a letter home, where there is natural interest in your activities, in advertising the copywriter must create the interest.

The copywriter is responsible for the words that appear in a newspaper advertisement. He must understand why the store bought the merchandise and tell the customer what benefit the merchandise will have for her. And, he must tell his story briefly.

The writer must know store policy and keep up with government regulations on merchandise.

The copywriter needs a college education. A major in journalism or English is desirable. Any retail experience is an advantage, but actual training is on the job.

Starting salaries depend upon background and potential. Earnings are good.

The copywriter's future is unlimited. He can step

ADVERTISING

up to such positions as copychief, ad manager, publicity director or branch off into public relations, radio and TV.

LAYOUT ARTIST *Without pictures or other artwork, advertisements might need 1,000 words to tell their story. Art is indispensible.*

The layout artist is responsible for the blueprint of the ad. He must develop and maintain the store look. He must know how to make an ad say "this is quality" or "this is for young people" by capturing a spirit, rather than using words.

Art school training with work in layout and typography is the best educational background. But it takes experience.

The professional layout artist earns good money. But while getting experience, it is often necessary to work for moderate wages and climb up. The larger retail stores offer the most opportunity.

The key to excellence is the ability to be cre[illegible]es in relat[illegible] art fields. within the framework of a store's policy.

There is opportunity for advancement—to art supervisor, art director, ad manager or publicity director.

ARTIST *Filling in the blueprint of the layout artist is the "finished artist" who is responsible for the illustrations that appear in a newspaper ad.*

The artist must understand the merchandise being sold to put emphasis on the product. A good artist keeps up with trends. He must use the newest hair styles, skirt lengths and accessories. If the store has a certain fashion image, he must be sure that image is part of his product.

Top notch artists can command excellent salaries. The beginner may start as a paste-up artist, a junior artist or in a related position.

Art school is essential, as is as much training and experience as possible. Most artists never stop learning, trying new techniques and equipment or taking

The artist with supervisory inclinations can move on to art supervisor, art director, ad manager or publicity director.

PHOTOGRAPHER *If you want to "tell it like it is," nothing does the job better than a photograph. And photography is becoming more important in retail advertising. It is realistic and can give a store or area of merchandise a distinctive look.*

The advertising photographer must be able to take good pictures and do darkroom work. He must understand merchandise to put emphasis on the product rather than the model.

Schools of photography provide an advantage for the beginner, but many photographers have started in art and added photography experience.

The beginner might start with darkroom work and then be trained on the camera. Photographers earn good salaries and there are opportunities to move into other areas of advertising or into executive positions.

RETOUCHER *With photography in use, advertising departments need photo retouchers. A good retoucher is a skilled person who understands art and the engraving process. He must be able to highlight the selling points of merchandise to the best advantage.*

The retoucher also is responsible for pasting down and sizing special type. He also may do hand lettering.

Art school education is important, as well as training in the mechanics of engraving and typography.

The job often becomes a stepping stone for persons to move into finished art, layout or even photography.

PRODUCTION *There is so much that goes into advertising that it needs a control center. That is the production department.*

The production department is where scheduling originates, copies of layouts are made, art assignments are designated and art checked out. It is where copy is put through to the newspaper or printer. It is where proofs come in and go back for final release.

careers in retailing

ADVERTISING

3959

Production is a career in itself. Yet, the production department is where many persons start advertising careers since it provides an opportunity to learn the store, its policies, all facets of the department and the work pace. It also gives advertising executives a chance to find out about a beginner's potential.

Wages in production are moderate to start, but advancement can be fast.

ADVERTISING BUSINESS *Since retail advertising is a daily function, it is often realistic for stores to have their own advertising business offices.*

Within this office, advertising costs are figured, billings are made, individual departments are charged back for their advertising and estimates are made for new budgets and future planning.

Business administration in college or business school is the best educational background, although a combination of business and advertising courses may be desirable.

The pay can be good, depending upon the type of work, and there is opportunity for advancement.

RADIO-TELEVISION *There was a time when the retailer who thought of broadcast advertising was considered foolish. But with technological advances, particularly color television, retailers learned they could effectively advertise their products in the broadcast media.*

Yet the potential has only been scratched. Radio and television advertising is a wide open field. Many stores use advertising agencies to create commercials, but more stores are bringing the operation into their own departments. And even when agencies are used, the stores need persons to help sell, coordinate, schedule and work with the agency.

College or technical school training in broadcasting is the best educational background. A great advantage is experience with a radio or TV station. The field is mushrooming and the future is unlimited.

careers in retailing

DISPLAY

3960

In a simpler world, it was assumed that if you built a better mousetrap, the world would beat a path to your door. But today, the sale of that mousetrap would depend in large part on how it was presented to the public.

One of the fastest growing areas in retailing is "display." It is the art of creating a setting for merchandise, much as a set designer creates a background for the action of a play. Displays are presented in store windows and within departments, the latter called "interior" displays.

The display department includes designers, artists, copywriters, fashion stylists and craftsmen such as carpenters, plastic fabricators and painters. In addition there are window and interior trimmers who are responsible for actual installation of the displays.

Generally, the most helpful academic training for display jobs are vocational or artistic courses. But more important is the desire to be creative and an interest, if not actual experience, in the artful use of materials, colors, composition, lighting and space.

Art training can be valuable, although graphic art is just one part of display. Also of some help is fashion design, interior decoration, industrial design, mechanical drawing or drafting. But none is an end in itself.

Salaries vary according to training, experience and responsibility. An inexperienced trainee might start at the legal minimum wage, but could work up to an annual salary of $8,000 or more. Salaries for qualified specialists and executives run into five figures.

Working hours vary with the duties. But most displays are installed early in the day, before heavy store traffic.

Future opportunities are unlimited since display is becoming a greater part of store planning and merchandising.

Some of the specific jobs in display include:

DESIGNER *The designer is, in a sense, the architect of a window or interior display. He creates the*

3961

concept from which the display craftsmen work. Many stores, however, do not have specific designers, feeling that design enters into every area of display. The concept may be determined by a supervisor and carried out, with innovations, by the display team.

GRAPHIC ARTISTS *In the area of graphic arts are the people who do silk screening, drafting, signs and the like. The silk screen operator cuts black and white or multicolor designs photographically, using the silk screen process. He does design, layout, mixing of inks and other processes to produce ornamental signs. The draftsman does layouts for temporary special shops, seasonal atmosphere, fixture design and other so-called "board" work. The sign machine operator runs various lettering machines and makes up signs for display and selling departments. He also may do some hand work such as painting borders or other simple embellishments.*

COPYWRITER *The copywriter writes the copy that appears on signs. He also proofreads and edits all sign copy. The prime requisite is an ability to use the fewest words to label a display or to provide pertinent information.*

FASHION STYLIST AND HOME FURNISHINGS COORDINATOR *The fashion stylist is responsible for selecting and coordinating all of the fashion merchandise that appears in windows and interior displays. The stylist also may advise selling departments on fashion coordination. The home furnishings coordinator is in charge of selecting merchandise and coordinating home furnishings windows and interior setups. He also may supervise custom sewing required for such displays.*

CARPENTER AND PLASTICS FABRICATOR *The carpenter, working with wood and metal, and the plastics fabricator, working with plastics, construct properties, backgrounds and "gimmicks" for window and interior*

DISPLAY

displays. Each should be familiar with construction materials and techniques within the specific field.

PAINTER *Painters use spray paints to color properties. They also may repaint previously used backgrounds and props for new displays. Painters must be able to match color cards and be able to use the numerous antiquing and ornamental techniques.*

WINDOW AND INTERIOR TRIMMERS *The window trimmer sets up window and showcase displays to accent the selling points of merchandise and attract customers. He arranges backgrounds, places merchandise on mannequins and adjusts lighting to highlight the merchandise. He works with the carpenters, sign writers, stylists and artists. The interior trimmer arranges formal displays inside the store. In a large store he may be assigned to a specific area.*

MERCHANDISE RETURNER *The "returner" is responsible for returning merchandise used in window and interior displays to the department from which it was borrowed. He must make sure the merchandise is returned in top condition. He also serves as a liaison man and goodwill emissary between display and the selling departments.*

OFFICE & CLERICAL

AUDITOR *The auditor watches over a store's finances as though they were his own.*

As his title suggests, the auditor "audits" or examines business procedures to review the effectiveness and efficiency of the operations and records. He also makes sure that all transactions are properly recorded and comply with federal and state laws.

The auditor is expected to dig out weak business procedures and recommend improvements to management. He prepares reports from which top level management makes policy decisions.

The auditor must have a strong interest in math and be able to write accurate, concise reports.

His educational background should include a college degree in accounting as well as on-the-job training. He can expect to earn from $7,000 to $15,000 a year.

There are great opportunities for advancement because of the increasing need for expense control and the expanding number of laws requiring compliance.

COMPTOMETER OPERATOR *No longer do people peer over ledgers working with figures. Machines do most of the work and the need is for people to run the machines. One of the most useful business machines is the comptometer, which aids in mathematical processes.*

The comptometer operator does bookkeeping, computes reports and checks and sums up mathematical reports. The job may also involve working on store inventory, payroll, saleschecks and profit and loss statements.

Several business schools offer comptometer training, usually in a six weeks course. Starting salaries for persons without experience run about $75 a week. Comptometer operators are in great demand.

CLERK-TYPIST *The clerk-typist in a retail company performs a variety of jobs using the typewriter—typing reports, bills, shipping forms, invoices and other items. She also may do some filing and*

other general office duties.

The clerk-typist must be strong in English and math. At least two years of typing in school or on the job is required. In addition, the clerk-typist should have some training in clerical skills.

Starting salary is about $65 a week. The big advantage for the clerk-typist is the training for future higher paying jobs. The work requires a high degree of skill and provides a variety of interesting duties.

STENOGRAPHER *A stenographer is a highly skilled person with the ability to take dictation in shorthand at a speed of 100 to 120 words a minute and transcribe from her own shorthand or from a dictating machine.*

She must have typing proficiency, clerical aptitude and be strong in spelling and grammar. Her educational background should include business school or high school training in shorthand, typing and clerical skills.

Starting salary is usually $75 for a 40-hour week. The job offers a variety of duties and opportunity to develop office skills.

SECRETARY *The secretary's main purpose is to relieve the executive of various duties to let him get on with the big business.*

She takes dictation, makes appointments for her boss (and reminds him to keep them), arranges travel schedules, handles mail, keeps track of records and receives persons calling to see her boss.

The job requires typing and shorthand skills, an ability to meet the public and work independently.

Graduates of business college are preferred. Beginners earn about $90 a week, but have the opportunity to advance into jobs as secretaries to top management and earn as much as $200 a week.

MAJOR APPLIANCE REPAIRMAN *On that inevitable day when the washing machine won't wash or the refrigerator won't refrigerate, the housewife would forego mink for the repairman who could get her household functioning again.*

Americans are buying more major appliances and the need for good appliance repairmen is critical.

Persons with a curiosity about how things work can expand that interest into a full time, high-paying profession.

The job entails an ability to locate trouble in laundry, refrigeration, air conditioning, cooking and dishwashing equipment and repair it. The repairman must understand electricity and how to install outlets and wiring. He must be able to follow schematic diagrams and understand printed and hand wired circuitry. He must know how to measure voltage and install equipment using natural and bottled gas.

It doesn't hurt to know a little about handling people. Most major repairs are done in the owner's home and he or she is sometimes upset because the appliance is not working.

An electronics course is the foundation of the repairman's education. Then there's on-the-job training and manufacturer training. Most manufacturers of major home appliances have training schools for which the employer pays the fee.

Salaries are good. The apprentice rate is about $2.50 an hour with a top scale of $4 an hour. There is variety in the appliance repairman's work and in the people he meets.

TV-RADIO REPAIRMAN *Behind the television screen is a mass of circuits, transistors, capacitors, condensers and a score of other components of the electronic world.*

It is a job that entails the ability to repair, service and adjust television sets, radio and phonographic equipment.

The best qualified repairman needs the equivalent

SKILLED CRAFTSMAN

of a full electronics course plus on-the-job training. Many employers feel the best trained persons are those who have received electronics training in the military.

Salaries for apprentices are $2 an hour with a top rate of $3.50 and going up.

The radio-TV repairman needs a basic knowledge of electrical current and supply, must know printed and hand wired circuitry and how to read schematic diagrams. He must also understand transistors, vacuum tubes and other component parts as well as the fundamentals of TV picture tubes and the various guns that produce the TV image.

He also must know about high voltage, radiation and magnetism and should have a basic knowledge of how signals are transmitted and received.

Also part of the job is the ability to handle the customer, especially the one who's fuming because he missed his favorite program.

Future needs for radio-TV repairmen will continue to be critical. It is a job that provides continuing employment. Employers supply the working tools and in most cases pay for instruction to keep up with new developments and model changes.

FURNITURE FINISHER *A lot of people like to spend their spare time hunting old furniture and refinishing it. For the amateur, it's an interesting hobby. But for the pro, it is a creative, well-paying vocation.*

The expert furniture finisher can repair and refinish all types of furniture. He can restore it to new-like condition.

The professional finisher must know about wood and wood grains, steel, plastics and glass. He must understand his materials—paints, varnishes, thinners, rubbing compounds, glues and the like. He also must know hand and power tools. All are provided by the employer.

The furniture finisher should be a qualified carpenter and know the fundamentals of the cabinet

maker. The educational requirement is that of a well-trained carpenter. He should have a full course in the materials of his trade. Added to that will be on-the-job and factory training.

Starting pay scale is about $2.50 an hour with a top rate of $4.00 per hour.

Because of the shortage of professional finishers, trained persons can be assured of continuous employment. The job provides a great variety of work, regular hours and personal satisfaction.

The professional finisher should also be customer minded since many times the work is done in the customer's home.

FITTER-TAILOR *People come in all shapes. Clothes do not. So clothing and department stores need experts who can make the garment fit the customer. And it involves a lot more than hemming dresses or cuffing slacks.*

The fitter or tailor must know how to take measurements and make any number of alterations. He must keep up with fashion and the tastes of all age groups and know how to fit persons of all ages.

The tailor is qualified to custom make a garment and knows about materials, both natural and man-made. He knows about different machines and other tailoring equipment. And he also knows about costs. Obviously customers are not willing to pay for alterations that double the cost of the purchase.

Current earnings for fitters and tailors start at about $2.50 an hour with a top scale of $4 an hour. The normal work schedule is 40 hours in a five-day week.

Practically all training and education is gained on the job, which tends to create a critical shortage in this skill.

careers in retailing

TECHNICIANS

REGISTERED NURSE *Thousands of employes and customers are in a large retail store every week. Where there are people, there are bound to be accidents, sudden illness and other emergency situations.*

Most stores have a registered nurse on their staffs to give treatment or first aid to employes or customers who become ill or injured on store premises. The nurse also administers minor treatment and preventative medicine to safeguard the health of store employes.

In addition, she fills out insurance reports and keeps records of all persons treated. The nurse usually maintains a daily log of employes she sees and transfers the entries to the employes' medical records.

She also makes periodic reports to management on the number of employes and customers treated. As part of the job, the nurse administers various insurance plans for the store, such as workman's compensation, public liability and property damage.

The store nurse must be a graduate of an accredited

school of nursing. She also must have a thorough knowledge of store procedures and policies.

CASH REGISTER REPAIRMAN *The major machine in any retail store is the cash register. Many of the larger department stores hire their own cash register repairman who keeps the registers in good working order.*

The repairman fixes the registers when something goes wrong and makes periodic inspections and overhauls. He also may make minor repairs to typewriters and adding machines.

The repairman should have mechanical ability. He must then be thoroughly trained with registers and be able to dismantle a machine and reassemble it. He also must be able to make some repairs right in the department without removing the machine to the shop.

The cash register repairman usually works a 40-hour week and earns an average salary of $7,500 a year.

DRAFTSMAN *Retailing is a people-to-people business. But the people deal with each other in buildings, on sales floors and across counters.*

The draftsman is involved with the physical aspects of the store. It is his job to make working drawings for a project or prepare sketches for displays, changes in departmental layout or store fixtures.

Taking sketches or instructions from supervisory personnel, the draftsman prepares preliminary drawings of site plans, sales floor plans or any proposed change in the building structure. He also copies the plans and drawings prepared by an architect or engineer. He makes detailed drawings of building revisions such as plumbing, piping or electrical fixtures.

The draftsman must be a high school graduate or have vocational school training. He must have a knowledge of plane and solid geometry, trigonometry and the ability to read blueprints. Above all, he must be accurate and have artistic ability.

333969

careers in retailing

SEMI-SKILLED CRAFTSMAN

AUTO MECHANIC *Many young men enjoy tinkering with automobiles. Just some professional training stands between tinkering and well-paying jobs as auto mechanics.*

The professional auto mechanic needs a basic knowledge of all makes and model cars, both American and foreign. That means knowing everything from air conditioners to windshield wipers.

The auto mechanic must know how to give a fast and accurate diagnosis of the problem and he must know his tools and how to use them.

Most employers prefer the auto mechanic to have a high school education, but aptitude and common sense are the primary requisites.

Training is available at numerous schools, including those run by manufacturers, private trade schools and tax-supported vocational and technical schools.

Because of the growing number of cars and their complexity, many shops are specialized and have specialized areas within them. Just as doctors special-

ize in a particular area of medicine, today's auto mechanic can specialize in the area of his greatest interest.

Earnings for the professional auto mechanic range from $7,000 to $12,000 a year.

The potential is unlimited, considering the growing number of cars and trucks that are on the roads.

BAKER AND CANDY MAKER *During the pre-dawn hours, before many customers even think of taking a shopping trip, bakers and candy makers are preparing those irresistable products that line the shelves of baked goods and candy departments.*

Bakers and candy makers work according to recipes. But there is room for individual initiative since they can suggest variations to be tested. They work hard and fast in the early morning hours to get their foods ready by the time the store opens.

Training may be gained on the job or in trade school courses. Both the baker and candy maker should be able to direct the work of helpers. The baker earns an average of $115 a week. The average weekly salary for a candy maker is $90.

One problem in the future is the possibility that increasing mechanization could eliminate some of the individual skill now required in the profession.

TRUCK DRIVER *The ring on the cash register is not always the signal of a completed sale. Quite often the retail store is responsible for delivering the merchandise to the customer's home.*

Many retail stores maintain their own delivery operations and hire their own truck drivers.

The truck driver for a large retail outlet will cover a specific route between the store and customers' homes. His job, perhaps with a helper, is to load the merchandise, deliver it and unload it.

Stores want their drivers to be in good health, neat and well-groomed.

Truck drivers need chauffeurs' licenses and knowl-

SEMI-SKILLED CRAFTSMAN

edge of vehicle and traffic ordinances.

The truck driver usually works a 40-hour week and overtime when necessary. The average salary for a regular week is $140. In addition to good pay, the job has a particular advantage for men who prefer outside work. The outlook for the future is good.

PRESSER *Clothing shipped from manufacturers to retail stores often must be pressed before it can be placed on the rack for sale.*

To do this job, stores must have pressers to operate pressing machines and hand irons. In some cases, the presser also must do spotting and minor cleaning.

The job calls for specific skills that are gained in on-the-job training. The presser usually earns about $80 for a 40-hour work week. Employment is steady and the need for pressers will continue in the future.

SEAMSTRESS *Many times just a little alteration will make the difference between a garment that looks well on a customer and one that he or she is reluctant to buy.*

On hand to make the small alterations are seamstresses. The seamstress performs simple alterations to both men's and women's clothing. She also may make adjustments on draperies and slipcovers that have been custom made. In her work, the seamstress must know how to hand stitch and use a sewing machine.

Stores provide on-the-job training for seamstresses. The average salary is $70 for a 40-hour week. Since alterations and custom work are always in demand, the future outlook for seamstresses is very good.

CARPET HELPER *Some jobs provide good pay for the work and also the opportunity to become "top dog" on the job. Such is the case with the carpet helper.*

The helper learns his trade by assisting the "master." He learns how to install carpet and how to use the tools of his trade, both hand and power. As a helper,

397

he can earn an average of $140 a week and there is often overtime.

The job involves a lot of heavy work. And since much of the work is done in the customer's home, traveling also is involved. The carpet helper has the opportunity to become a master in the trade. The outlook for the profession is good.

COOK *Some time ago, retail stores realized their customers were walking off the premises when they got hungry. So the larger stores decided to open their own restaurants and they went into food service operations.*

The job of the cook is to prepare large batches of food according to prescribed recipes. The cook works behind the scenes. Although not a difficult job, the work is heavy and hot.

Most cooks are trained on the job. The average salary is $80 for a 40-hour week. The outlook is for steady employment.

397

LABOR

WAREHOUSEMAN *It is impossible for many stores to keep all the merchandise they need within the retail building. They must have warehouses and warehousemen whose job is stock maintenance.*

The warehouseman has several duties. He puts stock away after it has been received at the dock, matches tickets to the merchandise, pulls items for delivery and for "will call" customers, puts returned merchandise back into stock, operates a tow motor and performs housekeeping duties in his area.

The warehouseman usually works his way up from lower level stock jobs. Salaries average from $2.25 to $2.50 an hour. There is always the opportunity to advance into other warehouse positions such as receiving, shipping and delivery.

STOCKMAN *People who walk into a retail store expect to find merchandise on the shelves and racks. Someone has to get it there.*

The stockman pulls merchandise from his assigned stock area and delivers it to the selling departments. He also places returned merchandise in the stock area and performs housekeeping duties in his area. He also may assist in stock counts on the selling floor and help salespeople arrange merchandise on shelves and racks.

Although little experience is required for the job, most employers require a high school diploma. The work schedule is usually a 40-hour week and salaries range from $1.70 to $2 an hour.

Stockmen must be physically able to be on their feet for long periods of time and be able to handle heavy items.

Working conditions are generally good and persons doing well as stockmen are often promoted to higher rated jobs within the store.

Additional copies of Careers in Retailing may be obtained from the Ohio State Council of Retail Merchants, 71 E. State St., Columbus, Ohio 43215. Telephone: (614) 221-7833.

ABSTRACT - Prepared by the Bureau of Continuing Education and Secondary Curriculum Development of the New York State Education Department, this curriculum guide is for instructor use in teaching tuneup services in the high school or adult education programs. Units are: (1) Introduction, (2) Engine Service, (3) Ignition System Service, (4) Fuel System Service, (5) Battery and Charging System Service, (6) Starting System Service, and (7) Cooling System Service. Each unit consists of objectives, content outline, questions for review, and an instructional materials list. A final examination, suggestions for using audiovisual materials, a glossary, a directory of related companies, and a bibliography are included. (GEB)

Foreword

Tuneup Services was developed to provide information and training about locating and correcting troubles occurring in the engine and related component parts. The various systems are analyzed and procedures are suggested to promote a more efficient diagnosis through the utilization of various test instruments and up-to-date troubleshooting methods. The course content may be used in secondary schools and adult programs to assist in preparing individuals who wish to enter this specialized area or to upgrade personnel already working as automobile mechanics.

Appreciation is expressed to Thomas Onderdonk, auto mechanics instructor at the Washington-Warren-Hamilton County B.O.C.E.S. Occupational Center at Argyle, for his efforts in developing the instructional materials. Assistance relating to content was provided by Edward Shattuck, Associate in the Bureau of Trade and Technical Education. The project was coordinated and the manuscript edited and prepared for publication by Nelson S. Maurer, Associate in the Bureau of Continuing Education Curriculum Development.

Message to the Instructor

Tuneup Services is designed to present an understanding of the major systems of an automobile that affect its performance and economical operation. This guide follows a more conventional approach to tuneup procedures by giving attention to all of the items that are normally involved. The sequence of instructional units may be altered to accommodate the needs and backgrounds of the trainees; also, the availability of tools and equipment may necessitate adaptations in the use of the materials.

Plan each lesson carefully before presenting it to the class. It will be necessary to consider classwork, discussion, demonstrations, and review. The left-hand column of each unit contains suggested topics. The right-hand column gives related information and teaching techniques, methods, and tips which should help to achieve a more effective presentation. Also, this column shows page references for selected textbooks for which the complete citations and symbols are given on page 68. Give a summary of the key points discussed at the conclusion of each unit. A suggested final examination is provided at the end of this guide. The questions are derived from the basic material and are in the form of completion and multiple choice.

Use the chalkboard, overhead projector, charts, diagrams, and other visual aids to clarify the material being presented. A list of suggested aids appears at the end of each unit. Excellent instructional materials are available from various automobile and automotive equipment manufacturers, but order these materials well in advance of the scheduled lesson. Specific materials might be located in *Automotive Instructional Material,* published by the Automotive Service Industry Association. Many teaching aids may be fabricated from samples or discarded equipment.

New instructional aids are constantly being made available to instructors. Current releases of audiovisual aids are usually listed in issues of such publications as the *American Vocational Journal, Industrial Arts and Vocational Education,* and *School Shop.* New information relating to the automotive industry is available from general trade magazines, as well as publications distributed by specific manufacturers.

As experience is gained with this guide, it is hoped that suggestions will be sent to the Bureau for consideration in subsequent revisions.

Introduction

OBJECTIVES

- To understand the content to be covered in the course
- To be able to conduct a customer interview that will assist in determining possible sources of engine trouble
- To be able to conduct a road test to verify the customer's complaints and to locate other engine troubles

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Importance	Automobile owners are becoming more and more interested in maintaining their cars in a "like new" operating condition. Also, the public concern about air pollution has emphasized the importance of keeping automobile engines properly adjusted. As a result, the field of tuneup has expanded rapidly in the last few years, and this has increased the demand for trained personnel. The purposes of the course are: • To permit individuals who are working as automotive mechanics to increase their knowledges and skills in the field of automotive tuneup • To provide training in the field of automotive tuneup for apprentices and vocational students
II. Course Requirements	
A. Textbook	*If a textbook is to be used, give its name, price, and source. Arrange for a group order.*†
B. Notebook	*Indicate that a looseleaf notebook is necessary for keeping class notes, job information, booklets, and materials distributed during the course.*

†Textbook citations given at the end of each unit.

3980

Introduction

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
C. Prerequisites	It is important that trainees be knowledgeable in the fundamentals of the following areas: • Internal combustion engine • Automotive electricity • Fuel system • Ignition system • Starting system • Charging system
III. General Safety	*Discuss the procedures for extinguishing small fires involving:* • *Liquids* • *Wiring* • *Upholstery*
A. Protective clothing	*State the school policy relative to coveralls or shop coats, and if required, suggest that trainees furnish their own protective clothing. Mention possible storage space for clothes, if any exists.*
B. Safety glasses	*Indicate the school policy relative to wearing of approved safety glasses.* *Arrange a group order for those who wish to purchase safety glasses.*
IV. Overview of Course	*Discuss the general subject matter that is to be covered in each unit of the course. Also, indicate such items as the length of each session, number of sessions, procedures to be followed in class, and what is expected of each class member.* *Adjust the course content to meet the needs of the trainees and availability of equipment.* *Indicate that a final examination will be given at the end of the course to point out any weak areas.*

3981

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Note that following the test there will be time for reviewing the examination and for any other questions related to the course.
V. The Tuneup Process	Tuneup is the process of making the necessary adjustments to bring an engine as near to its original operating condition as possible. Fine adjustment can be made only with accurate instruments and on engines that have no major defects. *Explain the process of tuneup. Include such items as:* • *Locating malfunctions* • *Determining the cause of the malfunctions* • *Correcting the malfunctions as well as the cause* *Discuss the advantages for both the customer and mechanic of performing a complete vehicle tuneup.*
VI. Preliminary Procedures	
A. Customer interview	A customer interview will yield clues as to the type and source of the engine trouble. *Develop with the trainees a questionnaire that will help to gather all the important information from the customer. Consider such items as:* • *Nature of complaint* • *Duration* • *Frequency of trouble* • *Speed at which trouble occurs* • *Unusual sounds* • *Engine temperature* • *Weather conditions*

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

Introduction

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Changes from normal conditions* • *Recent repairs or new work* • *Mileage since last change of spark plugs and contact points* *(Ref. B, p. 23-2)* *Have trainees role play several interview situations involving a mechanic and customer. Have trainees evaluate the information gathered during each interview and suggest ways to improve communications.*
B. Road test	Road-test the car prior to performing any service to verify the customer's comments and to have firsthand information regarding the condition of the automobile. *Discuss the precautions to take before making the road test. Include such items as:* • *Protecting the seat with a seat cover* • *Having clean hands and feet* • *Removing sharp tools from pockets* • *Having permission to operate the vehicle* • *Selecting the area for the test* • *Obeying all traffic laws* • *Caring for vehicle until it is delivered to the customer* *Discuss the conditions that should be noted during the road test. Relate these conditions to specific malfunctions that will have to be checked during the tuneup. Include such items as:* • *Starting characteristics* • *Accelerating and decelerating patterns* • *Operating conditions at low, medium, and high speeds*

3383

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Stalling conditions* • *Amount and color of exhaust smoke* • *Odd engine noises* • *Cooling system performance* • *Charging system operation* *Develop with trainees a checklist of items that could be used during the road test to assist a mechanic to gather important information. Use the above list as a guide.*
C. Work precautions	*Discuss the precautions necessary to take prior and during the tuneup process. Include such items as:* • *Providing for proper ventilation and exhaust removal* • *Bringing engine to operating temperature* • *Protecting fenders with fender covers* • *Protecting the seat with a seat cover* • *Removing sharp tools from pockets before entering a vehicle* *Have trainees road test vehicles. Trainees should develop enough proficiency to be able to identify possible troubles in the:* • *Ignition system* • *Carburetor and fuel systems* • *Engine* • *Charging system* • *Cooling system*

Engine Service

OBJECTIVES

- To be able to make and interpret an engine compression test, a cylinder leakage test, and a vacuum test
- To be able to adjust valve clearance
- To be able to clean and gap spark plugs

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Condition of Engine	The engine must be in a basically satisfactory condition before starting the tuneup service. *Review the symptoms of engine troubles. Include such items as:* • *Excessive oil consumption* • *Smoky exhaust* • *Power loss* • *Certain engine noises* • *Poor acceleration* • *Low fuel mileage* • *Engine misses* *(Ref. D, pp. 85-86)*
II. Compression Test	A compression test determines the mechanical condition of the cylinders and valves. *(Ref. A, pp. 124-126; Ref. B, pp. 23-3—23-4; Ref. C, pp. 189-190; Ref. D, pp. 78-80)* *Explain how engine performance and compression are influenced by:* • *Worn valve guides* • *Burned valves* • *Improper valve adjustment*

3985

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Worn or dirty hydraulic valve lifters* • *Worn timing gears or chain* • *Worn piston rings* • *Scored cylinders* • *Excessive crankcase pressure* • *Excessive oil consumption*
	Display and explain the operation of the common types of compression gauges.
	To conduct a compression test, the engine must be at normal operating temperature and supplied with the proper grade of oil, spark plugs removed, and choke and throttle valves wide open.
	Explain the safety precautions to take when making a compression test.
	Demonstrate the procedures for removing secondary wires from spark plugs.
	Demonstrate the procedures for removing spark plugs from an engine. (Ref. B, p. 21-23)
	Demonstrate the procedures for making and interpreting a compression test. Caution against prolonged cranking of the engine to prevent possible damage to the starting motor. (Ref. A, pp. 341-347; Ref. B, pp. 23-3—23-4; Ref. C, pp. 159-190)
	Demonstrate the procedures for determining the cause of low compression readings.
	Compression test readings should be compared with the manufacturer's specifications; and if there is a wide variation among cylinders, there is little value to continue with the tuneup procedure.
III. Cylinder Leakage Test	A cylinder leakage test supplements the information obtained from the compression test.

3986

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Explain how a cylinder leakage test may indicate that leaks are occurring: • *At the valves* • *At the piston rings* • *Between cylinders* • *Between cylinders and cooling system* *Display and explain the operation of the common types of cylinder leakage testers.* *Demonstrate the procedures for making and interpreting a cylinder leakage test. (Ref. B, pp. 23-4—23-5; Ref. D, p. 80)*
IV. Engine Vacuum Test	A vacuum test provides information about the internal parts of an engine. *(Ref. A, pp. 347-349; Ref. B, pp. 23-5—23-7; Ref. C, pp. 190-191; Ref. D, pp. 80-81)* *Explain how a vacuum test may indicate:* • *Incorrect carburetor adjustments* • *Ignition defects* • *Timing defects* • *Cylinder leakage* • *Valve system leakage* *Display and explain the operation of the common types of vacuum gauges.* *Demonstrate the procedures for making and interpreting a vacuum test. Emphasize that the action of the needle is more important than its location on the dial. (Ref. A, pp. 347-349; Ref. B, pp. 23-5—23-7)*
V. Valve Service	*Review the functions and operation of the valves. (Ref. A, pp. 113-123; Ref. C, pp. 73-79; Ref. D, pp. 47-49)* *Review the methods used to lubricate the valve mechanism.*

3987

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Discuss ways that faulty valve operation may affect engine performance. Include such items as: • *Loss of power* • *Rough idle* • *Engine miss* • *Poor starting* • *Engine backfire* • *Excessive fuel consumption* • *Noisy engine* *Show the procedures for using an engine stethoscope to isolate a noisy valve or valve lifter.* (Ref. C, p. 184; Ref. D, pp. 126-127) *Show the procedures and precautions for removing valve covers.* *Demonstrate the procedures for inspecting valve assemblies for lubrication, wear, and defective parts.* *Demonstrate the methods of adjusting mechanically operated valves on "L" and "I" head engines.* (Ref. B, pp. 13-36—13-37; Ref. D, pp. 51-53) *Review the functions and operation of hydraulic valve lifters.* (Ref. C, p. 78; Ref. D, p. 53) *Demonstrate the procedures for adjusting hydraulic valve lifters.* (Ref. B, pp. 13-34—13-36; Ref. D, p. 421) *Show the methods of installing valve covers.* *Use film loops, transparencies, and charts to assist in developing the topic of valve service. See Instructional Materials at the end of the unit.*

3988

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
VI. Spark Plug Service	*Review the functions and operation of spark plugs. (Ref. A, pp. 217-221; Ref. C, pp. 405-409; Ref. D, pp. 285-291)* *Review the procedures for removing spark plugs from an engine.* *Display and discuss the causes and corrections for the following spark plug problems:* • *Flashover* • *Cracked insulator* • *Fouling* • *Reversed coil polarity* • *Improper gap* • *Normal wear* • *Improper heat range* *(Ref. B, pp. 21-23—21-27; Ref. D, pp. 304-309)* *Review the importance of the following relative to spark plugs:* • *Thread size* • *Thread reach* • *Heat range* • *Manufacturer's recommendations* *Demonstrate the procedures for installing spark plugs and replacing the secondary wires. (Ref. B, p. 21-29; Ref. D, pp. 288-289)* *Use films, transparencies, and charts to assist in developing the topic of spark plug service. See Instructional Materials at the end of the unit.*
VII. Preliminary Checks	*Explain the necessity of performing the following checks and services early in the tuneup procedure:* • *Clean or replace air cleaner*

3988

3989

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Check all drive belts for condition and tension* • *Check operation of manifold heat control valve* • *Clean or replace PCV valve* • *Check terminals for corrosion and specific gravity of battery* • *Check level of oil and all coolants* • *Tighten all battery, starter, generator or alternator, regulator, and coil connections* • *Tighten all manifold, carburetor, fuel pump, and vacuum connections* *Have trainees perform engine service on shop engines and live cars until they acquire the proficiency necessary for an entry tuneup mechanic. Include such jobs as:* • *Conducting diagnostic tests for compression, cylinder leakage, and vacuum* • *Adjusting valve clearance* • *Cleaning and gapping or replacing spark plugs*

QUESTIONS FOR REVIEW

1. What is a flashover, and how do spark plug manufacturers guard against it?
2. How can an indication of incorrect coil polarity be detected by visual spark plug inspection?
3. Explain the meaning and cause of "crossfire."
4. Explain the methods of testing engine compression.
5. Explain how the use of oil in the cylinders during compression tests can help isolate the cause of a cylinder having a low compression reading.
6. What usually would be wrong if two adjacent cylinders were found with low compression readings?

3990

Engine Service

7. Explain the method of testing for cylinder leakage.

8. What condition would be indicated when air is escaping from the tail-pipe during leakage tests?

9. What effect would a worn timing chain have on engine compression?

10. What would the presence of black carbon deposits on spark plugs indicate?

11. What effect would a spark plug that is too hot for the application have on engine performance?

12. Explain the effects of preignition and its relationship to spark plug heat range.

13. Does the fuel octane rating have any relationship to detonation?

14. What effect would a collapsed hydraulic valve lifter have on engine operation?

15. What effect will worn valve guides have on engine performance?

16. Explain how the valve train is lubricated?

Ignition System Service

OBJECTIVES

- To be able to test and adjust to manufacturer's specifications a distributor
- To be able to remove, overhaul, and replace a distributor
- To be able to test and replace an ignition coil
- To be able to diagnose ignition system problems with an oscilloscope

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Distributor Service	The distributor performs both electrical and mechanical functions, and thus, requires service in both areas. *Review the functions and operation of a distributor. Include such items as:* • *Control of the primary circuit by the contact points* • *Regulation of the contact points to meet varying engine conditions* • *Distribution of the high-voltage surge to the spark plugs* *(Ref. A, pp. 177-199; Ref. C, p. 392; Ref. D, pp. 255-263)* *Demonstrate the procedures to determine that the coil is delivering a spark to the distributor. (Ref. D, pp. 297-298)*
A. Distributor cap	*Demonstrate the procedures for removing and checking a distributor cap for:* • *Cracks* • *Corrosion* • *Broken tower terminals*

Seee
3993

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Burned electrodes* • *Oil and dirt deposits* • *Worn carbon brush* *(Ref. A, pp. 208-209; Ref. B, pp. 21-10—21-11; Ref. D, p. 295)*
B. Contact points	*Demonstrate the procedures for checking and correcting the contact points for:* • *Misalinement* • *Improper breaker arm spring tension.* • *Pits* • *Worn rubbing block* • *Oxidization* • *Corrosion* • *Oil and dirt deposits* *(Ref. A, pp. 187-197; Ref. B, pp. 21-11—21-14; Ref. D, pp. 264-267, 300-303)* *Demonstrate the procedures for removing, installing, and adjusting contact points and dual points to manufacturer's specifications. (Ref. B, pp. 21-15—21-16; Ref. D, pp. 303-304)*
C. Condenser	*Review the functions and operation of the condenser, causes for malfunctions, and methods of correcting the malfunctions. (Ref. A, pp. 204-208; Ref. D, pp. 249-252; 298-299)* *Demonstrate the procedures for testing a condenser for:* • *Resistance* • *Capacity* • *Leakage* *Demonstrate the procedures for removing and replacing a condenser. (Ref. B, p. 21-14)*

3994

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
D. Primary wires	*Demonstrate the procedures for testing, removing, and replacing primary wires.*
E. Advance mechanism	*Demonstrate the procedures for checking and correcting the operation of the centrifugal and vacuum advance mechanisms. (Ref. A, pp. 179-185; Ref. B, pp. 21-16—21-18; Ref. D, pp. 299-300)*
F. Rotor	*Demonstrate the procedures for checking and correcting the rotor for:* • *Corrosion* • *Broken positioning lug* • *Pitted contact points* • *Broken contact spring* *(Ref. A, pp. 209-214; Ref. B, p. 21-11)* *Demonstrate the procedures for removing and installing a rotor.*
G. Tests	*Demonstrate the procedures for removing a distributor from a vehicle, and indicate the importance of:* • *Marking firing position of number one cylinder* • *Being careful of oil pump drive mechanism* • *Not rotating engine with distributor removed* *Explain the functions and operation of various distributor testing machines. (Ref. D, pp. 133-136)* *Demonstrate the procedures for testing a distributor for:* • *Cam angle* • *Contact point alinement* • *Mechanical advance* • *Vacuum advance*

3395

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• Condenser capacity • Breaker arm spring tension • Bearing and shaft clearances
H. Overhaul and adjustment	Demonstrate the procedures and use of special tools for cleaning, replacing, and adjusting to manufacturer's specifications the component parts of several types of distributors, including: • Centrifugal advance • Vacuum advance • Contact points and cam angle • Bearings and shaft • Lubrication (Ref. B, pp. 21-18—21-19; Ref. C, pp. 395-404; Ref. D, pp. 299-304)
I. Installation	Demonstrate the procedures for installing a distributor in a vehicle, and indicate the importance of: • Locating firing position of number one cylinder • Caring for oil pump drive mechanism • Seating in block • Checking cam angle • Arranging secondary wires to prevent cross-firing. (Ref. B, pp. 21-19—21-21) Show the procedures for testing carbon-type secondary wires with: • High-reading voltmeter • Ohmmeter (Ref. D, p. 296)

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
J. Ignition timing	The exact setting for ignition timing is specified by the manufacturer. *Explain why manufacturer's specifications for ignition timing may have to be altered slightly to compensate for:* • *Fuel octane ratings* • *Carbon deposits* • *High elevation operation* • *Owner's driving habits* *Explain the operation of a stroboscopic timing light. (Ref. A, pp. 351-352)* *Demonstrate the procedures for timing the ignition to manufacturer's specifications with various types of timing lights. Emphasize safety precautions relative to:* • *Hot manifolds* • *Rotating fan and belts* • *Applying the parking brakes* • *Disconnecting the vacuum advance lines* *(Ref. A, pp. 352-358; Ref. B, pp. 21-21—21-22; Ref. C, pp. 401-402; Ref. D, pp. 263-264)* *Demonstrate the procedures for connecting a tachometer and adjusting the engine r.p.m. to manufacturer's specifications. (Ref. A, p. 359; Ref. C, pp. 474-475; Ref. D, pp. 109-110)* *Explain how changes in the cam angle will affect the ignition timing.* *Demonstrate the procedures for checking the operation of the advance mechanisms with the distributor on the car. (Ref. B, pp. 21-17—21-18)*

3997

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
II. Transistorized Ignition Service	The use of transistors in the ignition system permits: • Higher coil output to engine • Longer contact point life • Wider spark plug gap. (Ref. A, pp. 227-229) *Review the basic types and functions of transistorized ignition systems commonly used on vehicles. Use manufacturers' charts, transparencies, and the actual devices to assist in developing the topic of transistorized ignition systems. (Ref. C, pp. 419-422; Ref. D, pp. 269-276)* *Discuss the precautions necessary to take when servicing a transistorized ignition system. Include such items as:* • *Checking high-tension wires* • *Disconnecting coil primary wire* • *Using approved types of condensers* • *Following manufacturer's directions for connecting test instruments* (Ref. B, p. 21-32) *Demonstrate the procedures for testing, removing, and installing:* • *Transistors* • *Pickup coils* • *Ballast resistors*
III. Coil Service	*Review the functions and operation of several types of coils commonly used on vehicles. Include such items as:* • *Primary and secondary windings* • *Magnetic induction*

3998

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Insulating materials* • *Capacity* • *Frequency of operation* • *Polarity* *Use the actual devices or manufacturers' manuals to assist in developing the topic of ignition coils. (Ref. A, pp. 40-42, 164-177; Ref. D, pp. 246-249)* An ignition coil needs to be at operating temperature when tested. *Demonstrate the procedures for testing a coil for:* • *Primary circuit resistance* • *Secondary circuit resistance* • *Primary current draw* • *Secondary current draw* • *Available voltage* • *System polarity* *(Ref. B, pp. 21-4—21-7; Ref. D, pp. 297-298)* *Demonstrate the procedures for removing and installing a coil.* *Explain the functions and operation of the ballast resistor used in the primary circuit by using the actual device. (Ref. A, pp. 172-173; Ref. D, p. 252)* *Demonstrate the procedures for checking a ballast resistor. (Ref. B, pp. 21-3—21-4)* *Explain the methods used to offset the normal voltage drop to the coil during the time the starting motor is operating. (Ref. D, p. 252)* *Demonstrate the methods of testing the voltage of the coil during the time the starting motor is operating.*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
IV. Oscilloscope Applications	The use of the oscilloscope assists in the testing of the entire ignition system and makes possible the obtaining of more information about what is happening in the system than any other test instrument.
A. Types	*Discuss various types of oscilloscopes, and by using manufacturers' manuals, show the different methods used to display patterns. (Ref. D, pp. 150-156)*
B. Patterns	*Explain the difference between:* • *Primary patterns* • *Secondary patterns* *(Ref. D, pp. 141-143)* *Use transparencies or distribute copies of a basic oscilloscope pattern and point out the following:* • *Spark zone* • *Coil-condenser zone* • *Dwell zone* *(Ref. C, pp. 476-477)*
1. Spark zone	*Explain the normal pattern in the spark zone, including:* • *Firing line* • *Coil polarity* • *Spark line* • *Available voltage* *(Ref. A, pp. 376-377; Ref. C, p. 147)*
2. Coil-condenser zone	*Discuss the normal pattern in the coil-condenser zone which shows the coil energy dissipating itself. (Ref. A, p. 377; Ref. D, p. 148)*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
3. Dwell zone	*Explain the normal pattern in the dwell zone, including the:* • *Point closing signal* • *Point opening signal* • *Degrees of dwell* *(Ref. A, pp. 371-378; Ref. D, pp. 148-149)*
4. Trace presentations	*Discuss the following types of trace presentations:* • *Parade sweep* • *Raster sweep* *(Ref. D, pp. 144-146)*
C. Pattern analysis	Pattern irregularities provide clues as to the parts of the ignition system that are faulty. *Explain the necessity of considering the following when making a pattern analysis:* • *Pattern normal or irregular for all cylinders* • *Pattern irregularity occurring in all or only a few cylinders* • *Pattern irregularity occurring in what zone*
1. Spark zone	*Show and explain the causes and effects of pattern irregularities in the spark zone, including:* • *Spark plug gap* • *Shorted plug* • *Crossfiring* • *Resistance in high-tension conductors* • *High-tension leakage* • *Defective distributor rotor* • *Low primary voltage* *(Ref. D, p. 147)*

0004 4004

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Use transparencies, charts, or manufacturers' manuals to show pattern irregularities.
2. Coil-condenser zone	*Show and explain the causes and effects of pattern irregularities in the coil-condenser zone, including:* • *Defective coil* • *Defective condenser* • *Low primary voltage* • *Open in high-tension circuit* • *Shorted plugs* • *Defective contact points* • *Incorrect dwell angle* *(Ref. D, p. 148)* *Use transparencies, charts, or manufacturers' manuals to show pattern irregularities.*
3. Dwell zone	*Show and explain the causes and effects of pattern irregularities in the dwell zone, including:* • *Dwell angle* • *Worn distributor shaft* • *Worn distributor cam* • *Reverse polarity in high-tension circuit* *(Ref. D, p. 149)* *Have trainees perform service on the ignition systems of shop engines and live cars. Trainees should develop enough proficiency to be able to enter the field of automotive tuneup. Include such jobs as:* • *Making distributor checks on the car* • *Adjusting distributor contact points and ignition timing on the car*

4002

19. What is a parade pattern?

20. Explain what condition would be indicated by a reversed secondary firing line.

21. How would a high resistance spark plug wire be indicated in the secondary pattern?

22. What procedure is used to test the maximum available secondary voltage?

Fuel System Service

OBJECTIVES

- To be able to adjust commonly used carburetors so they perform according to manufacturers' specifications
- To be able to remove, disassemble, clean, and reassemble commonly used carburetors
- To be able to service air cleaners, fuel pumps, and fuel filters
- To be able to diagnose and correct malfunctions in positive crankcase ventilation systems and exhaust emission control systems

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Carburetor Service	*Review the functions of the basic carburetor circuits, including:* • *Choke* • *Idle* • *Main* • *Float* • *Acceleration* • *Power* *(Ref. A, pp. 105-107; Ref. C, pp. 207-216; Ref. D, pp. 318-329)* *Discuss the effects of basic carburetor circuits on:* • *Starting* • *Accelerating* • *Economy* • *Idling* • *Cruising speed*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Discuss the common types and makes of carburetors commonly used on vehicles. Use charts, transparencies, manufacturers' manuals, and the actual devices to assist in developing the topic of carburetor types. (Ref. C, pp. 216-220; Ref. D, pp. 329-350)
A. Air-fuel ratio	*Discuss air-fuel ratio for:* • *Normal conditions* • *Quick acceleration* • *Idle speeds* • *Cold engine* The air-fuel ratio is measured by an exhaust-gas analyzer. The engine must be at operating temperature, compression satisfactory, and the ignition and exhaust systems in good condition. *Explain the functions and operation of an exhaust-gas analyzer. (Ref. C, pp. 247-248)* *Demonstrate the use of an exhaust-gas analyzer to detect such defects as:* • *High float level* • *Low float level* • *Plugged jets* • *Restricted air cleaner* • *Leaking intake manifolds and gaskets* • *Plugged air bleeds* • *Defective acceleration pump* • *Incorrect jets*
B. Oncar adjustments	Some carburetor adjustments may be made on the car. *Demonstrate the procedures for making the following carburetor adjustments on the car:*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Slow idle* • *Fast idle* • *Idle mixture* • *Automatic choke* • *Float level* • *Antistall dashpot* • *Accelerator pump* *(Ref. B, pp. 20-15—20-28; Ref. C, pp. 227-231, 245-247; Ref. D, pp. 354-360)*
C. Removal and disassembly	*Demonstrate the procedures for removing a carburetor from a vehicle.* *Show the procedures for disassembling and cleaning a carburetor.* *Emphasize safety precautions, such as:* • *Effects of carburetor cleaners on skin and clothing* • *Effects of using compressed air on reversed passages.* *(Ref. B, pp. 20-28—20-29)*
D. Reassembly	*Demonstrate the procedures for reassembling a carburetor and making the following adjustments:* • *Float level* • *Float alinement* • *Bowl vent* • *Choke rod* • *Automatic choke* • *Unloader* • *Metering rod*

4005 4006

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Pump travel* • *Fast idle*
E. Installation	*Demonstrate the procedures for installing a carburetor on a vehicle. (Ref. B, pp. 20-29—20-30)*
F. Final adjustments	*Discuss the reasons for turning on the headlights and the air-conditioning unit when making idle adjustments on vehicles equipped with an alternator.* *Explain why the vacuum lines for the parking brake release devices need to be disconnected and plugged when making carburetor adjustments.* *Show how to make the following carburetor adjustments on the vehicle after the engine is at operating temperature:* • *Throttle linkage* • *Fast idle* • *Slow idle* • *Idle mixture* • *Antistall dashpot* *Discuss the effects of air entering the intake system through:* • *Defective vacuum pump* • *Vacuum operated transmission shift device* • *Faulty power brake diaphragm* *Demonstrate the procedures for using a vacuum gauge to determine:* • *Carburetor adjustment* • *Intake system leaks* • *Exhaust system restrictions*

4007

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
II. Air Cleaner Service	*Review the types and functions of air cleaners commonly used on vehicles. (Ref. A, p. 152; Ref. C, pp. 241-243; Ref. D, pp. 351-352)*
	Demonstrate the procedures for cleaning an air cleaner. (Ref. B, pp. 20-30—20-32)
III. Fuel Pump Service	*Review the types and functions of fuel pumps commonly used on vehicles. (Ref. C, pp. 255-259; Ref. D, pp. 314-320)*
A. Tests	*Demonstrate the procedures for testing a fuel pump for:* • *Pressure* • *Vacuum* • *Volume* • *Leaks* *(Ref. A, pp. 154-155, 300-302; Ref. B, pp. 20-3—20-7; Ref. D, pp. 352-353)*
B. Removal and replacement	*Demonstrate the procedures for removing and replacing a fuel pump.*
C. Repair	*Show the methods of servicing and repairing a fuel pump. (Ref. B, pp. 20-7—20-12; Ref. D, pp. 352-353)*
D. Vapor lock	*Review the causes and effects of vapor lock. (Ref. B, p. 20-15)*
E. Combination fuel and vacuum pump	*Explain the functions and operation of a combination fuel and vacuum pump by using charts, transparencies, manufacturers' manuals, and the actual device. (Ref. A, pp. 153-154; Ref. C, p. 256; Ref. D, pp. 315-316)* *Show how to test a combination fuel and vacuum pump for:* • *Low vacuum assist* • *Air leaks in intake system* • *Oil leaks in intake system*

4008

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Noisy operation*
	(Ref. B, pp. 20-6—20-7; Ref. D, pp. 353-354)
	Demonstrate the procedures for removing and replacing a combination fuel and vacuum pump.
IV. Fuel Line Service	*Demonstrate the procedures for cleaning fuel lines and checking the operation of the:*
	• *Vent pipe*
	• *Filler pipe*
	• *Vented gasoline tank cap*
	(Ref. B, p. 20-3; Ref. D, pp. 360-421)
V. Fuel Filter Service	*Discuss the various types of fuel filters commonly used on vehicles. (Ref. C, pp. 264-265)*
	Demonstrate the procedures for removing, cleaning, and replacing a fuel filter. (Ref. B, pp. 20-13—20-15; Ref. D, pp. 422-423)
VI. Manifold Service	*Review the functions and operations of the manifold heat control valve. (Ref. B, pp. 20-29—20-30; Ref. C, pp. 237-239; Ref. D, pp. 360-361)*
	Demonstrate the procedures for freeing an inoperative manifold heat control valve.
	Show the manufacturer's sequence procedures for tightening manifold bolts.
VII. Positive Crankcase Ventilation Systems	*Review the functions and operation of various PCV systems commonly used on vehicles. (Ref. A, pp. 285-290; Ref. B, pp. 17-11—17-13, 33-7—33-8; Ref. C, pp. 293-294; Ref. D, pp. 74-75, 443-446)*
	Demonstrate the procedures for testing, removing, cleaning, and replacing various PCV assemblies. (Ref. B, pp. 17-13—17-14; Ref. D, pp. 75-76)

4009

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
VIII. Exhaust Emission Control System	*Review the functions and operation of the various exhaust emission control systems, including:* • *Air injection-air pump* • *Ignition-induction* • *Improved combustion* • *Controlled combustion* *Use manufacturers' charts and manuals and the actual devices to assist in developing the topic of exhaust emission control systems. (Ref. A, pp. 291-295; Ref. B, pp. 33-8—33-12; Ref. C, pp. 295-301; Ref. D, pp. 446-457)* *Demonstrate the manufacturers' recommended procedures for removing, inspecting, and overhauling the various exhaust emission control systems commonly used on vehicles.* *Have trainees perform service to the fuel systems of shop engines and live cars until they acquire the proficiency necessary for an entry tuneup mechanic. Include such jobs as cleaning and adjusting:* • *Carburetors* • *Fuel pump, lines, and filters* • *Positive crankcase ventilation systems* • *Exhaust emission control systems*

QUESTIONS FOR REVIEW

1. Name the major parts and functions of the carburetor choke circuit.
2. What are the functions of the power circuit?
3. What controls the operation of the power circuit?
4. What are the functions of the accelerator circuit?
5. What controls the operation of the accelerator circuit?

Fuel System Service

6. Explain the purpose of the choke unloader, and tell how to adjust it.

7. What are the purposes of the fast-idle device, and what controls its operation?

8. Why should alternator equipped vehicles have their lights turned on while making carburetor idle adjustments?

9. Explain the use of a vacuum gauge for making carburetor idle adjustments.

10. What fuel pump test is recommended in addition to pressure and vacuum tests?

11. What is the purpose of the exhaust manifold heat control valve?

12. Explain the functions of the positive crankcase ventilation system, and describe recommended service procedures.

13. Explain the functions of the exhaust emission control system, and describe recommended service procedures.

Battery and Charging System Service

OBJECTIVES

- To be able to clean, test, and charge a battery
- To be able to check the output of a vehicle's charging system
- To be able to test and replace diodes
- To be able to check and adjust regulators

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Battery Service	The battery plays an important role in the operation of the automotive electrical system. The battery must be fully charged in order that it may function properly. *Review the functions and operation of the storage battery. (Ref. C, pp. 440-444; Ref. D, pp. 159-165)* *Review the safety precautions relative to:* • *Harmful effects of battery electrolyte* • *Use of an acid neutralizer* • *Battery filling procedures* *(Ref. B, p. 22-1)*
A. Visual inspection	*Show how to inspect and correct such battery defects as:* • *Corrosion of terminals and cables* • *Cracks in top and sides of case* • *Loose holddown clamps and supports* • *Low level of electrolyte* *(Ref. B, pp. 22-1—22-2; Ref. D, pp. 179-181)*

4013

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
B. Tests	The battery must first be tested and brought up to full charge before conducting tests on component parts of the charging system. *Demonstrate the procedures for testing a battery with a hydrometer and explain:* • *Temperature compensation* • *Float readings* *(Ref. B, pp. 22-3—22-4; Ref. D, pp. 164-167)* *Demonstrate the procedures for testing with meters for:* • *Individual cell voltage* • *Total battery voltage (capacity)* • *Light load* • *Electrical leaks in system* *(Ref. A, pp. 314-318; Ref. B, pp. 22-4—22-6; Ref. D, pp. 176-177)*
C. Charging	When a battery is undercharged or overcharged, the cause must be determined and corrected. *Explain the procedures for charging a battery using the:* • *Fast-charge method* • *Slow-charge method* *(Ref. B, pp. 22-6—22-7; Ref. D, pp. 174-176)* *Emphasize the importance of polarity, and explain how an alternator may be damaged by connecting a battery improperly. (Ref. B, p. 22-9)* *Review the effects of overcharging a battery. Include such topics as:* • *Damaged cases* • *Warped plates*

4014

4015

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Loss of water*
	(Ref. D. pp. 178-179)
D. Replacement	*Demonstrate the procedures for removing and installing a battery in a vehicle. (Ref. B, pp. 22-9—22-10)*
II. Charging System Service	The charging system is directly responsible for the proper operation of the other electrical systems of the vehicle and must be checked during an engine tuneup.
	Review the functions and operation of a:
	• *Generator*
	• *Alternator*
	• *Regulator*
	(Ref. C, pp. 316-319, 323-327, 343-368; Ref. D, pp. 187-194, 199-200,213-220)
	Explain that problems in the charging system may be indicated by:
	• *Short headlight life*
	• *Frequent addition of battery water*
	• *Undercharged battery*
	• *Charge indicator showing discharge when engine is running at a fast idle or key in off position*
	• *High charging rate with a charged battery*
	• *Low charging rate with an undercharged battery*
	(Ref. B, p. 22-11; Ref. D, pp. 228-229)
	Explain the initial checks that should be made of the generating system, including:
	• *Condition and tension of the drive belt*
	• *Condition of wires and connections*

4015

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	(Ref. A, pp. 258-259; Ref. B, p. 22-12)
	Demonstrate the procedures for checking the wiring of the charging system. (Ref. D, pp. 222-223)
A. Output	*Demonstrate the procedures for determining if the output of the generator or alternator is being maintained in accordance with manufacturer's specifications.* (Ref. B, pp. 22-13—22-24; Ref. D, pp. 229-233)
	Demonstrate the procedures for removing and replacing a generator or an alternator.
B. Diodes	Faulty diodes are frequently the cause of alternator problems.
	Demonstrate the procedures for checking and replacing the diodes of an alternator. (Ref. B, pp. 22-24—22-25; Ref. D, pp. 218-219)
C. Regulator	*Show the procedures for connecting test equipment to check and adjust to manufacturer's specifications the following components of a regulator:* • *Cutout* • *Current limiter* • *Voltage control* • *Field relay* • *Circuit resistance* (Ref. A, pp. 84-94; Ref. B, pp. 22-12—22-13, 22-29—22-41; Ref. D, pp. 227-228, 233-242)
	Emphasize the safety precautions relative to: • *Polarity of the system* • *Meter clips* • *Rotating fans, belts, and pulleys*
	Demonstrate the procedures for removing and replacing a regulator.

4016

Battery and Charging System Service

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	Have trainees perform battery and charging system service on shop engines and live cars. The trainees should develop skills proficient enough for entry into the field of automotive tuneup. Include such jobs as: • *Cleaning, testing, and charging batteries* • *Checking output of charging system* • *Checking and adjusting regulators to manufacturer's specifications*

QUESTIONS FOR REVIEW

1. Explain the method of testing individual cell voltage on a battery that has sealed cell connectors.
2. What is the specific gravity of a fully charged lead-acid battery?
3. Describe the method of making temperature compensations when testing batteries that are hotter or colder than normal.
4. What units in the alternator may be damaged as a result of incorrect polarity?
5. Should acid be added to a cell that has a lower specific gravity reading than the others in the battery?
6. Explain the method of load testing a battery.
7. At what voltage is a cell considered to be discharged?
8. Explain how to distinguish between the positive and negative post of a battery.
9. Explain how to make a quick check of the charging system to determine if the system voltage is being limited properly.
10. What are the basic differences in the two types of regulators that control generators and alternators?
11. Why is it so important to observe polarity when testing or charging batteries on alternator equipped vehicles?
12. What is the purpose of the generator-regulator "cutout" unit, and how is it tested?
13. What is the function of the current limiter, and how is it tested?
14. What is the function of the field relay on an alternator equipped system?

4017

.015

15. Explain the effect of excessive system voltage on resistors, coils, and contact points.

16. Name several safety precautions to observe when testing the charging system.

4019

Starting System Service

OBJECTIVES

- To be able to check and correct the wiring of the starting system for loose connections
- To be able to test a starting motor for high resistance, current draw, and engine cranking speed

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Component Parts	*Review the functions and operations of the following starting system component parts:* • *Ignition switch* • *Neutral safety switch* • *Ignition bypass* • *Relay* • *Solenoid* • *Starter drives* *Use transparencies, charts, and manufacturers' manuals to assist in developing the topic of starting system component parts.*
II. Tests	Poor starting motor performance is frequently the result of a discharged battery or poor cable connections. *Explain the precautions to take when making starting motor tests. Include such items as:* • *Operating and cooling time for starting motor* • *Disconnecting high-tension coil lead* • *Placing transmission in neutral or park* • *Applying parking brakes*

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Plugging parking brake vacuum release lines* • *Following manufacturer's recommendations* *Demonstrate the procedures for visually checking the starting system circuits for:* • *Broken wires* • *Loose connections* • *Damaged insulation* Dependable starting can be achieved only when adequate cranking speeds are produced. *Show the methods of checking the starting system for:* • *High resistance* • *Current draw as compared to manufacturer's specifications* • *Engine cranking speed* (Ref. B, pp. 22-42—22-43, 22-50—22-51; Ref. D, pp. 372-374) *Demonstrate the procedures for testing and correcting the operation of the neutral safety switch.* *Demonstrate the procedures for removing and installing a starting motor.* *Have trainees perform service to the starting system on shop engines and live cars. Trainees should develop enough proficiency to be able to enter the field of automotive tuneup. Include such jobs as:* • *Inspecting for loose and broken wires and poor connections* • *Testing for high resistance, current draw, and engine cranking speed*

40:1

QUESTIONS FOR REVIEW

1. Explain the method of testing for starting motor current draw.

2. Explain the method of checking the resistance between the battery ground and the starting motor.

3. Explain the function of the neutral safety switch and the method of testing its operation.

4. Why should the ignition coil secondary lead be grounded to the engine during starting system tests?

5. How should a starting motor solenoid control circuit be tested for resistance?

6. What defective condition would cause a solenoid plunger to chatter?

7. Explain why a poor connection at one of the battery terminals may cause the headlights to go out when the starting motor is energized.

4023

Cooling System Service

OBJECTIVES

- To be able to check a cooling system for leaks
- To be able to clean and protect a cooling system from rust
- To be able to check, test, and replace a thermostat

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
I. Importance	*Review the functions and operation of the cooling system. (Ref. D, pp. 89-90)*
	Discuss the effects of insufficient heat dissipation. Include such items as:
	• *Loss of coolant*
	• *Reduction of cooling airstream*
	• *Loss of radiation surface*
	• *Inadequate heat transfer*
	Discuss the effects of excessive heat production. Include such items as:
	• *Retarded ignition timing*
	• *Incomplete combustion*
	• *Inadequate lubrication*
	• *Loading of engine*
	(Ref. D, p. 96)
	Discuss engine "hot spots" and their effects on spark plug and valve operating temperatures.
II. Inspection	*Demonstrate the procedures for inspecting:*
	• *Hoses and connections*
	• *Liquid level and conditions*

4024

CONTENT OUTLINE	UNDERSTANDINGS AND TEACHING APPROACHES
	• *Fan belt condition and tension* • *Water pump* *(Ref. B, pp. 19-7—19-10, 19-14; Ref. D, pp. 90-91)*
	Demonstrate the procedures for cleaning and protecting the cooling system from rust. (Ref. B, pp. 19-3—19-5)
III. Tests	*Demonstrate the procedures for pressure testing the cooling system. (Ref. B, pp. 19-5—19-6; Ref. D, pp. 94-95)*
	Show the procedures for checking the operation of the radiator cap pressure valve spring and seal. (Ref. B, pp. 19-6—19-7; Ref. D, pp. 95-96)
	Demonstrate the procedures for removing, testing, and replacing a cooling system thermostat. (Ref. B, pp. 19-11—19-12; Ref. D, pp. 93-94)
	Have trainees perform service to the cooling system on shop engines and live cars. Trainees should develop enough proficiency to be able to enter the field of automotive tuneup. Include such jobs as: • *Inspecting cooling system for leaks* • *Inspecting fan belts for condition and tension* • *Cleaning a cooling system* • *Checking and replacing a cooling system thermostat*

QUESTIONS FOR REVIEW

1. How should an engine cooling system be pressure checked to detect leaks?
2. How can a radiator cap be tested to determine pressure rating and efficiency?
3. Explain the methods of adjusting fan and generator belts.

4025

4. Explain how to determine if an engine is operating at the proper temperature.

5. What condition would indicate a leak between a cylinder and the cooling system?

6. What condition would indicate a leak between the lubrication system and the cooling system?

Final Examination

Final Examination Part I — Multiple Choice

Directions: For each statement, place an X in the space to the left of the choice that most accurately completes the statement.

1. The specific gravity of a fully charged wet cell should be approximately

   _____ (a) 12.75
   _____ (b) 1125
   __X__ (c) 1.275
   _____ (d) 1.350

2. The device used for translating electrolyte readings to battery capacity is called

   _____ (a) cadium tipped cell tester
   __X__ (b) hydrometer
   _____ (c) voltmeter
   _____ (d) ammeter

3. Before making a load test, the specific gravity of the battery must be at least

   __X__ (a) 1.220
   _____ (b) 1.275
   _____ (c) 12.75
   _____ (d) 1.350

4. During a starter draw test on a 12-volt system, the voltage should not drop below

   _____ (a) 8.0 volts
   _____ (b) 6.0 volts
   __X__ (c) 9.0 volts
   _____ (d) 12 volts

5. The solenoid is part of the

   _____ (a) generator-regulator circuit
   _____ (b) ignition system
   _____ (c) fuel system
   __X__ (d) starting motor control circuit

4027

6. A spark plug's operating temperature design is called

_____ (a) reach
__X__ (b) heat range
_____ (c) insulation
_____ (d) electrode temperature

7. A resistor-type spark plug is designed for

_____ (a) increased voltage
_____ (b) improved cold weather starting
_____ (c) use with premium fuels
__X__ (d) radio supression

8. Engines with considerable valve overlap and high-lift cams tend to give a

_____ (a) higher and steadier vacuum reading
_____ (b) lower vacuum reading
_____ (c) higher compression reading
__X__ (d) lower and more erratic vacuum reading

9. An excessive spark plug gap can contribute to

_____ (a) rough engine idle
__X__ (b) rough high-speed operation
_____ (c) oil fouling
_____ (d) overheating of the spark plug

10. A dark sooty deposit on a spark plug indicates

_____ (a) oil fouling
__X__ (b) rich carburetor mixture
_____ (c) preignition
_____ (d) too cold for the application

11. A high-speed skip may be caused by

__X__ (a) weak breaker point spring tension
_____ (b) insufficient vacuum advance
_____ (c) use of high octane fuel
_____ (d) plugged idle tube in the carburetor

12. A hesitation on acceleration may be caused by

_____ (a) radio supression
_____ (b) dual advance distributor
__X__ (c) inoperative carburetor pump system
_____ (d) improperly adjusted cutout

4028

13. Condensers should be tested for

_____ (a) rated output
__X__ (b) capacity, leakage, and resistance
_____ (c) ohms, volts, and amperage
_____ (d) flashover

14. The neutral safety switch is located in the

_____ (a) battery to ground circuit
_____ (b) ignition secondary circuit
__X__ (c) starting circuit
_____ (d) starter solenoid

15. A ballast resistor will

__X__ (a) lower the primary system voltage
_____ (b) increase the primary system voltage
_____ (c) lower the charging system voltage
_____ (d) increase the dwell readings

16. When using a dwell meter to checkout a transistorized ignition system, the leads should be connected to the

_____ (a) ground and coil primary
__X__ (b) tach block
_____ (c) coil primary
_____ (d) heat sink unit

17. Breaker point spring tension should be read

_____ (a) before installing the point set
_____ (b) with rubbing block on the high point of the cam
__X__ (c) when the gauge is just pulling the points open
_____ (d) at 1000 engine r.p.m.

18. Breaker point misalinement should be corrected by

__X__ (a) bending the stationary point bracket
_____ (b) bending the breaker arm
_____ (c) replacing the pivot
_____ (d) discarding the breaker points

19. If the breaker point gap is increased, the dwell will

__X__ (a) be decreased
_____ (b) be increased
_____ (c) not change
_____ (d) be reversed

20. When new distributor contact points are installed, they should be set to

_____ (a) the high specified dwell setting
__X__ (b) the low specified dwell setting
_____ (c) the mid range of the specified dwell setting
_____ (d) at 0°

Final Examination Part II — Fill-In Statements

Directions: For each statement, write the item or phrase that, when inserted in the blank, will correctly complete the statement.

1. The presence of black carbon deposits on spark plugs indicates OIL FOULING.

2. Spark plugs too hot for the application may cause PREIGNITION.

3. A grayish tan color on spark plug insulators indicates NORMAL operating conditions.

4. Voltage jumping over the outside of a spark plug insulator is called FLASHOVER.

5. When combustion chamber temperatures are high enough to ignite the fuel charge before the spark occurs, it is termed PREIGNITION.

6. The instrument for testing resistance between the battery ground and the starting motor is called a VOLTMETER.

7. The instrument for testing the amount of current flowing in a circuit is called an AMMETER.

8. Air emitting from the tailpipe while making a cylinder leakage test indicates a BURNED OR STICKING INTAKE VALVE.

9. Reversed battery polarity may cause damage to an alternator's DIODES.

10. Detonation is usually caused from TOO ADVANCED TIMING or LOW GRADE FUEL.

11. The device used in many distributors to shift the position of the breaker plate to produce a change in the timing of the spark in relation to throttle pressure is actuated by INTAKE MANIFOLD VACUUM.

12. The number of degrees that the contact points remain closed is referred to as DWELL.

13. The carburetor idle mixture is made richer by screwing the mixture screw OUT.

Final Examination

14. The device in the cooling system that increases the boiling point of the coolant is called the PRESSURE CAP.

15. During starting system tests, the ignition secondary should be GROUNDED.

16. Precautions should be observed when using a dwell-tach meter on the breakerless transistor ignition system to prevent damage to the AMPLIFIER UNIT.

17. The antistall device used on most cars equipped with automatic transmissions is called a DASHPOT.

18. Electrical transfer from one secondary lead to another close by is called CROSSFIRING.

19. On most engines the carburetor to distributor vacuum line should be disconnected while setting INITIAL TIMING.

20. The headlights should be turned on while adjusting idle speed on vehicles equipped with ALTERNATORS.

21. The rotor delivers SECONDARY voltage to each spark plug.

22. The vacuum advance mechanism varies the SPARK according to intake manifold vacuum.

23. The carburetor consists of SIX basic circuits.

24. Engines operated at continual high speeds require a COLDER THAN NORMAL spark plug.

25. A low reading on a vacuum gauge may indicate LATE ignition timing or intake manifold air leaks.

26. A floating vacuum gauge needle at idle speed may indicate the carburetor is adjusted TOO RICH OR TOO LEAN.

27. A normal vacuum reading should be between 16 AND 21 inches on the average engine.

28. Idle speed should be set BEFORE initial timing.

29. A low compression reading with two adjacent cylinders would indicate A BLOWN HEAD GASKET.

30. Current produced by an alternator is rectified by the use of DIODES.

4031

Using Audiovisual Materials

Audiovisual materials are both a tool for teaching and an avenue for learning. While no particular amount of time is recommended for using audiovisual materials, it is suggested that they be used with a variety of learning activities and that the instructor not devote an entire class session to the use of such materials.

Audiovisual materials lend themselves well to bring about a high level of involvement. When working with adults, it is well to remember that much can be learned from each other. It is with the idea of getting people involved and having them make contributions that these comments are made.

The following suggestions may assist the instructor as he prepares an overall plan for the use of audiovisual materials. The ideas presented should allow for a comprehensive coverage of the content and the efficient use of class time. Steps to consider are:

- Plan the presentation (organization and methods)
- Prepare the equipment and materials
- Orient the class (background material)
- Present the lesson
- Summarize concepts and understandings
- Evaluate knowledges acquired
- Followup with opportunities to explore new knowledges
- Return the equipment and materials

Plan the Presentation (Organization and Methods)

Always preview any audiovisual material to become familiar with its content and to see that it correlates with the lesson. Adult students dislike "time fillers" and inappropriate presentations. While previewing, prepare comments which might answer such questions as:

- What is being illustrated?
- Why is the presented material important?
- What are the important terms and understandings being presented?
- What are some appropriate topics which could be used to stimulate class discussions?

Prepare the Equipment and Materials

Request the required equipment several days ahead of time from the director of adult education or person in charge of audiovisual equipment. Then,see that it is delivered prior to the starting of the class. Before the class begins, practice using the equipment to become acquainted with its operation. Arrange the room so that everyone can see and is comfortable. Have a screen ready and place it so that the least amount of outside light

4032

is reflected onto it. The wall may be used, but a screen is much more desirable. The larger the room and the larger the audience, the larger the screen that is needed. Be sure there is a table for the projector, an electrical outlet, an extension cord (the cord with the projector is usually short), and a spare projector lamp available in case the one in use fails.

If the class is held during the day, be sure the room can be darkened and ventilated. Check to see if the lights can be turned off without shutting off the power to the projector. At the conclusion of the presentation, allow the fan on the machine to cool the equipment for a few minutes before completely shutting off the power to the projector.

Orient the Class (Background Material)

Explain to the class what they will see. Discuss the more important terms used, and indicate the main points to be presented.

Present the Lesson

Have the film threaded and the projector ready for use. Stop the film or filmstrip for discussion as the need arises during the showing instead of waiting until the presentation has been completed. A filmstrip offers flexibility, for it may be used as a whole or as a part, whichever is appropriate to the lesson. It may also be stopped at any frame for discussion or questions. At the end of the showing, give your comments and encourage discussion and questions from the trainees.

Summarize Concepts and Understandings

Itemize the important learnings on the chalkboard as they are contributed by the class. Allow time for the trainees to raise other questions which may lead to a more complete understanding. Encourage trainees to keep some kind of notation for future review.

Evaluate Knowledges Acquired

Prepare a list of questions which might assist trainees to evaluate how well they have learned the important points of the lesson. One approach might be for the instructor to present the question and pause for a few moments to allow the trainees to form their answers before responding. Interest could be generated by asking the trainees to keep track of the number of their correct answers.

Followup with Opportunities to Explore New Knowledges

Introduce a few new topics for discussion which will motivate the trainees to project their understandings.

Return the Equipment and Materials

After the class is over, make arrangements to return the equipment and school-owned audiovisual materials. For an item ordered from an out-of-school source, complete the required attendance report, prepare the material for mailing, and leave it so that it may be returned promptly.

Preparing and Using Transparencies

Materials for use on the overhead projector may be prepared by hand, the heat-transfer process, and the color-lift process. Each method is described briefly for those who might wish to make their own original transparencies.

General Suggestions

- Select only content that is appropriate for an overhead transparency.
- Keep content of transparency simple.
- Organize the content of the transparency carefully.
- Use multiple overlays (one transparency over another) for the development of a concept or to show steps.
- Keep master and overlays in register with crosshair registration marks in opposite corners.
- Use color to make the transparency attractive but only enough color for emphasis. Color-toned sheets or colored ink may be used to identify parts of a drawing or picture.
- Plan transparency for horizontal projection.
- Use letters and symbols that are at least $\frac{1}{4}$-inch high. Use a lettering guide or dry-transfer letters and symbols to produce attractive titles or labels.
- Leave a $\frac{3}{4}$- inch clear margin on all sides of the transparency.
- Use a pointer to identify a specific part and then remove it quickly or lay pointer on transparency, for a hand-held pointer cannot be kept steady, and therefore, becomes distracting.
- Use a sliding or hinged mask to control the rate of disclosure when more than one step is included on a transparency.

Handmade Process

Produces a simple and inexpensive transparency.

Materials Needed

Plastic sheet or roll - clear or frosted

2304 4034

Markers - grease pencil or pen
Ink - transparent or india

Suggested Procedures

- Mark directly on the plastic sheet. This may be done in front of the class as the lesson is being given or may be prepared ahead of time.

- Remove materials placed on a handmade transparency with a sponge or cloth moistened with water or a special cleaning fluid. Then the transparency is ready to be used again.

Heat-Transfer Process

Produces a transparency from almost any original that is flexible and no thicker than a sheet of paper.

Materials Needed

Plastic sheets
Item to be copied
Copying machine

Suggested Procedures

- Material to be copied can be opaque or translucent but should have a carbon-type ink base *(black)*.

- Follow the directions for the specific copying machine, and use the recommended type of plastic sheets.

Color-Lift Process — Drymount Press

Produces a transparency by transferring the ink of a printed picture to a sheet of transparent film. Only material printed on a clay-based paper may be used.

Materials Needed

Special film
Detergent
Flat tray
Drymount press
Pressure boards
Item to be transferred

Suggested Procedures

- Select and test the picture to be lifted. Wet the fingertip and rub over an unprinted portion of the page. Clay-based papers will leave a white residue on fingertip.

4055

- Dry the picture for 5 seconds in a drymount press set at 270° F.
- Put the picture on the coated side of the special film and place between pressure boards. Heat resulting sandwich for 2-3 minutes in a drymount press set for 270° F.
- Place picture and film in lukewarm water containing a liquid detergent. Soak for 2 minutes or until the paper pulls easily from the acetate.
- Wash clay coating from picture, and dry film carefully.
- Spray ink surface with clear lacquer spray. Allow spray to dry; then mount transparency.

PREPARING AND USING TRANSPARENCIES

4036

Glossary

Accelerator pump: A small pump in the carburetor that sprays additional gasoline into the airstream during acceleration.

Advance: The spark set so it occurs at an earlier time in the cycle of engine operation.

Advance unit: A device which moves the ignition timing ahead either mechanically or by vacuum.

Air-fuel ratio: The ratio by weight of the fuel as compared to air.

Airgap (regulator): The distance between the contact armature and the iron core.

Airgap (spark plugs): The distance between the center and side electrodes.

Air horn: The air inlet of the carburetor.

Alternator: A generator that produces alternating current.

Ammeter: An instrument used for measuring the amount of amperes in an electric current.

Antibackfire valve: A valve used in an air-injection reaction system to prevent backfiring during the period immediately following sudden deceleration.

Antipercolator: A device for venting the vapors from the main discharge tube of a carburetor.

Antismog device: A special part or system designed to reduce or eliminate the emission of harmful gases from the engine exhaust.

Ballast resistor: A resistor constructed of a special type wire that tends to increase or decrease the voltage in direct proportion to the heat of the wire.

Bendix drive: A gear mounted on a screw shaft attached to the starting motor armature which automatically engages and disengages the starting motor.

Blowby: A leakage or loss of pressure.

Bounce (contact points): Contact points that open and close when they should be closed.

Bounce (engine valves): A valve not held tightly to its seat.

4037

Breaker arm: The movable part of the contact points in an ignition distributor.

Breaker cam: A multilobed cam rotating in the ignition distributor which interrupts the primary circuit.

Breaker points: Two separable points which interrupt the primary circuit of the ignition system.

Cam angle (distributor): The number of degrees that the distributor shaft rotates during the time the contact points are closed.

Capacitor: A device that has the ability to absorb and store a surge of electrical current.

Centrifugal advance (distributor): A unit designed to advance or retard the ignition timing by using centripetal force.

Centripetal force: The force that deflects a body from its linear path and compels it to move along a curve.

Check valve: A valve that opens to permit the passage of fluid or air in one direction and closes to prevent passage in the opposite direction.

Choke: A butterfly valve located in the carburetor that is used to enrich the mixture for starting a cold engine.

Choke stove: A heating compartment in or on the exhaust manifold from which hot air is drawn to the automatic choke device.

Coil (ignition): A device used to step-up battery voltage.

Compression gauge: A gauge used to test the compression in the cylinders.

Condenser: A device that has the ability to absorb and store a surge of electrical current.

Contact points: Two points that complete a circuit when pressed together.

Current regulator: A device which prevents the generator from producing current in excess of its rated capacity.

Cutout relay (regulator): A device to connect or disconnect the generator from the battery circuit.

Dashpot: A device consisting of a piston and a cylinder used to slow down or delay the operation of some other part.

Detonation: An engine sound indicating that the fuel is burning too rapidly in the cylinder.

Diagnosis: The use of instruments to determine the cause of malfunctions of parts or systems of a vehicle.

Diode: An electronic device that permits current to flow through it in only one direction.

Distributor: A device that interrupts the primary circuit and distributes the secondary current to the spark plugs as required.

Downdraft carburetor: A carburetor in which the air passes downward through the carburetor into the intake manifold.

Dual breaker points (ignition): A distributor using two sets of breaker points to increase the cam angle.

Dwell (distributor): The number of degrees that the distributor shaft rotates during the time the contact points are closed.

Economizer valve: A device installed in a carburetor to control the amount of fuel used under certain conditions.

Electrode (spark plug): The center rod that passes through the insulator and the rod that is attached to the shell of the spark plug.

Electrolyte: A solution of sulfuric acid and water used in the storage battery.

Exhaust-gas analyzer: An instrument used to determine the efficiency with which an engine burns fuel.

Flat spot: A spot during an acceleration period where the engine seems to hesitate for a second before beginning to pull again.

Float bowl: A part of the carburetor that acts as a reservoir for the gasoline.

Float level: A predetermined height of fuel in the carburetor float bowl.

Flooding: A condition where the fuel mixture is overly rich or an excessive amount has reached the cylinders.

Fuel pump: A vacuum device used to draw gasoline from the tank and force it into the carburetor.

Gassing: Small bubbles of gas rising to the top of the electrolyte during battery charging.

Generator: A device for converting mechanical energy into electrical energy.

Heat range (spark plugs): The operating temperature of a given style of spark plug.

Heat sink: A device usually used to protect diodes from excessive heat.

High tension (ignition): The secondary or high-voltage electrical current.

Hot spot: Local areas in the cooling system which have attained above average temperatures.

4039

Hydrometer: An instrument used to measure the specific gravity of a liquid.

Idle valve: A device used to control the amount of fuel mixture reaching the cylinders during idling.

Ignition coil: A step-up transformer that increases the low primary voltage to high secondary voltage.

Ignition distributor: A device that interrupts the primary circuit and distributes the secondary current to the spark plugs as required.

Ignition system: A method of igniting the fuel in the cylinders.

Intake manifold: The housing used to conduct the air-fuel mixture from the carburetor to the engine cylinders.

Knocking (fuel): An engine sound indicating that the fuel is burning too rapidly in the cylinder.

Manifold heat control valve: A valve in the exhaust manifold that deflects a certain amount of hot gas around the base of the carburetor to aid in warmup.

Metering rod: A movable rod used to vary the opening in a carburetor jet.

Misfire: The fuel charge in one or more engine cylinders which fails to ignite at the proper time.

Muffler: A chamber attached to the exhaust pipe which allows the exhaust gases to cool and reduces the noise of combustion.

Octane rating: A rating that indicates a specific gasoline's ability to resist detonation.

Ohmmeter: An instrument used to measure resistance in a circuit.

Open circuit: A break or opening in the normal current path.

Oscilloscope: An electrical testing device which reproduces the spark action of the ignition system.

Pinging: A metallic rattling sound produced by the engine during heavy acceleration when the ignition timing is too far advanced for the grade of fuel being used.

Positive crankcase ventilation (PCV): A system which prevents crankcase vapors from being discharged directly into the atmosphere.

Preignition: The fuel burning in a cylinder before the spark occurs.

Primary circuit (ignition): The low-voltage part of the ignition system.

Primary winding (coil): The winding in the ignition coil that carries the battery current.

4040

Primary wires: The wires which carry the low voltage of the ignition system.

Regulator: A device used to control the output of a generator.

Relay: A switch operated by magnetism.

Retard: The spark set so it occurs at a later time in cycle of engine operation.

Rotor (distributor): A rotating switch in the distributor which conducts the secondary voltage from the central terminal to one of the outer terminals.

Secondary circuit: The high-voltage part of the ignition system.

Secondary windings: The winding in an ignition coil in which the high-tension current is induced.

Secondary wires: The wires from the coil to the distributor tower and from the tower to the spark plugs that carry the high voltage of the ignition system.

Short circuit: A circuit that is completed in such a way that the current bypasses part or all of the normal circuit.

Solenoid: A coil of wire with a movable iron core which centers itself when the coil is energized.

Spark: An electric current with enough pressure to jump through the air from one conductor to another.

Spark gap: The space between electrodes of a spark plug through which the spark jumps.

Spark knock: A metallic rattling sound produced by the engine during heavy acceleration when the ignition timing is too far advanced for the grade of fuel being used.

Spark plug: A device that conducts the high-tension current into the combustion chamber of an engine and provides the airgap for the spark.

Stroboscope: A device providing intermittent illumination of a moving object which gives the object the illusion of standing still.

Sulphated: The condition of the plates of a battery that is allowed to remain in a discharged condition for some length of time.

Tachometer: An instrument for measuring the number of revolutions of a device in a unit of time.

Thermostat: A heat controlled valve used in the cooling system of the engine to regulate the flow of water between the cylinder block and the radiator.

Throttle valve: A valve in the carburetor which controls the amount of fuel mixture reaching the cylinders.

Timing light: A stroboscopic unit that is connected to the secondary circuit to produce flashes of light in unison with the firing of a specific spark plug.

Timing marks (ignition): Marks on the vibration damper that are used to synchronize the ignition system so that the spark plugs fire at the precise time.

Transistorized ignition: A form of ignition that utilizes transistors and a special coil.

Troubleshooting: A process of diagnosing the source of trouble by observation and tests.

Tuneup: A process of making accurate and careful adjustments to obtain the utmost in engine performance.

Updraft carburetor: A carburetor in which the air passes upward through the carburetor into the intake manifold.

Vacuum advance (distributor): A device designed to change the ignition timing through the action of the engine intake vacuum.

Vacuum gauge: An instrument designed to measure the amount of vacuum existing in a chamber.

Vapor lock: The boiling or vaporizing of the fuel in the fuel line which interferes with the movement of the fuel to the carburetor.

Venturi: A tube so tapered as to form a constricted area which causes the pressure to decrease as the velocity of the liquids or gases flowing through it increases.

Voltage regulator: An electrical device used to control the voltage output of a generator.

Voltmeter: An instrument used to measure the voltage in an electrical circuit.

Wiring diagram: A detailed drawing showing all electrical units and the connections necessary for them to function.

RESOURCE MATERIALS; COURSE OBJECTIVES;
INSTRUCTIONAL AIDS; COURSE ORGANIZATION

ABSTRACT - This course of study has been designed to promote the use of citizens' advisory councils at local educational levels and to improve both the quality and quantity of citizen participation in these educational programs. Designed for use in educational and non-educational settings, this course of study will assist the teacher in determining what is to be taught as well as presenting ideas as to teaching and evaluating techniques, audio-visual aids, and recommended resources. The material has been arranged into teaching units on: (1) The Nature of Citizens' Advisory Councils, (2) Formation Procedures, (3) Internal Operations, (4) Activities and Operations, and (5) Special Citizens' Advisory Councils. Provided for each unit are objectives, suggested teaching techniques, a teaching outline, and resource materials. (Author/JS)

PREFACE

This publication is one of a series of source units for a course of study designed to assist in the improvement of the quality of citizen's participation in local advisory councils or committees. This course of study has been designed to promote the use of Citizens' Advisory Councils at local educational levels and to improve both the quality and quantity of citizen participation in these councils, as well as in local educational programs. The design allows the course to be used in educational and non-educational settings with equal effectiveness.

This course of study will assist an instructor in determining what is to be taught, as well as presenting ideas as to teaching and evaluating techniques, audio-visual aids, and recommend resources within selected bibliography. Recommended resources have been selected as to their accountability, completeness, conciseness, readability and availability. All efforts have been made to include the cost and complete address of each source.

REDL Staff

TABLE OF CONTENTS FOR THE COMPLETE COURSE OF STUDY:

Course of Study: Citizens' Advisory Councils

Units:

1. Nature of Citizens' Advisory Councils

   Concerns:

   A. History and Philosophy

   B. Organizational Structure and Authority

   C. Functions of a Citizens' Advisory Councils

2. Formation Procedures

   A. Use of Consultants

   B. Selection Committees

   C. Charters, Philosophies, and Constitutions

3. Internal Operations

   A. Mechanics of Meetings

   B. Use of Sub-Committees

   C. Group Dynamics

   D. Leadership Development

   E. Induction of New Members

4. Activities and Operations

   A. Conducting Surveys

   B. Development of Objectives and policies

   C. Evaluation Techniques

5. Special Citizens' Advisory Councils

   A. Problems and Practices of Ad Hoc Committees

   B. Problems and Practices of Vocational-Occupational Committees.

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit 1-A

Formation Procedures - History and Philosophy

Produced by the

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Nature of Citizens' Advisory Councils (1)

Concerns: History and Philosophy (A)

Objectives: After instruction, the student:

1. Recognizes or recalls reasons for and against citizen involvement in education.
2. Identifies current educational and societal conditions conducive to the increased use of Citizens' Advisory Councils.
3. Recognizes gains and effects received from Citizens' Advisory Councils usage.
4. Judges the effectiveness of the use of Citizens' Advisory Councils in involving citizens.
5. Describes federal and state opinions regarding the use of Citizens' Advisory Councils.

Possible Teaching Techniques:

1. Have students read the Recommended Resource before the class meeting. Fostered and encouraged class discussion on suggested questions below and on questions generated within the group.
2. Invite a local school board member, administrator or citizens' advisory council member to talk to and discuss key questions with the students.
3. Conduct a problem solving session via the following steps: Students should be encouraged to: (1) brainstorm possible school problems, (2) brainstorm possible solutions, (3) collect pertinent data, (4) select best possible solution, (5) anticipate effectiveness of solution, and (6) identify methods a Citizens Advisory Council could use in determining and attempting to solve similar school problems.

Suggested Audio-Visual Aids:

1. A chalkboard or overhead projector should be used during brainstorming sessions to record all responses from the group. Similar aids should be used during class discussions and during resource person's interaction with class.

Anticipated Problems and Concerns	Guides to Solutions & Sample Teaching Techniques
1. What is a Citizens' Advisory Council?	A Citizens' advisory council is a group of lay citizens from the community selected from a school's service area. The council is structured with suitable officers and a yearly program of activities to assist and advise the school board, the school administration and staff in formulating and conducting desired educational programs. Suggested technique: (A) Have the students read pages 12-15 of the Recommended Resource - THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION. (B) On the chalkboard, record the major parts of a Citizens' Advisory Council generated from a class discussion of the definition. These contributions will constitute a composite composed of each individual student's experience with Citizens Advisory Councils.

1. (Continued)	(C) Solicit the remarks of the school board member, administrator, or Citizens' Advisory Council member invited to the meeting as a resource person. Their remarks should be intimately included in a final definition formulated.
2. What are some reasons for developing and using Citizens' Advisory Councils?	(A) To involve lay citizens in education. (B) To facilitate communications between the board and the taxpayers. (C) To provide a true cross section of the community thereby serving as a reliable source of public opinion. (D) To assist the board and administration through special studies. (E) To provide a means of reconciling conflicting views. (F) To provide a training ground for prospective board members. (G) (H) (Note: Additional reasons generated by the class members and appearing to have the general concensus of the class should be included.)

2. (Continued)	<u>Suggested Techniques</u>: (A) Have the students read pages 5-12 of the Recommended Resource - THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION. (B) Conduct a brainstorming session to encourage student involvement. The session should assist in identifying positive reasons for Citizens' Advisory Council usage. Encourage a "rapid fire" type of response from the students for a short period (usually 2 to 3 minutes) of time. All answers should be listed on the chalk board as rapidly as possible. (C) Solicit positive reasons for developing and using Citizens' Advisory Councils from the resource people in attendance.
3. Why is citizen involvememt desirable in education today?	As population, individual specialization, and educational complexity have increased, a gap has formed and widened between the individual taxpayers and those bodies charged with the responsibilities of the local schools. This gap has also formed between schools and the parents of [illegible]ld children in attendance. In an attempt to bridge this communications and understanding gap, lay citizen involvement in local educational efforts is to be encouraged. One of the best involvement techniques available to date is a Citizens' Advisory Council.

3. (Continued)	Suggested Techniques: (A) Have students read the Preface and pages 8-10 of THE HOW OF SUCCESSFUL CITIZENS' ADVISORY COMMITTEE OPERATION. (B) Have students read Appendix I - RURBAN EDUCATIONAL DEVELOPMENT AND THE WORK OF CITIZENS' ADVISORY COMMITTEES. (C) Initiate and encourage class discussion of pros and cons of citizen involvement in education today. A chalkboard may be used to record elicited student responses. (D) Invite additional discussion and input from the resource people in attendance. Their responses should also be recorded on the chalkboard. (E) From the recorded responses, develop a satisfactory answer to the suggested question.
4. What are some tangible results of Citizens' Advisory Councils?	The major contribution that can be made by Citizens' Advisory Councils is their assistance and advice in formulating school policy. When policy is formed with the assistance of a local Citizens'Advisory Council, the local educational program can be considered even more of a combined community effort due to the increased number of citizens involved in the policy development.

4. (Continued)

Several studies have been designed, conducted and reported by Citizens' Advisory Councils. Examples of study topics include projected enrollment trends, projected financial conditions, determination of special needs within the service area, and occupational training program demand and interest within the community.

Suggested Techniques:

(A) Have students read pages 5, 6, and 7 of Appendix II, THE IMPACT OF CITIZENS' COMMITTEES ON THE EDUCATIONAL PROGRAM.

(B) Have students read pages 23 and 24 of CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION.

(C) Show slide set entitled HOW CITIZENS' ADVISORY COUNCILS AID BOARD OF EDUCATION. This slide and audio tape program is available from REDL. The address for REDL is located on the front cover of this teaching unit.

(D) Have a member of a local Citizens' Advisory Council make a presentation to the class informing the class of some positive results of the local Citizens' Advisory Council's work.

4. (Continued)	(E) Initiate and encourage a class discussion on the question. All positive results reviewed and developed by the class members should be recorded on a chalk board. (F) From the chalk board recordings, separate satisfactory reasons from unsatisfactory reasons, thus evolving a suitable final answer.
5. What are the state and federal activities and proclamations in regards to Advisory Councils?	The Vocational Education Act of 1963 and the Vocational Amendments of 1968 both called for the organization of and guidelines for use of national and state advisory councils for developing and evaluating programs of vocational education. As a result, in May, 1969. 37 of the 55 states and U.S. possessions submitting plans for vocational education stipulated the use of local Citizens' Advisory Councils for occupational education. Fifteen such plans recommended local usage of Citizens' Advisory Councils. Only three of the 55 made no mention of such local councils. Commissioner Howe of the U.S. Office of Education has welcomed and encouraged a responsible interest in schools by laymen who hold no official position except that of citizen.

5. (Continued)

Similarly, Illinois State Superintendent of Public Instruction has encouraged the formation and use of Citizens' Advisory Councils indicating that such councils play an important role in working with boards of education throughout the state to help boards resolve problems affecting the operation and growth of schools in Illinois.

Suggested Techniques:

(A) Have students read that part (Title I; Part A; Sec. 104) of the VOCATIONAL EDUCATION AMENDMENTS OF 1968 pertaining to national and state advisory councils.

(B) Have students read pages 109-113 of EDUCATION FOR EMPLOYMENT. (Note: As this will be one of the few references to this publication, the instructor may which to reproduce the pages indicated and supply each student with a copy for individual use.)

(C) Have students review pages 47-49 of the Recommended Reference - THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION.

(D) Review with the students the statements made by Commissioner Howe of the U.S. Office of Education and Mr. Ray Page, Illinois

5. (Continued)

Superintendent of Public Instruction made available in the slide-audio tape presentation entitled, HOW CITIZENS' ADVISORY COUNCILS AID BOARDS OF EDUCATION.

(E) Initiate and propagate a class discussion of the information read and reviewed. From this discussion, evolve a suitable answer.

(F) Have students read page 1 of ADVISORY COMMITTEES - ORGANIZATION AND USE IN VOCATIONAL AND TECHNICAL EDUCATION.

Suggested Evaluation Techniques:

(1) Develop, administer and evaluate an essay test to determine attitudes of students.

(2) Observe changes in student behavior during discussion sessions with various resource persons.

(3) Request and subjectively evaluate student's written self-evaluations as to changes in behavior as reflected from the objectives.

APPENDIX I

RURBAN EDUCATIONAL DEVELOPMENT AND THE WORK OF CITIZENS' ADVISORY COMMITTEES*

Lloyd J. Phipps
Director, REDL
University of Illinois

I think I should explain to you first what we mean by Rurban. As you have already surmised, it is a coined word. We had a person call us yesterday and tell us we had no right to do such a thing. The word was not in Webster's dictionary. But I think it expresses very aptly what we have in mind. Rurban is not rural, it is not urban. We mean, by a rurban area, an area that is composed of the open countryside, small towns, and small cities, if you want to call them small. The sociologists think of 200,000 people as being a small city as opposed to the metropolitan areas surrounded by their suburban areas. This is what we might mean by rurban. We are interested in educational developments in these rurban areas.

Some of you, I know, are from the metropolitan areas. Do not tune me out immediately, because what we have to say about rurban educational development also applies to you. You are concerned, or should be concerned, about educational development in rurban areas. Let me give you some information about the situation. At one time and for considerable periods of time in this country, economists and others believed that the answer to the problems of rural areas was to export the surplus population to the metropolitan areas. The economic policies that we have followed in this country have forced the people from our rurban areas. The concomitant result has been a blighting effect on the towns and small cities in rurban aresa.

The outmigration from rurban areas to metropolitan areas has also increased to intolerable levels the problems of these metropolitan areas. Air pollution, water pollution, transportation problems, race problems, ghettos and poverty enclaves resulting from the continuing growth of metropolitan areas are a blight on society and cannot be tolerated in the twentieth century and in an affluent society.

I would like to give you some figures on what the situation is. At the present time, 78 percent of the population in the United States live on one to two percent of the land area. The outmigration from rurban areas, and I mean not just rural areas but from small cities and small towns, is approximately one million people a year. This has been happening for some time. In the 1940's and 1950's approximately twenty million people outmigrated from these areas to the metropolitan areas. If this present trend continues for a few more years, in excess of 90 percent of the population will be crowded onto two to three percent of the geographical area of this country, with the rurban areas being relative vacuums in respect to population. Rurban areas cannot remain viable with this continuing outmigration of their best talent, and the metropolitan areas cannot effectively absorb all persons being forced upon them. Instead of accepting the notion that rural outmigration is inevitable, or even admirable, the idea is arising that the megapolis may not be the answer to all social, economic and political problems in the United States.

---

* Address given at a conference, "Improving the Effectiveness of Citizens' Advisory Committees," University of Illinois.

There are some very definite counter proposals that have been advocated recently. One of the proposals is that this country needs to do something to stem the flow from rurban areas to metropolitan areas. Some people are suggesting that we instigate a reverse flow. Considerable sentiment is developing for a national decentralization of business and industry to rurban areas as a means of making these areas more economically viable as places to live and to work, and as a means of solving pollution problems, transportation problems, ghetto problems and poverty problems that have developed to intolerable levels in metropolitan areas. We are seeing more and more articles in the press, if you have been tuned in on this sort of literature, regarding the outmigration problem of rurban areas. There was a national conference on December 11 and 12, 1967 in Washington D. C. which was called by seven cabinet members to discuss and to make definite plans regarding what to do about this problem. The people that are doing rurban planning are beginning to say that the cities cannot solve their problems by themselves. They are saying that we must have rurban development.

Recently, I attended a meeting in Stillwater, Oklahoma, called by Senator Harris. It was a congressional hearing type of meeting. Over 700 people were there from all over the United States, and the hearing was all about the problem of rural to urban migration. They were making some definite plans as to what we can do as a country to utilize the entire country and get a balance, a proper balance, between the rurban areas and the urban areas, metropolitan areas. They were not talking about rural areas, they were talking about rurban areas. They were talking about functional economic areas composed of several counties with small cities, as the central hubs of these rurban areas.

Is it possible to make rurban areas viable again? Some Gallup polls and other types of surveys show that all the people do not want to live in metropolitan areas. About 50 percent of the people would like to live in rurban areas, not necessarily rural areas, but rurban areas. These people have been pushed into metropolitan areas; they have not been pulled there. The population and industries are no longer tied to certain geographical areas. We have the transportation and the power of communication required for locating industry anywhere in this country.

What are some of the ways to implement rurban development? One way is to increase job opportunities in rurban areas. We have an act before Congress at the present time, the Harris-Pierson Act called the Rural Job Opportunities Act, which is designed to increase job opportunities in rurban areas. Another suggestion is the decentralization of industry. Industries are already doing this. IBM has moved out of New York City. Some people are talking about tax incentives to encourage the decentralization of industry. An important way is the development of service jobs in rurban areas. In many rurban areas the recycling of monies within the areas would create more jobs and be of more benefit to the area than the bringing of additional branch factories into the area.

Often in rurban areas maximum benefits from payrolls are not realized because the workers often spend their monies for services outside the area instead of within the area. If an area has good jobs for 1,000 persons in primary businesses and industries, it should be able, by providing adequate services in the area to maximize the recycling of this payroll, to provide good jobs for 9,000 persons. Often, however, these areas have jobs for only 2,000 to 3,000 persons because service businesses and industries have not been developed adequately so that the people will spend their money within the area. In my opinion, our educational systems in rurban areas must accept part, but not all, of the blame for the failure of rurban areas to provide adequate service jobs.

We have consciously or unconsciously promoted educational programs in our schools in rurban areas that have forced the young people and the adults in these areas to leave, instead of preparing them so that they could make a living in the area if they did not want to leave. Our educational programs, in most rurban areas, have systematically promoted the draining away from these areas of the most intelligent and the most talented young adults they produce.

For the young people and adults in rurban areas who are not interested in preparing to leave their home areas or are not capable of handling the courses provided, which are designed in many cases to produce outmigration, we have provided something which we have labeled the general education curriculum which really prepares for nothing. These young adults, after they have completed the schooling available to them, are forced, in most instances, to leave their home areas because of the lack of job opportunities. They drift into metropolitan areas and because they are products of the general education curriculum, they often add to the misery of the cities and usually end up on welfare in the poverty enclaves found in the inner cities.

Education is not the total answer to rurban development, but it is an essential component. Rurban development cannot succeed without adequate educational development in rurban areas. Instead of providing only educational programs in rurban areas designed to prepare young people and the adults for export, why not assist these areas and assist the rurban renaissance by preparing them for the job opportunities that will be available to them in developing and developed rurban areas?

Most rurban areas have permitted or have driven away the industries and the jobs that logically belong in these areas. They have driven them away because they have focused the attention of young people and adults in their areas on the occupations that existed in metropolitan areas. They have failed to focus attention on the job opportunities and potential job opportunities in rurban areas. Further, the educational programs provided have not prepared the young people to work in the industries and jobs that logically belong in rurban areas. The least that could be done would be to provide concurrent work-education programs in local businesses and industries.

Let me give you an example of how industries have been driven from rurban areas. In many agricultural areas in Illinois, the industries associated with production agriculture or farming have been forced to discontinue their businesses or move to metropolitan areas because they could not obtain qualified employees. Not all, but part, of the blame for this situation must be placed on the educational programs provided in rurban areas. Fortunately, we are beginning to rectify our mistakes. Mattoon High School, for example, now has an agricultural occupations program to prepare boys and girls for employment in the agricultural-oriented businesses and industries that should logically serve the rich farming area surrounding Mattoon. Further, Lake Land College at Mattoon now has an agricultural occupations program to prepare at the technical level for employment in nonfarm agriculturally oriented businesses that must be maintained in the rurban areas of Mattoon if this area is to survive as a functional economic area, a viable area that will hold and attract good citizens.

Rurban areas may be able to take giant steps forward by focusing less of their attention on attracting branch factories to their areas and by focusing more of their attention on developing their own industries. Look at some of the rurban areas in Minnesota, for example. There is one area of Minnesota that you all know for its mental health facilities. About 45 percent of the jobs in a 40-mile radius are provided by this mental health industry. It is a home-grown industry.

What has our Rurban Educational Development Laboratory to do with the Illinois Citizens' Education Council? It is our belief that there is a "ground-swell" movement in our country to make rurban areas more viable as places in which to live and work. This "ground-swell" is inevitable as a means of relieving the pressure on metropolitan areas. Rurban development efforts cannot succeed, however, unless they are accompanied or preceded by the correct educational development. It is also our belief that adequate educational development is dependent on the effective work of the Illinois Citizens' Educational Council and the work of local citizens' committees.

We, therefore, believe that a fruitful way of promoting rurban educational development is to promote the effective use and operation of citizens' advisory committees.

We encourage citizens' advisory committees to consider such questions as the following:

1. What educational development is needed to prepare young people and adults for job opportunities in developing rurban areas?

2. How can concurrent work-education programs be implemented?

3. How can the attention of young people and adults be focused on rurban job opportunities as well as metropolitan job opportunities?

4. What educational developments are needed to prepare young people and adults for occupations that logically belong in rurban areas, such as rural recreation occupations and nonfarm agriculturally oriented occupations?

5. What educational developments are needed to prepare people for service occupations that must be provided if a rurban area is to become and remain viable?

6. What educational developments are needed to prepare residents to accept a rurban renaissance? Most people resist change. Rurban renewal on a functional economic area basis will create vast changes and will be resisted by many residents. Educational programs at the adult level and at other levels will be needed that will assist residents in rurban areas to adjust successfully to changes that will occur. And I am firmly convinced that these changes will occur. The problems in metropolitan areas are going to force them to occur. Metropolitan areas cannot solve their problems without a rurban renaissance.

We want to work with you in your public schools, with your citizens' committes, on problems such as these six that I have just mentioned. We hope that you will want to work on educational problem areas such as these.

Excerpts from a Speech: THE IMPACT OF CITIZENS COMMITTEES ON THE EDUCATIONAL PROGRAM

Dr. Robert C. Lloyd
Tuesday, July 6, 1965
National School Public Relations Association Annual Seminar, July 4-8, 1965
Boston, Massachusetts

I appreciate and welcome this opportunity to talk with you about the Baltimore Citizens School Advisory Committee project. This project was a unique and exciting demonstration of private citizens' involvement in public schools. It has been difficult to select points from so much that could be said. I trust my selections will be of interest to you as I look back over two years of work.

First, I will describe briefly the organization and operation of the Citizens Committee. Second, I will highlight quickly some of the basic principles that governed the project and which gave maximum assurance of a successful project. Third, I will mention some important cautions. Fourth, I will share with you what I believe were some of the important values and benefits.

To understand what happened with the Citizens Committee in Baltimore, you need to have some information about the Baltimore city schools. As the sixth largest city in the nation with a population of about 950,000, the public schools enroll 190,000 students in day school programs operating from some 200 schools. Of a total school staff of 11,000 persons, 8,000 are educational staff members and around 3,000 are classified staff. In addition to a 1965 operating budget of about $74.5 million, we plan to spend nearly $17 million in 1965 for construction of new schools. The nine-member school board, appointed by the Mayor with confirmation by the City Council, is fiscally dependent and has no taxing authority.

The Organization and Operation of the Citizens Committee

Following many months of discussion and study, the Board of School Commissioners established the Citizens Committee in late October, 1962, to engage in a two-year study of public education in Baltimore city. Twenty-five citizens from a list of over 700 names were appointed and held their first meeting in November, 1962. With citizens and staff participation, the school board had developed a set of bylaws and an administrative code that were transmitted to the committee. These two documents served to clarify purposes, objectives, operating procedures, and relationships.

In brief, the objectives of the Citizens Committee were as follows:

1. To survey the school needs and to study educational opportunities and services.

2. To contribute to the public understanding of the fundamental issues in education.

3. To examine what good schools are and what good schools can do for the community.

4. To stimulate creative thinking.

5. To identify ways of utilizing the community's resources in developing the best possible educational program.

6. To recommend improvements needed in the decade ahead (1965-1975).

The committee was organized into five citywide study committees: Organization and Administration; Personnel and Staffing; Instruction and Guidance; School Plant Facilities; School-Community Relations.

To accomplish its objectives, the original 25 members appointed by the board, realized from the start that additional volunteers in quantity would have to be secured. At the peak point of operation, at least 1,500 persons had some part through service on over 50 committees and submommittees. More than 450 meetings were held during the two-year period. The general committee of 25 and the steering committee members met some 70 times. At least 20,000 man hours, as a conservative estimate, were volunteered by citizens, all of whom served without compensation and with some personal financial cost to themselves.

The final report contains 303 specific recommendations, some of which have several parts. Presented in three volumes with a total of 530 pages, the report approximates 315,000 words. To honor requests for copies and to assist the school staff in its analysis of the report, an abridgement was prepared. It contains all of the recommendations but does not have the explanations, tables, and certain other supportive information. In addition to rather wide community and national circulation, copies of the abridgement were distributed to all educational staff members in the Baltimore city school system.

Also, to provide a general, abbreviated summary of the project, we produced a synopsis which does not contain the specific recommendations themselves but gives an overall picture of the project and the work of the Citizens Committee.

Basic Principles

A number of basic principles were understood by the Citizens Committee members at the outset of the project. Other principles emerged as the project progressed. In my judgment, the apparent success of the project can be directly traced to these principles. I have not attempted to rank them in any priority scheme.

1. The committee understood its function in relation to the school board, to the staff of the schools, and to the community. This function was advisory. The committee knew that the school board retained responsibility for all policy decisions.

2. The committee constantly communicated in writing with the president of the school board and the superintendent so that these two individuals were kept fully abreast of the progress and problems. In addition, verbal and written reports were presented to the staff as deemed desirable and necessary. The committee realized the importance of communications with particular reference to informing the staff about the work being done. The committee published five issues of its own newsletter which reached a distribution of about 1,500 copies per issue.

3. The administrative code developed by the school board was extremely important in explaining the relationships between the Board, the staff, and the citizens. Also, the bylaws outlining operating procedures greatly aided the committee in promptly moving into the complex task of studying the public school system. Of interest to you is the fact that the bylaws were amended several times by the committee appropriate to their plans and needs. These two documents served an essential purpose in stating for all to know the objectives, policies, and relationships of the Citizens Committee.

4. Once appointed by the school board, the committee enjoyed complete freedom to carry out the project. At no time did the Superintendent or the Board restrict the operation of the Committee, or interfere with its work. Thus, from the outset, there existed a general feeling of mutual trust and confidence.

5. All members of the Citizens Committee were free to talk about the work of the committee by common agreement, but only the chairman could speak for the committee.

6. Every effort was made to involve all interested persons. A variety of techniques were used to invite and encourage participation. A significant membership stipulation was that persons participated as individuals, not as representatives of any group, organization, or institution. Any person could participate who either lived or worked in the city. Some of the individuals who participated included members and former members of the city council, judges, state legislators, former teachers, former school board members, persons working in other city agencies and bureaus, and individuals from a large variety of occupations. Housewives constituted a major portion of the membership. It should be stressed that all persons served as individuals.

7. The committee enjoyed excellent cooperation from the staff. Any initial concerns and apprehensions that staff members may have felt, quite rapidly evaporated. This can be traced primarily, though not exclusively, to the intelligent, sensitive, and sincere manner of the citizens as they made contact with hundreds of staff members at all levels and in all programs. Every school was visited at least once, some several times.

8. The committee tried always to focus its attention on the primary objective--better education. It avoided carefully getting into personalities, making snap judgments, and, all in all, it sought to shelve pet notions in the face of the facts of the matter.

9. The committee began its work with a belief that the public schools in the city were fairly good. They were genuinely convinced, however, that the schools were not good enough. Their report contains recommendations for improvement.

10. For the most part, the committee was a fact-finding committee. It is true that a few members, at times, saw their function as fault-finding.

11. The committee adopted a timetable and was able to adhere to the schedule. Furthermore, the committee had the freedom and responsibility to set its own priorities as to what to study, how to study, and how to report the studies. All areas of the school system were not examined and the committee not only states this forthrightly, but also urges the school board to have these areas examined sometime in the future. Great care was taken to study in depth rather than superficially.

12. The plans of the committee included careful consideration of the nature and style of the final report. What would it be like? What would it contain? The committee also presented to the board its thoughts concerning distribution, realizing that its task was discharged at the moment the report was presented to the board. It nonetheless had strong and definite feelings about wide circulation of the report.

13. For the most part, the committee started with the idea that they first needed an education about public education in Baltimore. Most of the first year was devoted to orientation and information-seeking activities before any particular consideration was given to developing recommendations.

14. In my judgment, one of the most important operating procedures called for review by and clearance from the steering committee of research projects and study procedures.

15. Committee members were given opportunities for full discussion of all business items. Indeed, an atmosphere of permissiveness prevailed in keeping with the desires of the chairman and most of the committee members. While some time may have been lost, in a sense most agreed, in looking back, that this policy was sound.

16. The committee carefully and judiciously guarded against interrupting or corrupting the ongoing school system. The committee understood that the education program must proceed normally even though members of the committee for many months were visiting schools and offices.

17. The committee searched for the good as well as the deficiencies. The good things were applauded and expansion recommended. Deficiencies were forthrightly identified and corrections recommended.

18. A definite review and screening procedure was established for the consideration of each recommendation. After a recommendation had been adopted by a subcommittee, it then had to meet the rigorous testing of the citywide study committee, the steering committee, and ultimately the general committee of 25. At least 40 recommendations were rejected somewhere along the way. Others were combined where obvious duplication occurred. In some cases, recommendations went through six revisions before being approved by the general committee.

19. Provisions were made for minority reports. The handling of minority reports either from individuals or from groups resulted in the formulation of a clear policy.

20. All educational staff members were given an opportunity to participate in plans for establishing the Citizens Committee. This opportunity for participation undoubtedly led to the splendid cooperative assistance provided the citizens by the staff. As mentioned before, definite steps were taken during the two-year project to inform the staff about the work of the committee.

21. The committee was given status and respect. Special stationery was designed and provided. Office space was furnished. Staff was assigned. Requests of all types were promptly handled. Special identification cards were given to members for presentation during school visits.

22. Accurate records were maintained portraying all committee and subcommittee deliberations and decisions. The superintendent approved the use of 16 outstanding school vice-principals for service as permanent recorders to the five major study committees. Not only did these staff members serve well, but they also gained much from their contacts with the citizens.

Other principles could be cited, to be sure. In this listing, I have endeavored to highlight those which seem to me to be the more important guidelines. As a matter of fact, during the project, I was accused of a kind of pre-occupation with machinery and with ground rules. I suppose I would have to plead guilty and yet, as citizens look back over the two years of extremely hard work, they now advise me of the necessity of these ground rules and of this machinery.

Some Important Cautions

There are a number of important cautions that need to be squarely faced by those having responsibility for the operation of a citizens committee. I doubt that any of the ones mentioned below are new to you. Nor have I attempted to put them in any particular order of importance. School staff members and citizens must clearly understand some of the difficulties and hazards so that they are better prepared to meet the difficulties and avoid the hazards insofar as possible. Let me make clear that some of these cautions about people are aimed at a very small portion of people among the many hundreds, even thousands, who were involved in the Baltimore city project.

1. Some citizens may emerge from a citizens committee study as new-found experts who have most, if not all, of the answers. Some few will not have truly learned of the incredible complexity of running a large school system.

2. There will be factions and special interest groups. Disgruntled minorities with their pet theories will be abundantly evident.

3. Some few may even see themselves as the spokesmen for the schools acting as a "super" school board.

4. There will be the initial eager beavers who all too soon are identified as free-loaders and deadwood.

5. Some of those with the big names and the established reputations are not necessarily the real workers.

6. A citizens committee project is work--very hard work.

7. Committees and subcommittees should be as representative as possible. Special efforts should be taken to involve persons from business and industry.

8. Consultants should be carefully selected and their involvement clearly defined.

9. In addition to obtaining facts, citizens need interpretation of facts. You all know the saying, "Don't confuse me with facts. My mind is made up." A few, unfortunately, have this attitude.

10. Recommendations developed by citizens must be based on identified needs following study and investigation and analysis.

11. Citizens need to understand and believe that their relationship to the school board is as an ally, not as a threat. Overall goals and objectives of the two groups are in fact identical as all seek to improve the program of public education.

12. The committee should focus on both present and future needs. Citizens' dreams of public education, as expressedin their recommendations, should be sensibly and realistically based. But there must be some dreams.

13. Committees must regularly consider their own staff needs in relation to the conduct of the citizens' study. Such staffing requirements may be for professional personnel, clerical staff, consultants, and many other phases of human energy and talent that will be required.

14. The committee should develop policies and plans for involving and working with representatives of the public media. This is true at the beginning of the project, even before it officially starts, and throughout the project.

15. Citizens, as is probably true of people generally, need to scrupulously guard against the tendency to overgeneralize and to oversimplify.

16. Above all, members and officers should make certain all along the way that they stick to the objectives and purposes established. The tendency to stray and meander is real, but usually distracting.

17. Lastly, the Committee should be ever mindful of cost implications of suggested improvements. No sound recommendation should be withheld simply because of cost, however.

Values and Benefits

In their report, the Citizens Committee noted what they called products of the process. Indeed, many benefits and values derived simply because there was a committee. Other good things have happened in the short space of time since the report was presented to the school board. Numerous benefits are yet to be realized but are assured as the school board acts on the citizens' recommendations. Let me share with you some of the values and dividends for public education in Baltimore ~~city~~.

The most important product was the process itself of citizens and staff members meeting together, talking, and confronting the educational issues in today's world. Questions were posed for which there were no immediate answers and yet answers were found. Information was requested where research was required and was conducted. Horizons were widened. Understandings were improved. Sights were more sharply focused. The educative process was at work.

Many tangible benefits resulted.

.1. Publications were produced ahead of schedule for use by the Committee. Reports were prepared that were useful both to the staff and to the citizens.

2. The maintenance and operation of buildings were improved.

3. Changes were made in the deployment of personnel.

4. Research activities were expanded and improved.

5. Some changes have been made in a few curricular programs. Other changes have been made in concepts of curriculum development and planning.

6. Closer liaison with colleges and universities, other city agencies, civic and professional groups, and PTAs can be observed.

7. Plans are being reviewed for continuing and extending the use of citizens.

8. A new set of promotional policies has been adopted and the staff appointed to administer these policies.

9. A staff committee is currently working on a long-needed handbook for per diem substitute teachers.

10. Many staff committees are busily engaged examining the report for ideas that may be recommended for adoption.

11. The project led to improved relations with the public media and the public generally.

12. Study of the report by other groups and committees within the city and around the nation surely places additional value on the project and the report.

13. Staff morale has been improved because of the project and more particularly because of the work currently underway wherein all staff members have the opportunity to convey reactions to the recommendations.

14. Materials were accumulated from around the nation by the committee which have been made available to the staff.

15. The committee itself conducted research which has been of value to the staff.

16. The project brought into the schools many citizens who had never before been involved in or particularly concerned about the public school program.

17. Not bound by tradition or custom, citizens explored new areas, proposed new and different procedures, and brought creative thinking to the operation of the public schools.

Finally, it is hoped and anticipated that the impact of the study will be substantial and far-reaching, serving as a blueprint for public education in Baltimore in the decade ahead.

Much remains to be done since there are many recommendations and since the staff must study carefully the effect of any recommendation on the efficiency and effectiveness of the educational system. A complex task faces the administrative staff and the school board in preparing a follow-up report on the actions to be taken for each of the several hundred recommendations.

Summary

The Citizens Committee project, in the final analysis, provided an opportunity for schools and citizens to explore what the community wants and expects the public schools to accomplish. Hopefully, community support for better education has been stimulated and strengthened. The schools have had an unprecedented and unparalleled opportunity to inform the people about the needs, programs, achievements, and problems of the public schools.

Citizens not only examined what good education can do, but they also examined the consequences of not providing good education. The project demonstrated that public education is public business. Our conviction that informed citizens will support improved education has been supported, at least partially, for much remains to be done.

The public schools are really the public's schools.

They will be as good or as poor as the public demands, expects, and supports.

The project seems to have demonstrated, also, through the thoughts and expressions of citizens, that human progress and educational quality are inseparable.

The pursuit of human excellence remains the most important task we face and the successful accomplishment of this task is directly related to our ability to provide excellence in education. Many Baltimore citizens do not talk now about the public schools or your public schools.

Rather, they use the term our public schools.

The committee sought to reaffirm the principle that education is a partnership between schools and the community. As the superintendent commented upon the Citizens Committee report, "The report represents the conscience of the community."

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit 1-B

Nature of a Citizens' Advisory Councils - Organizational Structure & Authority

Produced by the

Rurban Education Development Laboratory

Dr. Lloyd J. Phipps - Director
357 Education Building
University of Illinois
Urbana, Illinois 61801

Staff Assistants:

Richard Hofstrand W. Edward Shipley

Source Teaching Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Nature of Citizens' Advisory Councils (1)

Concern: Organizational Structure and Authority (B)

Objectives: After instruction, the student:

1. Recognizes or recalls the roles of the federal government, U.S. Office of Education, State Department of Education, local school board, local school administration, and Citizens' Advisory Council in public education.
2. Generates or recalls the interrelationship as to authority and responsibility between each of the above bodies.
3. Recognizes or recalls the typical organizational structure of most Citizens' Advisory Councils.
4. Recognizes or recalls the officers considered necessary in a Citizens' Advisory Council, their roles, and the organizational structure of most Citizens' Advisory Councils.
5. Recognizes or recalls the responsibilities of each of the above officers.

Suggested Teaching Techniques:

1. At the beginning of the class session, have each student attempt to generate and write down the answers to the suggested anticipated problems and concerns that follow. Through study of the Recommended Reference and class discussion, develop satisfactory answers.
2. Invite a member of the school board, a school administrator, a local Citizens' Advisory Council member, or the local Superintendent of the local educational service region to talk to and discuss with the students, the suggested anticipated problems and concerns that follow. These resource people may wish to speak individually or as a panel.

3. Divide the class into four equal groups to represent the school board, state department of Education, school administration, and Citizens' Advisory Council. These groups through role playing could attempt to clarify the inter-relationships and lines of authority commonly occuring among these educational bodies. Periodically, the groups roles could be alternated allowing each student to serve at least once in each position.
4. Have the class generate specific school problems of various kinds. Then, through group interaction, attempt to identify a specific problem with the correct body responsible and in authority for that problem.

Suggested Audio-Visual Aids:

1. Develop a graph or transparency and a duplicated handout of the flow chart of the lines of educational responsibility and authority shown in Appendix I.
2. A chalk board or overhead projector should be utilized during class discussions to illustrate verbal concept generations from the class.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. What are the bodies of authority and responsibility in the nation's public education system.	A. Federal Government B. Department of Health, Education, & Welfare. C. U.S. Office of Education D. National Advisory Council E. State Department of Education F. State Advisory Council G. Local Board of Education H. Local School Administration I. Local Citizens' Advisory Council J. (Note: Other bodies may be included if desired).

1. (Continued)	<u>Suggested Techniques</u>: A. At the beginning of the study period, ask the students to write down plausible answers to the anticipated problem. B. Have students study pages 11-12 of THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION. C. Solicit the reactions of the resource person or persons in attendance to the question.
2. What is the role and responsibility of each of the bodies or levels listed in Anticipated Problem and Concern #1.	A. Federal Government; Dept. of Health, Education and Welfare; U.S. Office of Education - Roles and responsibilities of national priority determination and advisement. (Select composite ideas of the class.) B. National Advisory Council - (Bring out aspects of identifying the national manpower needs and the responsibility for public education.) C. State Department of Education - Legal authority and responsibility for public education. D. State Advisory Council - Similar to National Advisory Council except for individual states. E. Local Board of Education - Legal arm of the state department having legal authority and responsibility for the local district. F. Local School Administration - Implimentation of local policy decisions.

2. (Continued)

G. Local Citizens' Advisory Council - Advises the local board of education, administration, and staff on policy decisions.

H.

Suggested Techniques:

A. Have students read pages 18-25 in the Recommended Resource: INDUSTRY AND COMMUNITY LEADERS IN EDUCATION.

B. Have students review pages 9-15 of THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION.

C. Solicit answers from visiting resource people regarding the determination of their roles and responsibilities. Example: "Mr. Administrator - what do you see as your role and responsibilities in education?"

D. Duplicate the flow chart in Appendix I. Distribute to class for discussion.

E. As mentioned in Suggested Teaching Technique #3, divide the class into four equal parts. Have each group select the level they wish to represent, i.e., state education department, local school board, local school administration, or citizens' advisory council. Select some fictitious problems such as bussing or sex education to demonstrate the lines of authority and responsibility. Change the

2. (Continued)

groups' identity periodically throughout the session so that each group plays all of the roles at some time during the session.

F. Record all perceived lines of authority and responsibility on the chalk board for later use.

G. As mentioned in Suggested Teaching Technique #4, have the individual class members select specific educational problems. Then through class discussion, attempt to determine who would be responsible for each problem.

H. From all previous class input, develop satisfactory answers and alternatives for the question under consideration.

3. How does a Citizens' Advisory Council fit into a local school structure?

A. A local Citizens' Advisory Council is usually organized by the local school board to advise the school board, school administration, and staff. Questions from school administration and staff are usually channeled through the board. The Citizens' Advisory Council has no authority except through the board.

Suggested Techniques:

A. Solicit the comments of the resource people in attendance concerning the role and responsibilities of a Citizens' Advisory Council.

B. Prepare an overhead transparency of the flow chart in Appendix I.

3. (Continued)	C. Discuss with the students and have the students review the flow chart presented in Appendix I. D. Develop suitable answers and alternatives to the question under consideration
4. What officers are necessary for an effective Citizens' Advisory Council?	President, Vice President, and Secretary. A Treasurer is not completely necessary as a Citizens' Advisory Council does not usually handle money. <u>Suggested Techniques</u>: A. Have students read part of page 17 in CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. B. From the students' experiences, solicit and develop a suitable answer for the question under consideration.
5. What is the typical organizational structure within a Citizens' Advisory Council?	Typically, the organizational structure is kept to a minimum in an attempt to avoid structured meetings. Meetings where individual interest and dialogue are spontaneous are desired. The skeleton executive committee shown in Question #4 is considered a minimum for effective and efficient council meeting operation. <u>Suggested Techniques</u>: A. Have an officer of a local Citizens' Advisory Council serve as a resource person. Solicit his comments as to the organizational structure. Record his responses on a chalk board.

5. (Continued)	B. Solicit student input as to organizational structure as seen from their experiences. C. Develop a suitable answer from the input received.
6. How should sub-committees and special study groups be incorporated into a Citizens' Advisory Council organizational structure?	Sub-committees and special study groups may be organized by the Citizens' Advisory Council. Such groups should report to and be responsible to the parent Citizens' Advisory Council. <u>Suggested Techniques</u>: A. Have students review the flow chart in Appendix I. B. Solicit the input from Citizens' Advisory Council members serving as resource people. C. Record all pertinent information on a chalk board. D. Develop a suitable answer for the question under consideration.

<u>Suggested Evaluation Techniques</u>:

1. Develop, administer, and evaluate an essay test based on key questions. Evaluation may be greatly enhanced by comparing the test with the answers generated by the class members at the beginning of the class session.
2. Attempt to observe and evaluate the changes in individual attitudes as students change roles in Suggested Teaching Technique #3.
3. Ask each student for a written self-evaluation of his or her learned behavior in the reflection of the objectives.

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit. Nature of Citizens' Advisory Councils (1)

Concern. Functions of Citizens' Advisory Councils (C)

Objectives. After instruction, each class member:

1. Generates functions and activities of Citizens' Advisory Councils generally considered advantageous to the total local educational effort.

2. Recognizes or recalls functions and activities generally considered improper or dangerous to the well being of the school as a whole.

3. Judges the relative value of questionable activities and functions.

Possible teaching techniques

1. Foster and encourage class discussion and generation of reasons why some activities may be injurious to the school followed by generation of criteria for determining the relative value of various activities.

2. Have each student generate a list of proper and improper functions. This list should also include reasons why each function is improper or proper and how the differentiations were made.

3. Divide the class into equal halves to brainstorm activities and reasons why each is proper or improper.

4. Invite a board member, school administrator and Citizens' Advisory Council member to discuss their experiences with the students in regards to successful and unsuccessful activities of Citizens' Advisory Councils.

Suggested Audio-visual aids

1. The slide set and audiotape presentation entitled "Proper Functions of a Citizens' Advisory Council" available free from REDL. This audio visual should prove effective as an instruction and motivational device. (The address for obtaining the slides is shown on the front cover of this unit.)

2. Expose the class members to the material in Appendix I and II. This may be accomplished through reproduction, opaque projection, or overhead projection of the material.

3. A chalkboard should be utilized during brainstorning and class discussion sessions to record response from class member and resource persons.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. What are some proper functions of Citizens' Advisory Councils?	<u>Suggested solutions</u> A. Policy development, interpretation, execution, and publicity. B. Clientele determination of the school. C. Determination of the public purposes of the school. D. Development and execution of evaluation arrangements. E. Make recommendations regarding the operation of the school. F. Provide services for parents and others. G. H. I. (Note: Additional responses should be solicited from the class members.) <u>Suggested techniques</u> A. Have class members prepare a list of possible proper functions of a Citizens' Advisory Council. The list should be developed from the class member's own experiences and comprehension of possible functions and activities. B. Have class members view the slide-audio tape entitled "Proper Functions of Citizens' Advisory Councils." C. Have class members read pages 19-22 of the recommended resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. D. Have class members read pages 17-22 of THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION.

1. (Continued)	E. Have class members read Appendix E3 of THE HOW OF SUCCESSFUL CITIZEN ADVISORY COMMITTEE OPERATION. F. Have students read the information included in Appendix I. G. From the above resources, solicit and extract a satisfactory answer from the class members.
2. What are some improper functions of Citizens' Advisory Councils, and why are they considered improper?	<u>Suggested solutions</u> A. Involvement in political concerns. B. Activities termed as pressure groups. C. Independent reporting to the public. D. Involvement in the teaching of specific courses. E. Involvement in individual personnel matters. F. Nonschool activities. G. Fund raising. H. I. J. (Note: Additional responses should be solicited from the class members.) These activities are improper as they tend to cause dissention between different parts of the school. Furthermore, such activities may tend to undermine the authority of the school board. This board is and must remain the final legal authority in the conduction of the school program.

2. (Continued)

Suggested techniques

A. Have class members prepare a list of possible improper functions of a Citizens' Advisory Council. (Note: This activity could be combined with the similar activity under Anticipated Problem and Concern number 1 above.)

B. Have class members read pages 22-23 of the recommended resource CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION.

C. Review with the class members the slide and audiotape set viewed under Anticipated Concern number 1.

D. Have students read the information included in Appendix I.

E. Solicit and encourage contributions by the resource persons in attendance as to their observations about the problem and concern under question. Record ideas on the chalk board.

F. From the above discussion have the class members develop a suitable answer for the question.

---

3. How may the activities listed in Problem number 2 above be injurious to the local educational effort?

Suggested solutions. The improper functions listed:

A. May extend the efforts of the Citizens' Advisory Council so broadly that effective results may not be obtainable.

B. May produce a credibility gap between the Citizens' Advisory Council and the public.

C. May cause the community to divide itself as to its moral and financial support of the school.

D. May produce trouble within other community organizations due to duplication of effort and action.

3. (Continued)

E. May cause strife and friction between the administration and teaching faculty.

F. May cause trouble between the school board and the school administration.

G. May cause trouble between the school administration and the nonacademic school personnel.

H.

I.

J.

(Additional injuries may be brought out by class members during discussions.)

<u>Suggested techniques</u>

A. Solicit and encourage the presentation of ideas and opinions by resource people in attendance. Record these ideas on a chalk board for later reference.

B. Have class members review the information included in Appendix I.

C. Conduct a role playing session. Divide the class into groups to represent the school board, school administration, academic faculty, nonacademic staff, a school board member, a school principal, a teacher, a janitor, a Citizens' Advisory Council member, a parent, and a taxpayer. With these roles assigned, select one of the improper activities listed under Problem number 2 and have each actor discuss the activity from his point of view. Have the class members change roles with each new improper function to be discussed.

D. From the above information, have the class members develop a suitable answer for the question.

4. What measures can be taken to attempt to avoid unsuitable and improper activities by a Citizens' Advisory Council?

Suggested solutions

A. The Citizens' Advisory Council should be established under a charter with rules of operation clearly defined.

B. The Citizens' Advisory Council should be responsible to one group only, i.e., the local school board. Citizens' Advisory Councils which must respond to the school board and the school administration or some other group becomes divided in its allegiance and efforts.

C. Effective Citizens' Advisory Council leadership needs to be developed to guide and assist in selecting suitable and proper activities.

D. Establishment and use of effective communications lines between the Citizens' Advisory Council, local school board, and, local administration.

E. The lines of communication and authority between the Citizens' Advisory Council and the school administration should be clearly defined.

F. A member of the school board should be assigned the responsibility of sitting in on and communicating with the Citizens' Advisory Council.

G. A member of the Citizens' Advisory Council should be assigned the responsibility of sitting in on and communicating with the school board.

H.

I.

J.

(Note: Additional measures should be included as they are developed by the class members.)

4. (Continued)	Suggested techniques A. Conduct a brainstorming session to find all possible answers to the anticipated question. The instructor should lead the group in a rapid-fire session of two or three minutes where all answers are considered correct. Incorrect answers can be deleted during subsequent class discussions. B. Have class members read the information in Appendix II. C. Have class members review the information in Appendix I. D. Solicit and encourage the inclusion of information, ideas, and opinions of the resource people in attendance. E. From the above information, have the class members develop a suitable answer for the question.

Suggested evaluation techniques

1. Subjectively evaluate the written work done by the class members to Possible Teaching Techniqued Number Two.

2. Have each student self evaluate his accomplishments during the class period in terms of the stated objectives. The evaluation (6) should be written allowing the teacher to evaluate subjectively his personal efforts and techniques.

3. Upon invitation, observe the class member in his role as the member of an actual Citizens' Advisory Council in an attempt to determine the class and learning effect on his behavior.

2 West 45th Street, New York 36, N.Y.

SIXTEEN DO'S AND DON'TS FOR CITIZEN SCHOOL GROUPS
(Based on the experience of 85 towns and cities)

DO	DON'T
Expect the job of organizing a study group to take time. More time spent in the beginning will mean less time wasted in the end. Give the project a chance to grow. Give leadership a chance to emerge.	Be in a hurry or rush others into accepting responsibility before they have a chance to find out how much is involved.
DO	**DON'T**
Start with temporary officers--maybe as temporary as for just one meeting; perhaps a host and/or hostess, instead of a chairman. Take turns keeping notes for the first few meetings. Provide ample opportunity for expression of all views.	Try to elect a slate of permanent officers at the first meeting, or try to choose subjects for study before you know what subjects interest the whole town most.
DO	**DON'T**
Give the Board of Education, Superintendent of Schools, and other school personnel opportunity at the outset to suggest how you can be most helpful and to join in your activities. If their cooperation is not immediately forthcoming, keep trying. Be sure they receive notices of all meeting dates. Remember that independence doesn't rule out interdependence.	Fail continuously to seek cooperation from school authorities. Don't forget that cooperation does not mean domination.
DO	**DON'T**
Seek out for commendation areas in which your schools are setting an example for others, as well as areas in which there is room for improvement. Be a fact-finding group, not a fault-finding group.	Carp, criticize irresponsibly, or involve personalities.

DO	DON'T
Make membership represent your town, community and education interests, business, labor, churches, organizations, youth, racial and national backgrounds, and all geographic areas. Keep meetings open to interested groups and persons. Build a cross-section membership big enough to do the job you outline for yourselves.	Try to do a board job with only a few chosen members.
DO	DON'T
"Include the opposition in." Invite those who disagree with you to participate in the group. Try to get them to accept responsibility in the group.	Be afraid of opposition or avoid those who disagree with you.
DO	DON'T
Clearly define the purpose, policy, and scope of your group after the first few meetings. This can be amended later, if the interests of the group broaden.	Tackle the job until you have all agreed on precisely what the job is.
DO	DON'T
Choose your subjects for study with reference to the preferences of the entire membership of the group, plus town opinion as sampled by the membership.	Have subjects for study chosen by a small committee and foisted onto the rest of the group.
DO	DON'T
Determine the number of officers needed, the number of sub-committees, etc., with reference to the scope of the job you carve out, in all its aspects.	Hold committee elections in a vacuum or emphasize <u>machinery</u> above <u>subject matter</u>.

DO	DON'T
Elect a responsible steering committee that will coordinate and stimulate the work of all subcommittees, and will authorize, with reference to the whole group, the work of each subcommittee.	Let subcommittees go off on individual tangents which may duplicate the work of other subcommittees.
DO	**DON'T**
Make liberal use of "live" resources in seeking answers to study-group questions. Consult town and school officials, industry, labor, health and housing authorities, architects, etc.	Rely on printed statistics to provide all the answers.
DO	**DON'T**
Keep the whole town continuously up-to-date on the methods, findings, activities of the group as you progress. Report to the press. Send speakers to meetings. Hold open forums.	Wait until your study is complete to let others know what you are doing.
DO	**DON'T**
Be sure final recommendations are based on a factual foundation and represent the views of the entire group in relation to the town. Include study of financial resources which can be tapped to support your recommendations.	Make "wishful" recommendations, which are not related to available sources of income, or to the needs of the town.
DO	**DON'T**
Officially share final recommendations with school authorities before releasing them generally.	Release final recommendations before school authorities have officially examined them.
DO	**DON'T**
Develop dramatic means of presenting your final recommendations to the entire town. Plan definite avenues of action leading to adoption of recommendations.	File your recommendations and forget about them.
DO	**DON'T**
Consider ways in which a school community council can be of permanent service to the town.	Consider your job as finished when you have completed your first full study.

APPENDIX II

GUIDING PRINCIPLES OF EFFECTIVE CITIZENS' COMMITTEES FOR THE PUBLIC SCHOOLS

Be representative of the whole community.

Keep well informed (the process of gathering, digesting and passing on information is all important).

Earn confidence of the community through tangible achievement and services.

Strengthen the work of parent-teacher and other school-minded groups through teamwork, close liaison and by not duplicating efforts.

Work cooperatively with the School Board and School Administration but keep independence of thought and action.

Remember the citizens' committee studies, interprets and recommends, but that policy decisions rest with the Board of Education.

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit. Formation Procedures (2)

Concern. Use of Consultants (A)

Objectives. After instruction, the student:

1. Describes the services of a consultant.
2. Elicits reasons as to the value of consultants and their services.
3. Identifies a consultant's role and techniques.
4. Generates sources of consultants.
5. Recognizes occasions when a consultant's services are desirable.

Possible teaching techniques

1. Produce a role-playing experience where part of the class members act as consultants with the remainder of the class serving as Citizens' Advisory Council members. Activities and techniques should be acted out.
2. Have a professional consultant and a lay consultant talk to and discuss techniques, activities, and recommendations as to possible problem areas with the class members.
3. Foster and encourage group discussion on the value and activities of consultants.
4. Develop and conduct a debate between panels of students taking opposing sides as to the value of consultants.

Suggested audio-visual aids

1. Utilize chalk board in developing source of consultants for your geographic area.
2. Duplicate and disseminate concise information as to techniques and possible problem areas for consultants.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. What is a consultant and what are the characteristics of a suitable consultant?	<u>Suggested solutions</u> A consultant is an adviser or technical specialist whose expertise is needed to insure success of a program to be undertaken and to provide advice as to alternative procedures and their relative values. A suitable consultant should be an expert in the field and on the problem. He should be knowledgeable in the techniques of consultation and be able to allow sufficient time to your case to bring the solution to fruition. <u>Suggested techniques</u> A. Have class members read page 27 of ORGANIZATION AND EFFECTIVE USE OF ADVISORY COMMITTEES. B. Have class members read pages 9-12 of COLLEGE-COMMUNITY CONSULTATION. C. Solicit and encourage remarks concerning the anticipated problem by the professional or lay consultant in attendance as a resource person. D. Foster and expand a class discussion of the definition of a consultant. E. From the above information have the class members develop a suitable answer for the question.
2. What can a Citizens' Advisory Council do to in insure efficient and effective use of a consultant's time?	<u>Suggested solutions</u> A. Make sure you are ready for the consultant. Analyze your problem thoroughly and have resource materials determined and at hand. B. Provide ample time for the consultant's observation of your community before asking him about far-reaching questions and decisions.

2. (Continued)

C. Supply the consultant with any and all information possible about your problem well in advance of his visit or visits.

D. Inform the consultant as to what you want the consultant to do. (For a listing of the different ways a consultant may be utilized, refer to anticipated concern number 3 of this Source Teaching Unit.)

E. Inform the consultant as to how he or she is to relate to the problem. Will his time be spent with large groups, small groups, individuals, or other structural bodies?

F. Provide for several visits from the consultant. "Run in" and "run out" meetings are cheaper, but the soundness and effectiveness of subsequent decisions may be inferior.

G. Don't ask the consultant to give you a speech. Speeches usually do not relate directly to your problems, and speeches seldom result in positive actions.

H.

I.

(Additional items may be added.)

<u>Suggested techniques</u>

A. Conduct a role-playing situation where approximately half of the class members will serve individually as consultants. Have the other half of the class serve as a Citizens' Advisory Council. Have the mock Citizens' Advisory Council generate a possible need together with background information. Have the mock consultants come individually to assist the mock Citizens' Advisory Council.

B. Solicit and encourage the remarks of the resource person in attendance.

2. (Continued)	His or her involvement during the role-playing situation should also be encouraged. He may wish to act as a mock consultant. C. From the above information have the class member develop a suitable answer to the question.
3. What are the different ways that a consultant may be utilized?	<u>Suggested solutions</u> A. The consultant may analyze the problem for you and advise you as to what to do about the problem. B. The consultant may sit down with you and help you analyze the problems and help you determine alternative solutions for your selection. C. The consultant may supply you with technical knowledge and evidence to assist in selection and implementation of your selection solution alternative. D. The consultant may supply several alternative solutions for your selection and implementation. E. F. <u>Suggested technique</u> A. Continue the role-playing situation developed in anticipated problem number 2. Direct the roles to attempt to generate differing methods whereby consultants may be utilized. B. Have the professional or lay consultant in attendance talk formally with the class in regards to his or her methods of consulting. C. From the above information have the class members develop a suitable answer to the question.

4. What arrangement should be made for "permanent" consultants?	<u>Suggested solutions</u> "Permanent" consultants should be those who are ex officio members of the Citizens' Advisory Council, and who advise when called upon or upon observing a questionable activity. "Permanent" consultants should be part of every special study group to assist in clarifying terminology and to effective actions taken by the group. Examples of "permanent" consultants include school board members, school administration members, instructional faculty members, and educational service region personnel. <u>Suggested techniques</u> A. Have the class members read page of the recommended resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. B. Solicit and encourage the remarks by the resource person in attendance. C. From the above information have the class members develop a suitable and satisfactory answer to the question.
5. Who may serve as a Citizens' Advisory Council consultant?	<u>Suggested solution</u> Anyone whose services and expertise are needed by a Citizens' Advisory Council may serve as a consultant. Often times, effective lay consultants may be obtained from neighboring Citizens' Advisory Councils. Such people are usually well aware of such situations and have spent considerable time working on the specific problem. School personnel may also serve as temporary or permanent consultants. Several state institutions of higher learning foster and encourage their staff to serve in such consultation services.

5. (Continued)	<u>Suggested techniques</u> A. Have students review page 11 of the recommended resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. B. Foster and encourage the class members to enter into a discussion of how different people within a community could serve as consultants for differing problems. C. From the above information, have the class members develop a suitable answer for the question.
6. What are some potential sources of consultants?	<u>Suggested solutions</u> A. Local school. B. Local Community. C. Neighboring Citizens' Advisory Councils. D. Neighboring Communities. E. Area Vocational Center. F. Local Educational Service Region Office. G. Local Community Colleges. H. Other State Institutions. I. Office of the Superintendent of Public Instruction. J. K. L. (Other satisfactory answers may be added.) <u>Suggested techniques</u> A. Have students read page 28 in THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION.

6. (Continued)	B. Conduct a brainstorming session where class members may generate and subsequently evaluate various sources of consultants. C. Solicit and encourage the comments of the resource person in attendance. D. From the information generated above, have the class member develop a suitable answer for the question.
7. What about consultant's fees?	<u>Suggested solutions</u> Consultant's fees may vary from several hundred dollars to no charge whatsoever depending on the size and extensiveness of the problem. Local consultants such as school personnel are usually paid for by the school system. Consultants from the community and neighboring communities may charge for the expenses incurred in doing the consultation. Many institutions of higher learning have schedules for their faculty members. Charges to be made for the consultation service should be clearly stated and agreed upon before the actual consultation work begins. <u>Suggested techniques</u> A. Have students read the information presented in Appendix I. B. Request the remarks of the resource person in attendance. C. Have each class member contact a potential consultant or consultant firm to report their charges to the class as a whole. D. From the above information, have the students develop a suitable answer to the question.

<u>Suggested evaluation techniques</u>

1. Prepare, administer, and evaluate an objective examination based on the anticipated problems.

2. Observe and subjectively evaluate changes in student attitudes during the class session.

3. Request students' self-evaluation of their changes in attitude toward the value and use of consultants.

APPENDIX I

PROPOSED POLICY

Remuneration for Consultative Services

The following statement is designed to outline in greater detail specific aspects of the noncredit policy dealing with consultative services.

Released time

The services of university staff members may be made available to area schools on a released time basis if departmental schedules permit. The local school system is expected to defray necessary travel and lodging expenses under this arrangement.

Extra pay

If no qualified staff member is available on a released time basis, the consultative service may be provided on an extra pay basis at the option of the school system making the request.

The school system, or other employing party, will enter into a contract with the university for the provision of the requested consultative service.

University staff members serving as consultants may be reimbursed in accordance with the following schedule:

¼ day or less	$15.00
½ day	25.00
3/4 day	40.00
over 3/4 day	50.00

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Formation procedures (2)

Concern: Selection committees (B)

Objectives: After instruction, the student:

1. Identifies the functions of a selection committee member.
2. Identifies the steps in the selection and recruitment process.
3. Distinguishes the lines of authority and responsibility.

Possible Teaching Techniques:

1. Have an experienced local selection committee member or board of education member meet with, talk about, and discuss the concept of selection committees with the class. A local school administrator could be contacted to aid in identifying such a resource person.
2. Conduct a role playing situation where class members are assigned to roles as school board members, selection committee members, and Citizens' Advisory Council candidates. The role playing should include the entire process from selection committee appointment to Citizens' Advisory Council member determination.
3. Foster and encourage class discussion of the Anticipated Problems.
4. Have each student prepare a directive to establish and instruct a selection committee.
5. Have each student develop a list of organizations and bodies within the communities. Examples include: Churches - Jewish, Catholic, Mormon, Methodist, and others; vocational areas - production agriculture, retail, manufacturing, and others; Fraternal organizations; and others.

6. Have each student outline a procedure for contacting Citizens' Advisory Committee member candidates.
7. Have each student develop an appointment letter for contacting successful candidates.
8. Have the class observe a selection committee meeting to observe activities and observations.
9. Have the class, as a whole, act as a selection committee culminating in a codified list of potential candidates.

Suggested audio-visual aids:

A chalk board should be used to list the important points from the resource people and class discussions.

Anticipated Problems and Concerns	Guides to Solutions & Sample Teaching Techniques
1. What is and what are the functions of a selection committee?	A selection committee is a relatively small group of conscientious citizens who are asked, by the school board or other sponsoring agency, to select nominations for possible Citizens' Advisory Council members. The selection committees have 2 basic functions. They are to: (1) secure nominations for membership in the local Citizens' Advisory Council. (2) screen nominees to produce the kind of committee designated by the sponsoring agency.

1. (Continued)	Suggested Techniques: (A) Have class members read pages 11 and 12 in the Recommended Resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. (B) Request comments on the Anticipated Problem from the resource person in attendance. This resource person may be from a selection committee, board of education, or other agency. (C) Foster and encourage a class discussion of the above information to develop a suitable answer to the question.
2. How should citizens' Advisory Committee candidates be selected?	The selection committee may be charged with the responsibility of selecting candidates that will produce a "representative" council. The selection committee needs to create a list of possible candidates. These possible candidates should be contacted personally by a member of the selection committee to determine if the individual is willing to serve. Having determined a list of legitimate candidates, the selection committee must screen and select individuals which will produce a balanced or representative council.

2. (Continued)	<u>Suggested Techniques</u>: (A) Have the class members read pages 12-16 of the Recommended Resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. (B) The material in Appendices I, II, & III should be presented for the student's use. This presentation may be made through duplication or projection of the material. (C) Have the class members read pages 13-17 in ORGANIZATION AND EFFECTIVE USE OF ADVISORY COMMITTEES. (D) Have the class members read pages 24-30 in THE ADVISORY COMMITTEE AND VOCATIONAL EDUCATION. (E) From the above information, have the class develop a satisfactory answer to the question.
3. What is meant by "representative" membership?	"Representative" membership is that membership which represents or attempts to represent the whole community. Every community has many different dimensions. These dimensions include ages, locales, occupations, industries, fraternal groups, religious groups, and many others. The selection committee should attempt

61 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

3. (Continued).	to include a cross section of the community to insure representiveness. Representation should also include those who are unfavorable to the existing school program. Suggested Techniques: (A) Have students read pages 11 & 15 of the Recommended Resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. (B) Conduct a brainstorming session to identify the many various dimensions and facets of a local community. Spontaneous student involvement for a very short period of time will facilitate the session's success. All responses by the group should be recorded on the chalk board for later use. (C) From the above information, have the class members develop a satisfactory answer for the question.
4. How large should a Citizens' Advisory Council be?	The answer to the question is usually determined by a balance between (1) sufficient number to make the Citizens' Advisory Council representative, yet (2) small enough to facilitate effective council meetings. Citizens' Advisory Councils that are too large will sometimes become bogged down due to the sheer number of participants.

4. (Continued)

Several other criteria may be used also. Some consultants recommend the selection of between 12-15 members. This does not mean, however, that 15 citizens is the limit to be involved in the actions of a Citizens' Advisory Council. Many more citizens may be involved in sub-committees and special study committees. The total goal of involved citizens may be expressed as one percent of the eligible voting citizens in the community.

(A) Have the class members review pages 11-16 of the Recommended Reference entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION.

(B) Have the class members read pages 23-24 in ORGANIZATION AND EFFECTIVE USE OF ADVISORY COMMITTEES.

(C) Solicit the comments and remarks of the resource person in attendance as to the question under consideration.

(D) From the above information, have the class members develop a satisfactory answer for the question.

5. How and to whom should a selection committee announce its results?	The selection committee should prepare several listings of proposed Citizens' Advisory Council memberships. Each individual listing should be representative of the community, and should be able to serve as a Citizens' Advisory Council member. The selection committee should present these listings to the sponsoring agency (usually the board of education). The sponsoring agency must then select one of the lists to serve as the Citizens' Advisory Council. The sponsoring agency should not select individual members from the different lists as this will void the efforts to insure representativeness by the selection committee. <u>Suggested Techniques</u>: (A) Solicit and encourage the comments and remarks by the resource person in attendance, Comments should be in regard to the question under sonsideration. (B) Through the efforts of the resource person and a class discussion, a satisfactory answer should be developed for the question.

6. How should prospective and successful candidates be contacted and announced?	After the nominations have expressed their willingness to serve on the Citizens' Advisory Council, the successful candidates must be contacted. The most effective way of contacting is through a formal letter from the selection committee acting on behalf of the school board. <u>Suggested Techniques</u>: (A) Before class starts, have each class member prepare a letter that could be used to inform a successful candidate of his or her membership. These letters may be discussed in detail during the ensuing class session. (B) Have students read the information presented in Appendices I, II and III of this unit. (C) Have the students study the proposed letter as shown on page 13 of ADVISORY COMMITTEES FOR HOME ECONOMICS. (D) Have the students read the pamphlet entitled THE VOLUNTEER IN VOCATIONAL EDUCATION.

6. (Continued)	(E) From the above information, have the students prepare several examples of satisfactory letters to announce successful membership.
7. Should a selection committee be temporary or continuous?	Selection committees should generally be considered to be a continuous committee. Although their functions are cyclic, they must be available to suggest replacement members for those leaving the Citizens' Advisory Council. Furthermore, the selection committee should be responsible to the school board for the evaluation of the selection process undertaken. <u>Suggested Techniques</u>: (A) Have students review pages 9-16 of the Recommended Resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. (B) Develop two panels of students. Have one panel serve to encourage the use of temporary selection committees. The other panel should serve to encourage the use of continuous selection committees. The advantages and disadvantages of each type should be listed on a chalk board as they are brought out by the two panels.

7. (Continued)	(C) From the evaluation of those factors listed on the chalk board from the above techniques, have the students develop a satisfactory answer to the question.

Suggested Evaluation Techniques, the instructor may:

1. Subjectively observe the written assignments produced by class members.
2. Observe class members' functioning within the mock selection committee exercise.
3. Request written self-evaluation from each student as to his or her accomplishments within the class.

APPENDIX I

WHY A CITIZENS' COMMITTEE MUST BE REPRESENTATIVE

Because:

Good Leadership

- Dies off
- Is siphoned off by other organizations
- Loses interest when it's not stimulated by other points of view
- Becomes sterile when it spends too much time talking to itself even about matters of vital concern
- Stops learning because everything is already "decided"

The Community

- Respects the attitudes of its natural leadership groups and wants their point of view on record
- Changes constantly so that new natural groupings and new leaders are developed
- Has all the natural frailities of any group of human beings and is suspicious of eggheads, low brows, extremists, middle of the roaders, fence sitters and banner wavers

The Citizen

- Wants to be able to identify with someone in the group
- Wants a chance to have his ideas explored
- Wants opportunity to work on something interesting to him
- Resents being told but wants a chance at doing some telling himself

The Board of Education

- Is elected to represent all of the people in the school district and can't listen only to the views of a few people or minority
- Labels as "radical" ideas presented by narrow-based groups with an axe to grind
- Resents being accused of knuckling under to pressure groups
- Suspects the validity of studies made by homogeneous groups representing one point of view even when they are demonstrably good studies
- Is reluctant to use an idea unless it can be shown to have widespread community support
- Can't rely on expanding relationships with a group whose leadership may be subject to the ills outlined above
- The Board wants continuing interest, help, awareness, reliable channels through which to communicate and to hear

The Administration

- With its first responsibility to the Board of Education and the children of the district is subject to the same hesitations as the boards of education, suffers more of a setback when supposedly representative groups lead planning astray

REPRESENTATIVENESS doesn't necessarily mean large numbers -- the quality is important too. Does your committee represent not only the geographic, ethnic, religious, socio-economic patterns but the talents, ideas, skills and abilities inherent in your community? Does your committee need new light on old problems? Get the points of view of those opposed: They'll make you think, realign your ideas, marshall your facts, seek further data to refute charges, express yourself clearly in words that convey your meaning to everyone, not just to the initiated.

Source: New York State Citizens Committee for the Public Schools, Inc., 2 West 45th Street, Room 1201, New York 36, New York.

APPENDIX II

SOME IDEAS ABOUT RECRUITING

There is no substitute for face to face communications

So when you go to see him:

Arm yourself with a clear idea of your program and purposes and go with a specific job in mind.

Have conviction about the citizens committee purpose, program and process and convey your conviction to the prospective member.

Take with you any written material you have, but don't rely on the printed word to sell the idea.

Talk about the job, let your prospect catch fire from your enthusiasm.

Be honest about the amount of time and work the job entails. (Too often we snare the half-willing, too-busy person by saying "There's really nothing to it," when we expect a lot of time and talent and effort.)

Be honest about the kind and quality of help the citizens committee can provide to do the job. If special resources are needed, be specific about materials and personnel.

Don't promise the unattainable. (People like Dr. Conant seldom have time to work with a local citizens' committee studying local transportation problems.)

YOUR REPRESENTATIVE MEMBERSHIP

A major job of citizens' committees working for and with their public schools is getting and keeping active members who represent the total community. As in all voluntary agencies, the job may be not where to get them, but how to keep them.

How long a volunteer stays with you and how effective he is depends in large measure not only on his personal interest in better schools but on the way he is recruited and oriented to the program and the way of working of your citizens' committee.

Source: New York State Citizens Committee for the Public Schools, Inc., 2 West 45th Street; Room 1201, New York 36, New York.

APPENDIX III

THE CARE AND TREATMENT OF VOLUNTEERS

Once you have him, treat him well and he'll be a source of inspiration and joy forever.

A FEW SUGGESTIONS

Keep an up to date membership file. Cards are easy to work with, but a loose leaf notebook will do as well, if you allow a full page for each member. Head the page with the name, address and telephone number.

Jot down the member's talents, abilities and his IDEAS for future work

Make a note of other affiliations, service clubs, business, social agencies, etc., and note the times when these call upon all of his spare time and energy.

Record items about his family: does his wife (or her husband) want to work with him, does he have school age children, and if so, what ages.

Remember his special educational interests -- the committee may decide to look into a related subject at some future date.

If he says NO to a job, respect his decision and write it down. He may very well say YES to something else.

A few techniques:

Keep in touch

Find out how he's doing without "checking up on him"

Offer help, ideas, encouragement

Report to him about other activities of the committee

Listen when he tells you something

Act on his suggestions and let him know what has been done about them and the results of his idea

Communication is a two way street. Listening is as large a part as talking.

Remembering and understanding are part of listening.

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Formation procedures (2)

Concern: Charters, philosophies, and constitutions (C)

Objectives: After instruction, the class member:

1. Recognizes or generates the purpose(s) for a charter, philosophy and constitution.
2. Recognizes or generates the major parts of a charter, philosophy, and constitution.
3. Recognizes or generates the inclusions generally considered important in the above documents.

Possible Teaching Techniques:

1. Have each class member prepare a mock sample of each document.
2. Have the class members critique the sample documents prepared by other class members.
3. Provide several samples of charters, philososphies, and constitutions for individual perusal.
4. Encourage and foster group discussion of the Anticipated Problems.
5. Have a local senator or representative talk to and discuss with the class members the importance and major aspects of charters, philosophies and constitutions.
6. Have a local Citizens' Advisory Council member or school board member talk to and discuss their experiences in preparation and use of such documents with the class members.

Suggested Audio-Visual Aids:

1. Duplicate and distribute sample copies of charters, philosophies, and constitutions. Samples are shown in the Appendices.
2. Render documents useful for use with an overhead, opaque, or 35mm. projector.

Anticipated Problems and Concerns	Guides to Solutions and Sa ple Teaching Techniques
1. What is a charter or resolution, and why is it important in the effective use of a Citizens' Advisory Council?	Suggested Solutions: A charter or resolution is a document drafted by the sponsoring agency of a Citizens' Advisory Council to authorize the formation and operation of a Citizens' Advisory Council. A Charter or resolution is important as it authorizes the existence and operation of the Citizens' Advisory Council. Suggested Techniques: (A) Have the class members read pages 24-29 of the Recommended Resource entitled CITIZENS PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. (B) Have the class members look through the information included in Appendices I, II, and III. (C) Solicit and encourage discussion of the question by the resource per[illegible] in attendance.

1. (Continued)	(D) From the above information, have the class members develop a satisfactory answer for the question.
2. Who should prepare and what should be included in a charter or resolution?	<u>Suggested Solution</u>: A charter or resolution should be prepared by the sponsoring agency. This is usually the board of education. Others, such as the administration, may prepare the document for the boards ratification. A Charter or resolution should contain: A, The name of the organization or body who is authorizing the Citizens' advisory Council formation. B. Proposed purposes for formation of a Citizens' Advisory Council. C. Proposed activities and operational guidelines for a Citizens' Advisory Council. D. Authorization and appointment of a selection committee. E.Guidelines and membership directives for the selection committee's use. F. Proposed organizational and operational structure for the Citizens' Advisory Council. G. H.

2. (Continued)	I. J. (Other satisfactory items may be added as they are brought out in class discussion.) Suggested Techniques: (A) Have each class member prepare a list o of items that should be included in a charter. (B) Have each class member prepare a mock charter. (C) Have the class members review pages 24-29 of the Recommended Resource entitled CITIZEN PARTICIPATION IN LOCAL POLICY MAKING FOR PUBLIC EDUCATION. (D) Have the class members review the information given in Appendices I, II, and III. (E) From the above information, have the class members prepare a satisfactory answer for the question.
3. What is a philosophy of Education, and why is one important to the development and operation of an educational program?	Suggested Solution: A philosophy of education is a statement of the educational beliefs and value decisions of a school board, Citizens' Advisory Council, or other body.

3. (Continued)	A philosophy is important as it makes public the overall educational beliefs and attitudes of the educational body. From the determination of the philosophy, subsequent decisions concerning the educational program may be made which will reflect the community's value structure and system. Suggested Techniques: (A) Have the class members prepare a philosophy for their own individual lives. (B) Have the class members individually prepare mock philosophies of education. (C) Solicit and encourage the verbal involvement of the resource person in attendance. (D) From the above information, have the class members develop a satisfactory answer for the problem.
4. What is a constitution and by-laws, and why are they important to the operation of a Citizens' Advisory Council?	Suggested Solution: A constitution and by-laws set out the organization, rationale, and operation procedures for an organization. A constitution usually closely follows the contents of a charter and philosophy.

5. What should a constitution and bylaws contain, and who should prepare these documents?

Suggested Solution:

Preparation of the constitution and bylaws usually is a joint effort between the Citizzens' Advisory Council and the school board. A constitution and bylaws should contain:

A. Definition of the organization.

B. Definition of those involved in the organization.

C. Expressed purposes for the organization.

D. Organizational structure

E. Administrative structure.

F. Operational guidelines.

G. Meeting mechanics guidelines and rules.

H.

I.

J.

(Additional satisfactory answers may be added as identified.)

Suggested Techniques:

(A) Have each class member prepare a listing of what a constitution and bylaws should contain.

(B) Have each class member prepare a mock constitution and bylaws.

5. (Continued)	(C) Have each class member obtain a constitution and bylaws from an organization. These samples may be brought into class and discussed as to their format application for Citizens' Advisory Council. (D) From the above information, have the class members as a whole, prepare a constitution and bylaws for a local Citizens' Advisory Council.

Suggested Evaluation Techniques:

1. Collect and subjectively evaluate the mock documents prepared by the class members.
2. Develop, administer and evaluate an objective test on the material covered.
3. Request a written self-evaluation by each student based on the course objectives and anticipated problems.

APPENDIX I

W H Y A CONTINUING CITIZENS' COMMITTEE:

Advisory committees considering the question of becoming permanent citizens' committees may find the report of the Yorktown Heights, New york, Citizens' Advisory Committee useful. The NYSCCPS realizes that no one kind of organization suits all communities, but reproduces this report for your consideration in studying this problem.

As requested by the Committee, an Ad Hoc committee was formed to consider the advisability of establishing a permanent Citizens' Advisory Committee on Education in Central School District #2, Yorktown, New York. After due consideration of the question, the Committee reached the following conclusions:

1. The Citizens' Advisory Committee for the new High School shall recommend that the Board of Education approve the formation of a permanent Citizens' Advisory Committee on Education.

2. The purpose of this Committee shall be to further the cause of education in the district by assisting the Board and the administrators in arriving at the best possible solution to our educational problems.

3. Membership on this Committee shall be open to all adults in District #2 on an individual basis.

4. This Committee shall make every effort to insure that its membership be truly representative of the entire District.

5. A Committee of this type would offer the following advantages:

   A. It facilitates communication between the board and the taxpayers.

   B. If properly organized, it can be a true cross section of the community and thus be a reliable source of "public opinion."

   C. It provides the board and administrators with access to special talents for studies and investigations, which if conducted by board members would be extremely burdensome and time consuming.

   D. It provides a means of reconciling conflicting views.

   E. It provides a training ground for prospective board members.

APPENDIX II

4146

SAMPLE CHARTER FOR A CITIZENS'ADVISORY COMMITTEE

I.
NAME

The Committee will be called the Citizens' Advisory Committee of _____ School.

II.
PURPOSES

The Committee is constituted to:

A. Assist the Board of Education in developing broad educational policy for the school system.
B. Work with the employees of the school system, with the Superintendent's approval, in ways agreeable to all concerned, in planning and conducting the program of the school system.
C. Facilitate communication and cooperation between the school system and the citizens, organizations, and institutions of the District.

III.
NATURE OF POLICY AND POLICY DEVELOPMENT

A. Policy is officially enacted by the Board of Education. The Board cannot legally surrender its responsibilities for the enactment and execution of school policies. In addition to enacting and executing its own policies, it must execute the laws of the State of Illinois that apply in the District. It abdicates none of its authority in creating a citizens' advisory committee.

B. Policy development is understood to be the process whereby policy is prepared for enactment by the Board of Education. Suggestions for school policy may come from any source. The Citizens' Advisory Committee may originate policy proposals and may review proposals from other sources.

C. School policy is understood to comprise the answers to the questions about the purposes and the management of the school system which only the citizens of the District or their authorized representatives can answer. These questions are of the following types:

1. How is the process of policy development to be organized and conducted?
2. Who are the clientele of the school system and how, in general, is each element in the clientele to be served?
3. For what purposes is the public conducting the school system?

4. How are the people of the District to determine whether these purposes are being accomplished?
5. What ways and means must the people of the District provide if the public purposes of the school system are to be accomplished?

   a. How is the program of the school system to be planned?
   b. How are adequate professional and non-professional staffs to be provided, retained, and improved?
   c. How is the school system to be organized and administered?
   d. What funds are required and how are they to be raised?
   e. What facilities (buildings, equipment, library, teaching aids) are to be provided?

IV.
TENURE AND FIELD OF THE COMMITTEE

A. The Citizens' Advisory Committee and any committees affiliated with it will continue as school sponsored committees until the committee is dissolved by a majority vote of the members of the Board of Education. The Board reserves the right to reorganize the Committee if it judges that its functions would be better performed if a different organization were provided.

B. The Committee will concern itself only with matters directly related to the school system.

C. The Committee will promote in the District the adoption of its proposed policy and plans for the school system only with specific authorization by the Board of Education.

V.
MEMBERSHIP

A. The Committee will include approximately 30 members.

B. The original members of the Committee will be those who have served in 1955 as members of an advisory committee.

C. Persons to fill vacancies in committee memberships which may occur during 19___ and 19___ will be recommended to the Board by the Selection Committee.

D. The original members of the Committee will serve for one year, after which they will determine by lot equal numbers of the members who will serve for one, two, or three additional years. New members with three-year terms will begin to replace the original members at the beginning of the third year the Committee is in operation.

E. Beginning in 19___, and each third year thereafter, the Board will name a selection committee to serve for three years in recommending to the Board persons to replace the members who terms will expire and others who may be required to fill vacancies in the membership.

F. Appointments to the Committee will be made by the Board of Education but no one will be appointed who has not been nominated by aelection committee. Resignations of members of the Committee will be received by the Board.

G. A representative of the Board of Education, the Superintendent, and a representative of the teachers chosen by them will meet regularly with the Committee without voting privileges. The Board member and the teacher representative will be chosen annually, but neither shall serve for more than three consecutive years.

VI
SELECTION COMMITTEE

A. Each selection committee will include approximately 15 members, who are highly respected in the District, and who represent as well as possible all elements in the District.

B. In preparing a slate of new members to be presented to the Board, a selection committee will:

1. Consult with a large and representative part of the citizens of the District by whatever means it may devise to secure their suggestions for membership in the Committee.

2. Screen the names suggested by representative citizens and add other names if desired.

3. Recommend to the Board prospective members of the Citizens' Advisory Committee who are:

   a. Capable of and like to be interested in the work the Committee will do -
   b. Able to work cooperatively and constructively with others; their fellow members, the Board of Education, the staff of the school system, and their fellow citizens who are not officially connected with the schools -
   c. Representative of the people of the District in such respects as geographic location, sex, age, schooling, occupation, race, nationality background, membership in the organizations and institutions of the District.

(The Advisory Committee should include parents and non-parents, persons favorable to and critical of current school policies, large and small taxpayers, new and old residents of the District. In all of these respects, and in others that a selection committee may think important, the numbers included in the Citizens' Advisory Committee should correspond to the number of their kind in the District. No one is to be included because he is an officer or a professional executive of an organization or institution. None is to be considered the representative or spokesman of any organization, institution, faction or element in the District.)

C. In recommending persons to fill vacancies in the Citizens' Advisory Committee, a selection committee will consider the personnel of the entire committee and will seek to choose replacements who will help in maintaining the representative character of the Committee.

D. Members of a selection committee may be recommended as members of the Citizens' Advisory Committee.

E. A selection committee will recommend to the Board one person for membership in the Citizens' Advisory Committee for each position to be filled. It will prepare for its own uses a list of alternates who may be recommended to the Board if nominations by the selection committee are not approved by the Board or if those chosen do not accept membership.

F. Appointments to fill vacancies on the selection committees will be made by the Board of Education.

VII
ADVISORY COMMITTEE PROCEDURES

A. The Citizens' Advisory Committee is to organize itself in its own way, determine the frequency and nature of its meetings, choose its officers, provide for sub-committees and affiliated committees, and decide upon the problems it will study and the activities in which it will engage within the field indicated by this Charter.

B. The Committee is expected to add affiliated committees and to involve in its work many more citizens than are included in the central committee. Affiliated committees may be named to deal with the problems of the District, the attendance areas, the high school departments, and the Division of Adult Education.

C. In performing its duties, the Committee is expected to conduct careful fact-finding studies and to use consultants (who are approved by the Superintendent) from the school staff, the District, and sources outside the District.

D. The school system will provide for the Committee assistance by its professional and non-professional staffs, mimeographing and printing services, consultant service, publications, and other aids to the work of the Committee to the extent that resources permit without damage to the current school program. The Committee is asked to submit to the board in October of each year an estimate of its requirements of funds and personal services for consideration in planning the budget for the ensuing year.

E. The Board of Education and the Citizens' Advisory Committee may originate policy proposals jointly or individually. The Board may seek advice from the Citizens' Advisory Committee concerning policy that has originated with either the Board or the Citizens' Advisory Committee.

F. Special, joint meetings of the Board and the Committee will be held when these meetings are desired by both groups.

G. Minutes of the meetings of the Citizens' Advisory Committee, any sub-committee or special reports shall be available to each member of the Committee and to each of the Committee's regular consultants, and to the Board of Education, upon request. Minutes of sub-committee meetings do not need general distribution to all committees but sub-committees should report to the Committee of the Whole once every two months either by oral or written report, and these reports should be incorporated into the minutes of the Citizens' Advisory Committee.

H. Minutes of the meetings of the Board of Education are available to any citizen of the District in the office of the Board of Education.

I. The Committee may may initiate studies of special interest to a majority of the group as well as study and recommend problems suggested by the Board of Education.

J. The Committee may recommend policy for the school personnel, but it is never to consider the emplyment, promotion, transfer, dismissal, or salary of an individual employee.

K. All reports and recommendations of affiliated committees will be cleared by the central committee before they are submitted to the Board of Education or publiciz ed in the District.

L. It being understood that all formal publicity regarding the Committee and its work will be released by the Superintendent.

M. The Committee, as such, will never recommend or endorse candidates for the Board of Education.

N. The members of the Committee are expected to interest in and inform about the work of the schools the individuals and organizations with whom they normally have contacts and to receive from them suggestions for the improvement of the schools. They may properly seek counsel from ot others in the District regarding proposals before the Committee, though the Committee as a whole and its affiliated committees will promote in the district no proposals for policy changes without authorization by the board of Education.

O. The Board of Education may request the services of the Committee in publicizing in the District policy proposals to which the Committee and the Board have agreed.

P. The Board of Education may submit for community consideration policy proposals which have originated in the Committee.

APPENDIX III

Citizens Advisory Committee

CHARTER

The following policies are proposed for adoption by a board of education in creating a district-wide citizens' committee with affiliated committees. A different set of policies would be required if only special committees reporting to a board of education were used.

1. Purpose. The purpose of a citizens' committee is to improve the education of the children, youth, and adults and thereby to develop more useful citizens and to enrich the lives of the people.

2. Ways in Which the Committee is Expected to Contribute to This Purpose.

   a) To study the problems of public education in the district which are properly the concern of the layman, rather than of professional people, and to report the findings of studies to the appropriate persons or groups within the school system.

   b) To advise the Board of Education in developing and revising official policies for the district.

   c) To counsel and work with the employees of the Board of Education in whatever ways are mutually satisfactory to the Committee and to the employees and in keeping with the provisions of this charter in planning and conducting educational programs under Board of Education policies.

   d) To promote two-way communication between the public and the officials and employees of the school district.

   e) To facilitate co-operation in educational affairs between the schools and the organizations and institutions of the district, to extend the use of community resources by the schools, and to increase the proper use of the schools, their staffs, and their facilities by the people of the district.

3. The Legal Status of the Board of Education. The Board of Education is the legally constituted authority over the public schools of the district. It cannot legally surrender any of its powers and responsibilities. It abdicates none of its authority in creating a citizens' committee.

4. Tenure of the Committee. The Citizens' Committee herein created and any committees affiliated with it shall continue as school sponsored bodies until the Committee is dissolved by a mutual agreement of the board of education and the committee.

5. Field of the Committee. Since the public schools exist only for public education, the Committee will concern itself only with the education of the public through the public schools and with matters directly related to it. The Committee and its affiliated committees are primarily study and planning committees, advisory to the Board and its employees. They will promote their ideas and plans in the school and community in conjunction with the Board of Education.

6. Affiliated Committees. The Committee is authorized and encouraged to create affiliated committees as needed for:

   a) Attendance areas within the district.

   b) Important and continuing interests of the schools, such as citizenship education, vocational education, efficiency, finance, and teacher welfare.

   c) Special problems of a temporary nature, such as constructing buildings, adapting to special measures for national security, or planning a system of pupil transporation, etc.

   All committees created by the Citizens' Committee shall be and remain affiliated with the Citizens' Committee. Each affiliated committee shall be given by the Citizens' Committee a definitely prescribed field within the total field of the Citizens' Committee in which it is to operate. Affiliated committees may be created to serve for a definite period or to continue indefinitely with rotation of memberships. Affiliated committees may or may not include members of the Citizens' Committee. The Superintendent of Schools, or his representative, or a member of the Board shall be available as a consultant, with each affiliated committee. Administrators, teachers, non-academic employees, and students, as well as laymen, may be members of affiliated committees. It will usually be advisable to include more laymen than others. The members of some affiliated committees may be chosen primarily because of their expertness in a particular field, rather than because they are representative of the citizens of the district.

7. Membership in the Committee.

   a) The Committee shall include 55 members. Any number of persons may be included in committees constituted by the Citizens' Committee.

   b) The original members of the Citizens' Committee shall be recommended to the Board of Education by a selection committee, named by the Board.

   c) The Selection Committee shall include no fewer than seven members. More than one-half of the members of the Selection Committee shall be citizens who are not associated with the schools as members or employees of the Board of Education. The Selection Committee shall include a member of the Board of Education, the Superintendent of Schools, and one or more other school employees, chosen by the employees they represent.

d) In preparing a slate of members of the Citizens' Committee to present to the Board of Education, the Selection Committee shall:

1) Consult with a large and representative part of the citizens of the district by whatever means it may devise to secure their suggestions of persons to be considered for membership in the Citizens' Committee.

2) Screen the names suggested by representative citizens, taking into account:

(a) the general ability of the persons suggested and the keenness and clarity of their thinking
(b) the respect in which they are held by their fellow citizens
(c) their ability to work constructively with others
(d) their insight into and interest in public education, and
(e) other items considered by the Selection Committee to be important.

e) The total group selected shall be as representative as possible of all of the citizens of the district in such respects as:

1) Geographical distribution within the district
2) Sex
3) Age
4) Years of schooling
5) Occupation
6) Race and nationality backgrounds
7) Social class
8) Political, religious, and social affiliations
9) Membership in organizations

f) It shall include:

1) Parents and non-parents
2) Persons favorable to and critical of current school policies
3) Large and small taxpapers
4) Owners and non-owners of homes, farms, and businesses
5) Old and new residents of the district.

g) In all of these respects and in others that the Selection Committee may consider important, the number recommended for the Citizens' Committee shall be roughly relative to the number of their kind in the district.

h) No person recommended for membership in the Citizens' Committee is to be considered the representative or spokesman of any particular organization, faction, or element in the district. Individuals are to be recommended, each of whom has contacts with a variety of organizations, factions, and elements so that, taken

together, the members of the Committee have means of first-hand communication with all of them. No one is to be recommended because he is an officer or a professional executive of any organization or institution. In general, persons of this type will not be recommended unless they are known for their broad interests in the community and are regarded primarily as citizens rather than representatives of agencies.

i) Members of the Selection Committee may be recommended to be members of the Citizens' Committee.

j) The Selection Committee shall recommend to the Board of Education the exact number of persons to be included in the Citizens' Committee. The Board retains the privilege of asking for additional names if those first submitted are not wholly satisfactory.

8. Terms. The terms of the original members of the Citizens' Committee shall be for one year. At the end of the first year, equal numbers of the members will draw lots for terms of one, two, and three years in order to provide a systematic rotation of members. New members with three-year terms will replace the original members, beginning in the third year. A member will not be eligible for reappointment until one year after his term has expired.

9. Replacement of Members and Unexpired Terms. When members of the Citizens' Committee are to be chosen to replace those whose terms have expired, or when vacancies occur, the chair shall appoint a nominating committee of 5, which shall include a member of the Board of Education, to make recommendations to the Citizens' Committee for the filling of such vacancies.

10. Consultants. There shall sit regularly with the Citizens' Committee as consutants a representative of the Board of Education, chosen annually by the Board; the Superintendent of Schools; a teacher or principls chosen annually by the teachers and principals in the system; and a representative of the non-academic employees in the system, chosen annually by these employees.

11. Relationships of the Citizens Committee

a) To the Board of Education

1) The Board of Education may submit to the Citizens' Committee proposals regarding school policies to which the Committee is expected to react in oral or written reports to the Board

2) The Citizens' Committee may make policy recommendations to the Board of Education and will be apprised of the Board's reactions to these recommendations

3) Special joint meetings of the Board and the Citizens' Committee shall be held when these meetings are desired by both groups

4) Minutes of the meetings of the Citizens' Committee will be sent to each member of the Board of Education.

5) The Board of Education, the Citizens' Committee, and its affiliated committees will not engage in public controversies.

b) To employees of the Board of Education.

1) The Citizens' Committee or any of its affiliated committees may seek information and counsel from any employee of the Board of Education on matters clearly related to the problems on which these committees are working.

2) Any employee may, with the approval of the administrators under whom he works, including the superintendent of schools, request the assistance of the Citizens' Committee or an affiliated committee regarding any phase of his work.

3) Requests for affiliated committees for particular attendance areas or special fields or work may be initiated by indivdual employees or groups of employees and will be considered by the Citizens' Committee if approved by the administrative officer for the attendance area or field and by the Superintendent of Schools.

4) The Citizens' Committee and its affiliated committees may properly recommend regarding school policies for employee welfare, but they are never to consider the employment, promotion, transfer, dismissal, or salary of an individual employee.

5) In asking employees for data regarding the schools, account is to be taken of the time required to assemble these data and the other duties of these employees.

c) To the public

1) The Citizens' Committee is encouraged to promote the interest and participation in the schools of individuals not members of its network of committees and of organizations in the district. The committees herein provided are not to be regarded as substitutes for other forms of public participation in school affairs, but as means of providing a minimum of systematic, representative, and responsible public participation.

2) Each committee member is expected to do what he can to learn the ideas and attitudes about the schools of his associates in the district and to pass on to these associated information about the schools.

3) Publicity regarding the Citizens' Committee and its affiliated committees, dispensed through the press, and radio, printed and mimeographed statements, and other formal means of communicating with the public shall be arranged in conjunction with the Board of Education or its executive officer, the Superintendent of Schools.

4) The Board of Education may request the Citizens' Committee to designate individual members or groups of members to assist in publicizing and promoting in the district policies and proposals which have the joint approval of the Committee and the Board.

5) Recommendations of the Citizens' Committee may be released by the Board for public discussion either before or after action has been taken on them by the Board.

12. Organization of the Citizens' Committee.

a) The Citizens' Committee is to organize itself in its own way, determine the frequency of its meetings, conduct these meetings as desired, and work upon the problems it considers significant.

b) If the Committee desires, an executive secretary of the Committee, chosen by the Committee from the school staff, will be provided and will be given time for his work in this capacity, the amount of time to be agreed upon by the Committee and the school authorities.

c) The Committee is asked to submit annually for consideration as a part of the school budget, an estimate of its clerical expenses for the year.

d) At the end of each year of the life of the Committee, this charter shall be reviewed by the Committee and by the Board. Changes in it may be made by majority vote of the members of the Board. Recommendations of changes may originate in the Committee or in the Board. The Committee will be consulted regarding any proposed changes originating in the Board.

APPENDIX IV

CITIZENS' LAY ADVISORY COMMITTEE

OPERATING RULES

The following operating rules are proposed for adoption by the Citizens' Committee:

1. Officers and Committees

a) The officers shall be a chairman, a vice chairman, and a secretary, elected by the members of the Committee for one-year terms. These officers shall together constitute the Executive Committee

b) Committees for special purposes will be authorized by the Citizens' Committee as needed; will have their work outlined by the Citizens' Committee; and will report to the Citizens' Committee

1) Methods and Procedures concerning the Operation of Affiliated Committees of the Citizens' Advisory Committee

(a) Purpose: The purpose of creating special projects committees is to encourage a detailed study of a particular problem to assist the Lay Advisory Committee and the Board of Education in improving education throughout the school district.

(b) The legal status of the Board of Education: The Board of Education is the legally constituted authority over the public schools of the district. It cannot legally surrender any of its powers and responsibilities. It relinquishes none of its authority in creating a citizens' committee, or any of its affiliated or special projects committees.

(c) Tenure: Special Projects Committees will be terminated when the Lay Advisory Committee has accepted or rejected its findings, and/or it has been released by the Lay Advisory Committee.

(d) The field of the committee shall be limited to the subject assigned by the Lay Advisory Committee.

(e) Membership: Any number as named by the Lay Advisory Committee and who shall be residents of the school district shall make up the membership -- Lay citizens, school employees, and students may serve as members.

(f) Consultants: There shall sit regularly with the Special Projects Committee as a consultant, a representative of the Lay Advisory Committee, and the Superintendent of Schools or his representative. Also, specially qualified people such as employees of the school system and people of special competence both within and from outside the district may be called in for consultation.

(g) The Special Projects Committees shall meet with the Lay Advisory Committee for its initial meeting to learn of the scope of its problem and in the final meeting to explain the results of its written report.

(h) It shall be the province of Special Projects Committees not only to be fact finding bodies, but shall also offer any recommendations it deems proper to the Lay Advisory Committee.

(i) Each Special Projects Committee shall appoint its own chairman, and a secretary to keep minutes of its proceedings.

(j) The Special Projects Committees will not engage in public controversies, nor release any of their findings other than to the Lay Committee.

2. Meetings

a) Regular meetings of the Citizens' Committee will be held on the third Thursday of each month at the various schools from 7:30 to 9:30 p.m. Special meetings may be held or regular meetings may be cancelled by the Executive Committee or by vote of two-thirds of those present at a regular meeting

b) Discussion aimed at arriving at a consensus of the members shall be the prevailing procedure in the meetings. Parliamentary procedures will be used when it is the judgment of the group that a decision should be recorded or transmitted

c) Meeting of the Committee and its affiliated committees are open to non-members by invitation of these committees

d) The Executive Committee has the responsibility of submitting to the Citizens' Committee proposals for meeting agenda for as many meetings in advance as it can feasibly plan. After the first year, an annual program shall be recommended by the Executive Committee and revised and approved by the Citizens' Committee

e) The regular meeting in June of each year shall be devoted to an evaluation of the work of the Citizens' Committee and its affiliated committees and to planning the work of these committees for the coming year. Time will be allowed during meetings for meeting-by-meeting evaluations

f) Minutes of each meeting will be sent by the Secretary to each committee member

3. Loss of Membership in the Committee

Members of the Committee who fail to attend three consecutive meetings without reasons satisfactory to the Committee shall lose their memberships in the Committee

4. Limitation of Committee Activities

The Committee and its affiliated committees will never recommend individuals or slates of candidates for the Board of Education

5. Responsibilities of Committee Members

a) Each member of the Citizens' Committee and its affiliated committees is expected to attend meetings regularly, to participate in committee discussions, and to serve on sub-committees

b) Each member of a committee is expected to study carefully any problem before the committee before committing himself to a final conclusion about it

c) Members of a committee will extend to fellow members the courtesy they themselves will expect of not reporting outside of committee meetings opinions expressed and stands taken by individual committee members

d) The authority of the Citizens' Committee, or an affiliated committee, to study and advise about school matters belongs to the group as a whole. No individual member of a committee has any rights or privileges that he does not possess as a citizen of the district. As a member of a committee, he will exercise his rights as a citizen with unusual discretion lest there be confusion as to whether he is asserting himself as a citizen or as a member of a committee

6. Use of Consultants

The Committee recognizes the need of professional knowledge and assistance and will make extensive use of consultants from within and without the staff of the local schools

7. Change of Rules

It will require a two-thirds vote of those members present of the Committee to change the rules at a regular meeting. Notice must be given one regular meeting in advance before a rule or rules may be changed.

APPENDIX V

Board of Education Policies

Advisory Committee

1. The advisory committee shall exist only by authorization by the Board of Education of Community Unit School District, and the Board of Education reserves the right to dissolve the committee at anytime.

2. The advisory committee shall act in an advisory capacity to the Board of Education, Superintendent of Schools, and the Principal of the High School relative to such problems as curriculum development, course of study, adult education and state and national trends in education.

3. The advisory committee shall denote its time to the whole Community Unit School District and not limit its activities to any one area unless given special authorization by the Board of Education.

4. Membership:

   A. The total membership shall number 15.
   B. The Board of Education shall appoint one of its members for a one-year term
   C. Fourteen members shall be appointed by the Board of Education selected from the area served by Community Unit School District.

5. Term of office:

   A. The term of office shall be for a two-year period except the member appointed from the Board of Education who shall serve for a one-year term.
   B. Seven members shall carry over each year and seven new members shall be appointed each year by the Board of Education upon recommendations submitted by the Superintendent of District, Principal of the High School, and members of the existing advisory committee.
   C. The term of office shall start March 1.

6. After completing his two-year term on the committee, one year must lapse before he may be reappointed to the advisory committee, except the Board Member who may succeed himself year after year, if appointed by the Board of Education.

7. In case of vacancies, a new member shall be appointed to complete the term of office as set down in Article 5, Section B.

8. The officers of the advisory committee shall consist of chairman, vice chairman, and recording secretary.

9. The chairman and vice chairman shall be elected by a majority vote of the total membership at the first meeting after March 1.

10. The recording secretary shall be the Superintendent or Principal who shall act only in an ex-officio capacity.

11. The chairman shall have the following duties:

    A. Preside at all meetings of the advisory committee.
    B. Appoint all necessary committees.

12. The vice-chairman shall have the following duties:

    A. Preside in the absence of the chairman and assume the responsibility of the chairman.

13. The duties of the secretary shall be as follows:

    A. Keep a record of all business transacted at the advisory committee meetings.
    B. Keep attendance record of the members present at committee meetings.

14. All members completing a full term of office shall be awarded a certificate of appreciation by the Board of Education of Community Unit School District.

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Internal operation of council (3)

Concern: Mechanics of meetings (A)

Objectives: To develop within citizens the ability to:

1. Identify the different types of meeting and the factors pertaining to each particular meeting.
2. Select and integrate relevant material in preparation of an agenda.
3. Recall or recognize lines of authority.
4. Plan a meeting using the proper procedures in preparing an agenda.

Suggested teaching techniques:

1. Conduct a discussion and review of the responsibilities of each officer in the Citizens' Advisory Council.
2. Make a list of possible topics for the agenda. Divide class into three groups. Have each group plan a meeting then defend it before the class as a group.
3. List a group of possible agenda items, determine which items are not important and why.
4. Use "brainstorm" procedures as a way of getting new ideas for an agenda.
5. Have students take turns conducting a mock meeting in the class.

Suggested audio-visual aids:

1. Use the chalkboard to list the items involved in an agenda.
2. The overhead projector is very useful as a flexible means of writing down the items to be included on the agenda.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. What are the different types of Citizens' Advisory Committee meetings?	All members of the advisory council should attend the general advisory meetings. All other meetings will be attended by subcommittee members. <u>Suggested techniques</u>: A. Through class discussion generate a list of meetings that will involve the lay Citizens' Advisory Committee. B. Using the above list discuss who should be in attendance and how many people should be involved. C. Conduct a class discussion on advantages and disadvantages of the number of people at a particular meeting. D.
2. What is an agenda and how is it used?	An agenda is a valuable tool for any meeting. It is a written procedure to follow in conducting the meeting. The agenda, if used properly, will give each member of the committee a responsibility, not only to look for important topics to present in the meeting, but also to make preparations for a successful meeting.

2. (Continued)	<u>Suggested techniques</u>: A. Discuss with the class the pros and cons of an agenda. B. Write the name of a meeting down and propose an agenda that could be used for that meeting. C. Discuss pitfalls of certain agenda items to prevent radical ideas from developing. D.
3. What is the proper order of business when conducting a public meeting?	The following is a proposed order of business and may vary from one area to another or for different meetings. 1. Call to order and roll call. 2. Minutes of previous meeting. 3. Orders of the day or the agenda. 4. Report of program of work. 5. Special features. (Speakers, music, etc.) 6. Unfinished business. 7. Committee reports. 8. New business. 9. Adjournment. 10. Entertainment, recreation, refreshments.

3. (Continued)	Suggested techniques: A. Provide each member of the class with a copy of Roberts Rules of Order. Have members skim through the booklet and then generate a list similar to the one above. B. Have class carry on a discussion of proper and improper procedures in conducting a public meeting. C. Invite an F.F.A. group to give a demonstration of their meeting and note the formality. D.
4. What is the role of the chairman?	The chairman of a meeting must be a successful leader. His function is to run a progressive, decision-making program. Suggested techniques: A. Conduct a class discussion on the role of the chairman and indicate specific areas of involvement. (See Appendix I.) B. Have the class generate topics for committees, select a chairman and role play the responsibility within the committee of the chairman.

4. (Continued)	C. Use role playing before the entire class and have selected class members chair different types of meetings. D. Assign Appendix I as a reading assignment and then discuss how to be a better meeting chairman with the class. E. F.
5. Other areas requiring information.	Organizing a meeting is more than an agenda and officers. The following questions must be answered before a meeting can be held: 1. Purpose for the meeting. 2. Time of meeting. 3. Place of the meeting. 4. Those to be involved in the meeting. 5. Social aspects. <u>Suggested techniques</u>: A. Conduct a class discussion, relative to the above five factors, and determine how to implement them. B. Have members of the class give prepared reports dealing with each area requiring information.

5. (Continued)	C. Invite a resource person to the class to speak on the topic of "Success through Meeting Mechanics." D. E.

Suggested evaluation techniques:

1. Observe changes in student behavior as the program develops.
2. Check student's written work to see if it fulfills objectives.
3. Conduct an oral evaluation as to relevance of material.
4. Ask students to write a self-evaluation.

APPENDIX I

HOW to be a better Meeting Chairman

■ The chairman of a meeting is its heart and will. His function or object is to run a progressive operation and to the extent that his group discusses what they are supposed to do and to the extent that decisions are made and projects and deadlines are assigned to individuals and teams. The chairman must be a successful leader.

It has been found that a maximum number of seven people can work together productively at a meeting.

Major Stumbling Blocks of Group Meetings:

1. Small meetings are usually very casual and, due to their nature, only a vague notion about the objectives of the meeting are recognized by the participants.
2. The chairman must provide precise knowledge of what he expects. Otherwise, the other members can easily become confused.
3. Creativity is a vital component of group meetings.
4. Oftentimes a high level of antagonism toward ideas exists at such meetings.

Responsibilities of the Chairman:

1. It must be the responsibility of the chairman to work hard to get good suggestions from his committee.
2. Observations indicate that very few chairmen are able to recognize and sort out helpful responses. The chairman usually does not realize that his role includes being a careful, judicious listener.
3. Oftentimes the leader does not appreciate the possibilities of his role. The chairman often has a general role – namely, to get things done. But the result is the old-fashioned waste of talent – both of his own and his group – by not allowing for proper discussion.
4. Group meetings are often sabotaged by the familiar symptoms of boredom, impatience, hostility and rivalry. These create negativity.

Stating the Problem:

1. A chairman should keep notes that all can see. Large pads usually are better than blackboards.
2. Write brief statements of the problems facing the group. These need not be in detail.
3. The chairman should ask experts as to their reactions to these problems.
4. The chairman should have each participant air his own views. There should be a free-wheeling discussion.

Rules for Chairmanship:

1. The chances for a successful meeting are reduced if the group has no recognized leader.
2. Conditions most likely to disrupt include: negative reaction to new ideas, rigidity of thinking, confusion and rivalry.
3. A meeting must have individual personalities and styles if it is to generate constructive thoughts.
4. Though the chairman has responsibilities to conduct the meeting, he should avoid ideas detrimental to the creative thinking of others.

Leadership principles:

1. Never compete with group members. You do not want to lose any ideas that might be useful.
2. Specific times should be set aside when the chairman should contribute his ideas.
3. Listen to group members. Permit the speaker to paint any picture he wishes. The importance of listening cannot be overemphasized.
4. The chairman should establish his intent. His job is to understand what is in the minds of others and help these thoughts come out.
5. Don't permit anyone to be on the defensive. Keep your fingers on the psychological pulse of each member. If one group member disagrees with another in his view point, accept both ideas as being potentially useful. Record both thoughts as both may be useful later on.
6. Avoid pinning down an individual. Never try to put a person on the defensive.
7. Use every member of the group. Learn to control the member who has a tendency to dominate the meeting.
8. When you take over leadership, give it your best. Don't be reluctant to show enthusiasm for what you believe to be the answer to any problem.
9. Keep the meeting moving at a fast pace. Don't spend too much time on any one step. Watch for boredom and counteract it by going on to other subjects.
10. Keep the members informed about where they are and what is expected of them.
11. Do not manipulate the group.
12. Work hard at the technique of chairmanship. The chairman, even though he can be replaced with another person to serve in that capacity, has the primary responsibility to keep the group alert and aggressive to the problems under discussion.

HANDY CHECKLIST OF SOME PROGRAM METHODS

METHOD	CHIEF CHARACTERISTIC	PATTERN OF PARTICIPATION	SPECIAL USEFULNESS	LIMITATIONS
Lecture, film, reading, recitals, etc.	Information-giving.		Systematic presentation of knowledge.	Little opportunity for audience to participate.
Forum	Information giving followed by questions for clarification.		Audience can obtain the specific information it wants on particular aspects of the subject.	Formality; lack of freedom to interchange ideas.
Symposium panel or debate	Presentation of different points of view.		Different points of view spotlight issues, approaches, angles; stimulate analysis.	Can get off the beam; personality of speakers may overshadow content; vocal speaker or questioner can monopolize program.
Discussion	High degree of group participation.		Pooling of ideas, experience, and knowledge; arriving at group decisions.	Practical with only a limited number of people.
 Project, field trip, exhibits, etc.	Investigation of a problem cooperatively.		Gives first-hand experience.	Requires extra time and energy for planning.
Buzz groups	100% participation by large audiences through small clusters of participants.		Makes individual discussion, pooling of ideas, possible in large groups. Develops leadership skill in members.	Contributions are not likely to be very deep or well organized.
Group interview	Spontaneous giving of opinions and facts by experts in response to questions.		Brings knowledge from a number of sources to bear on one problem.	Becomes disorganized without careful planning of material to be covered.

APPENDIX II

COMMITTEE ON SCHOOL BOARDS, PRINCIPLES FOR CAUCUS PROCEDURE

As Suggested by
Edward Mowbray Tuttle
in
School Board Leadership in America

(Danville, Illinois: Interstate Printers and Publishers, 1958) P. 26

1. The caucus body shall be so broadly representative of the school district as to deserve the confidence and support of the entire community.
2. The caucus body shall be completely independent of any other civil, political or community organization.
3. Members of the caucus body, whatever the basis of their selection, shall serve in their individual capacities, dedicated to the best interests of the district as a whole.
4. Membership of the caucus body shall be on a rotating basis with one-third of one-half carryover of old members into each succeeding period of operation.
5. The period of service of a particular caucus body shall extend from one school board election (or appointment) through the next with a sufficient number of meetings to accomplish the following things:
   a. Organize the caucus body with a chairman, secretary, committees, etc;
   b. Carry on a campaign to secure from citizens generally suggestions of qualified candidates for board service;
   c. Secure complete data on each potential candidate and go through a process of screening;
   d. Interview and secure consent from candidates finally chosen by the caucus;

e. Present the names of candidates to the proper appointment or election authorities;

f. Publicize the caucus selections to the district with supporting data, and urge widespread and active community backing for the candidates;

g. And finally, arrange for the proper selection of new members of the caucus body for the next period.[1]

Heugh, in an article in The Nations Schools, sets forth criteria to be used in selecting candidates for boards of education in accordance with the tenets of the democratic philosophy:

1. The selection process should provide means for each group which has a clearly identifiable set of interests to voice those interests and to make known its needs....

2. The selection process should promote the cooperative functioning of the various community groups to the end that agreement upon policies and general methods may be achieved....

3. The selection process should be free from partisan control, whether of the political, socioeconomic, religious or so-called 'patriotic' nature....

4. The selection process should be open to public evaluation.

   a. All meetings having to do with the organization process and the actual selection itself should be open to the public.

   b. There should be thorough coverage through the local press of all such meetings.

   c. A clear statement of the policies and purposes of any select committee or group should be given wide public circulation.

1/Edward Mowbray Tuttle, op. cit., pp. 126-127.

5. The selection process should be rooted in the people's experiences. Only when people have the security of starting from a base with which they are familiar can they successfully plan for improvement.
6. The selection process should provide some means or basis for the public's evaluation of the candidates....
7. The selection process should be an integral part of the total effort at overall community planning....
8. The selection process should be flexible in structure providing for orderly change either to meet new conditions or in response to criticism arising from public evaluation.
9. The selection process should further adhere to the principle that candidates chosen according to the foregoing criteria are selected on the basis of individual merit and not primarily because they represent any special interest or group.[2/]

Concerning the last criteria, Heugh says, "Selection on any other basis than that each individual member is the representative of all the people is likely to lead to a detrimental emphasis upon the interests of constituent groups, whether they be geographical, economic, social, political or religious."

2/William C. Heugh, "How to Get a Good School-Board," Nations Schools, 40:26-7, N47.

APPENDIX III

Suggested Panel Procedures

We have received a number of "tips" regarding group discussion procedures. Most of these have come from people who have participated in previous meetings. They make good sense to us, so we are passing them along for whatever value they have to you. It is our sincere hope you will enjoy the session and that a fruitful and effective discussion will ensue.

The role of the chairman

As chairman, you have an important job. Good judgment will dictate your actions. Regardless of how carefully the program has been planned, feel free to change it when the situation justifies.

The successful chairman does not make a speech. He is measured more by his expeditious brevity and his giving the speakers a chance to present their message to the audience. Likewise, he is judged by his skill in protecting the audience from overzealous speakers as well as his ability to make everyone feel they have had an opportunity to join in the discussion.

Introductions, while brief, should be sufficient to impress upon the audience the fact that the speaker is familiar with the subject and well qualified to discuss the topic under consideration.

A general knowledge of the topic is helpful to a chairman. If practical, plans should be discussed with the speakers prior to the panel session with each person being informed regarding the length of time he will be allotted for speaking. Time limits should be established and followed to insure each speaker an opportunity to make his presentation in addition to providing time for general discussion.

The open discussion period is an essential part of the program. One of the most difficult jobs, particularly for a chairman with little

experience, is to wait a sufficient length of time for the first question from the audience. It may seem slow in coming but do not rush in with your own questions. OFTEN THE PAINFUL PROCESS OF WAITING FOR THE FIRST QUESTION IS NECESSARY.

The role of the speakers

The job of the speakers is to state issues sharply and concisely, not to exhaust the subject--and the audience along with it. Principal issues and facts should be set forth as provocatively as possible. Presentations should be planned so they will touch upon the important points in the allocated time. Details may very well be reserved for the open discussion period following the planned presentations.

Conducting the meeting

Plan to arrive at the meeting place in time to see that everything is in readiness for the session.

Participants should be seated facing the audience.

The session ought to start promptly even though the audience may be slow in gathering.

Open the meeting by stating the discussion topic and making any brief comments you may consider appropriate. Explain the plan of action, requesting that the audience refrain from asking questions and commenting until all speakers have had an opportunity to make their presentations. Briefly introduce the panel members, including information about their background and interests in the subject area.

Call on the first speaker. Following his presentation, thank him, call on the next, etc., until each person has spoken. Approximately one-half of the session time should be divided among the speakers, allowing equal time to each. Chairmen are urged to make every effort to see that speakers stay within their allotted time.

Each panelist ought to have an opportunity to speak before the meeting is opened to general discussion for the remainder of the session.

Open the meeting to questions and comments from the audience. Suggest the panel members have a question or comment ready to toss in if the discussion falters. Questions may be directed to a specific member of the panel or to the panel in general. Sometimes it is advisable for the chairman to repeat the questions or comments for everyone's benefit. Do not let one or two individuals monopolize the discussion when others are seeking recognition. Try to achieve as wide participation as possible.

Maintain an informal atmosphere that encourages free and easy discussion.

Closing the meeting

Plan to close on time and do so. Warn the group a few minutes before closing time, reserving the remaining time for summarizations or last-minute questions. In closing, thank the speakers and the audience for their participation.

APPENDIX IV

Jersey Community School Unit No. 100
School Board--Joint Meeting--Citizens' Consulting Committee
March 31, 1970--7:30 to 9:30 p.m.
West Elementary School
Jerseyville, Illinois

Agenda

1. Introductions and roll call. 10 minutes.
2. Statement of purpose. 5 minutes.
3. Discussion groups. 30 minutes.
4. Reflections and interpretation. 30 minutes.
5. What should be the relationship or role of the Citizens' Consulting Committee to the school board? 45 minutes.

Adjournment

CITIZENS' CONSULTING COMMITTEE

Agenda

February 24, 1970, 7:30 p.m.

1. Roll call.

2. Acceptance of minutes of meeting on January 27, 1970.

3. Future meetings.

   Tuesday, March 31.

   Tuesday, April 28; may this be changed to April 21?

   Tuesday, May 26; may this be changed to May 19?

   Tuesday, June 23.

4. Tour of new high school facilities.

5. Old business.

   5.1. Administration report.

   5.2. School board report.

   5.3. Faculty representative report.

   5.4. Miscellaneous.

6. New business. Work/study groups on the following questions taken from Citizen Participation in Local Policy Making for Public Education by Herbert M. Hamlin, College of Education, University of Illinois.

   1. How is public policy for the school system to be developed, interpreted, executed, and publicized?

   2. Who are to be served by the public schools? How? How much? When? Where?

   3. What public purposes are to be served by the public schools?

   4. How is the public to decide whether its purposes are being realized?

   5. What provisions will the public make for organization, administration, program planning, staff, bonds, and facilities, so that its purpose can be realized?

Reports or Summaries

Assignment. Write down some initial thoughts in trying to develop an adequate statement of a philosophy of education. Here are some ideas to wrestle with as you think.

"What is implied by having a democratic viewpoint? What emphasis should be given to the dignity and worth of the individual human personality? How much really should we imply by our belief in the intelligence and rational capacity of man? What do we mean to imply when we talk about freedom with responsibility?"
...from Youth Education, American Association for Supervision and Curriculum Development.

"Philosophy is concerned with man and with society--not primarily individual instances of specific men or specific societies..., Philosophy is concerned with truth...interlocking facts brought together into some sort of comprehensive whole that we can call knowledge. Philosophy is concerned with what makes things good or evil, ugly or beautiful, right or wrong, valuable or worthless."
...from Philosophy for American Education, Kenneth H. Hansen, p. 3.

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Internal operations (3)

Concern: Use of sub-committees (B)

Objectives: After instruction, the student is able to:

1. Generate a list of functions and activities considered proper for advisory subcommittees.
2. Identify and recall the kind and size of sub-committees to be used.
3. Demonstrate correct democratic processes.
4. Assume responsibility for effective operation of a sub-committee.

Possible Teaching Techniques:

1. Have class suggest areas needing study or review. Then have students select the topic they desire to expand and set a time limit for collection of information and presentation to the class. Hand in written objectives or goals for their topic.
2. Conduct class discussion on lists of questions using illustrations to help answer these questions.
3. Assign three to four people from the class to come to the class prepared to demonstrate how to work in a sub-committee.
4. Assign a member of the class to research the topic of sub-committees and conduct a lecture-discussion approach to the problem with the class members.

Suggested Audio-Visual Aids:

1. A chalkboard may be used to list areas of concern of the committees.
2. An overhead projector may be used if a chalkboard is not available.

Anticipated Problems and Concerns	Guides to solutions and sample teaching technique
1. What is a subcommittee or a special committee and how is it organized?	A subcommittee is a group of individuals selected from the central advisory committee and elsewhere to study a specific problem area. While the basic practices of subcommittees are the same, various schools have tailored the approach to solving problems with subcommittees to fit their needs Suggested techniques A. Have class review the format of methods and procedures concerning the operation of affiliated committees; Hamlin, pages 30-31. Before initiating a subcommittee this format should be filled. B. Using the discussion approach, suggest a specific problem area and then break the area down to fit the format for subcommittees. C.

Anticipated Problems and Concerns	Guides to solutions and sample teaching technique
2. What is the relationship and duties of a subcommittee?	Each subcommittee should be independent of other subcommittees. All correlary work should be done on the central advisory committee level. <u>Suggested techniques</u>: A. Have class generate a list of duties for a particular area. B. Divide the class into groups and have each person respond, by writing down how they would carry out the particular duty they were assigned. C.
3. How should the subcommittee report to the general committee?	A progress report should be prepared for the central advisory committee meeting and presented to keep the central committee informed. When all the data has been collected and the subcommittee has fulfilled its duties, a written report should be presented to the central advisory committee.

Anticipated Problems and Concerns	Guides to solutions and sample teaching technique
3. (Continued)	Suggested techniques: A. With the aid of the class, develop a format for subcommittee reports. B. Obtain several subcommittee reports and evaluate in the classroom or in small groups. C. Invite a resource person to class to discuss the role of the consultant and the subcommittee. D.

Possible Evaluation Ideas:

1. Divide into committees, all having the sampe topic, and have class members research a topic and submit a written proposal.
2. Observation of the changes in class attitudes during the class sessions.

University of Illinois
Urbana, Illinois 61801

Staff Assistants:

Richard Hofstrand W. Edward Shipley

Teaching Source Unit

CITIZENS' ADVISORY COUNCIL IN EDUCATION

Unit. Internal Operation of Council (3)

Concern. Group Dynamics (C)

Objectives. After instruction, the student is able to:

1. Identify and recall practices and procedures used in group dynamics.
2. Demonstrate correct usage of group dynamics.
3. Assume responsibility for the effective functioning of a working group.
4. Identify the purposes of different group dynamic methods.

Suggested Teaching Techniques

1. Have class demonstrations for each identified area of group dynamics.
2. Have individual reports on various group techniques.
3. Have the class attend civic functions using various group techniques. Have the class discuss the process and the effectiveness of the group dynamics.
4. Invite a resource person to discuss the use of group dynamic methods.

Suggested Audio-Visual Aids

1. The overhead projector and acetate sheets could be used very effectively for showing animated interaction of a group.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. What is a definition of group dynamics?	Group dynamics is a process of learning. The process uses the meeting as a vehicle. The different types of meetings are as follows:

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. (Continued)	1. Convention. When local unit representatives gather upon call of the parent organization to talk about problems of common concern, the meeting is designated as a convention. 2. Conference. A conference usually carries with it descriptive adjectives which identify it; for instance, family life conference, career conference, soils conference, etc. The adjective used tells the public what the conference theme is to be. This term should not be confused with a conference of two people regarding some problem as for instance, a teacher-pupil conference. 3. Institute. If a group of people come together for a series of meetings of one or more days duration where instruction and information are given in a specific field, the meeting is often designated as an institute. 4. Workshops. A workshop is a relatively new term used to identify a meeting of people who have assembled where facilities are available for them to go to work.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. (Continued)	5. Seminar. The term seminar is most commonly used around an institution of higher learning and normally presupposes that those participating bring with them much experience and training in the area under consideration. 6. Formal Classes. Formal classes are directed by experts or committees in charge who move the group in the direction they believe it should go. Informal techniques may be employed in the course of the activities. 7. Informal Discussion. Informal discussion has as its keynote, participation. It is hoped that everyone will take part. Meetings are often initiated and conducted on an informal discussion basis. 8. Short Course. If the meeting procedure is more systematic than a conference but less extended and formalized than credit courses offered by colleges, the meeting might be characterized as a short course. 9. Lecture Series. Quite often outside speakers, or perhaps only one speaker, is called upon to deliver a series of addresses.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. (Continued)	These may extend over several days or may be intermittent as, for instance, one day per week or month. These types of meetings can be best designated as lecture series. <u>Suggested Techniques</u> A. Have individual members give oral reports on the different types of meetings. B. Divide class into small groups and discuss the different types of meetings. C. Conduct a class discussion of the different areas after reading associated materials relative to the different types of meetings.
2. What different group dynamic techniques may be employed in a meeting?	In outlining meeting procedures, effort should be made to include the more important techniques which might be employed. A list of techniques are: 1. Formal or stage presentations. All communication is in one direction, from stage to audience. a. Lecture or speech b. Symposium c. Panel discussion d. Colloquy

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
2. (Continued)	2. Discussion techniques a. Open discussion b. Co-leaders in group discussion c. Buzz sessions d. "Phillips 66" technique e. Leadership team (1) discussion leader (2) process observer (3) recorder (4) resource person f. Listening teams g. Role playing h. Dramatic skit i. Brainstorming j. Lecture forum k. Symposium l. Panel forum 3. Demonstration and Laboratory a. Method demonstration b. Result demonstration c. Laboratory procedure 4. Field trips and tours 5. Audio visuals 6. Written communication <u>Suggested Techniques</u> A. Divide the class into groups and use each of the techniques outlined. B. Have class read Appendix 1 and Appendix II. After reading, use discussion approach to gain an understanding.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
2. (Continued)	C. Have members of the class give individual reports to help clarify the meaning of the technique. D. Have class use a written evaluation of the class to see how many techniques that have been used they can identify. E.
3. How is the problem-solving process related to group dynamics?	Group dynamic techniques are employed in situations where a problem-solving process is used. <u>Suggested Techniques</u> A. Use the case approach to determine when and what techniques to use. Present a situation and determine the problem areas. Select a technique or techniques that will best solve the situation. B. Have class generate a list of techniques and suggest when to use the technique. C. Have groups within the class role play different techniques and then have the class determine the technique and the success of the group in using it. D.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
4. What are the advantages of various group dynamic techniques?	Inasmuch as group dynamic techniques involve nearly every aspect of learning and education in some way, it is important to recognize their advantages. The following is a partial list of advantages: 1. Method of relaying information 2. Method of problem solving 3. Uses resources at hand for a meeting 4. Determines meeting procedures 5. Provides a realistic way to approach a situation. 6. Method of getting input from all members. 7. Utilizes all types of people and personalities. 8. 9. <u>Suggested Techniques</u> A. Have class discuss and then generate a list of advantages to group dynamics. B. Conduct a class discussion on the pros and cons of group dynamics. C. Invite a resource person to class to speak on the topic of group dynamics. D.

Suggested Evaluation Techniques

1. Have class use a written identification of different dynamic techniques.
2. Use the class as the evaluators of techniques that have been used in previous classes.
3. Observe the students in a role-playing situation to determine the effectiveness of the teaching unit.
4. Observe the changes in student behavior as a result of the identification of techniques.

APPENDIX I

Some Methods and Tools for Increasing Interest, Participation, and Teaching Effectiveness

William W. Reeder
Department of Rural Sociology
Cornell University

How to Use the Small Group Discussion Method

What is it? Small group discussion is a method for breaking a large group down into small subgroups for greater participation. Its primary purpose is to increase interest, participation, and teaching effectiveness.

Other names. The small group discussion has been called by several other names: Discussion 66, the buzz session and the committee system.

An old method in a new situation. There is nothing new about the small group discussion method. It is one of the oldest in man's experience. It happens at the end of almost every interesting meeting. Folks just naturally gather in groups of three, four, or five to talk among themselves; if a group gets too large it soon subdivides. This old natural method has just been brought into captivity for effective use in classrooms and groups.

What are the advantages of the "small group discussion"?

1. It is a very satisfying method from the point of view of students or group members.
2. It draws everyone into participation into a situation where they feel free and comfortable in taking part.
3. It provides interstimulation which increases the flow of ideas in a setting in which ideas can be challenged and freely batted back and forth without embarrassment to anyone.
4. It places responsibility on every individual to think about the problem and to make a contribution of its solution.

5. The students or members of the group work the answers out for themselves and they are more meaningful than ideas which they are simply told about by someone else.
6. The small group discussion is a big time-saver. It provides a rapid technique for pooling ideas or experiences on a problem, or for bringing out questions and problems of group members. If there are three or four problems to be discussed, the group can be split into parts so that discussion is going on on all questions at the same time. As each team reports on its question, the entire class or group can make additions which they feel should be made.
7. The method increases group unity. Everyone shares in the product and becomes more attached to what is going on.
8. It gives the members of the class or group experience in tackling problems as a member of a team and of expressing themselves in the same kinds of situations as they will work in as citizens in a democracy.
9. As the group gets experiences and sees how much it is able to accomplish, the members develop confidence in their own ability to handle problems and in the democratic process as an effective means of solving problems and getting things done.

Essential steps in organizing the group for the small group discussion. The content of the discussion and the length of the discussion will vary widely according to the purposes of the group but the method of organizing the group for the discussion is pretty much the same in most cases.

1. Orient the group. Tell them briefly what you are planning to do and how you are planning to do it so everyone will know what is going to happen. Here is a sample introduction indicating the kind of information they will want to know about.

"Our topic for discussion tonight is 'How to get participation in the group'. In order that everyone may get in the discussion we have decided to use Small Group Discussion method which is both productive and enjoyable. Here is how it goes:

"First we divide up into groups of four to six--not more than six. We can do this by having the odd rows turn their chairs around so the odd rows are facing the even rows. Then count from the aisle and every three chairs makes a committee of six. As soon as you are in your committee of six introduce yourselves by name and home towns, then select a chairman and a recorder. It is the job of the chairman to see that everyone gets a chance to get his ideas in and the job of the recorder to write down the ideas of the group and to be prepared to report back after the discussion.

"We have two questions so we will divide up; the people on the right side of the room can discuss this question, 'What are the reasons that some people do not participate in meetings?' The people on the left side of the room can discuss this question, 'Why is it that some people do participate in meetings?' We will have 12 minutes to discuss this topic after which we will call on the recorders to report for their groups. I will give each group a card to write on, and I will write the two questions on the board so everyone can see them. Are there any questions? In case there are some questions when we get started, just raise your hand and I will come to you."

Such an introduction lets everyone know what is happening so they will know what to expect and can prepare for it. Sometimes in a large group of 400 and up, written instructions for the odd and even rows helps in this orientation process. If written instructions are used, the leader should go over them with the group.

2. Divide the large group into subgroups. This can be done in several ways depending on the room and the group.
   a. The method of having the odd rows turn around to face the even rows works well in large meetings. If the seats are stationary, the persons on the odd rows can just turn around in their seats.
   b. In smaller groups, you can demonstrate with five people sitting together and have the rest follow your example.
   c. You can have them count off and have the ones form a group, the twos a group, etc. This is effective in some kinds of meetings because it splits up little friendship cliques and helps people to get acquainted and get a greater exchange of ideas.
3. The size of the group. The size of the subgroups depends upon the topic to be discussed. If it is a topic requiring considerable thought, five or six persons provide more thought stimulation and make the members feel easier as one does not feel as pressed to come up with an idea. Where the topic is one where everyone is likely to have several ideas, three- or four-person groups give more opportunity to participate and are more satisfying. Six is about maximum size for best results. By experimenting with larger numbers you will notice that you begin to get individuals who are left out of the participation when the group is seven or more.
4. Length of time for discussion in the small groups. The length of time for discussion will vary with the topic. It should be long enough so that each group has had a chance to get down several ideas but not long enough to exhaust the topic.

5. Consolidating the findings--reporting back to the large group. There are three or four ways of consolidating the findings and reporting back. The size of the group and the purpose are the main factors which determine the method selected.

   a. In raising questions for discussion following a talk you can move from group to group asking each for their best question and allowing time for answers after each question. In using this method it is well to call for questions from different parts of the room. The discussion period is usually not long enough to cover all of the questions and the group will feel better if you do not concentrate on one particular part of the room in calling for questions.

   b. If the group is fairly small, you can have the spokesman from each group present the report for his group. This works best where the group is working out answers to a question or problem. In such a group the repetition of answers adds emphasis and usually does not detract.

   c. In some cases such as in a problem census, program planning, or where a problem calls for a large number of answers, it works well to have a blackboard and have a recorder list all the questions or answers on the board. In this case it is usually best to get all the points down before discussing any of them.

   One method of avoiding repetition and still giving recognition to all the groups is to take a quick vote of the number of groups who had the same question or answer while the recorder is writing down

the statement. This also gives some indication of the relative importance of each.

d. Where the group is large, over 100, it is sometimes advantageous to send the recorders of each subgroup into an adjoining room to consolidate the answers while the group goes ahead with other matters. It is well to have someone prepared to lead out in the consolidation and to have one of the recorders report the findings back to the group.

e. Occasionally it may fit the purposes of the group best to collect the reports from the various groups, have a committee consolidate them, and report the findings at the next meeting. In most cases, however, the purposes will best be served by getting a report back during the same meeting.

6. Discussion following report. The reports are a consolidation of the suggestions of the small groups and does not represent agreement of the group. Some discussion is usually appropriate. The length of such a discussion will depend again upon the topic and purpose. Following the small group discussion, the members are more free to discuss them than they would otherwise be in the large group.

7. Calling the attention of the group to its accomplishments. Frequently the group becomes lost in the process of participation and it is not aware of how much it has accomplished unless it is called to its attention. Such questions as: "How do you feel about the amount we have accomplished today?" "How do you feel about the quality of the ideas that have been presented?" "Do you think we have gotten more or less than a speaker could have given us?" All serve to make the group aware of its own

Almost always it is combined with the large group discussion which is used in reporting back and in the discussion following the report of the small groups.

10. How to teach the small group discussion to a class or group which has not used it before. Select an interesting topic, a problem which you know the class will be interested in and will have ideas about. Select one you have tried before and found it to be successful. Give the class one or two experiences using the method under your direction. After two or three times they will know how to do it themselves with the help of a few instructions. Do not tell them about it--SHOW THEM HOW TO DO IT.

The Large Group Discussion

What is it? The large group discussion is the most common type known to most of us. A large group discussion occurs whenever a total group of seven or more persons carry on a discussion as one unit.

Size. Theoretically the number could vary from seven to a thousand or more ; however, in practice discussion tends to break down a question-and-answer session in groups of 40 or 50.

Where it fits

1. Threshing over ideas as a total group following a small group discussion.
2. Groups under 50 in which the members are well acquainted and are used to discussing can use it fairly well following a talk, a panel, a film, or a symposium.
3. Groups from 7 to 25 can use it fairly well in exploring an idea though it is more productive to combine it with the small group discussion.

The Advantages and Disadvantages of the Large Group Discussion

Advantages

1. Gets more member involvement than the speaker-audience techniques though not as much as the small group discussion or the dramatic techniques.
2. Keeps the group together, everyone knows what is happening.
3. Gives the total group a chance to check on any particular idea which may be presented.

Disadvantages

1. Less productive of ideas than the small group method.
2. Moves slowly and is likely to get side tracked.
3. Frequently a few talkers dominate the meeting.
4. The larger the group the fewer there are who feel free to speak up.
5. As the size of the group increases, member involvement decreases.

Some Suggestions for Leading Large Group Discussions

1. Choose a topic in which the group is interested. A discussion technique may create some interest but for the most part it simply facilitates it.
2. If possible have the group sitting in a circle, square, or diamond shape, facing each other so they can see each other's face and can talk to each other.
3. If the group is small enough so they can see you and hear you easily, sit down in the circle just like any other member with persons on either side. This creates informality and helps the group to take more responsibility upon itself.
4. Encourage people to speak loudly enough so they can be heard. In large groups of row seats or chairs it sometimes is necessary for the leader to repeat the statement.

5. When questions are directed to you as a group leader, bounce them back to the group for an answer rather than answering them yourself. If anyone in the group knows the answer,it is usually better to come from them than from you. This avoids leader domination, maintains member involvement and interest and keeps the discussion from disintegrating into a question-and-answer session. Hold your own comment back until others have expressed their ideas.
6. Use a minimum of formality; the smaller groups will need almost none. The best amount is that amount which makes for greatest productiveness. Too much kills interest and wastes time. Too little in a large meeting may let it get out of hand and thereby waste time.
7. Encourage group members to talk to the group and direct their questions to the group.
8. Summarize at the end. Either a leader summary or a group summary will clinch important points, organize the ideas in their thinking, and enable them to see how much they have accomplished. It is often well to call attention to this last point as groups are seldom conscious of their own productivity.

The Opposing Panel

The opposing panel was developed to meet a particular type of situation which is rather common in classes and groups. There are many important topics which have been talked about, written about, and discussed and yet about which there are still many questions and misconceptions. If you have further talks, or general discussion, most of the time is spent in hashing over that which is already known. When group members see the topic listed they say to themselves, "No, not that again." The opposing panel was developed to meet this kind of a situation to avoid rehashing that which is already known, to get at the unknowns, and to secure interest and involvement.

How you do it

1. Divide your group in half; designating the one-half as the "question raisers" and the other half as the "question answerers."
2. Divide each half into small groups of four to six as in the small group discussion.
3. Announcing the topic, assign the "question raisers" the job of getting down some good questions, the kind which they have wondered about or which they have heard others asking about. Next assign the "question answerers" the job of anticipating the kind of questions which might come up and being ready to answer them.
4. Group yourself as one of the "question answerers," which will enable you to make your contribution as one of the group.
5. Allow 15 to 20 minutes for preparation.
6. Call on one of the subgroups of "question raisers" to ask their best question letting the "question answerers" provide the answers. You, as one of this group, can add anything you wish after others have had a chance.
7. The question raisers may not be satisfied with the answers you give and may wish to add something to the answer themselves. Letting them do so usually adds to their interest and to the completeness of the answer.
8. Call on another subgroup of question raisers for their best question and repeat the same process as tested above as long as your time permits.
9. Take a few minutes at the end for a leader summary or a group summary calling attention to high points, group interest, and group productiveness.

What are the Advantages of the Method?

1. It avoids the known overworked material and removes immediately the unknowns and the unclear items.
2. It introduces a friendly competitive element between the question raisers and the question answerers.
3. It creates a situation in which everyone has to think about the question.
4. It introduces an element of suspense.
5. Participation in the small groups provides for fellowship and social wants thus creating general satisfaction.
6. Experience indicates that both groups go through the same process in the preparation period. They think of both the question and the possible answers.
7. The learning which takes place in the small groups as they discuss possible questions and answers is as valuable as any other part.
8. It creates interest and gets total participation and involvement.
9. It keeps the attention of the group members on the questions and their answers.

Question-and-Answer Techniques

In many classes or meetings a portion of the time is designated for discussion. What usually occurs, however, can better be described as a question-and-answer session. There are four common ways which this may take place.

1. The leader may introduce the questions and call upon the group for answers.
2. The leader may draw questions from the groups and he or some resource person answers them.
3. The leader may draw questions from the group then turn the question back to the group for an answer. In this case a resource person usually makes his contribution as a member of the group.

4. The leader raises some questions which he answers himself or calls upon some resource person to answer.

All of these techniques have their particular uses. A few generalizations may serve as a guide in choosing which one to use.

1. Questions stimulate thought no matter who asks them.
2. People like to ask and answer questions if the situation is made comfortable for them.
3. In trying to get at the questions which are in the minds of the group members it is usually safer to ask for them than to guess at them.
4. Do not underestimate the resources within the group itself. The combined knowledge and experience of the group members are frequently greater than that of the leader or resource person. In such cases your best service is to enable them to pool and share their knowledge quickly and efficiently.
5. On new material or technical matters with which the group has had no knowledge or experience, a resource person is essential.

Suggestions on techniques of getting the group to raise questions.

1. The small group discussion method (Discussion 66) is probably the most productive technique we have for raising questions and gets greatest involvement.
2. An alternate method which works well and gives variety is to give the members of the group a one- or two-minute period to jot down the questions they would like to ask. This concentrates attention on questions for one or two minutes thus producing better questions. Likewise a person gets his own questions clearly in mind and is less likely to forget them as he gets involved in the discussion.
3. Reminding group members to make note of questions when they think of them will help. It is easy to forget the questions that come to your mind when you are trying to keep up with a speaker or a discussion.

Suggestions on pooling the knowledge and experience of a group in answering questions in a short period of time.

1. Here again the small group discussion method is usually the most productive.
2. If you have several questions, divide them among the subgroups with provisions for the total group to make additions following the report of each subgroup.
3. If the group is very large and the time very short, you may find it works best to send the subgroup recorders to another room to consolidate the findings and repeat back later in the program. In this, someone who has had experience should be assigned to help them in consolidating their material.
4. In some instances you may have a blackboard which can be used.
   a. Two recorders each taking every other answer will pool the ideas on the board very quickly.
   b. If the small groups have two or more questions to answer, it can choose a recorder for each question and as each question is finished the recorder for that question can leave the group long enough to list his group's ideas on the board. The group continues on with the remaining questions.

The Lecture

The lecture, the most widely used technique for teaching in American schools needs little introduction. Its characteristic is that one person, the leader or teacher, does the talking and the class or group becomes an audience. It has several advantages and disadvantages.

Some of its advantages

1. It enables a person to present his ideas to a large number of people.
2. It makes possible a systematic presentation of ideas.
3. It enables a person to put out a great deal of information.
4. It enables a large number of persons to take advantage of the unique knowledge or experience of one individual at the same time.
5. It is fairly effective in dispensing information.

Some of its disadvantages

1. The members of the group retain only a small portion of the information which is put out.
2. There are few good lecturers who can hold interest and attention and teach effectively at the same time.
3. The group member does not necessarily become involved and the situation does not require him to think.
4. In keeping up with the flow of ideas the group member quickly forgets what has gone before. It is not uncommon for a person coming out of a lecture not to be able to recall the main points though he is likely to have an impression as to whether it was good or poor.
5. While the lecture is useful in presenting facts and information it has less value in developing skills, attitudes, and the kind of an understanding which is necessary to put the knowledge and facts to work in a concrete situation.

The lecture has several uses by itself and in combination with other techniques. Frequently, we use it in situations where other techniques would be more productive. The caution here is: get acquainted with other techniques; then use the lecture where it fits best.

The Symposium

The symposium consists of two or more brief talks presenting different phases of the same general topic. It is usually followed by a discussion or question period.

Advantages over lecture

1. It introduces a wider variety of experience and knowledge of the subject.
2. It creates some suspense as the audience wonders what the next person is going to say. This is particularly true if the subject is controversial.
3. The change of voices and breaking up of the time span helps to hold attention and interest.
4. In general, a symposium gets greater involvement on the part of the audience than does a lecture.

Some disadvantages of the symposium

1. Usually it is a less systematic presentation.
2. It may not cover as much ground.

The discussion period which usually follows may employ either the small or large group discussion.

Different types

1. Usually the symposium speakers are selected because of their knowledge of the subject.
2. One variation from this which works well in some situations is to divide the group into subgroups as in the small group discussion; assign the subgroups different phases of the general topic; after 10 or 15 minutes discussion in the subgroups, organize a symposium composed of the chairmen of the subgroups. After their presentation the meeting is opened up for questions and discussion from the floor.

3. Another variation is to have each symposium member give a brief presentation. Then have the group become a panel to discuss some of the live issues among themselves before drawing the total group into the situation.
4. There are two main types of presentation depending upon the nature of the topic:
   a. The symposium members may briefly present answers or opinions on the topic or question.
   b. The members may spend their time raising questions and problems which provoke interest, leaving the answers to the discussion period which follows.

The Panel

The panel, sometimes called the "round-table discussion," is usually composed of four to six persons. The members of the panel carry on a discussion of the topic among themselves, and the audience "listens in" on the discussion.

Sometimes the procedure is formal, with the speakers getting permission from the leader, or moderator, when they wish to talk. At other times it is very informal; the panel leader simply states the questions, and the members pick it up from there.

The panel question. Needless to say, the more interesting the topic the better.

The panel members. The membership of the panel may differ somewhat, depending on the question. There are three or four possible choices, any of which can be successful.

1. You may have a panel of experts.
2. You may have a panel of persons who are known to represent different positions or points of view in relation to the question. They may be experts on the topic, but they do not need to be.

3. You may have a panel representing different ages or different occupations without knowing what their point of view might be.
4. The panel may be composed of members of your own group drawn more or less at random.

Some suggestions for using the panel

1. Seat the panel members in a V-shape with the leader, or moderator, at the point of the V. They can see each other, and the audience can see them.
2. If the panel members do not know each other well, a folded card with the person's name on both sides placed on the table in front of him or her will enable both those across and those alongside to refer to the person by name. Print the name large enough so it will be easy to see.
3. The leader has five or six jobs which he must be prepared to do:
   a. Introduce the panel members.
   b. Introduce the topic.
   c. Be prepared to raise some provocative questions which would lead the panel to explore the various aspects of the topic.
   d. Keep the panel on the subject and help it move to a new question when the main points have been brought out on the one being discussed.
   e. Be prepared to lead the audience in a discussion or a question-and-answer period following the panel presentation.
   f. Be prepared to summarize or lead the panel in a summary at the end.

The advantages of the panel

1. There is always an element of suspense as to what is going to happen next.
2. Questions and answers are likely to be raised in the way that the audience thinks of them.
3. Fast moving questions and answers create interest and participant involvement.

4. A panel under a skillful leader can cover a large amount of ground.
5. Of the speaker-audience techniques the panel is perhaps the most dependable in creating interest and general audience satisfaction. Careful planning will help to assure its success.

The Forum

Like the symposium the forum is a speaker-audience technique in which there are two or more speakers who present talks on the same subject. The primary characteristic of the forum, however, is that the subject is controversial, and the speakers present the opposing sides of the question.

Each speaker presents his case to the audience for its consideration. They do not spend their time trying to tear each other's case down as in a debate. The forum is usually followed by a question-and-answer period in which the members of the audience direct their questions to the particular speaker concerned.

Advantages of the forum

1. It is an excellent way to present the various sides of a controversial issue.
2. It can fill an important role in democratic public life in presenting the various sides of a question together and leaving the listeners to make up their minds. Lecturers, or newspapers and magazines, are prone to present and argue only that side of the case which they are individually supporting.
3. In the forum the nature of the topic being controversial is usually interesting to the audience who came to hear it.
4. Like the symposium, the change of speakers and voice, tends to break up the period and to make it appear short.

Some disadvantages

1. The speakers may not spend their time on the issues which are of most concern to the audience.
2. As in the lecture, success is largely dependent upon the ability of the speakers.
3. Since the forum is basically a lecture by two or more persons, it suffers from most of the same weaknesses as the lecture.

Special Discussion Techniques

A number of techniques have been devised to stimulate participation and improve the effectiveness of group discussion. Some educators have labeled these activities as "group discussion primers. Others refer to them as "group dynamics techniques." Each device has been developed for a specific type of discussion situation. Discussion leaders who are familiar with these methods can greatly improve the effectiveness of the discussions by analyzing the situation and using effectively the supplemental method or methods best adapted to the situation.

Some of the methods aid in systematizing the discussion. Others tend to increase participation. The aim in using some of the methods is to add variety, to create suspense, or to pep up the discussion. A number of supplemental methods are described in the following paragraphs.

Co-Leaders in Group Discussion

The Great Books Foundation has popularized the use of two chairmen in group discussion and the system is used today in many discussion groups. The success of its use is dependent largely upon the qualifications of the two leaders and their abilities to assume their particular responsibilities.

There are several advantages of the co-leader plan. Leadership is important in obtaining participation in discussion. The use of two leaders speeds up the discussion and facilitates thorough coverage of the subject. Either leader may ask questions. The questions asked by one may assist in leading the discussion in the direction of the goals that have been set. One chairman may act as a check on the other to see that no important information is left out. While one leader may lead the discussion the other may be role playing

The co-leaders help each other when discussion drags. Two persons can think better than one, and two persons can do a better job of analyzing the reactions of the participants than can one person.

Usually when two leaders are used they sit together at one end of the table, if the group is seated at a table, or they sit together on one side of a circle, if the group is so situated. The two persons should share equally the responsibilities of the chairman. It is important that the two persons be able leaders and similar in ability and action. Two poorly trained leaders will not take the place of one capable leader. Special precaution should be taken to make certain that neither of the co-chairmen dominates the discussion.

The co-leader system works best in groups of less than twenty-five or thirty persons. It is not effective with larger groups.

Huddle Groups

It is difficult to get participation in discussion when large groups are involved unless the groups are for a time subdivided into smaller groups. This can be done quite easily.

When a basketball team goes into a huddle on the basketball floor they talk over their offense and defense and agree on a plan of action. The group is small. The five persons are close together and all can participate in the discussion. When a football team goes into a huddle, the quarterback does most of the talking. The group of eleven players is too large for all members to participate.

People normally form groups. Most informal discussion in the hotel lobby or after meetings is done by persons in small groups. A group of five is a normal conversation group. Physically and psychologically members in a group of five are close together.

The most common practice in using the huddle system is for the chairman to introduce the problem or issue, clarify it if necessary, and then motivate the group to want to do something about it. When they are properly motivated, he asks them to get their heads together

in huddle groups of five persons and talk over the problem. He suggests that one person be selected in each group to serve as leader and that they come up in ten to twenty minutes, depending upon the question under consideration, with the decision of the group concerning the answer to the problem.

During the huddle period the members of the group exchange experiences, share ideas, test possible solutions and finally agree on a possible solution.

When the allotted time has been used, or when it appears that there has been thorough discussion of the problem by all huddle groups, the chairman reconvenes the original group and asks the spokesman of each group to make a brief report. He or an appointed secretary summarizes the separate reports on a chalk board.

As the brief reports are made, the chairman may encourage questions from members of other groups, or he may hold up the questioning period until all huddle groups have reported.

When all groups have reported it is usually possible for the chairman to lead the discussion group in summarizing the principles that have been enumerated and in working out a plan of action. If additional information is needed, the chairman may provide it, or a study committee may be set up.

Buzz Groups

The buzz group technique is quite similar to the huddle method in that it is a device used to divide larger discussion groups into smaller groups. Two variations in the technique are used by educators and sociologists.

The most commonly used version of the technique involves dividing the original group to make up buzz groups of 12 to 15 persons.

The chairman usually introduces and clarifies the issue or problem to be discussed and motivates the group to the place that they want to discuss it. He can at this stage divide the large

group into buzz groups and assign each group a specific phase or sub-problem for discussion, or he can assign the same problem to all groups.

The method provides an excellent means of starting a meeting and getting the members of the group acquainted with each other. A chairman and secretary may be appointed in advance or selected by each group. The chairman makes certain that the members of the group become acquainted with each other. He leads the discussion and strives to get all members to participate. It is his responsibility to get the group to consider all facts and phases of the problem and to come to a decision as to the solution to the problem or issue.

The secretary makes note of the contributions made by the various members of the group and prepares a summary which is presented to the group as a whole when the buzz group discussion period has terminated. Usually the buzz sessions will require from 10 to 20 minutes depending upon the topic under consideration.

When the discussion leader reconvenes the group, he normally calls for reports from the secretaries of the various buzz groups before opening the meeting for general discussion and the raising of questions.

The use of buzz groups requires more complete change of seating arrangement than does the use of huddle groups. Each buzz group should be seated in a circle.

The second adaptation of the buzz group method involves the formation of two- or three-person discussion groups rather than groups of 10 to 15 persons. The groups may be formed without movement of people. Since only two or three persons participate in each group, there is little need for formality. One person in each group reports for the group. The method guarantees participation of all members of the group. Usually less time is allowed in using this version of buzz group method since fewer persons are involved.

Normally buzz groups of 10 to 15 persons are used when the original group numbers 40 or more people. With 30 or fewer people, small buzz groups may be used.

Phillips 66 Technique

The "Discussion 66" technique developed by J. Donald Phillips is a variation of the huddle system and is applicable to innumerable group situations in which democratic participation is desired. It may be used with small groups of 10 to 20 persons or with large groups of several hundred persons.

In using this system the large group is asked to form into smaller groups of six persons with as little movement of chairs as possible. If seats are not moveable as in an auditorium or classroom, groups of six persons can easily be formed by having the three in the front row turn and talk with the three persons directly behind them. By starting at one side of the room it is easy to divide the entire group into discussion committees in a few seconds. When persons are seated at tables, the groups may be formed by starting at one end of each table and having the first three persons on one side form a group with the three persons on the opposite side of the table.

It may be desirable when physical arrangements permit to split the group by use of another method. By estimating the total number in attendance by six, it is possible to determine the number of small groups that will be needed. The group then can be asked to count off by the number of sub-groups needed and a different area of the room can be assigned to the ones, twos, threes, etc. This process breaks up cliques, family groups and other groups which are seated together.

Each committee or sub-group is then encouraged to take a minute or two to get acquainted and to select a chairman and a secretary, as is done in using the huddle or buzz system. At the end of the "getting acquainted" and organization period, a clear and concise statement of the problem or issue for discussion should be so worded as to encourage specific single-statement answers.

The time limit for discussion is then started. "You will have just six minutes to come to an agreement as to the best answer to the problem. I will warn you when you have only one minute left." The chairman of each committee then attempts to get the viewpoint of each member of his group and they try to come to an agreement as to the best answer.

The overall discussion leader moves quietly from group to group during the discussion period and when necessary raises questions to stimulate or bring the discussion back to the subject under consideration. He leaves the group immediately, however, so that the members of the group do not direct their answers to him.

When each person in the group has expressed his opinion on the problem and it has been recorded by the secretary, the group selects the best one or two answers for the committee report.

At the end of six minutes the overall chairman reconvenes the group and calls for reports from the secretaries of the committees if there are ten or fewer groups. It is usually best to have each secretary report but one idea or answer the first time around. When all groups have responded, the chairman then can start around again, or call for volunteers. At this time questions may be raised or contributions may be presented by members of the total group.

An alternate plan may be followed in getting the reports from the committee secretaries. The secretaries may be asked to come to the front of the room, or to the stage, and participate as members of a panel.

In large groups it may be necessary to have the secretaries meet in another place where the opinions and solutions are further screened before a presentation is made to the entire audience.

The Phillips 66 technique is designed to obtain a quick mass of ideas, suggestions, attitudes or recommendations. It may serve as an interest approach when opening a meeting. It is not intended to be the meeting in its entirety. It is used to supplement other group discussion techniques.

Discussion Guides

There are two types of discussion guides. One involves people, the others deal with prepared outlines, questions or statements. Either type of guide may be used effectively in facilitating proper direction in discussion.

Persons

Individuals may serve as discussion guides. They are carefully selected because of their interest and knowledge of the subject as well as for their ability to influence people. They are usually assigned a specific responsibility in the development of the discussion. They may prepare for their assignment by reading about the subject, or they may obtain information from other persons. Each guide is given his cue in the progress of the discussion. As many as three or four individuals may serve as guides in one discussion meeting. Each guide has a specific contribution to make. The chairman or discussion leader determines not only the contribution to be made by each guide, but also the most appropriate time for him to make it.

It is important in using this system to make certain that the members of the group do not detect that the persons are serving as guides. Any artificiality detected by the group will hinder spontaneity of discussion. It is good practice for the chairman to provide ample opportunity for everyone to get into the discussion between and following the contributions of the guides.

Outlines

Some discussion leaders prepare and have duplicated an outline of the important items to be discussed. These outlines may be mailed or handed to the members of the group in advance of the meeting or may be distributed to them at the start of the discussion period. They are very effective both in stimulating discussion and in giving it the proper direction.

Leadership Team

The discussion leader is quite largely responsible for the success or failure of group discussion. As a result various devices and helps have been developed to assist him. Some of the devices that have been discussed in previous paragraphs involve the assistance of people, others involve only the use of materials.

The use of a leadership team of four persons has been found to be much more effective in group discussion than the use of one discussion leader alone. Four persons can do more things in group discussion than can one person, especially if they are trained for their specific responsibilities. A leadership team usually consists of (1) a discussion leader, (2) a process observer, (3) a recorder, and (4) one or more resource persons. The responsibilities of these persons as members of a leadership team are described in the following paragraphs.

It is not always necessary or possible to use a leadership team of four persons. The team may be composed of two persons, a discussion leader and a resource person, a discussion leader and a recorder or a discussion leader and a group observer. A three-man team may comprise a discussion leader and two assistants. A discussion leader aided by a recorder and resource person is an example of an effective three-man leadership team.

Discussion leader

The discussion leader serves as a member of the leadership team in much the same manner as he does when he has no assistants with the exception that he now has one or more persons to assist him. His responsibilities are shared. He can give full attention to his leadership responsibilities. The observer, reporter and resource person or persons assume specific functions normally assumed by the discussion leader. The leader's task then is eased providing he uses effectively the other members of the leadership team.

The discussion leader starts the meeting, or discussion, when the leadership team is used in much the same manner as when no

assistants are used. He, however, usually in the early stages of the meeting, introduces the process observer and recorder and explains their functions. He may introduce the resource person or persons at this time or he may defer the introduction until the discussion has progressed to the stage that their assistance is needed

As the discussion progresses the leader calls upon the process observer from time to time to report on the direction that the discussion is moving and the progress which is being made to reach the goals desired by the group.

The discussion leader relies upon the recorder for a careful record of the points or suggestions that have been expressed. He assists the recorder in getting summarizing statements from members of the group for the record. The leader may call upon the recorder from time to time to review the points which have been discussed. He may encourage the recorder to enter the discussion at will.

The effectiveness of the use of resource persons is quite largely in the hands of the discussion leader. It is his responsibility to see that they are carefully chosen and are involved at the most opportune time. It is his job, too, to see that they do not monopolize the discussion.

The discussion leader summarizes the meeting. He will, in doing so, call upon both the observer and recorder for their summaries He may call upon the resource persons, also, to ascertain if the conclusions drawn meet with their approval.

Process observer

The function of the process observer is to watch the group during the discussion and then report back to the group, from time to time, his ideas about what happened during the discussion. The process observer is primarily interested in the behavior and participation of the group. He usually does not participate in the discussion of subject matter. To become involved in what is being said will prevent him from giving full attention to how it is being said, and its relation to the goals that have been agreed upon. The process observer must be objective at all times, yet must not lose the feeling of membership in the group.

The observer may provide to the group several different kinds of information that will be helpful to it in improving its efficiency. A group may secure information about itself through the observer in getting answers to the following questions:

1. Have we agreed upon the goal to be reached?
2. Has the discussion been beamed at the goal or have we wandered off the course?
3. How far has the discussion progressed?
   Has the problem been diagnosed?
   Have the contributing factors been presented?
   Have we discussed all of the possible solutions?
   Are we ready to make a final decision?
4. Has the discussion been moving along satisfactorily or have we bogged down?
5. Are all members of our group participating satisfactorily?
   Have some members dominated in the discussion?
   Have we heard from only a part of our group?
6. Has the group matured to the place that all members are working together as a team?

The process observer may report and make suggestions to the group from time to time without being called upon to do so by the discussion leader, or he may wait for instructions from him. The report is informally made and should be brief. The observer may present data which he has tabulated, his observations, or expressions of his feelings. The members of the group may accept or reject the interpretations of the process observer. An effective observer, however, usually presents in his reports information that aids the discussion leader and the group in reaching the goals that they are striving to reach.

Recorder

The recorder serves as the secretary of the group. It is his responsibility to keep a record of the issues and questions that are discussed, the decisions that are reached, and the proportion of the group that seem to be in agreement.

The recorder, like the process observer, may ask questions or participate in the discussion at will, or he may wait for instructions from the discussion leader. Usually the members of the leadership team meet in advance of the meeting to agree upon procedures to be followed and responsibilities to be assumed by each member of the team.

The recorder normally reports to the group once or twice during the meeting, depending upon the length of meeting, and then summarizes the meeting at the close. He compares his notes on the discussion with the leader's recollections at the close of the meeting. He then edits or revises his notes and prepares a clearly written summary of the discussion.

Resource person or persons

Discussions sometimes bog down because no member of the group has the answers to some of the questions under consideration. A group can discuss as long as they have related information. There are times, however, when it is necessary to introduce information not available from the regular members of the group. The responsibility of providing this information is delegated to the resource person or persons when a leadership team is used.

Persons are usually selected as resource persons because of their knowledge of the subject, or their experiences in the field. They are usually persons who command respect. Often they are local persons. In some cases they are technically trained individuals who are considered specialists. Two or more resource persons may function in a discussion as members of a leadership team in much the same manner as do individuals participating in a symposium. The resource persons participate in the discussion informally. They do not make speeches.

The discussion leader may instruct the resource persons to participate in the discussion as they see fit with no introduction by the leader. In some cases the resource persons are instructed

to refrain from participation until called upon by the leader. The discussion leader should analyze carefully the probable needs of the resource persons and instruct them so that their contributions will be most effective.

Resource persons who leave the impression that they are authorities on the subject may discourage discussion. A good resource person does have the answers, but he presents them in a humble and informal manner. He encourages individuals to question him and perhaps to disagree with him.

In most cases resource persons are introduced at the start of the discussion and questions are directed to them as the needs arise. Most discussion leaders assume that there is no need to direct questions to resource persons as long as members of the group are able to provide correct answers. When incorrect answers or no answers come from the group, it is time to draw on the knowledge and experience of the resource persons.

Listening Team

There are two common uses of listening teams in group discussion. The teams may be designated listeners to take notes and question a formal lecturer or symposium participants, or they may listen,evaluate and question a group participating in informal discussion.

Each member of a good listening team keeps a record of the most important ideas presented by the speaker or speakers. He identifies the issues, the questions, problems and opinions developed by the participants.

The use made of the listening team varies with the type of meeting and the method of presentation. In group discussion, the team is usually called upon to summarize what has been said and to point out problems and concepts which are significant to the group, The team may be called upon periodically during the discussion, or may be called upon only at the close of the discussion.

A listening team may be used to summarize the important problems or concepts presented by a speaker, a panel or by a symposium. The team may make a summary at the close of the presentation, or it may question the speaker or participants before summarizing the salient points or problems which have been presented.

Listening team members must be carefully selected. It is important that they be persons who are well informed concerning the subject under consideration, yet persons who have no biases or axes to grind. They must be alert and sharp to interpret the sense of the presentation or discussion.

Normally listening team members do not enter the discussion unless the chairman calls upon them. Under some circumstances, however, the team members do participate from time to time as members of the group. They may assist the discussion leader in starting the discussion and in helping the group in deciding clearly the objectives or purposes the group wishes to accomplish.

The number of persons serving as members of a listening team varies. Most teams involve two or three persons. As many as five or six persons may be used, however, when a large group is involved and formal methods are used in presenting the subject.

Role Playing

Role playing is a comparatively new tool in adult education yet children have role-played for centuries. Probably one of the first uses of the role-playing technique in adult education was made by psychiatrists in the early 1900's to help patients recover their mental health. The process became known as a psychodrama.

The main emphasis in psychodrama is the problem or problems of a specific individual. The roles assumed by the individual are of a private nature. They should be attempted only under the guidance of a trained therapist.

The terms sociodrama and role playing are often used synonymously. A sociodrama deals with the interactions of people with other individuals or groups. Two or more persons are involved and they execute roles which deal with a problem common to the majority of the members of the group. The audience helps to interpret the roles.

Role playing defined

Role playing is the spontaneous acting out of a situation or an incident by selected members of a group to portray a human relationship problem which is common to members of the group. Roles are usually assigned to various members of the group who act out the problem situation. In most cases no script is used, however, considerable briefing and planning may precede the role-playing scene.

The usual procedure in role playing is for two to five members of the group to reproduce a situation which the group wants to study by acting out a brief scene as it would happen in real life. The other members of the group observe the performance.

The role playing scene usually lasts no longer than ten minutes. The discussion leader or the role players themselves cut the scene at the point where enough action has occurred to provide a basis for discussion. Group discussion then follows.

Advantages of role playing

Role playing has many advantages in group discussion. The most important of them are:

1. The method is new and novel.

2. It provides for more active participation by group members than do many of the discussion techniques.

3. It can bring before the group examples of human behavior and human relations which cannot easily be presented by use of traditional methods.

4. It introduces the situation to both actors and observers with a dramatic impact.

5. The group is drawn from a purely intellectual experience into an emotional experience.

6. It can arouse interest in a problem.

7. It can help to clarify a problem.

8. It provides a means of presenting to the group several possible solutions to the problem.

Dangers in role playing

Role playing is not a gadget or technique to use for fun or entertainment alone. Nor should it be used just to stimulate interest and discussion. It is a useful method when it is used thoughtfully and appropriately. A number of difficulties may be encountered when the method is used improperly.

1. Role playing is not always an appropriate method. The use of role playing can be worse than a waste of time when the situation is not suited to the use of the technique.

2. Role playing takes time. It should not be tried unless there is sufficient time for the dramatic skit and adequate group discussion following the skit. A speaker, a role-playing demonstration and a discussion in one meeting is too much.

3. Role playing can be very ineffective when it is considered as an end rather than a method of reaching a desired goal.

4. An effective role-playing scene is usually short. The method becomes ineffective if used too long. The scene must be cut at the proper time.

5. Sometimes the role play is above or below the level of understanding and maturity of the group.

6. Groups should not attempt to deal with problems that are not their own or at their level.

7. Role playing can be ineffective or even worse when incapable persons are assigned to play the various roles. The method can be no better than the persons assuming the various roles.

8. Role playing is ineffective when there is only one answer to the problem.

9. It is dangerous to use the role-playing technique when it may embarrass or "put on the spot" some member or members of the group.

The role-playing process

The success of the role-playing process is quite dependent upon the resourcefulness of the director, and his ability to help the actors to be spontaneous in assuming their respective roles. The director may be the president of the organization, the chairman of the meeting, or a member of the group who is familiar with the role-playing process.

Role playing as an educational process involves a series of steps. The director must understand each of these steps and acquaint the members of the group with them. The acting out of roles actually represents but one of the steps. The other steps prepare the participants and observers for the action, or helps them interpret it.

The steps usually associated with the role-playing process are:

1. Defining the problem.
2. Establishing a situation.
3. Casting of characters.
4. Briefing of participants.

5. Acting out of roles.
6. Cutting.
7. Discussion and analysis of the action.

Defining the problem. Participation of the group in the selection and defining of the problem is desirable. The problem should be significant and close to the people playing the roles as well as to the observers. The problem must be valid and clear. It must be sufficiently simple in order for the participants to discuss it rationally. Care should be taken to avoid problems which would uncover deep-seated issues which would distract from the purposes of the role-playing process. The observers as well as the actors must understand the problem thoroughly.

Brainstorming

A relatively new term which has been introduced in adult education methods is brainstorming. Brainstorming is a form of creative thinking in which judicial reasoning gives way to creative initiative. Participants are encouraged to list for a period of time all the ideas that come to their minds regarding some problem and are asked not to judge these ideas during the brainstorming session. Judgment of the ideas will come at a later period in which all contributions will be sorted, evaluated and perhaps later adopted.

Ideation or imagineering are two terms often used to describe brainstorming. Everyone is encouraged to "free wheel" in his imagination and to curb his thinking in no way by questioning the practicality of what he and others are suggesting as solutions to a problem. Quality of suggestions steps aside for quantity of suggestions. Freedom of expression is the rule and it is hoped that participants will feel free to combine or modify ideas contribut by others in the brainstorming session.

Brainstorming can be used in new inexperienced groups but is most effective if preceded by orientation ahead of time. Recently tl

author assisted in a brainstorming session of a small group of school superintendents in which they were asked to offer suggestions on "What I would do back home in school administration if I only dared." This was a situation in which it was hoped a long list of ideas would be presented with evaluation of the ideas to come later. The brainstorming as a technique was quite well accepted but it was impossible to get the participants to divorce themselves from practicality. "Yes, but" was in evidence as a response to almost every idea. Creativity was curbed by an evident urgency to "Let's keep our feet on the ground and not go off the deep end into the impossible." No doubt this same group of highly intelligent people could be oriented to brainstorm most effectively after some explanation and training in the technique.

Specifically, brainstorming should develop creativity. Some of our most important decisions in business and industry, as well as in the fields of literature and music, have grown out of someone's brainstorming. It should be noted that the value of brainstorming is just as important, or perhaps more so, as engaged in by individual as it is when used in groups. Those who are fortified with a whole list of creative ideas are better equipped to solve old problems. Their own mental blocks tend to be overcome as they sidestep old habits and past experiences and push into the field of creativity. Business and industry have found that, by developing brainstormers among their employees, long lists of creative ideas have been built, communication between employers and employees has been improved, morale and better understandings have been assured.

There are many ways of organizing brainstorming groups. It must be remembered that the process of brainstorming is a most important experience for the individual, perhaps more important than the end results or final action growing out of the brainstorming experience. The ground rules should be thoroughly understood by the participants. The following points should be observed:

1. Judgment of ideas must be deferred to a later time.

2. Each person should be encouraged to "free wheel" even though his ideas may be wild. Ideas can be tamed down much easier than they can be thought up in the first place.

3. "Hitchhiking" and/or riding "piggyback" on other's ideas should be encouraged, especially if the new slant on the original idea adds to creativity of the group thought process.

4. Positive, dynamic ideas only should be accepted. "Yes, but it won't work" thoughts are ruled out entirely.

5. Perhaps less than 10 percent of the ideas will probably be usable in the final analysis so this means quantity of ideas must be stressed.

6. Brainstorming is most effective in a relatively small group of people, perhaps not more than 12 to 15.

7. A time limit of not more than about one hour is most effective for groups. Mental fatigue, ridiculous responses and uneasiness on the part of participants because of an urgency to get things done, all tend to set in if brainstorm is prolonged indefinitely. Many participants will go home still engaging in brainstorming individually, all of which is very good.

8. The leader of the session should see to it that:
   a. The group members fully understand the brainstorming process.
   b. Likewise, they fully understand what the problem is that the brainstorming will revolve around.
   c. Negative or "killer phrases" be kept to a minimum.

d. Intermittent ideas be thrown in to trigger thinking so as to avoid pauses in discussion.

e. He as a leader stays in the background as much as possible.

f. The recorder is keeping a record of all ideas so that sorting and sifting can be done in the subsequent evaluation.

g. Both the immediate opening remarks and those given in the closing few minutes be carefully recorded. Authorities do not agree completely as to what intervals of time are best for the production of ideas to be most fruitful; some say at the beginning, others believe after the leader has suggested there are only so many minutes left for the discussion.

9. If possible, one might wish to contact the discussion members a day or two later to see if any other ideas have come to their minds.

10. In sifting and evaluating the ideas, those which are unusable should be eliminated, but only after an attempt has been made to identify those which can be used immediately and those which need further study.

Some of the limitations to brainstorming are that:

1. The process is time consuming, particularly where less than 10 percent of the ideas are ultimately usable.

2. Like any discussion group, the productivity to the brainstorming session is dependent upon the abilities and quality of orientation of the participants.

3. Its ultimate value might come more in what it does to participants rather than in what productivity occurs immediately in the brainstorming session, and this value cannot be measured with any degree of accuracy.

Staff Assistants:

Richard Hofstrand W. Edward Shipley

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Internal Operations (3)

Concern: Leadership Development (D)

Objectives: After instruction, the student is able to:

1. Recognize the different types of leadership.
2. Identifies or recalls methods or procedures used in leadership.
3. Assume responsibility for effective functioning of work groups.
4. Demonstrate self-reliance when working with a group.
5. Demonstrate the ability to listen and correlate instead of dominate.

Suggested Teaching Techniques:

1. Have class members identify the different roles that leaders may take in the community.
2. Use a consultant, as a resource person, to discuss the importance of community leadership.
3. Use a resource person to distinguish the requirement of different community leaders.
4. Determine a process for identifying community leaders.
5. Establish a leadership situation and decide the best type of leaders wanted and how to deal with undesirables.

Suggested audio-visual Aids:

1. A film strip on community leadership would be a good introduction to this unit.
2. The chalkboard and overhead projector will be useful in programming in areas for discussion.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. What are the three types of leaders?	Leaders seemingly are all of the same type. On an analysis of the characteristics of each the following emerge: 1. Position leader. This individual is the leader because of his social, religious, cultural, or political position. 2. Emerging leader. This individual comes from within the group to meet the problem and when the problem is met, the individual goes back into the group. 3. Manipulative leader. This individual is often dictatorial and uses diverse ways to get a job done. This individual often uses people indiscriminatly. <u>Suggested Techniques</u> A. Ask class members to identify the three types of leaders or more listed above. B. Conduct a class discussion to review and determine the characteristics of the different types of leaders.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. (Continued)	C. Carry on a role play situation and have class identify the type of leader. D. Write actual leader situations, present them to the class and have class identify the leader type.
2. What kind of leadership is within a group?	Every individual in a group is a leader in some way. The contribution of each person can be a form of leadership. The following list is part of those who make up leadership. 1. Group leader is the person to take charge of or to open and close the meeting. 2. Content leader is a resource person who gives answers to questions that fall in his particular range of knowledge. 3. Negative leader is the person who is always against what is brought up or suggested. Often this person is negative just to be opposite the majority.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
2. (Continued)	4. Question leader is always asking questions. He often will have no answer but phrases new questions for every answer. He stimulates deeper thinking on other unthought of areas. 5. Idea leader is the person with a "brainstorm" mind. No particular questions or solutions but a wealth of ideas. 6. Apathy leader takes it all in as a topic is discussed. Votes with the majority but doesn't do a thing about it. This person has the idea that everything will work out in time. <u>Suggested Techniques</u>: A. Have the class generate a list of the different types of leaders within a group. B. Have the class identify the characteristics of each type of leader in the above list and add any they think of. C. Conduct a panel discussion and identify the different people who use each leadership role.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
2. (Continued)	D. Have a small group conduct a committee meeting while the class observes. E.
3. Where is the power structure in the community?	The power structure in any community generally does not lie with the group leader. The group leader conducts the program but individuals who control votes, money or people compose the power structure. Often the power structure is an unknown to the public and could be the barber of the group leader or the head janitor in the school. In other situations it could be the priest or minister where there is a dominant church in the area. Civic organizations to which the businessmen belong often end up as the power structure and hold business men's cooperation as the stakes to get community leaders to do what they desire. <u>Suggested Techniques</u>: A. Conduct a discussion of power structure and identify if possible some of the situations listed abo

Anticipated Problems and Concerns	Guides to Solutions and Sample Teching Techniques
3. (Continued)	B. Invite a resource person to discuss power structure and how to utilize it in your organization. C. Discuss the effects of a power structure on a school system and what its effect will be on education. D.
4. How do you develop leaders?	Since leadership is action-oriented, development of leaders is by doing. Unless an individual has an opportunity to either lead or role play, he will not be as effective a leader as he would have been with the chance to lead. <u>Suggested Techniques</u>: A. Divide the class into groups, assign a topic and watch the leadership develop. Do not tell the group to pick a leader but let the leader emerge according to the group. B. Divide the class into groups, assign a leader and watch the leader handle the situation. Give the leader a topic outline and ask him to get the outline duplicated by the group without showing the group the outline.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
4. (Continued)	C.
5. What are some tec.. techniques and skills of leaders?	1. Never compete with group members. 2. Specific time for the leaders remarks should be set aside. 3. Listen to group members. 4. The leader should establish his intent. 5. Don't permit anyone to be on the defensive. 6. Avoid pinning down an individual. 7. Use every member of the group. 8. When you are the leader, give it your best. 9. Keep the meeting moving at a fast pace. 10. Keep members informed about where they are and what is expected of them. 11. Do not manipulate the group. 12. Work hard at the technique of leadership. <u>Suggested Techniques</u>: A. Through class discussion generate the above list.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
5. (Continued)	B. Divide into groups and discuss different principles of leadership and how to apply them. C. D.

Suggested Evaluation Techniques

1. Use the class as the evaluator of how a leader handled the problem and his committee.
2. Observe students in a role-playing situation to determine the effectiveness of the teaching unit.
3. Observe personal interaction within the class for cues of leadership techniques.

Speech by Mrs. Shulman
given on
February 14, 1963

As Mr. Shrader told you, I am a school board member, and I find that members of citizens committees and members of boards of education have much in common. Perhaps our greatest difference is that boards of education are action groups. We have certain responsibilities and we must take action in order to carry them out. Citizens committees are advisory groups. You make studies and recommend to the board certain action to be taken, but you never act--in that sense. However, I think our similarities are the most important. Certainly, members of citizens committees and members of boards of education should be vitally interested in the education of all children. We should serve with an open mind and a broad outlook. Members of both groups must be willing to read and listen in order to understand school matters, and all of us must wholeheartedly want excellence in education.

Persons chosen as members of citizens committees have a unique opportunity to learn and to serve. Most of us come to citizens committees, and to school boards, with very definite opinions of how schools should be run and what they should accomplish, and although we may remain opinionated as long as we serve, our opinions become educated.

I have found it to be a stimulating and challenging experience to view the many facets of education from both sides of the table and as one does this one becomes more and more aware of what administrators and boards of education are trying to accomplish. A board of education is made up of seven lay citizens; a good working citizens committee usually has 12 to 15 members. Add to that 50 or 75 people who might temporarily be working on sub-committees, depending on how large a project the committee has undertaken. When you have that many people learning and understanding the workings of a school system, this knowledge is transmitted throughout the community, and this, to my mind, is the finest contribution a citizens committee can make.

Lay Citizens Advisory committees bring together the various viewpoints that exist in a school district. Boards of education and citizens committees are not always in agreement, but this is why boards need citizens committees. For instance, a larger representation of the community might point out to the board that its educational goals are not the same as the community's. Together the two groups can determine that "what" and the "why."

What are some of the ground rules? As I see it, a new board member and a member of a citizens committee need some of

the same guidelines to become contributing and valuable members. Some of these guides that I present to you are mine; some, and I am pleased to quote them, are Sarah Lory's, a member of the Fairfax County School Board of Fairfax, Virginia.

1. Go slow in the beginning--especially if you think that you are serving to "reform" the school system. The chances are you will feel differently about a lot of things six months after you are on the committee.

2. Make a real effort to be informed. To be informed will require time, effort, and a compelling interest on your part. And along with this, do not hesitate to ask questions. Seek information from the administrative staff, the supervising staff, the board, the teachers. And at your meetings, feel free to ask anything you want to know about your school district. Some members sit back, afraid to ask about the very thing that has been perplexing them for fear the superintendent or the board representative might take offense. This is not the case. If a board and its superintendent want a citizens committee, they want your understanding and they welcome your questions.

3. Do not become discouraged if you cannot see any immediate results. The progress of a citizens committee is slow, especially at first. You need to get your feet on the ground--there is so much to learn. Some of you don't even know the purpose of a citizens committee when you are invited to serve on it. But all the while that you are adapting to your new role, you are learning, and as you learn you discuss these things with others--at the barber shop, the beauty parlor, at a coffee break or the luncheon table; over the backyard fence or at get-togethers in your homes, and without even being aware of it, you are accomplishing something great--UNDERSTANDING!

4. And finally, accept your job as a member of a citizens committee as one of responsible leadership in the community. As you broaden your knowledge and your viewpoint you can help clear away doubts, misconceptions, and misunderstandings. Like the valuable board member, you can help formulate public opinion and thereby create an active, intelligent and strong public support for the schools. Throughout the state there are committees with such success stories. This is what we all want--the public's understanding and support of the public schools.

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit 3-E

Internal Operations - Induction of New Members

Produced by the

Rurban Educational Development Laboratory

Dr. Lloyd J. Phipps - Director
357 Education Building
University of Illinois
Urbana, Illinois 61801

Staff Assistants:

W. Edward Shipley Richard Hofstrand

Resource Teaching Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Internal Operations (3)

Concerns: Induction of New Members (E)

Objectives: After instruction, the student is able to:

1. Recognize and recall the purpose of Citizens' Advisory Councils.
2. Identify principles of good public relations.
3. Identify factors that influence the way to inform public.
4. Recall and recognize the essential function of the member within the committee.

Suggested Teaching Techniques:

1. Have a member of the class give a short discussion on purpose and function of Advisory Committees.
2. Invite a resource person to speak on the different principles or parts of public relations.
3. List different types of news or information media and discuss how to give information to each.
4. Divide class into three small groups and have an induction - identification situation for discussing areas and problems that are involved in Citizens' Advisory Councils.
5. Put a topic on the board with a few facts - have class complete the composition.

Suggested Audio-Visual Aids:

1. Newspaper articles, cuts, radio announcements, tickertape - show how its put together and the key words.
2. Get a Dale Carnegie tape for listening pleasure.

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
1. What is the responsibility of the school board to the new members of the citizens' committee?	1. Mail a letter of invitation to membership with a copy of the board's resolution of the committee and a copy of the procedures in organizing and conducting the committee. 2. It is helpful for two representatives of the board to call on each new member to urge his acceptance and to answer any questions. 3. A prospective member should be given to understand that he is joining a particular committee that has: a. certain responsibilities b. certain modes of operation c. specific relationships d. certain restrictions upon its prerogatives e. advisory status only f. no action orientation. 4. They may accept or reject knowing what they are accepting or rejecting.

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
1. (Continued)	<u>Suggested Techniques</u> A. Have students read Hamlin, pages 16 and 17 and then respond in open class discussion. B. Through class discussion generate a list of desirable school board new member induction techniques. C. Have students write down their interpretation of their selection for the citizens' council. Divide into small groups and discuss. D.
2. What should be the agenda for the first meeting of the year when new members are present?	The agenda projectively should include: 1. A short talk by the board president or his representative. 2. A short talk by the superintendent. 3. A short talk by someone from outside the committee who has had experience with citizens' groups. 4. An overview discussion of the purposes of the citizens' advisory council.

63 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963-A

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
2. (Continued)	5. A summary of what was accomplished in the past year. 6. A review of the new years' projected program. <u>Suggested Techniques</u>: A. Compare and discuss opening meetings and the briefings some individuals received as inductees. B. Develop an agenda or a criteria for the first meeting. This could be similar to the one provided or one which the class feels would be the most successful. C.
3. What is the function and relationship of new members to other members of the committee?	When the induction process of new members is followed as has been described and the individual accepts the responsibility of serving as a member, he has indicated his readiness to work. The nominee should not accept the request if they do not have the time or do not have sufficient desire to do a good job. The work of citizen advisory is not without its rewards, but dedication to the cause is required.

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
3. (Continued)	<u>Suggested Techniques</u>: A. Have class members respond in writing what they think the relationship between old and new members should be. B. Conduct a class discussion on the topic of new and continuing members with associated responsibilities of each. C. Have class members suggest ways of getting to know each other because in a lot of cases the new members will not know the continuing members and vise-versa. D.
4. What are some principles of good public relations?	Principles of good public relations are: 1. Keep the public informed. 2. Keep the committee informed about public attitudes. 3. Evaluate past work and ask questions such as: a. How well did our message reach the citizens of this area? b. How well did we get our message across?

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
4. (Continued)	c. How well did we get the reaction of groups to our report? <u>Suggested Techniques</u>: A. Conduct class discussion on principles of good public relations. B. Have a volunteer panel discuss the pros and cons of public relations and its effect on the public school. C. Invite a resource person to discuss with the class the topic of public relations. D. E.
5. Who should inform the public and what are some ways of informing the public?	Informing the public is a major problem in any area or field. The citizens' advisory committee of its own volition should not inform the public. Any information for the public is sent to the appropriate representative of the school board with a request for publicity. The school board either sends out the publicity or authorizes the advisory council to take care of publicity. Until

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
5. (Continued)	information is published or authorization is given, the advisory council does not use the publicity media. Ways to inform the public are diverse. The following is only a brief list: 1. By word of mouth 2. Newspapers 3. Radio 4. Television 5. Organizations 6. Public speakers 7. Publications 8. Circulars 9. Pictures 10. Films <u>Suggested Techniques</u>: A. Conduct a class discussion relative to publicity and the advisory council. B. Invite a publicity consultant to class to discuss effective ways and means.

Anticipated problems and Concerns	Guide to Solutions and Sample Teaching Techniques
5. (Continued)	C. Have a subcommittee or a small group of classmembers present a demonstration and samples of publicity. D.
6. What is the purpose of a public relations subcommittee?	The purpose of the subcommittee is threefold: 1. To collect all the facts, figures, and important news items concerning what the survey subcommittees are doing and trying to do, and to get information to all the people in the community. 2. To provide and promote ways and means by which the general public can present ideas and opinions to the advisory committee. 3. To facilitate communications among advisory members themselves. <u>Suggested Techniques</u>: A. Discuss in class the feasibility of a public relations committee. B. In small groups formulate policy and procedures for the public relations committee. C.

Suggested Evaluation Techniques:

1. Evaluate written material to determine further approach to a specified topic.
2. Conduct an in-class survey to determine the value of different publicity media.
3. Observe the effects of negativism in relationship to publicity.
4. Write a list of things you would like to know if you were a new member then ask - do I have answers to all of these?
5. Review the interpretations of what others have written.

Unit 4-A

Activities and Operation--Conducting Surveys

Produced by the

Rurban Education Development Laboratory

Dr. Lloyd J. Phipps, Director
357 Education Building
University of Illinois
Urbana, Illinois 61801

Staff Assistants:

Richard Hofstrand W. Edward Shipley

Resource Teaching Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit. Activities and operation (4)

Concern. Conducting surveys (A)

Objectives. After instruction, the student:

1. Identifies the different types of surveys that can be administered.
2. Recalls and recognizes advantages and disadvantages of surveying.
3. Identifies instruments used in surveying.
4. Identifies factors that will influence the kind and the length of a particular survey.

Suggested Teaching Techniques

1. Using the overhead projector, with the help of the class, design a survey to fit a special need.
2. Have students generate a list of survey items, write them on the chalkboard, and discuss the advantages and disadvantages of each.
3. Have students generate a list of survey items individually and then divide into small groups to discuss and formulate the best survey items. Each group leader will present their formulation to the class for further discussion.
4. Invite a special consultant to speak to the class, on surveys and surveying.

Suggested Audio-Visual Aids

1. The chalkboard should be utilized to itemize the generated survey topics as they are presented by the class.
2. The overhead projector with acetate sheets could be used very effectively to project prepared survey forms for all the class to see at one time.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. What is a survey and what are its purposes?	A survey is a means of collecting data. There are many techniques in the use of surveys that make them more valid, more reliable, and easier to use. Suggested Techniques A. Ask the class to respond to the question, "What is a survey?" List the ideas put forth by the class on the blackboard. B. With the ideas listed on the blackboard either hand out a mimeo sheet or use an acetate sheet on the overhead projector, to give some examples of good survey forms. C. From the examples, give the class a chance to determine the best parts of the survey and why.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
	D. Discuss in class the relationship between a purpose or need and a survey instrument.
2. What is a sample?	Sampling, instead of surveying the whole population, decreases the work involved but does not reduce the reliability of a survey if certain precautions are taken to ensure that the sample is representative of the community. Use surveying when absolute numbers must be used for an answer. <u>Suggested techniques</u> A. On the chalkboard, draw an illustration of a sample and describe the characteristics of such a process. B. Have a member of the class describe samples or sampling.
3. What areas or groups are representative of our community?	1. Geographical distribution 2. Age 3. Type of business 4. Owners or tenants 5. Religion 6. Nationality 7. Education or profession

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
	8. Sex 9. Ethnic group 10. <u>Suggested Techniques</u> A. Ask class members to generate a list similar to the one provided above. B. Conduct a class discussion concerning problems of representation with these groups or areas. C. Generate a list of ways to achieve representation within the community. D. Invite a resource person or consultant to speak on involvement of factions and dissidents within the community.
4. What are the advantages and disadvantages of surveying?	A. Advantages: 1. Gives exact information 2. Establishes present situation 3. Feels the pulse of the public 4. B. Disadvantages: 1. Very time consuming for a large population 2. Requires a large number of people to conduct

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
	3. Doesn't always give the exact information required. 4. Can be subject to interpretation. <u>Suggested Techniques</u> A. The class may generate a bit of survey items. B. Conduct a discussion as to what information is required and how best to collect it by using the survey. C.
5. What are the different types of surveys?	The three types of surveys are 1. Projective survey 2. Present or existing condition survey 3. Evaluative or follow-up survey
6. What kind of surveys are there and how often should they be conducted?	Some different kinds of surveys are 1. Projected enrollment 2. Current enrollment 3. Bussing needs 4. Occupational needs 5. Occupational desires of employers 6. Occupational desires of students 7. Evaluative as to job, salary 8. Safety

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
	<u>Suggested Techniques</u> Questions 4-6 tie very closely together A. Using the generated survey items, discuss the best possible times for conducting each survey. B. Determine who establishes need for a specific survey by reviewing policy. C. Structure a survey within the group outlining process and procedures to be used. D. <u>Suggested Evaluation Techniques</u> 1. Subjectively evaluate the written work of the class member. 2. Use the class as the evaluator of individual group presentation of their best survey items. 3. Observe student in a role-playing situation to determine the effectiveness of the teaching unit.

Staff Assistants:

W. Edward Shipley Richard Hofstrand

Resource Teaching Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit. Activities and Operations (4)

Concern. Development of Objectives and Policies (B)

Objectives. To develop within citizens the ability to:

1. Identify and recall the steps in policy making.
2. Distinguish concepts, principles, and generalization in policies.
3. Identify consequences of no policy.
4. Apply policy concepts, principles, and generalizations to new situations.
5. Distinguish between policies and objectives.
6. Identify objectives for use by Citizens' Advisory Councils.
7. Recognize objectives in relation to policy in public education.

Suggested Teaching Techniques

1. By invitation have a superintendent of schools come into the class and present some policies of the secondary school system. Discuss these to get understanding as to what a policy consists of.
2. Have each class member write policy or policies about a particular topic. Present these policies to the class for review and evaluation.
3. Divide class into small groups and generate ideas that could formulate policy.
4. Divide class into two groups--generate policy items and then assign one side pro and one side con and debate the policy implication and involvement.
5. Collect a series of policies that are already in effect and review the ramifications and conditions.

Suggested Audio-Visual Aids

1. An opaque projector could be used to show class difference policies without having a copy for each student.
2. The chalkboard can be used to list class-generated items.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
1. Policy making	The American system places the responsibility for public policy upon the citizens of the country. Relevant questions are: A. What are policies? B. Who makes policies? C. What are the steps in policy making? <u>Suggested Techniques</u> A. Have class members read pages 3-9 in <u>Citizens Participation in Local Policy Making for Public Education</u>. B. Collect policy statements from different schools, civic groups, businesses, etc., for review. C. Evaluate the different policy in an effort to pick out bias and determine who developed the policy. D. Request the class to generate a list of steps in policy making comparable to those provided in Citizens Participation in Local Policy Making for Public Education. E. Have class members generate general topics to write policy for. Divide class into small groups and have each group select a chairman and a secretary.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
	The group develops the most important policies for the topic selected by the group. After 20 minutes each group will present topic and policies to class for evaluation. F.
2. What is an objective and how is it related to policy?	An objective is a determination of what accomplishment is desired. An objective is often referred to as a goal. Policy, rules, and regulations are the vehicle to achieve objectives. Objectives and policy facilitate philosophy. <u>Suggested Techniques</u> A. Have class generate a list of topics or areas for achievement. B. Have each student write objectives to a selected topic. C. Divide class into small groups and compare objectives. Carry out evaluation in the small groups. D. Conduct a class discussion on the relationship of objectives to policy and rules. E.

Anticipated Problems and Concerns	Guides to Solutions and Sample Teaching Techniques
3. How are Citizens' Advisory Committees involved in developing objectives and in policy making.	The process of education changes slightly from time to time and to keep education viable it is necessary to evaluate education. As a result of this evaluation suggested objectives and associated policies must be changed. Suggested Techniques A. Have class evaluate policies and objectives to determine the relevance for today. B. Have the class generate other areas that objectives or policies could be initiated that are not currently involved and then write on an individual basis their contributions.

Suggested Evaluation Techniques

1. Subjective observation of written assignments by class members.
2. Observe individual students as they respond to a situation.
3. Self-evaluation of students.

The Policy-Making Process

A satisfactory arrangement for policy making in a school district would have the following minimal provisions:

1. A board of education that understands its responsibility for policy making, knows the laws and regulations of its state within it can function, knows the arrangements for policy which are needed, and will provide them.
2. A widely spread understanding that policy proposals from any source will be welcomed, heard, and considered by the board.
3. Administrators who understand their responsibility for proposing policy and who have the courage and vision to provide leadership in policy revision.
4. Organization of the professional and nonprofessional staffs of the school system for proper participation in policy development.
5. A system of citizens committees to propose and review policies.
6. Consultants from within and without the district who can help to guide the policy-making process and supply needed information.

Four Steps in Policy Development

1. Codify existing written policy. Reduce to writing unwritten policy that is currently operative and include it in an organized policy statement.
2. Provide the best possible answers to the five basic policy questions.
3. Compare these answers with those the school system has been giving and with those other school systems have given.
4. Devise a new statement of policy, try it out, and revise it as revision is needed.

Basic Policy Decisions

1. How is public policy for the school system to be developed, interpreted, executed, and publicized?
2. Who are to be served by the public schools? How? How much? When? Where?
3. What public purposes are to be served by the public schools?
4. How is the public to decide whether its purposes are being realized?
5. What provisions will the public make for organization, administration, program planning, staff, funds, and facilities, so that its purposes can be realized?

APPENDIX II

Same Policy Statements

Elmer Wright, Jr.

Legal authority

Reimbursement of classes for Public Aid Recipients participating in the Adult Basic Education program and the General Education Development program shall be for the entire cost of such instruction.

Tuition charges

Tuition charges and reimbursement shall not exceed the total cost of the adult education program. The interpretation of cost of the program is that total costs shall include such items as instruction, supervision, guidance and counseling, facilities, equipment, and other items directly attributable to the operation of the adult program.

Units of credit

A unit of credit in an adult high school shall be awarded for knowledge, skill, or competency equal to that normally required to earn credit in an equivalent course in a regular accredited secondary school.

Credit and residence requirements for graduation

Graduation requirements in a north-central association adult high school shall be the same as set forth in criterions II 2.70 (criterion ICA of present criteria), except that no adult student may be graduated until a minimum of four semester credits have been earned in residence at the adult high school.

Professional staff

The regulations and requirements concerning professional staff shall be the same as set forth in criterion III (criterion IV of the present criteria) except that for noncredit courses the qualification of teachers shall be the subject to the discretion of the local governing board.

Adult basic education program

Scope of program. The Superintendent of Public Instruction shall designate programs of instruction designed to eliminate the inability for adults to read and write English and to substantially raise the general educational level of such adults with a view of making them less likely to become dependent on others, to improve their ability to benefit from occupational and homemaking training, and to otherwise increase their opportunities for more productive and profitable employment, making them better able to meet their adult responsibilities.

Teacher certification

Teacher in an adult education program must hold a valid teaching certificate issued by the State Teachers Certification Board. All teachers of adults not certified and holding a standard certificate may be issued a general certificate as authorized under Sections 21-11 of the School Code of Illinois.

Counseling and library services

Adult high schools shall provide counseling services adequate to the effective formulation of realistic individual programs of study. Library facilities and privileges shall be made available to students and to adult high schools.

APPENDIX III

Decision Making in the School Districts

H. M. Hamlin, Teacher Education, University of Illinois

There are important decisions about agricultural education in the school districts of Illinois that should be faced and not dodged or postponed. Some of the more urgent decisions are the following:

How will decisions be made? Who will share in making them? How will they share?

Will the state and national funds available for vocational education in agriculture be used for all of the purposes for which they may be used?

Will local funds be provided for those types of agricultural education which are not financed in part by state and national funds?

Is agricultural education to be considered a function of a school system or is it to be left to a department of agriculture in a high school?

What counseling about agricultural opportunities and agricultural education will be provided?

What agricultural education will be provided in the elementary school, the junior high school, the senior high school, and the adult division?

What agricultural education will be provided for groups presently unserved?

How will the needs for agricultural education of all of the people of the district be studied?

How will the program in agricultural education be evaluated and improved?

How will the time of the teachers of agriculture be used?

Is an area posthigh school institution needed? What provisions for agricultural education would be made in such an institution?

The Decision-Making Process

The basic decisions about agricultural education must be made officially by the board of education, but they must be understood and supported by the people of the district and the school staff. Boards will make better decisions and receive more support for them if administrators, teaching staffs, and citizens share in arriving at them. The requirements for making good decisions are the following:

A board of education that recognizes the importance of agricultural education and gives attention to it.

An administrator who provides leadership in developing policies and programs that provide adequately for agricultural education.

A teaching staff aware of the contributions agricultural education may make to the total school program, who are consulted when decisions about agricultural education are made, and who integrate agricultural materials appropriately into their own teaching specialties.

Teachers of agriculture who see their field broadly, report regularly to the decision makers regarding it, have constructive ideas for improving it, and are able to get cooperation in putting these ideas into effect.

A system of citizens committees advisory to the board of education including a continuing committee for agricultural education.

Receptivity to suggestions for the improvement of agricultural education from any responsible source in or out of the school district.

Unifying Decisions in Written School Policy

Each basic decision regarding agricultural education is related to every other decision about agricultural education and to the basic decisions about the school system as a whole. The separate decisions that are made must be consistent.

The best approach to decision making in agricultural education is through the development of organized, written policy for the school system. If general school policy is well conceived, few special policies for agricultural education will be needed.

The alternatives to general school policy, properly made are:

Choas

or

Decisions made, one at a time, by a board of education when the need for them is acute. Many of these decisions will be short sighted. Some decisions are likely to be in conflict with other decisions. There are sure to be large gaps in policy.

or

Decision making by administrators and individual staff members when decisions are required. This arrangement transfers policy making from lay citizens to professional educators. The decisions made are almost sure to be short-range, inconsistent decisions. They may not receive board approval if a board decides to act regarding them.

or

Decisions backed only by minority groups in the school or the community.

Well-conceived school policy, developed and supported by those who are to be affected by it, or their representatives, provides a charter for a school system under which agricultural education can be developed over a period of years without fear of whimsical reversals. Anything less is dangerous to all concerned.

Staff and Citizen Participation in Decision Making

All members of the staffs of Illinois school systems should realize the critical importance of agriculture to all of us. They are most likely to gain insights regarding agriculture and agricultural education if they share in developing policies and programs for agricultural education. In small schools the entire staff may participate; in larger systems much of the work must be done in committees.

It should not be assumed that a program of agricultural education for a school system is to be carried out by the teachers of agriculture alone. Most or all of the teachers should participate appropriately. Agriculture is related to the other school subjects; it is a subject which integrates and applies subject matter from many fields. Close cooperation between those who teach agriculture and those who teach the related subjects is imperative.

Administrators, supervisors, and counselors have important parts in developing a schoolwide program of agricultural education. All should share in decisions about it.

A continuing, schoolwide system of citizens committees is needed in every Illinois school district. A representative committee will include some citizens with agricultural interests. An affiliated committee for agricultural education is also needed, which will need help from time to time from special task forces.

The entire public should be represented in a committee or committees for agricultural education if the needs of all are to be considered. A general committee for agricultural education may have subcommittees for vocational and nonvocational education in agriculture. It is unlikely that a committee of farmers will show much interest in providing agricultural education as a part of the general education of nonfarmers.

In Conclusion

Agriculture is the economic base of hundreds of Illinois communities and it is important to every community in the state. It is likely that, after adequate consideration, any Illinois community would decide to expand its program in agricultural education, not to curtail or eliminate it.

Although some of the funds for public school education in agriculture come from state and national sources, they are only a small part of the funds needed for an adequate program and the controls which accompany them are minimal. Agricultural education in the school districts is not suffering from outside control but from failure on the part of the local people to make thoughtfully and promptly the decisions necessary if it is to be as effective as it should be.

If agricultural education is to be used effectively to improve the agriculture of a school district, a much larger part of the funds for agricultural education must be used for the education of those beyond high school age.

Agricultural education should be provided throughout a school system. In one Illinois system 22 or 23 teachers were found to be teaching something about agriculture. A large part of the students in any school system need to be counseled about opportunities and requirements in agricultural occupations.

Agriculture is far broader than farming. The fate of agricultural education in a school system should not be determined by number of percentage of farmers in its community.

The efficient and productive agriculture we now have did not arise by chance. Agricultural education in the public schools has had a critical part in its development. It must be continued, improved, extended, and adapted to change if our present abundance is to continue. If agricultural education is neglected, the effects will become apparent and repercussions from the public may be expected.

Source Teaching Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Activities and operations (4)

Concern: Evaluation techniques (C)

Objectives: After instruction, the student is able to:

1. Identify the steps in an evaluation process for public education.
2. Recall and recognize the advantages and disadvantages of evaluation techniques.
3. Recognize correct evaluative procedures for public education.
4. Judge the adequacy with which conclusions are supported by data in situations.

Suggested teaching techniques

1. Prepare some sample evaluations, hand these out to class and then conduct class discussion on the sample evaluations.
2. Have the class generate a list of several topics relevant to public education and have each class member select one and expand or develop an evaluation for that topic.
3. Divide the class into small groups, select a topic from a student-generated list and develop an evaluation.
4. Conduct a class discussion and write up a list of major points to include when developing an evaluation.
5. Invite a resource person to describe an evaluation and discuss the different aspects with the class.

Suggested audio-visual aids

1. Using the opaque projector, show the center pages of So You Want to Evaluate Your School ; an ICEC publication.

2. Use an overhead projection to present transparencies of sample evaluation. Use a grease pencil to add or delete sections.

3. Use the chalk board. Put the evaluation on the chalk board and have individuals be responsible for correcting certain areas.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. What do you evaluate?	An evaluation is a measurement to determine value or effectiveness to a specific situation. This evaluation may be broad and general or it may be detailed and specific. <u>Suggested techniques</u> A. Conduct a class discussion of what an evaluation actually is. B. Have the class generate a list of areas that evaluations could be used. C. Present and study different evaluations to see if the evaluation was valid or relevant. D. Invite a resource person to class to discuss an evaluation they were involved in that would benefit the class. E.
2. What should be expected from an evaluation?	An evaluation determines the level or point on a standard scale, a school or facility is functioning. By utilizing the evaluation information it will be possible to realign or

2. (Continued)-	set new goals to achieve the level of quality or competence desired. <u>Suggested techniques</u> A. Using a selection of objectives and policies already being used, review an evaluation that was completed in relation to these objectives and policies. Discuss with the class whether or not the evaluation is valid or determines relevant information. If the evaluation shows that the objectives are not being met then the class could suggest a number of ways to realign and correct the situation. B. Using sample evaluations, divide into small groups and discuss the different evaluations and the implications of each. C.
3. What are the steps in conducting an evaluation and how often should evaluations be conducted?	The steps in an evaluation may vary slightly but generally should fit the following format: A. Obtain consent of the board. B. Determine the goals and expectations of the school. C. Submit the tentative list to the professional staff for comment and suggestions. D. Submit the list of goals to the board of education for endorsement.

3. (Continued)

E. Determine circumstances under which the evaluation will be made.

F. Determine the instrument of evaluation.

G. Decide who is to conduct the evaluation.

H. Make the evaluation and collect the data.

I. Analyze the data.

J. Make out a written report.

K. Give data, analysis and report to the school board.

The process of evaluation is a continuous one. When a need for an evaluation is determined and the board of education agrees, then, an evaluation should be made.

Suggested techniques

A. After carrying out a discussion on the possible steps of an evaluation, generate a list similar to the one provided.

B. Use the small group's approach to get the information or steps in an evaluation.

C. Invite a resource person to come and discuss with the class the best techniques for conducting an evaluation.

D. Determine an area of evaluation and let the class members design an instrument for the evaluation.

E. Conduct a class discussion and utilize the individual information to put together a good, all inclusive instrument.

F.

4. What are some criteria for evaluations?	This topic basically will be covered in determining steps in the evaluation. If they are not covered, introduce the following ideas and information: <u>Suggested techniques</u> A. Use one example of an evaluation and have class members look for: 1. Personal bias by the designer or designers of the evaluation instrument. 2. Political implications. 3. Prejudice of any type. B. Discuss with the class if the evaluation: 1. Finds out the strengths and weaknesses of the program. 2. Evaluates the effectiveness of the program. 3. Determines ways and means of improving the program. C.
5. Can citizens do a good job of evaluating schools?	Yes, they can if they judge <u>results</u> not educational procedures and practices. Citizens should be interested in results. How to get the desired results is for the professional people to figure out. <u>Suggested techniques</u> A. Have the class review different evaluation forms to see if the evaluation is on results or procedures.

5. (Continued)	B. Review with the class the purpose of citizens' advisory committees. C. Discuss with the class the role of the citizens' advisory committees in relationship to the board of education. D.

Possible evaluation ideas

1. Subjective observation of written assignments.
2. Observation of class reaction and response to key points.

University of Illinois, Urbana-Champaign
Urbana, Illinois 61801

Staff Assistants

Richard Hofstrand W. E. Shipley

TEACHING SOURCE UNIT

Citizens' Advisory Councils in Education

Unit. Special Citizens' Advisory Councils (5)

Concern. Problems of Ad Hoc Committees and recommended operational procedures (A)

Objectives. After instruction the student should be able to:

1. Identify the need for ad hoc committees.
2. Identify the advantages and disadvantages of ad hoc committees.
3. Identify and recall operating procedures of ad hoc committees.

Possible teaching techniques

1. Have a consultant discuss techniques, activities, and recommendations for use in ad hoc committee programming.
2. Develop an ad hoc committee situation and discuss in the class the function and operating procedures.

Anticipated problems and concerns	Guides to solutions and sample teaching technique
1. What is an ad hoc committee?	An ad hoc committee is a specialized committee that deals with a particular problem area. The ad hoc committee may supplement the general continuous committee or work independently of the general committee under the direction of the Board of Education. Suggested techniques A. Through class discussion determine problem areas that could more easily be handled on an ad hoc basis. For example:

Anticipated problems and concerns	Guides to solutions and sample teaching technique
	1. Special events 2. Parent and teacher relationships 3. Curriculum planning 4. Building utilization B. After generating a list of ad hoc special areas, discuss the "how" and "why" aspects of the special problems to determine proper use of ad hoc committees. C. Have class read pages 5-8 in <u>Organization and Effective Use of Advisory Committees</u>. Discuss the relationship between the types of committees, their purposes and specific functions. D.
2. What are the operating procedures of an ad hoc committee:	The operating procedures are A. Make a detailed study of the problem. B. Determine the best plan of action to take within the community. C. Determine the opposition to the problem. D. Recommend procedure to handle opposition. E. Solicit the assistance of the power structure.

Anticipated problems and concerns	Guides to solutions and sample teaching technique
	1. Lawyers 2. Local newspapers 3. Mayor, etc. <u>Suggested techniques</u>: A. Divide the class into small groups and have each group apply the operating procedures to a problem area of their choice. B. Announce a problem to the class, then have small groups attempt to solve the problem. Have each group select and use one of the preceding five operating procedures. Each group should present alternate ways of handling the situation. C. Compare the solutions suggested by the class and evaluate each solution. D.
3. What are other functions of an ad hoc committee?	Other areas which might be referred to ad hoc committees are A. Bond issues. B. Site selection for schools. C. Revision of total curriculum. D. Establishment of internal school boundaries.

Anticipated problems and concerns	Guides to solutions and sample teaching technique
	<u>Suggested techniques</u> A. Obtain copies of different plans used to solve the various problems frequently encountered by ad hoc committees. Discuss in class. B. Divide the class into small groups, such as would be used for an ad hoc committee, and assign a specific problem for each committee to solve. C.
4. What are the advantages and disadvantages of an ad hoc committee?	Advantages of ad hoc committees 1. The committee studies and reviews only one problem and then is released. 2. Committee members may be specialists or consultants that normally would not be involved in a continuing committee. 3. The committee may utilize people who would not serve on an ongoing committee. 4. Disadvantages 1. Necessary to select new members for each problem. 2. Each new committee must be educated and oriented.

Anticipated problems and concerns	Guides to solutions and sample teaching technique
	3. Since committee is of a temporary nature, members may not become as deeply involved in school community relations as they would on a continuing basis.

Suggested evaluation techniques, the instructor may:

1. Observe the ideas generated by the class members.
2. Observe class members' functioning in an ad hoc committee exercise.
3. Request written self-evaluation from each student as to his or her accomplishments within the class.

Teaching Source Unit

CITIZENS' ADVISORY COUNCILS IN EDUCATION

Unit: Special citizens' advisory councils (5)

Concerns: Problems and practices of vocational or occupational committees (B)

Objectives: After instruction, the student will be able to:

1. Recognize problems of the vocational or occupational committees.
2. Judge the effectiveness of using vocational or occupational councils.
3. Interpret federal and state laws regarding the use of citizen committees for vocational or occupational programs.

Possible teaching techniques

1. Have students read the laws and regulations dealing directly with technical and vocational education.
2. Through class discussion determine problems and practices of vocational-occupational programs of the different geographical areas represented by the class.
3. Invite a representative of either a junior college, university or the State Department of Vocational and Technical Education to discuss problems and practices of vocational or occupational committees.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. Where do vocational-occupational councils fit into the flow chart on Citizens' Advisory Committee structure? (See Unit 1-B, Appendix I.)	Place the flow chart from Unit 1-B on an opaque projector and use for discussion purposes so that the class may understand the flow of communications and authority. Suggested techniques A. In class discussion, follow the arrows in the flow chart to indicate communications and [illegible]ty.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
1. (Continued)	B. After following the lines of communications and authority, discuss the relationship of the different organizations on the flow chart. C. Without using the proposed flow chart, have students divide into three groups and develop a flow chart showing communications and authority. D. When the three groups have completed their flow charts, utilize the class to help develop a flow chart on the blackboard using the information generated by the groups. E.
2. What areas are involved in vocational or occupational councils?	The following vocational areas should have representation on the vocational advisory council. A. Administration and Supervision of Vocational and Technical Education B. Adult Education C. Agricultural Education D. Business Education E. Engineering Technology

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
2. (Continued)	F. Health Occupations G. Home Economics Education H. Industrial Education I. Public Service Education J. Supportive Services for Vocational and Technical Education <u>Suggested techniques</u> A. Have students study pages 4-17 of <u>Organization and Effective Use of Advisory Committees</u>. B. Through class discussion, have the class generate a list of areas that could be involved in vocational or occupational councils. Compare the generated list with references listed in the literature. C.
3. What is the actual relationship between the general advisory committee and the vocational or occupational committees?	The relationship between the general advisory committee and the vocational occupational committee is based on determined needs. The general committee is responsible for the operation of the different subcommittees. The vocational or occupational committee is responsible

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
3. (Continued)	to the vocational education committee. In turn it is recommended that the vocational education committee work through the general advisory committee with the local board of education. <u>Suggested techniques</u> A. Review the flow chart that the students helped develop. B. Solicit a resource person to attend class and discuss the relationship of the general committee and the vocational or occupational committee with the class. C. Have class review pages 55-60 of <u>Organization and Effective Use of Advisory Committees</u>. D. Conduct class discussion relative to the question under consideration. E.
4. What does the federal law say concerning advisory councils in vocational education?	Public Law 90-576 90th Congress, H. R. 18366, approved October 16, 1968. H9374 National and State Advisory Councils. Quote "Sec. 104 .(a)(1) There is hereby created a National Advisory Council on Vocational Education...."

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
(4) Continued)	"(5) (6) (1) Any State which desires to receive a grant under this title for any fiscal year shall establish a State Advisory Council,...." end quote. The State of Illinois does not stipulate use of local advisory committees for vocational education but does recommend their use. To receive funds under Title I Public Law 89-10 found in the U.S. Office of Education Bulletin 46, it is necessary to have a representative advisory council of those people to be served. <u>Suggested techniques</u> A. Obtain copies of Federal and State Bills referring to advisory councils and hand out to class members for their review. B. Invite a resource person from the State Department to discuss vocational education laws and bills. C. Solicit a consultant from one of the universities to discuss vocational and technical programs.

Anticipated problems and concerns	Guides to solutions and sample teaching techniques
4. (Continued)	D. Using a panel discussion, review the different phases of citizen advisory involvement in vocational and technical education bills and programs. E.

Suggested evaluation techniques

1. Observe class members' reaction to the problems and practices of vocational or occupational committees.
2. Request students' self-evaluation of their change in attitude toward vocational and technical education.

APPENDIX I

Checklist of Activities and Services Provided by Local Industry-Education Advisory Committees[1/]

Student recruitment, selection, and placement

1. Encouraging young people (and parents) to consider vocational and technical education and training through visits to "feeder schools," speeches to civic clubs, career day meetings, etc.
2. Assisting in the screening of students applying for admission to the courses.
3. Participating in the development of aptitude tests for selection of students.
4. Providing information concerning desirable aptitudes, education, and experience background which applicants for entry level jobs should have so that educators may properly plan their student recruitment, as well as educational and training programs.
5. Arranging plant or field trip visits for students and counselors.
6. Providing vocational guidance literature to teachers, counselors, and students.
7. Assisting and participating in surveys of local industry manpower needs.
8. Assisting in the development of aptitude tests, achievement tests, and certification and licensing tests concerned with initial employment of school graduates.
9. Placing students in part-time work during school year or summer vacations.
10. Placing school graduates in jobs.

Instructional program

1. Assisting in the preparation and review of budget requests for laboratory and shop equipment and supplies.

1/ Samuel M. Burt, Industry and Vocational-Technical Education (New York: McGraw-Hill Book Company, 1967), Chapter 3.

2. Evaluating physical conditions, adequacy of equipment, and layout of laboratory or shop.
3. Assisting in the development and review of course content to assure its currency in meeting the changing skill and knowledge needs of the industry.
4. Obtaining needed school equipment and supplies on loan, as gifts, or at special prices.
5. Assisting in the establishment of standards of proficiency to be met by students.
6. Assisting in the development of school policy concerning the kinds and volume of production work or "live jobs" to be produced by students so that this work will be of instructional value in the educational program.
7. Establishing and maintaining a library of visual aids, magazines, and books concerning industry.
8. Assisting in the development of special educational and training programs conducted with funds made available by the Manpower Development and Training Act, the Economic Opportunity Act, etc.
9. Assisting in the development of evening school skill improvement and technical courses for employed plant personnel.
10. Assisting in the development of apprenticeship and on-the-job training related courses.
11. Arranging plant or field trip visits for teachers.
12. Providing sample kits of raw materials, finished products, charts, posters, etc., for exhibit and instructional purposes in classrooms and shops.
13. Assisting in the establishment of student fees and charges for courses and programs.

Teacher assistance

1. Providing funds to assist local teachers to attend regional and national meetings of industry and teacher organizations.
2. Arranging meetings of teachers to establish cooperative relationships between the schools and industry.
3. Arranging summer employment for teachers.
4. Assisting in the establishment of teacher qualification requirements.
5. Conducting clinics and in-service and out-service training programs for teachers.
6. Arranging for substitute or resource instructors from industry to assist regular teachers.
7. Subsidizing teacher salaries in such unusual cases as may be necessary to obtain qualified instructors.
8. Paying industry organization membership dues for teachers.
9. Providing awards and prizes to outstanding teachers.

Student recognition

1. Providing scholarships and other financial assistance for outstanding graduates who wish to continue their education and training.
2. Providing prizes to outstanding students.

Public relations

1. Providing speakers to address trade and civic groups concerning the industry's education and training program in the school.
2. Providing news stories concerning school programs to magazines published for specific industry groups.
3. Providing news stories concerning school programs to local news media.

4. Attending meetings in support of vocational and technical education which may be called by local and state school officials, boards, and legislative groups.
5. Participating in radio and television programs designed to "sell" vocational and technical education to the public.
6. Contributing funds to advertise specific school occupational education and training programs.
7. Advising employees and their families concerning school programs by posting the information on bulletin boards, news stories in company publications, and enclosures in pay envelopes.

PUB DATE - Apr70 119p.

DESCRIPTORS - *AGRICULTURAL EDUCATION; *CURRICULUM GUIDES; *OFF FARM AGRICULTURAL OCCUPATIONS; *UNIT PLAN; *MANAGEMENT; INSTRUCTIONAL MATERIALS; PURCHASING; AGRICULTURAL SUPPLIES; BIBLIOGRAPHIC CITATIONS; INSTRUCTIONAL AIDS

ABSTRACT - Focusing upon the knowledges and skills needed by employees in moving the product from supplier to the agricultural firm, this teaching source unit was developed by high school and junior college agriculture teachers in a course at the University of Illinois. The materials are divided into seven teaching source units containing 34 problem areas. Units are: (1) Understanding the Purchasing Function of an Agricultural Firm, (2) Determining the Kind, Quantity, and Quality of Products to Buy, (3) Identifying Potential Suppliers, (4) Understanding Methods Used by an Agricultural Firm in Making Buying Contracts, (5) Identifying Methods of Transporting and Routing Products, (6) Understanding Procedures for Receiving Products, and (7) Identifying Ways of Measuring and Reporting Purchasing Performance. Each problem area includes anticipated problems, questions and concerns, suggested teacher and class activities, and a listing of various teaching aids. A selected bibliography is appended. (GB)

FOREWORD

This publication includes teaching source units which resulted from the efforts of a group of hard-working teachers enrolled in a course (VOTEC 459) offered by the University of Illinois, Agricultural Education Division, during the summer of 1969. The course was the second of a three-part summer program designed to give high school and junior college teachers of agriculture firsthand experience in the nonfarm business sector of agriculture. In addition, the participants spent time in the classroom analyzing the experiences in terms of implications for teaching agricultural occupations. Experiences and selected references served as a basis for the development of teaching plans that may be useful in secondary or postsecondary programs of vocational education in agriculture.

The title of this publication, Moving Products Into Agricultural Firms, served as the theme for the course. The following teaching source units focus upon the knowledges and skills needed by employees in moving the product from the supplier to the agricultural firm. The materials developed by the teachers enrolled in the course were divided into seven teaching source units containing 34 problem areas. Each problem area includes anticipated problems, questions and concerns, and some suggested teacher and class activities. Professor David L. Williams and Mr. Ali Ammadi, instructors for the course, edited the materials and arranged the problem areas and units in an order which teachers may find useful.

David L. Williams

TABLE OF CONTENTS

Unit I. Understanding the Purchasing Function of an Agricultural Firm

Problem Area 1 Understanding the Importance of the Purchasing Function to an Agricultural Firm

Problem Area 2 Determining the Structural Organization of the Purchasing Function of an Agricultural Firm

Problem Area 3 Understanding the Various Segments of the Purchasing Function of an Agricultural Firm

Problem Area 4 Understanding the Purchasing Responsibilities of Employees of an Agricultural Firm

Problem Area 5 Identifying the Characteristics and Functions of the Buyer of an Agricultural Firm

References and Instructional Aids for the Unit

Unit II. Determining the Kind, Quantity, and Quality of Products an Agricultural Firm Should Buy

Problem Area 1 Determining the Kinds of Products the Agricultural Firm Should Purchase

Problem Area 2 Determining the Proper Quantity of a Product for Purchasing

Problem Area 3 Determining the Quality of Product Which an Agricultural Firm Should Purchase

Problem Area 4 Determining the Proper Time for Purchasing Additional Products for the Agricultural Firm

Unit I. Understanding the Purchasing Function of an Agricultural Firm

Problem Area 1: Understanding the Importance of the Purchasing Function to an Agricultural Firm

Problem Area 2: Determining the Structural Organization of the Purchasing Function of an Agricultural Firm

Problem Area 3: Understanding the Various Segments of the Purchasing Function of an Agricultural Firm

Problem Area 4: Understanding the Purchasing Responsibilities of Employees of an Agricultural Firm

Problem Area 5: Identifying the Characteristics and Functions of the Buyer of an Agricultural Firm

References and Instructional Aids for the Unit

PROBLEM AREA. Understanding the importance of the purchasing function to an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the meaning of the purchasing function and its objectives related to an agricultural firm.

2. Appreciate the success of the agricultural firm resulting from proper purchasing operations.

3. Understand how the purchasing function may vary among different types of agricultural firms.

STUDENT MOTIVATION.

1. What is the largest single cost involved in most agricultural firms?

2. How does the purchasing in a farm business differ from that in an agricultural firm?

3. How can the purchasing function affect the operation of an agricultural firm?

SPECIAL ARRANGEMENTS. Secure samples of management training materials used by agricultural firms in recruiting new employees.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students list major purchasing functions of an assigned firm in the area.

2. Ask students to record recent problems encountered due to improper purchasing procedures.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What do we mean by the term "purchasing"?	1. State that purchasing consists of buying materials of appropriate quality in the right quantity at the proper time at the best price from the best source of supply for resale to the customers. 2. Discuss and develop a definition of the term "purchasing" as it applies to the agricultural firm. 3. References: 1, 2.
2. What are the objectives of the purchasing function in an agricultural firm?	1. Discuss the objectives as follows: a. to maintain a constant supply of goods for resale by the firm. b. to maintain a sufficient supply of goods with a minimum investment in inventory. c. to minimize loss to the firm through duplication, waste and obsolescence of goods. d. to maintain appropriate quality standards. e. to purchase goods at the lowest possible cost consistent with the quality and service required. f. to contribute to the competitive position of the firm through proper purchasing. 2. Have students compile a list of objectives of purchasing. 3. References: 1, 2.
3. What are some of the desirable outcomes resulting from proper purchasing by the agricultural firm?	1. Give examples of ways proper purchasing affects the firm. State the following examples: a. gain in customer demand and more customer satisfaction. b. increased profit to the firm through good management dicisions. 2. Use on-job experiences and discuss new purchasing suggestions which may benefit the firm. 3. References: 1, 2, 12.
4. How could the type of an agricultural firm dictate its purchasing functions?	1. Discuss a situation where an agricultural firm might be involved in proprietorship or partnership.

4330
4431

Problems and Concerns	Guides to solutions and examples of teaching techniques
	2. Analyze the situation of a member company in a cooperative or a corporation-owned retail store.
	3. Have students report individual experiences in various types of agricultural firms and illustrate variations in the purchasing functions.
	4. References: 2, 11.

PROBLEM AREA. Determining the structural organization of the purchasing function of an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the overall structural organization of an agricultural firm.

2. Understand the detailed structural organization regarding the purchasing function.

3. Understand the relationship of the worker to those in charge of purchasing.

4. Recognize that different organizational patterns exist.

STUDENT MOTIVATION.

1. Give the example of the boss cow and the "social order" in a herd. Does such a situation or order of authority exist in an agricultural firm? Is this a structured order of authority or does it just happen?

2. Using a transparency on overhead projector show the structure of a military unit or of a college or school. Can a similar structure be drawn for an agricultural business? Would the organizational structure be the same for all businesses? Should they be the same?

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students map the structural organization of a business or the agricultural business in which they work.

2. Have students map the structural organization regarding the purchasing function.

3. For a given business, have students trace the procedure from the time the need for a product is recognized until the merchandise is placed in the stockroom or displayed for sale.

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What kinds or patterns of structural organizations exist in agricultural firms?	1. Have two or more students draw on the chalkboard the organizational pattern of the firm(s) where they work. 2. Identify each pattern with one or more of the following: a. line and staff pattern. b. functional pattern. c. line or military pattern. 3. References: 1, 5, transparencies.
2. Why is it essential that an employee understand the structural organization of his firm?	1. Discuss experiences students have had where an employee did not understand the firms organization. 2. Identify situations encountered by students in their work that required a knowledge of the structural organization of the firm. 3. References: 3, 12.
3. What is the structural organization for purchasing products for resale in the firm where you work?	1. Using the organizational charts drawn by students, identify positions in the firm responsible for purchasing. 2. List on the chalkboard why it is significant for an employee to understand who is in charge of purchasing. 3. References: 6, 7.

PROBLEM AREA. Understanding the various segments of the purchasing function of an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the significant segments of the purchasing function.

2. Understand that the purchasing function includes more than buying.

3. Understand how various activities within the firm are related to the purchasing function.

STUDENT MOTIVATION. Some of you have purchased major items, such as a car. At the time of purchase, you recognized that there was more to purchasing than telling the salesman, "I'll take it." What are some of the problems or concerns you may have had at time of purchase? Were you, in fact, a purchasing agent? Would a purchasing agent in a business have concerns similar to the ones you experienced?

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have student spend some time in the purchasing department to observe and record the activities.

2. Have student help in the receiving of material into a firm to observe or participate in the receiving, inspection and warehousing that is involved and how it relates to purchasing.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are the major segments of the purchasing function of an agricultural firm?	1. List and discuss the three major segments of the purchasing function. Identify activities included in each: a. buying. (1) preferred quality. (2) right quantity. (3) desirable price. b. distribution. (1) to proper place. (2) at given time. (3) by best method. c. disposal of excess. (1) to other contracts. (2) to other facilities. (3) to salvage. (4) return to supplier. 2. References: 12, 2, 11.
2. Why is purchasing a service function to the agricultural firm?	1. Identify through class discussion, situations where purchasing may be considered a service to the firm. These may include: a. reduced cost to firm. b. improved service to other departments. c. uniformity of policy and practice. d. improved continuity of operation. e. saving of valuable time of personnel not specialized in purchasing. f. application of uniform knowledge and skills to common problems throughout the organization. 2. References: 1, 7.
3. What problems might arise if distribution and disposal of excess is not considered by those doing the purchasing?	1. Have students discuss with management personnel in the agricultural firm where employed, the problems encountered in distributing and disposal of excess products. Identify personnel in the firm who handle these problems; are they also responsible for purchasing?

PROBLEM AREA. Understanding the purchasing responsibilities of employees of an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the duties and responsibilities of personnel involved in the purchasing function in an agricultural firm.

2. Understand the knowledges and skills required to perform an efficient job of purchasing products for an agricultural firm.

3. Recognize the advantages of consolidating purchasing in an agricultural firm.

STUDENT MOTIVATION.

1. Using the organizational chart of the agricultural firm prepared by each student, review the reasons why the firm has prepared such a chart. (Emphasize the need for division of responsibility.)

2. Ask students how they would like to become an employee in a firm in which no one would know his duties and responsibilities.

3. Discuss some of the problems which might arise in a firm which had no one responsible for purchasing goods.

SPECIAL ARRANGEMENTS.

1. Arrange with the owner, manager or an employee of an agricultural firm to discuss with the class the responsibilities for purchasing which are assigned to various members of the firm.

2. Have several members of the class report on the purchasing duties and responsibilities which they have experienced in an assigned agricultural firm.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Through discussion with members of an agricultural firm, compile a list of the duties and responsibilities for purchasing which exist in the firm.

2. In the same firm, indicate how each of these duties and responsibilities are assigned among members of the firm.

3. During the supervised experience program, compile a list of the knowledges and skills required to perform the purchasing function in the firm.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are the duties and responsibilities of personnel for purchasing in an agricultural firm?	1. Identify and list on the chalkboard the duties and responsibilities. These may include: a. deciding what and how much to purchase. b. identifying a source of supply. c. negotiating price and completing payment. d. making purchase orders. e. checking, storing and handling goods received. 2. References: 1, 2, 12.
2. What knowledges and skills are required to do a good job of purchasing for an agricultural firm?	1. Discuss the knowledges and skills required to perform the duties listed in problem one. These may include: a. knowledge of the kinds and amounts of goods demanded by the customers of the firm. b. knowledge of when customers will purchase goods. c. knowledge of the available sources of supply for desired goods. d. knowledge of new products being developed. e. ability to complete purchase orders and make payments. f. ability to keep accurate records of goods ordered, received and sold. 2. References: 1, 2.
3. What are the advantages of having one individual or department responsible for all purchasing for the agricultural firm?	1. Discuss the improvements that may result from consolidated purchasing. Advantages may include: a. better control--one set of records for all purchases. b. relieves other members of the firm of additional responsibility and thus allows them to do their primary job more efficiently. c. encourages the development of specialized knowledges and skills which may improve job of purchasing. 2. References: 2, 11.

PROBLEM AREA. Identifying the characteristics and functions of the buyer of an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Recognize and identify the desirable competencies that a good buyer should have.

2. Identify the etiquettes observed in buying agricultural products.

3. Decide what preparations and guidelines are needed for a successful career in buying.

STUDENT MOTIVATION.

1. Divide your class into two groups, then, ask students to assume that the school agricultural club is planning for a large party. What would be the desirable qualities you would like the person in charge of purchasing to possess. List these responses on a transparent sheet. Project the list on a screen and compare responses.

2. Show a set of slides of the major buying operations that take place in an agricultural firm.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Ask students to identify and list the name and titles of individuals responsible for purchasing in the agricultural firm where they are employed.

2. List the duties and activities of the individual(s) responsible for buying the main line products of the agricultural firm.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are the functions of a purchasing agent?	1. Discuss the functions as follows: a. to purchase items for resale or use in company. b. to select source of supplies. c. to determine specifications d. to price items. e. to check items received. f. to determine means of shipment. g. to receive items into the firm. h. to identify products needed by customers. 2. References: 10, pp. 27-32; 1, pp. 24-26.
2. What are the special skills needed by a good buyer?	1. Ask students to discuss buying skills they have observed during their training program. 2. List other abilities as follows: a. be able to remember details. b. be able to write good reports. c. be flexible. d. be able to analyze readily. e. be able to choose wisely. f. have factual knowledge of quality. g. know principles of mathematics. h. possess good human relations. 3. References: 10, pp. 32-44; 9, p. 53.
3. What are the etiquettes followed in buying?	1. Ask students to state the rules they feel a good buyer should follow. Write their ideas on the chalkboard. 2. List some "do's" as follows: a. be loyal, act in good faith and in best interest of your employer. b. exercise reasonable care, diligence and skill. c. follow all instructions and policies and delegate authority when necessary. d. turn over all concessions received to their employers. e. keep accurate records and render an accounting of all their business transactions. 3. List some "don'ts" as follows: a. ask for unreasonable concessions. b. pass mistakes on to the customers. c. cancel orders unfairly. d. accept personal favors from sellers.

Problems and concerns	Guides to solutions and examples of teaching techniques
4. What experiences are necessary for a buyer?	1. List necessary experiences as follows: a. have experience in retail selling. b. have experience in wholesale and retail marketing. 2. Assign readings on: a. functions of buying. b. customer demands and human relations in buying. 3. References: 10, pp. 44-48.
5. What are the keys to a successful career in buying?	1. List key characteristics as follows: a. be able to make sound decisions. b. be able to accept responsibility. c. be able to keep up-to-date. d. be able to maintain good relations. e. be able to make and keep good and accurate records. 2. References: 4, ch. 8, 10, 18.

   a. organizational structure of a military unit.
   b. organizational structure of the junior college.
   c. line or military pattern of structure.
   d. line and staff pattern of structure.
   e. functional pattern of structure.
   f. pattern of organization of a given structure within the purchasing function.

Unit II. Determining the Kind, Quantity, and Quality of Products an Agricultural Firm Should Buy

Problem Area 1: Determining the Kinds of Products the Agricultural Firm Should Purchase

Problem Area 2: Determining the Proper Quantity of a Product for Purchasing

Problem Area 3: Determining the Quality of Product Which an Agricultural Firm Should Purchase

Problem Area 4: Determining the Proper Time for Purchasing Additional Products for the Agricultural Firm

Problem Area 5: Understanding the Consequences of Miscalculations in Purchasing Products for an Agricultural Firm

Problem Area 6: Determining the Procedures for Receiving Products into the Agricultural Firm

Problem Area 7: Discovering the Importance of Standards and Specifications in Buying

References and Instructional Aids for the Unit

PROBLEM AREA. Determining the kinds of products the agricultural firm should purchase.

OBJECTIVES. To develop in each student the ability to:

1. Identify factors that should be considered in buying new types of products for an agricultural firm.

2. Understand two major lines of products in an agricultural firm.

3. Become familiar with some management skills in buying for an agricultural firm.

STUDENT MOTIVATION.

1. Have each student list ten products he would expect to find in a particular type of business. Compile the lists on the chalkboard.

2. Ask questions as follows:

   a. Why did we expect to find these particular products in the business?
   b. Could the business be successful carrying only these products?

3. Have a wholesaler describe how he goes about convincing a businessman to market a new product.

SPECIAL ARRANGEMENTS. Secure empty containers or representatives of products that a particular agricultural firm would stock and make a shelf display of the items for the classroom.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS. Ask students to survey the business where they are employed and identify a new product that they feel should be carried by the firm. Have students give reasons for their choice.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What factors determine types of products bought for an agricultural firm?	1. List the important elements of concern to customers as follows: a. price. b. quality. c. need. d. personal taste. 2. List other relevant information about the customers that the firm could utilize in serving them as follows: a. spending habits. b. financial status. c. education. d. interests. 3. Have each student interview at least two persons and develop a list of products that should be offered by a particular store in addition to the ideas already given by the class. 4. References: 3, 5, 14, and purchasing guides from commercial companies.
2. What are "short-line" and "main-line" products and how are they related?	1. Join with the class and select a business that carries hog, cattle, sheep, and pet feeds as main-line products. Develop a list of complimentary short-line products. Give examples as follows: a. livestock feeding equipment. b. health aid supplies. c. all types of pet supplies. 2. Discuss the relation between the two types of products and the importance of providing a complete line for the customer to choose from. 3. Ask each student to survey the main-line and short-line products offered in his place of employment and discuss findings with the employer. 4. References: 14 and purchasing guides from commercial companies.
3. How could one determine the availability of a new product?	1. Discuss how availability can be determined. Note the followings: a. catalogs in place of business. b. traveling salesman. c. trade news. d. trade advertising.

4345

Problems and concerns	Guides to solutions and examples of teaching techniques
	2. Ask each student to assume a new product and suggest ways to determine its availability.
4. What factors should be considered before acquiring new products?	1. Draw from the class points to be considered. List the points which should include the following: a. technical servicing. b. warehouse space. c. shelf space. d. short shelf life. e. special temperature and humidity needs. 2. Be aware that if a new product is added, its special needs also must be met. 3. References: 1, 9, 14.
5. How can we find out if a new product is profitable?	1. Stress the fact that agricultural firms are profit oriented and cannot continue without it. 2. Invite a businessman to speak to the class about determining how a product can be profitable. Have him go through an example item, give dealer cost, overhead cost and retail price and calculate the margin of profit and determine if it would be a good product to handle. 3. Draw from the class why an item may be offered for reasons other than profit. State reasons as follows: a. customer convenience. b. loss leader items. c. close out items. d. sale items. 4. References: 1, 5, 13, 14.

4346

PROBLEM AREA. Determining the proper quantity of a product for purchasing.

OBJECTIVES. To develop in each student the ability to:

1. Understand the major techniques in determining sales potential for a product in an agricultural firm.

2. Understand the relationships between customer demands and the amount of products purchased by an agricultural firm.

3. Detect the time when an adequate stock of products should be kept in an agricultural firm.

STUDENT MOTIVATION.

1. Illustrate the case of a person who is a tire dealer and has supplied all the tire needs for the customers' farm or business during the past five years and expects to continue meeting their tire needs in the future.

2. Ask questions as follows:

   a. How does the tire dealer know how many tires he will sell?
   b. Should he expect to stock these tires all at one time?

SPECIAL ARRANGEMENTS: From the shelf display developed in problem area one, select both a seasonal and nonseasonal product and determine the quantity that should be ordered for a years supply.

DIRECTED, STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students secure the sales records of a selected item for the past three years. Have students plot the past records on a graph and project sales for two years in the future.

2. Ask students to study the business where employed and determine the method of keeping sales records.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are major methods used to determine sales potentials for a product?	1. Determine with the class some techniques used to figure potential sales.. State examples as follows: a. customer surveys. b. past sales records. c. condition of the local economy. d. buying guides offered by the parent companies. 2. Emphasize the importance of utilizing past sales records. 3. References: 3, 9, 10, 14.
2. What factors should be considered in making special orders for a product?	1. Have a salesman discuss with the class the ordering policies of his company. Examine the factors as follows: a. time from ordering to delivery. b. added expense to handle special orders. c. method of transporting product to the agricultural firm. 2. Ask students to look up information concerning ordering in the wholesale catalogs available in their agricultural firms.
3. What factors should be considered in keeping extra stock of products in the firm?	1. Emphasize the need for adequate space. 2. Consider other elements as follows: a. size of the product. b. amount which must be taken at one time--i.e. minimum order. c. opportunity cost of using space for a certain product. 3. References: 1. 4. Explain the turnover rate by stating that the rate of stock turnover is an index of the velocity with which products move into or out of a store. Note that the turnover rate may be computed on a unit or a dollar basis. Give examples as follows: a. Rate of stock turnover = $\frac{\text{Number of units sold}}{\text{Average unit stock}}$ If a business sold 120 gallons of fly spray in a given year and the average stock was 30, then a rate of turnover for the spray would be 120 divided by 30 or four times turnover.

Problems and concerns	Guides to solutions and examples of teaching techniques
	b. Rate of stock turnover = $\frac{\text{Cost of goods sold}}{\text{Average cost of goods on hand}}$ If the cost of goods sold for the year is $60,000 and the average inventory at cost is $20,000, then the rate of stock turnover is $60,000 divided by $20,000 or three turns. 5. Ask students to discuss with employers the turnover rate of some fast moving items and some slow moving items and report back to class. 6. References: 1, 5. 7. Find out what effects do seasonal needs have on the quantity of a product ordered? a. Attempt to identify with the students the seasonal and nonseasonal products found in the business. b. Bring out in discussion that on a seasonal item such as seed corn the entire year's supply must be ordered ahead and be on hand when planting time arrives or lost sales will result. c. Discuss a nonseasonal item such as dog food which can be ordered periodically and in smaller quantities because demand will be fairly even throughout the year. 3. References: 1, 3, 14.

4349

PROBLEM AREA. Determining the quality of product which an agricultural firm should purchase.

OBJECTIVES. To develop in each student the ability to:

1. Identify quality differences in like products available to an agricultural firm.

2. Understand factors influencing the quality of supplies or services an agricultural firm will provide.

3. Understand how to determine the value of products carried by an agricultural firm.

STUDENT MOTIVATION.

1. Secure a wide variety of a particular item, such as a small adjustable wrench, and by using buying price, selling price, and quality show relationship between price, profit, and quality.

2. Distribute the above items to the students and encourage them to discuss good points of the wrench as well as the weaknesses of a competitor's wrench.

3. Ask questions:

   a. What is meant by quality?
   b. What is meant by tests of value?

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Choose a particular item sold by agricultural firm and compare it's value with a similar item available for sale from several sources.

2. Make a list of merchandise which is returned to the agricultural firm by customers as unsatisfactory and record reason(s) for it being so judged.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is the range of quality of product available for an agricultural firm?	1. Consider the following points in a discussion of the range of quality: a. range may be from the best materials and workmanship to serviceable and low price. b. price and quality usually go together. c. Reference: 13.
2. What quality of product should a particular agricultural firm carry?	1. Consider how the following influence the quality of product carried: a. nature of merchandise lines carried. b. characteristics of trading area. c. community need. d. competition. e. personal capabilities of the merchant. f. capital resources. 2. References: 13, 14.
3. What are some tests of value of product?	1. As per reference 15: a. is its cost proportionate to its usefulness? b. does it need all of its features? c. is there anything better for its intended use? d. do material costs, reasonable labor costs, overhead, and profit add up to its total cost? e. will another dependable supplier provide it for less? f. is anyone buying it for less?

PROBLEM AREA. Determining the proper time for purchasing additional products for the agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand and appreciate the importance of timeliness in ordering and delivery of products for the agricultural firm.

2. Plan the demand of an agricultural firm's products based upon seasonality.

STUDENT MOTIVATION.

1. Have the class identify the seasons of high demands for an agricultural firm's major products, e.g. farm machinery, fertilizers, herbicides.

2. Have a representative of a local agricultural firm discuss with the class his yearly calendar of ordering and delivery of products to the agricultural firm.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Select a main-line product and develop a yearly calendar showing the following:

   a. seasonal demand.
   b. ordering time.
   c. delivery time.
   d. when product is on inventory.

2. Develop a list which explains possible ordering policies for preseason ordering, in-season ordering, and out-of-season ordering.

4352 CCCD

Problems and concerns	Guides to solutions and examples of teaching techniques
1. How may a particular season of the year influence the demand for a particular product?	1. List the following examples: a. nature of the product, corn herbicides in spring; tractors prior to spring work. b. type of enterprise, livestock farmer would have a wider demand period compared to a grain farmer. 2. Select a product for study and identify the demand period for that product. 3. Draw a yearly calendar showing when the product should be on inventory at the agricultural firm. 4. Become familiar with supplier's policies for returning products not sold when in season. 5. Have a local, successful, agricultural firm manager discuss these and other topics in class or on a field trip to the agricultural firm.
2. What are the reasons for or advantages of following ordering schedules?	1. State that manufacturers may have different policies. 2. Give an example product such as a combine (if one company requests orders for next year's combines during October-November, it is felt that at this time the salesmen and dealers are then familiar with and can best estimate next year's demand based upon anticipated demand for new sales and sales during the current harvest season. By December this company can start production based upon current orders for next year's product). 3. List advantages of preseason ordering as opposed to in-season ordering--discounts, freight costs, timely delivery, etc.
3. What factors may govern the need for an "early order" for a product?	1. Give examples as follows: a. the product itself and its availability (supply and speed of delivery) will determine when the order should be placed. b. companies policies. c. a combine must be ordered well ahead of a bag of fertilizer to be on hand when the season starts. 2. State that expensive products will be less apt to be on hand year around. Smaller items may be carried year around on a display shelf.

4353 4325

PROBLEM AREA. Understanding the consequences of miscalculations in purchasing products for an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the probable result of not having merchandise which customers of an agricultural firm desire.

2. Understand policies of suppliers relative to the return of slow moving merchandise.

3. Understand how employees can assist in determining the quantity of products to be purchased.

STUDENT MOTIVATION.

1. Have class members role play a situation in which a customer requests merchandise which is much used but the agricultural firm cannot supply at the present time.

2. Have a parts manager explain to the class the policy of a supplier relative to return of merchandise.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Study "Parts Return List" or a similar booklet to become familiar with the policy of a supplier relative to returnable merchandise from agricultural firm.

2. Assist other employees in preparing for shipment the merchandise which the agricultural firm may return to its supplier.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What factors determine the quantity of merchandise which the agricultural firm may have on hand?	1. Identify and discuss factors influencing quantity of a product that would be maintained in the firm. The discussion should include: a. availability of storage. b. availability of capital. c. availability of labor. d. obsolescence of product. 2. References: 3, 6.
2. What products may the firm return to the supplier?	1. Have students secure and bring to class a "Parts Return List" from the business where they are employed. 2. Discuss the reasons why a supplier may or may not allow a firm to return merchandise. 3. Identify how a "Parts Return List" may be used in purchasing.
3. What can employees of a firm do to help in the procurement of the right amount of merchandise?	1. Have a student describe how a "want list" may be used in purchasing. 2. Discuss how employees can assist in anticipating needs of customers. 3. References: 4, 14.

4356

PROBLEM AREA. Determining the procedures for receiving products into the agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the importance of processing newly arrived products into the firm properly.

2. Be familiar with the record keeping functions and checking procedures appropriate to each product upon arrival at the agricultural firm.

3. Understand the routing of purchase orders, shipping statements, and invoices when used to process products into the firm--correct, incorrect, and partially correct shipments.

4. Be familiar with procedures followed in moving products to appropriate locations in the firm after checking has been accomplished.

STUDENT MOTIVATION.

1. Discuss with the class--What is receiving; where does it start and stop?

2. Have class members move a small agricultural product through the receiving stages. List from class discussion the reasons for properly checking products into the agricultural firm.

3. From class discussion, outline the steps involved in moving the product into the agricultural firm.

SPECIAL ARRANGEMENTS. Secure a small agricultural product for class members to use in class discussion. Obtain purchasing orders and invoices needed for checking.

DIRECTED, STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Ask students to develop a list of the receiving procedures used by an agricultural firm.

2. Assign each student to select a main-line product and move it through the receiving stages.

3. Ask each student to draw an outline of storage and selling areas specifying products in each area. Determine who is responsible for receiving.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Where are newly arrived products delivered at the firm?	1. State that it may differ according to the size or kind of product delivered. 2. Make a map of the facilities identifying all points of delivery and other areas of the firm.
2. Why should newly arrived products be accurately checked?	1. Discuss the need for maintaining a record of products entering or leaving the firm. 2. State reasons as follows: a. accurate inventories. b. paying suppliers. c. saving money and time.
3. What inspection and record keeping functions should be performed before putting an item into the firm's inventory?	1. Inspect the delivered product in comparison to the ordered product as to: a. number--shortage, overage. b. damage or condition. c. kind. d. quality. e. size. f. color. g. material. 2. Unveil the total picture of receiving products which includes the following activities: a. taking possession of delivered goods. b. checking condition. c. preparing records of incoming goods. d. checking contents against invoices and buying orders. e. marking goods. f. moving to storage or point of sale. 3. Emphasize that the record keeping function of receiving involves recording or substantiating the following: a. number of packages or units received. b. vendor's name. c. method of shipment and shipping firm. d. facts about receipt of goods. 4. State that a discrepancy report should be filed immediately with the supplier to prevent mistakes in payment, or to speed up reshipment

CTEA 4358

Problems and concerns	Guides to solutions and examples of teaching techniques
4. Who is usually in charge of receiving at an agricultural firm?	1. Explain that it depends on the firm. For example, some firms have a receiving clerk(s) who handles all receipts of goods; other firms will have persons designated for receiving in their departments.
5. What should be done with damaged or incorrect shipments?	1. Make sure that students understand that any damage, shortage, or overage should be identified before signing a freight receipt. 2. Emphasize the fact that one should carefully read the invoice before signing the release.
6. Where does the product go after it is officially received by the firm?	1. State the two main areas as follows: a. storage. b. selling area. 2. Ask the students to become familiar with these areas in the firms where they work.

PROBLEM AREA. Discovering the importance of standards and specifications in buying.

OBJECTIVES. To develop in each student the ability to:

1. Understand the nature of standards and specifications and the reasons for their use.

2. Illustrate the importance of standards and specifications in buying.

3. Develop a working knowledge of how standards and specifications are successfully used.

STUDENT MOTIVATION.

1. Show the class a Mepp (or any other type of quality fishing lure) and a poor quality imitation. Pass the lures around and have the students carefully examine them. Ask the students to evaluate the two lures that are quite similar in respect to appearance.

2. Tell a "Fish Story" and relate the importance of specs and standards to the comparison made.

SPECIAL ARRANGEMENTS.

1. Have a resource person who is actively using or enforcing standards discuss with the class the importance of standards to his business.

2. Have students survey a business of their choice and identify the enforcing agencies of standard and specifications for that business.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have employer provide the student with a simple buying experience. (Emphasize selection of a product or item that has specs or standards.)

2. Have the student relate the procedure he followed to purchase the item in a discussion group.

3. Have students list all of the items they come in contact with that are in some way controlled by standards and specifications for a 30-minute period during a routine day.

4360 1361

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is a purchase specification?	1. Define by saying that it describes the quality that is expected to be found in the article under consideration. 2. Reference: 8, p. 72.
2. What is the main reason for using purchase specs?	1. State that it can help one find the supply that gives greatest satisfaction. 2. Reference: 8, pp. 72-73.
3. What are the sources of specs?	1. Give examples as follows: a. federal agencies. b. standards associations. c. engineer and technical associations. d. A.S.T.M. and within the firm. 2. Reference: 8, Chapter 11.
4. Why do certain retailers set their own specifications?	1. List reasons as follows: a. there may not be supplies with merchandise that "measures up." b. inspection is easier. c. brand names are no longer the only guide to quality. d. assure more uniform quality. e. product can be easily measured against claims. f. consumers want to know more about quality. g. allows consumer to compare price and quality. 2. Reference: 12, Chapter 8.
5. How could specs facilitate better communications with customers?	1. Explain by giving the following: a. providing a common understanding between intermediates such as agents, jobbers, etc. b. reducing disputes. 2. Reference: 8, p. 72.
6. What are some examples of purchasing methods based on specs?	1. List methods as follows: a. quality. b. brand or trade names. c. use of blue prints. d. chemical or physical characteristics. e. material and methods of production. f. discription of purpose or use. g. standard specs. h. by sample. 2. Reference: 4, Chapter 3.

4360 4361

Problems and concerns	Guides to solutions and examples of teaching techniques
7. How could an employee of an agricultural firm use one of these specifications?	1. Give an example of blue prints which offer a purchase plan that fixes dimensional measurements. 2. Reference: 4, p. 35.
8. What is a standard?	1. Explain that a standard is the result of general acceptance of a specification. 2. Reference: 4, Chapter 4.
9. What is meant by "Standard Products"?	1. State that products are often stock items ensuing immediate inspection and prompt delivery--usually cheaper. 2. Reference: 4.
10. How could one establish a set of standards for a product if none existed?	1. Hire an outside testing bureau. 2. Reference: 13, Chapter 10.
11. What do testing bureaus do?	1. Give following functions: a. set standards and specs. b. aid buyer in comparing competitive offerings. c. test goods under "normal" conditions. d. conduct innovative research. e. check claims. f. cooperate with complaint departments on claims.
12. Are standards and/or specifications related to profitable buying?	1. Moderate a panel discussion. Choose five for affirmative and five for negative. Highlight both advantages and disadvantages. 2. References: 12, pp. 191-200, 302-303, 458-459, 476-477. 8, pp. 68-69, 74, 198-199, 357. 4, pp. 33-37, 45, 52-53, 308-309, 215. 13, pp. 218, 273-276, 289-290.
13. What are the characteristics of a spec sheet?	1. Show samples if available. 2. Reference: transparencies.
14. How could one convert to specification buying?	1. Give steps as follows: a. develop specifications. b. buy in volume. c. use brand names [illegible] customer security is a consideration. d. establish standards and test if feasible.

A. BOOKS

1. Davidson and Doody, Retailing Management.

B. TEACHING AIDS

1. Slide series on the various standardizing agencies.

2. Film loop on "ABC's of Buying with Specifications and Standards."

3. Resource men from agriculture businesses.

4. Transparencies from reference 12, pp. 92-95.

5. Purchasing guides from commercial companies.

Unit III. Identifying Potential Suppliers to an Agricultural Firm

Problem Area 1: Recognizing How Products Sold by an Agricultural Firm Affects the Choice of a Supplier

Problem Area 2: Recognizing How the Retailing Aids Offered by Agricultural Suppliers Affect the Choice of a Vendor

Problem Area 3: Understanding How Credit and Discount Policies of Suppliers Affect the Choice of Vendors for an Agricultural Firm

Problem Area 4: Determining How Advertising and Promotional Programs Influence Choice of the Supplier

Problem Area 5: Selecting Suppliers for an Agricultural Firm through Affiliation

Problem Area 6: Determining the Status of the Suppliers of an Agricultural Firm in Terms of Their Business Service

References and Instructional Aids for the Unit

PROBLEM AREA. Recognizing how products sold by an agricultural firm affect the choice of a supplier.

OBJECTIVES. To develop in each student the ability to:

1. Understand how a firm selects a supplier on the basis of the products it sells.

2. Understand how policies of the supplier may influence a firm's selection of a vendor.

3. Identify sources of information for establishing a list of related suppliers.

STUDENT MOTIVATION. Have the students in the class quickly establish a list of firms in the area that sell fertilizers, for example, or any other agricultural product that would have a large number of dealers in the area and ask students which one they would choose if they were farmers. Ask students to justify their choice.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students develop a list of suppliers available to the firm where they are employed.

2. Have students determine, through a discussion with employee(s) of the firm, the quality of merchandise sold by the suppliers listed in number one above as high, medium or low.

4365

Problems and concerns	Guides to solutions and examples of teaching techniques
1. How may the quality of product desired by customers influence the selection of a supplier for an agricultural firm?	1. Emphasize that merchandise may vary greatly in quality, and that customer demand for quality may also vary. 2. Discuss the following in relation to choice of a supplier: a. customers' desire for high quality merchandise that offers long service. b. customers' willingness to sacrifice quality for a reduced price. 3. Have students present their lists of suppliers as described in "structured activities" one and two. (Emphasize that the selected supplier must offer the quality of product desired by the firm's customers.) 4. References: 7b, supplier catalogs and periodic publications of the industry.
2. How may trends in agricultural industry influence selection of the supplier of a firm?	1. Discuss how the management personnel of an agricultural firm must be alert to recognize new trends of the industry. 2. Discuss how innovations in agricultural may influence choice of a supplier. Give the following examples: a. minimum tillage. (Only suppliers whose products fit into this trend should be considered.) b. riding mowers. (Suppliers that handle only push mowers should be reconsidered.) 3. Have the students consider other possible trends in agriculture that would relate to the firm where they are employed and identify types of products that should not be handled or ones that are quickly being replaced. 4. References: 7b, 8.
3. Why is it significant to select a supplier that offers merchandise that has distinct features from its competitors?	1. Discuss the importance of product differenciation using the following lead questions: a. What problems could be created by competitors advertising when the product you sell is very similar to competitors' products?

4366

Problems and concerns	Guides to solutions and examples of teaching techniques
	b. What advantages could be gained from competitors advertising? c. What problems could be created by complaints of the competitors' products? 2. Have each student select one brand of an agricultural product and present to the class its distinct features. 3. References: 7b, 8.
4. How may the method of packaging a product influence selection of a supplier?	1. Have selected students bring to class a packaged product and through class discussion, analyze the package according to the following: a. package protects product while in transit. b. package prevents pilferage and shopper damage while product is on the counter. c. package lends itself to ease of handling both in storage and on the shelf. d. package provides for efficient storage of product. e. package enhances merchandising of product. f. package includes an informative label. g. package provides convenience to the customer. 2. References: 7b, 8.
5. How may product-demand variations influence the choice of a supplier for an agricultural firm?	1. Write the following three categories of goods on the chalkboard and ask the students to provide examples of agricultural products that could be classified under each. a. high fashion goods--goods that come quickly and are replaced quickly. b. seasonally used goods--goods that are sold and used during a limited time of the year. c. staple goods--goods that are sold, stocked and used the year around. 2. Relate that vendors can be classified into five categories according to the rate of developing and handling of new products.

Problems and concerns	Guides to solutions and examples of teaching techniques
	a. Innovators. Suppliers that lead the industry in research and development of new products. b. Early adopters. Suppliers that wait to see if the product is going to be successful before they start handling it but are still well ahead of the industry. c. Early majority. Suppliers that handle a product after it is well established. d. Late majority. Suppliers that start handling a product when competition is the greatest and profits are low. e. Laggards. Suppliers that are last to develop and handle a new product. 3. Have the class identify the type of vendor they would like to have for each of the three types of goods outlined above.
6. How may the policies of an agricultural firm limit its choice of vendors?	Discuss the implications of the following policies on supplier choice: a. buy in large quantity and store. b. buy in small quantity and limit storage. c. produce own products under its own label. d. buy products with its own label from a manufacture. e. handle nationally sold brands and not a private brand.
7. How may a supplier's policies concerning its product influence a firm's selection of a vendor?	1. Have class members identify how each of the following policies may influence choice of a supplier: a. supplier endorses "fair trade laws" to establish the retail price. b. supplier limits output and will not sell all of its output to one firm. c. supplier directs merchandising of its products. 2. References: 7b, 8.

4368

Problems and concerns	Guides to solutions and examples of teaching techniques
8. What are sources of information that a firm may use in establishing a list of possible suppliers?	1. Discuss how the following may be used to identify possible suppliers: a. past experience and records. b. suppliers' salesmen and representatives. c. shopping at a competitor's store. d. visiting market centers. e. advertising in periodic publications. f. trade shows. g. trade directories of suppliers. 2. Have the students bring to class examples of sources of information that could be used by the firm to identify possible suppliers. 3. Have each student bring to class the list of characteristics the firm looks for in a supplier in relation to the products it sells. 4. References: 7b, 8, trade directories of suppliers and firms, periodic publications and catalogs of the industry.

PROBLEM AREA. Recognizing how the retailing aids offered by agricultural suppliers affect the choice of a vendor.

OBJECTIVES. To develop in each student the ability to:

1. Identify the retailing aids provided by a vendor.

2. Evaluate the retailing aids offered by a vendor.

3. Select the retailing aids that may increase the sales of an agricultural product.

STUDENT MOTIVATION. Have students enumerate the selling aids that caused them to buy a specific product. Ask students which aids they believe might cause their parents to buy. Compare what causes students versus adults to buy. Relate these to agricultural products.

SPECIAL ARRANGEMENTS.

1. Secure and show a film from a main line product supplier explaining the advantages of its franchise.

2. Plan with a supplier representative to discuss with the class retailing aids offered by his company.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students discuss with management of an agricultural firm and report back to class the value of retailing aids offered by suppliers.

2. Encourage students to ask a vendor's representative to state advantages of retailing aids to a firm provided by his company.

4370

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are some ways to evaluate the value of retailing aids offered by suppliers?	1. Have students list five sales made with the help of a selling aid while they were on the job. Consider aids used in each sale and relate to the success or failure of the business. 2. Have manager of an agriculture firm explain how selling aids provided by suppliers help his business. 3. References: 7b, selling aids from suppliers.
2. How do managers of agricultural firms recognize helpful aids of potential suppliers?	1. Discuss how the manager of a firm may use the following to identify helpful retailing aids:' a. guidance from managers of similar agricultural firms. b. observing activities of competitors handling similar products. 2. Assign each student to list five helpful retailing aids he would look for in choosing a new supplier. 3. Use as basis for class discussion "Structured Activities" number one and two.
3. How can vendor representatives aid the manager of an agricultural firm choose a supplier?	1. Discuss the value of the following: a. explaining the policies of the company. b. conducting tours so manager can see retailing aids in action. 2. Have an agricultural supplier's representative explain to the class how retailing aids help sell products. 3. Use teaching aids: a, b, c, d, e, f.

PROBLEM AREA. Understanding how credit and discount policies of suppliers affect the choice of vendors for an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Recognize credit and discount policies available through a supplier.

2. Determine which credit and discount policies are beneficial to an agricultural firm.

3. Use the credit and discount policies effectively.

4. Determine the monetary value derived from the use of credit and discount.

STUDENT MOTIVATION. Have students relate credit and discount policies they have experienced in buying personal items (car, machinery, etc.), and how their buying decisions were influenced by them.

SPECIAL ARRANGEMENTS.

1. Invite a supplier to the class to discuss credit and discount policies.

2. Develop a "bar" graph to illustrate the cost of items with and without credit and discounts.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students discuss the importance of credit and discount policies of a supplier with the manager of the firm where they work.

2. Have a team of students make a board display of the various credit and discount policies of suppliers, illustrating monetary value to the retailing firm.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What credit and discount policies are offered by suppliers of agricultural products?	1. Reference: "Structured Activity" number one. 2. List and discuss policies identified by students. Policies should include: a. floor plan required. b. cash discount. c. volume discount. d. wholesale price. e. carrying charges. 3. References: 1, 5.
2. Why should an agricultural firm use credit and discounts offered by suppliers?	1. Have students identify the affects of using credit and discounts in relation to the following: a. competition. b. greater profits. c. lower prices to consumers. d. greater service. e. new equipment. f. volume sales. 2. References: 1, 2.
3. When can an agricultural firm use credit and discounts effectively in buying?	1. Identify qualifications necessary for a firm to receive credit and discounts offered by a supplier. 2. List commitments required to receive credit and discounts. 3. Discuss penalities and restrictions. 4. References: 5, 7b.
4. How may use of credit and discounts affect the profit of an agricultural firm?	Set up hypothetical buying problems to illustrate the potential results of the following: a. using discounts. b. using credit. c. limited capital versus credit.

PROBLEM AREA. Determining how advertising and promotional programs influence choice of the supplier.

OBJECTIVES. To develop in each student the ability to:

1. Identify good promotional and advertising techniques.

2. Allow the agricultural firm to take advantage of supplier promotion.

3. Help the agricultural firm to increase profits through promotion and advertising offered by the supplier.

4. Realize if a supplier is meeting the product promotional needs of the firm.

STUDENT MOTIVATION.

1. Have students list important sales techniques.

2. Ask students what kinds of promotion is used by different suppliers in their areas.

3. Have students compile materials from each firm and supplier(s) selected.

SPECIAL ARRANGEMENTS.

1. Arrange for a field trip to observe advertising and promotional techniques used.

2. Prepare a list of suppliers with good techniques or programs in advertising and promotion.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students list methods which an agricultural firm follows in order to determine whether advertising is profitable or not.

2. Divide the class into equal groups and allow each to display an exhibit showing promotional techniques and schedules for coverage.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are some techniques used in advertising?	1. State elements that get the attention of the clientele as follows: a. color. b. pictures. c. size and type of the advertisement. d. position of the advertisement. e. local correlation. 2. Use a local resource person to tell of ways of getting attention used in his firm. 3. Take the class on a field trip and observe promotional techniques used by the supplier.
2. How does a firm make arrangements with a supplier to advertise and promote a product?	Explain the following points. a. check on availability of aids. b. determine if the cost is fair. c. determine who furnishes the personnel. d. determine the role of supplier in the choice of advertisement. e. calculate cost of materials. f. make provisions for signing contracts.
3. What factors influence use of advertisement and promotion?	1. Relate sales volume to the amount of money that could be spent on advertising. 2. Consider number of people served by the firm. 3. Find out how much money the supplier will provide for advertisement.
4. What are some strategies in marketing?	1. Have students become familiar with elements that affect the marketing process. Discuss the following: a. personal selling versus advertising. b. customer buying decisions: need, thing, source, price, and time.

Problems and concerns	Guides to solutions and examples of teaching techniques
	c. steps in the sale--AIDA Formula, (attention, interest, desire, and action).
5. What does the supplier consider a continuous process in advertising?	State procedures involved in continuous selling. Explain the following: a. group selling (advertising for desires of masses). b. imitation. c. association. d. suggestion. e. intellectual appeal. f. campaign strategy.
6. How can a firm determine if its advertising is returning money?	Ask a local supplier of an agricultural firm to come and disucss the following items with the class: a. percent of gross sales normally spent on advertising. b. increases in sales due to advertising. c. the best time to advertise.
7. How can you determine if the supplier program is meeting your needs?	1. Note that promotional techniques should increase profit through the following factors: a. increased interest. b. increased sales. c. product enthusiasm. 2. Assign students to devise a promotional technique and illustrate its usefulness. 3. Divide the class into groups and have each group select a supplier of importance or interest. Suggest: fertilizer, farm management, pesticides, or petroleum supplies. 4. Ask each group to determine the sales technique used to promote additional sales. 5. Make a list of promotional techniques used by the supplier. Identify which of the following techniques were used:

4376

Problems and concerns	Guides to solutions and examples of teaching techniques
	a. national advertising. b. seasonal promotion. c. personalizing advertisement. d. local relativeness. e. identifying with success. f. pictorials.

PROBLEM AREA. Selecting suppliers for an agricultural firm through affiliation.

OBJECTIVES. To develop in each student the ability to:

1. Understand the various types of affiliation.
2. Appreciate the complexity of business ties.
3. Develop a working knowledge of the importance of affiliation to the final selection of a supplier.

STUDENT MOTIVATION.

1. Select four students to play the various roles of:
   a. President of a large machinery company.
   b. Local dealer.
   c. High pressure Brand X salesman.
   d. Customer wanting to buy an oil filter.
2. Assume that the customer is interested in getting the most for his money. Have each of the students act out their roles as though their jobs depended on it.

SPECIAL ARRANGEMENTS.

1. Visit a small local business and a nationally affiliated business. (Example: Local feed store and F.S.)
   a. Encourage students to observe where they get their supplies.
   b. Discuss the affiliations of the two firms.
2. Have students research affiliations of some of the major industries, particularly the agriculture industries.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students identify types of affiliations at their placement station(s).
2. Have students identify the classification of the affiliation. (Example: vertical integration, conglomerate, etc.)
3. Have students identify some affiliation possibilities of the businesses where they are employed.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Why do companies integrate?	1. State possible outcomes as increased earning or capturing a competitive advantage. 2. Reference: 4, Ch. 12.
2. What is a conglomerate?	1. Explain that the means of diversification through horizontal integration is generally called a conglomerate. 2. Reference: 4, pp. 96-98.
3. What is vertical integration?	1. State that the assumption of processes related to the marketing of a product or good is referred to as integration. (e.g., A supermarket raising its own broilers.) 2. Reference: 4, Ch. 12.
4. What types of affiliations affect the selection of a supplier?	1. List major types as follows: a. holesaling by voluntary groups to meet competition of chains by independents. b. reciprocal buying--"Scratch my back, I'll scratch yours." c. preferred resources--pricing and purchase agreements on large volumes. d. franchise or agency--gives more through identification of interest with the vendor. e. commercial bribery--the acceptance of gifts, money, subsidy, etc. f. market agreements, unions, cooperatives. 2. References: 3, pp. 49-261; 6, pp. 83, 215; 4, Ch. 12.
5. Can a company be affiliated in several ways?	1. Use chart and/or resource man to discuss ties of a business. 2. Reference: organizational charts, resource persons from agricultural firms, and film loops.
6. How does affiliation effect competition?	1. Discuss how affiliation may reduce competition. 2. Reference: 4.
7. How does affiliation influence diversification and intensification?	1. Generate discussion and identify ways affiliation may influence diversification and intensification. Factors considered should include:

Problems and concerns	Guides to solutions and examples of teaching techniques
	a. competition. b. profitability. 2. Reference: 3.
8. How does affiliation affect the final selection of a supplier?	1. State that affiliation generally dictates selection of a supplier. 2. Relate that normal competition is frequently interrupted by affiliation. 3. Have students identify and relate the affiliations that the firms where they work have with major suppliers.

4379

PROBLEM AREA. Determining the status of the suppliers of an agricultural firm in terms of their business services.

OBJECTIVES. To develop in each student the ability to:

1. Examine the status of the firms' place in the market area.

2. Determine if the present suppliers are meeting the objectives of the agricultural firm.

STUDENT MOTIVATION. Ask students to give reasons why a customer of an agricultural firm might switch to a new vendor.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students identify an agricultural firm which lost some of its customers to a nearby competitor and suggest possible causes.

2. Determine, through a discussion with the manager of the firm, a product that was once an important line in the firm, and why it was cut back or discontinued, and what effect if any this had on the supplier.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What factors influence the reconsideration of the products carried by an agricultural firm?	1. State factors as follows: a. customers' taste. b. customers' mobility. c. replacement of old products by new ones. d. shift in types of product carried by the firm. 2. Have students prepare examples of products that have been either dropped from the line or have lost their importance. Discuss possible causes for the outcome. 3. References: 7a, 8.
2. What factors influence the reconsideration of the suppliers in relation to the products handled?	1. Emphasize that the quality of the product under consideration may change as a result of one or more of the following: a. management becomes poor. b. lack of quality control. c. management decision to change the quality because of more profit. 2. State other reasons as follows: a. competition. b. customer demands. c. cease in production of products. 3. References: 7a, 8.
3. What factors influence the reconsideration of suppliers of an agricultural firm in relation to the policies of that supplier?	1. Discuss the following reasons that may influence policies of a supplier: a. change in management personnel. b. change in financial condition. c. competition. d. new legislation.

Problems and concerns	Guides to solutions and examples of teaching techniques
	2. Have students discuss and analyze policy changes resulting from the following elements. a. advertising. b. credits made available to the firms where the students are receiving supervised experience. 3. References: 2, 7a, 8.

Unit IV. Understanding the Methods Used by an Agricultural Firm in Making Buying Contracts

Problem Area 1--Understanding How to Use Purchasing Orders Effectively in an Agricultural Firm

Problem Area 2--Understanding the Role of Price in the Purchasing Function of an Agricultural Firm

Problem Area 3--Considering the Importance of Transporting Agricultural Products When Making Buying Agreements

Problem Area 4--Understanding the Legal Aspects of Procuring Commodities for Agricultural Firms

Problem Area 5--Choosing the Method of Payment When Making Buying Agreements for an Agricultural Firm

Problem Area 6--Using Computers in Making Buying Decisions in an Agricultural Firm

References and Instructional Aids for the Unit

PROBLEM AREA. Understanding how to use purchasing orders effectively in an agricultural firm

OBJECTIVES. To develop in each student the ability to:

1. Realize the importance of accuracy in ordering supplies.

2. Fill out a purchase order correctly.

3. Understand the purchasing responsibilities of various personnel in an agricultural firm.

STUDENT MOTIVATION. Have students write down the items they would want on a new car and then exchange papers and let another student determine from this list if he could properly fill the order.

SPECIAL ARRANGEMENTS.

1. Secure enough copies of a common purchase order so that each class member will have one for classroom use.

2. Prepare a visual for the overhead projector that will show a properly completed purchase order.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students assist another employee in the firm prepare a purchase order.

2. Have students discuss the purchase contract on the back of a purchase order with the managers of the firm where they work.

3. Have students observe how their places of business determine when purchase orders have been filled.

4387

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is a purchase order?	1. Have several students give their definition of a "purchase order." 2. Prepare a visual in advance and explain to the class that a purchase order is an agreement that a firm makes with a vender to supply a specific product. 3. Reference: 5, p. 268.
2. What are the major parts of a purchase order and the information contained in each part?	1. Have students relate the types of information required on a purchase order. Make a list on the chalkboard. The list should include the following: a. Name and address of both buyer and seller. b. Department for which goods are purchased. c. Date of order. d. Quantity. e. Description of goods. f. Unit cost. g. Extension. h. Total cost of order. i. Credit terms. j. Discounts. k. Transportation instructions. l. Delivery date. m. Signatures. n. Special terms and agreements 2. Using a visual prepared in advance, explain that a standard order commonly has seven zones or parts as follows: a. Zone 1, special instructions. b. Zone 2, name, address, etc., of buyer. c. Zone 3, name and address of seller or vendor. d. Zone 4, shipping instructions. e. Zone 5, terms or conditions of sale. f. Zone 6, listing of materials ordered, number, description, size, unit price. g. Zone 7, signature of buyer. 3. Reference: 5, p. 271.
3. What is the proper way to fill out a purchase order?	1. Supply each student with a copy of a purchase order. Give the students a problem consisting of items to be purchased and other necessary information and have them fill out the order. 2. Use the overhead projector to show a properly completed form and have students make necessary corrections on their copies.

Problems and concerns	Guides to solutions and examples of teaching techniques
	3. Have each student identify the person who would receive each copy in the firm where employed. Distribution may be as follows: a. Vendor, original copy. b. Purchasing office file. c. Requisitioning department. d. Receiving deportment. e. Inspection department. 4. Reference: 5, pp. 268-271.
4. What are some of the terms and conditions of a purchase contract?	1. Discuss the terms and conditions of contracts experienced by students in the class. The following items should be included in the discussion: a. Quality of product. b. Discount on prompt payment. c. Drafts--not allowed. d. Cartage--no charge allowed by buyer unless otherwise agreed. e. Taxes--usually payed by seller. f. Tools--statement concerning special tools used. g. Shipment--must be made within time specified. h. Patents--seller shall hold purchaser from liability of any nature or kind for or on account of the use or sale of any patented invention. i. Price--agreement as to price to be paid or last quoted or paid if not stated. j. Compliance--this order is placed by the purchaser with the understanding, and in accepting the seller agrees, that no federal statute has been violated in the manufacture or sale of the items covered in this order. 2. Reference: 4, pp. 352-356.
5. How may an order which has been submitted to a vendor be changed?	1. Have students obtain a copy of a change order form from the business where they work. 2. Discuss the procedure for making a change in an order. Emphasize the following steps: a. Restate original order. b. Give the desired order. c. Negotiate change order with vendor. d. Inform various departments within the firm of the change. 3. Reference: 4, pp. 359-361.

Problems and concerns	Guides to solutions and examples of teaching techniques
6. Who has the power to purchase merchandise within a company?	1. Have students determine the items purchased by the various personnel within their businesses and have them find out who had to give approval for purchase of items. 2. Relate that an authorized person should sign all purchase orders and include the following: a. Printed name of the company. b. Personal signature. c. Printed title of the signer. 3. References: 4, p. 358; 14, pp. 258-260.
7. Why should a copy of all purchase orders be kept on file?	1. Discuss the importance of keeping orders on file until filled and payment has been made. 2. Reference: 4, p. 358.

PROBLEM AREA. Understanding the role of price in the purchasing function of an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the importance of prices in buying transactions.
2. Understand the basis for negotiating prices.
3. Understand the economic principles affecting prices.
4. Evaluate different types of discounts offered by suppliers.

STUDENT MOTIVATION. As an advance assignment, have the students price a specific item at several different local firms. As this problem area is introduced, discuss the reasons for differences in the prices. Have students tell where they would purchase the item and why.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Arrange for students to observe a negotiating session between the employer and one of his suppliers. Follow up in class by having students report on what happened during the discussion.
2. Have students critically evaluate two suppliers of similar products. Outline the advantages and disadvantages of purchasing the products from each supplier.

4390

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Why is pricing an important part of the purchasing function?	1. Have each student select an item that is available at the student's business and at several other businesses in the area. Have the student obtain retail prices of the item from several of the businesses and report his finding to the class. a. Discuss why these prices differ. b. Discuss how much savings would be made by "shopping around." c. Discuss possible reasons for not selecting the lowest priced item. 2. Have students discuss with the employers of the business where they work the importance of pricing in purchasing. 3. Develop a definition for the following terms and relate each to price: a. Quoted price. b. Discounts. c. Transportation allowance. 4. References: 2, chs. 15, 16; 4, chs. 1, 17.
2. When may bargaining be effective in reducing the price paid for a product?	1. Have students relate examples of bargaining they have observed in the businesses where they are employed. 2. Discuss how the following may influence the price paid by a firm for a product: a. Buying in quantities. b. Paying cash. c. Ordering during "off season." d. Negotiating for job lots, or "distress" merchandise. e. Purchasing manufacturer's clearance of broken lines, sizes, colors, or styles. f. Providing savings to manufacturer in production, delivery, or selling. 3. Discuss the ethical procedures to be followed in price negotiations. 4. References: 13, Chs. 1-3 and 9-13.

4391 best

Problems and concerns	Guides to solutions and examples of teaching techniques
3. How can a buyer for an agricultural firm determine what is a "fair price" for a product?	1. Discuss the implications of the following techniques used in determining price of an item: a. Guessing prices. b. Memorizing prices of similar products. c. Building up prices. 2. Reference: 15, Chs. 6-10.
4. What are the different types of discounts available from agricultural suppliers?	1. Assign a member of the class to lead a discussion on each of the following types of discount. Each student should use examples, preferably from his own place of employment. a. Quantity discount. b. Seasonal discount. c. Trade discount. d. Chain discount. e. Cash discount. f. Retail discount 2. References: 5, 15, Chs. 6-10.
5. What economic principles may affect the price an agricultural firm pays for a product?	1. Explain the following principles and have students cite examples of how each may affect the firm where they work: a. Purchasing cycle. b. Supply and demand. c. Competitive buying. d. Price controls. 2. References: 2, 4, Chs. 1, 17.
6. What are some special buying arrangements that may affect prices?	1. Explain in class the following buying procedures: a. Preferred selling space. b. Free display material. c. Demonstrators. d. Unit packing. e. Guarantees against price decline. f. Merchandise deals. 2. Have students check with employer to see if they use any special buying arrangements. 3. References: 13, Chs. 1-3 and 9-13; 15, Chs. 6-10.

PROBLEM AREA. Considering the importance of transporting agricultural products when making buying agreements.

OBJECTIVES. To develop in each student the ability to:

1. Cut transportation costs when ordering agricultural supplies.

2. Realize the importance of transportation to an agricultural firm.

3. Select the proper transportation method for a given product.

4. Be familiar with the terms used in the delivery of products.

STUDENT MOTIVATION.

1. Select a product such as a bag of feed or hog feeder and ask students how it got from the manufacturer to their farms. Discuss the channels of transportation.

2. Have students estimate the transportation costs of some common items and relate this to the price a company charges for transporting the items.

SPECIAL ARRANGEMENTS.

1. Secure copies of freight guides for use in the class.

2. Duplicate copies of "Methods of Transporting Goods" and "Common Transportation Terms" for distribution to students.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students determine the per unit transportation cost of two major products handled by the firm where they work.

2. Have students determine if merchandise is shipped to the businesses C.O.D., C.A.F., or C.I.F.

4393

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Why should the management of a business firm be concerned with delivery methods when buying products?	1. Have students determine the transportation cost of a major item sold by the business where they work. 2. Explain that transportation expense constitutes a major part of the total retail cost of a product. 3. Reference: 11, p. 167.
2. What are some of the common methods of transporting agricultural products from the supplier to the retail firm?	1. List on the chalkboard transportation methods observed by students in the firms where they are employed. 2. Discuss advantages and disadvantages of each of the following methods of transporting goods: (See chart at end of this problem area.) a. Parcel post. b. Express or rail. c. Truck. d. Airplane. e. Boat. f. Pipeline. 3. Reference: 11, p. 175.
3. What factors should be considered in choosing a method of transporting agricultural products from the supplier to the retail firm?	1. Discuss how each of the following may influence the choice of a method of transporting goods: a. Cost. b. Speed. c. Dependability. d. Convenience in pick up and delivery. e. Packing requirements. f. Speed required in loading and unloading. g. Size of shipment. 2. Have students identify the main factor to be considered in shipping the following items: a. Ton of feed. b. Combine. c. Repair parts for tractor at planting time. d. Soil testing supplies. e. Repair parts for English made tractor. 3. Reference: 11, p. 176.

Problems and concerns	Guides to solutions and examples of teaching techniques
4. How can freight rates for an agricultural product be estimated prior to shipment?	1. Provide a freight guide and have students calculate the transportation costs of various items. Compare the costs of different methods of transportation. 2. Reference: 11.
5. What shipping arrangements must be made by the buyer after merchandise is purchased?	1. Identify decisions that the buyer of a product must make in regard to transportation. The following should be included: a. Who is to pay for the cost of transportation? b. Who is to own the goods and be responsible for them during shipment? c. What will be the method of shipment? d. How will goods be packed? e. How will transfer of title be handled? 2. Review the terms commonly used in shipping goods. (See terms and definitions at end of this problem area.) 3. Reference: 11, p. 177.
6. What are the differences between a straight bill of lading and an order bill of lading?	1. Explain that when payment for the goods is not involved, either because they have been prepaid or purchased on long-term credit, a straight bill of lading is used. This directs the transportation company to deliver the goods only to the consignee and no one else, for the bill is nonnegotiable. An order bill of lading is negotiable, for it directs the shipping company to deliver the goods to the consignee, or anyone the latter may designate, who presents the original bill to the freight agent at destination, properly endorsed just as a check might be endorsed. 2. Show the class examples of the different kinds of bills of lading. 3. Reference: 11, p. 177.

Methods of Transporting Goods

	Truck	Railroad	Airplane
Rates	Lowest rates on short haul	Lowest on long haul	Highest rates
Speed	Faster for short distance than railroad	Faster for long haul than truck	Fastest of all for long distance
Schedule	No regular schedule but handles emergency or rush hour shipments	Definite regularly scheduled	Frequent service, but dependent on weather
Service	Door to door and flexible	Rail service to factory dock	Usually far from commercial centers
Packing	Packing and crating costs reduced	Requires packing but carload lost move without changing cars	Less expense in packing, but must be removed from plane before delivery
Expense	Less handling, therefore less loss or damage	Better terminal facilities, cars need not be unloaded at once	Quick deliveries, cuts down on inventory and warehouse costs

Common Transportation Terms

1. Consignee. Receiver of goods.

2. Consignor. Shipper of goods.

3. F.O.B. shipping point. The shipper assumes the responsibility for the goods until they reach the carrier's shipping point. At this point the title passes to the buyer and he pays the rest of the charges.

4. F.O.B. city of destination. The shipper pays all transportation charges to the city in which the buyer is located. The buyer pays the cartage from the carrier's freight station to his store.

5. F.O.B. store. The shipper pays all transportation charges. Title passes when the shipment arrives at the buyer's place of business.

6. C.A.F. The quoted purchase price includes the cost of the merchandise and the freight to the destination.

7. C.I.F. The quoted price includes the merchandise cost, insurance covering the shipment en route as well as the freight charges.

8. C.O.D. The shipping company collects the cost of merchandise for the shipper as well as the delivery charges from the buyer.

9. Demurrage. When a consignee takes more than his designated time to get a car unloaded, he is charged a small fee called demurrage.

PROBLEM AREA. Understanding the legal aspects of procuring commodities for agricultural firms.

OBJECTIVES. To develop in each student the ability to:

1. Understand the characteristics and procedures of legal contracts.

2. Appreciate the ethical procedures of procurement.

3. Understand the implications of purchasing contracts which may be of interest to an agricultural firm.

STUDENT MOTIVATION. Read a brief case history involving a purchase contract dispute (such as the many cited in reference 9 or one selected from a local, current newspaper). Try to get students to see how this kind of problem can affect them or the agricultural business where they are gaining experience.

SPECIAL ARRANGEMENTS.

1. Save current newspaper reports which could serve as points of discussion for the class.

2. Arrange for an agricultural businessman to come and talk to the class.

DIRECTED, STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have students secure copies of buying contracts used by the agricultural firmswhere employed, become familiar with and be able to explain the statements included and their implications.

2. Have students become familiar with the legal responsibilities of both buyers and sellers by interviewing at least two people involved with these two aspects of the business.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are the characteristics of a legal contract?	1. Explain that a contract comes into existence when two or more parties make an agreement that is enforceable at law. 2. State elements of a legal contract as follows: a. Parties must be competent--know what they are doing, of proper age, and mentally capable. b. Mutual agreement--agreement on the rights and obligations of each party. c. Subject matter must be legal--agreed upon activity must not violate any existing laws. d. Considerations must be given--each party must promise either to give up something of value which he has a legal right to keep, or take on an obligation he is not legally required to assume. e. The contract must be in the proper form--it must be in writing and in a form prescribed by law.
2. What is considered ethical practices in buying?	1. Explain that merchandise could be returned if damaged, faculty, not according to specifications, or not delivered on the time agreed upon. 2. Emphasize that a contract cannot ethically be changed due to change of price or style. 3. Reference: 4, pp. 289-290.
3. What are the types of contracts?	1. List the types on the chalkboard as follows: a. Oral. b. Written. 2. Discuss aspects of written contracts as follows: a. No more valid than oral unless a written contract is required by law. b. Preferred if the transaction is important or complicated. c. Ensures greater certainty and reduces future misunderstanding.

CCCP

Problems and concerns	Guides to solutions and examples of teaching techniques
4. What are some common terminologies associated with contracts?	1. Write the following terms on chalkboard and explain each. a. Express. The terms of agreement should be explicitly stated and agreed upon by both parties. b. Implied. Terms must be inferred from: (1) The acts or conduct of the parties. (2) The customs of a particular business. (3) Conditions or circumstances rather than from oral or written words. c. Executed. A contact becomes executed when both parties have complied with all the terms of the agreement and nothing remains to be done. d. Executory. The terms of the agreement that are to be put into effect. e. Formal. A written contract under seal. f. Simple. All other contracts not written under seal.
5. What can an agricultural firm expect from vendor warranties?	1. Give following conditions related to warranties: a. Warranties can be enforced in court if sufficiently specific. b. Implied warranties enforceable in some instances. Examples: (1) Articles sold for food are to be fit for human consumption. (2) An article sold as designed for a certain purpose--an electric heater must actually heat; how much or how long are not guaranteed. 2. Refer to elements that constitute fraud and deceit. 3. Reference: 5.
6. When does title to merchandise pass from seller to buyer?	1. State situations as follows: a. F.O.B. vendors place of business. Title passes to buyer as soon as vendor turns merchandise over to the carrier. b. F.O.B. buyers place of business. Title passes when buyer receives merchandise. 2. Clarify the position of the carrier involved in these two situations in case of damage in shipment.

PROBLEM AREA. Choosing the method of payment when making buying agreements for an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Realize the importance of the method of payment in business contracts.

2. Identify various payment procedures.

3. Make sound purchasing decisions for optimum profits.

STUDENT MOTIVATION. Illustrate an example to the class where a firm may increase its profit by choosing an appropriate method of payment.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS. Ask each student to discuss with the vendor representative of the firm where he is employed and determine why discounts are or are not given to the customers.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Why are methods of payment important?	1. Discuss the following factors related to payments: a. Available capital. b. Turnover rate of the product. c. Size of the firm.
2. What are the major types of payment agreements?	1. List the major types of payment on the chalkboard. Discuss the terms associated with each. a. Cash discounts. (1) Net ten days. Ten days from date of invoice. (2) E.O.M. Net due at "end of month." (3) Net 30-60 extra. Called "extra dating" payment due 30 days after an extra 60 days has expired. (4) C.O.D. Collect on delivery. (5) R.O.G. Terms of dating begin on date of "receipt of goods" by the buyer. (6) ½/10, n/30. Buyer may take a one-half percent cash discount if paid in 10 days or the net is due in 30 days. (7) E.O.E. or E.O.E. (errors and omissions excepted). If seller's bookkeeper made an error, the correct amount is nevertheless due. b. Trade discounts. Deductions from the list price before an invoice is written. (1) These are allowed as quantity discounts or to adjust prices shown in infrequently published catalogs. (a) Noncumulative. (b) Patronage or cumulative. c. Chain discounts. Two or more trade discounts. For example: a 10% + 5% - $100 purchase less 10% = $90, less 5% = $85.50. d. Advanced dating. Terms of payment figured from an advanced dating (Example: January 1 invoice, March 1 dating). Season dating is a common form, determined by the date of opening of seasonal sales (Example: Christmas toys shipped in July; terms 2/10/30, December 1 or two percent discount if paid in 10 days or the net is due in 30 days).

Problems and concerns	Guides to solutions and examples of teaching techniques
	e. Anticipation. An allowance of an additional cash discount if the bill is paid prior to the expiration date of the cash discount period. (1) Typical allowance is at the rate of six percent per annum. (2) "2/10-60 days extra"--$500 invoice, dated September 1, payment made September 10 or 60 days ahead of due date-- Invoice $500.00 Less two percent 10.00 $490.00 Less one percent (i.e., one-sixth of six percent) 4.90 Net amount $485.10
3. How could the management of an agricultural firm choose a method of payment that would optimize profit?	1. Have students illustrate some example problems of the savings that a firm could realize by taking advantage of discounts or other terms. 2. Discuss the advantages of delayed payment. a. In a firm where capital is tight--using money for other purposes until payment is due on longer terms. b. Delaying payment until some or all of merchandise is sold--particularly seasonal items.
4. What are the legal limitations to the amount of discounting given by a vendor?	1. Review the following aspects of Robinson-Patman Act. a. A quantity discount must not exceed the seller's savings in production and distribution costs made possible by the quantity involved. b. Few firms really know their cost-quantity relationships. c. The seller is expected to be able to offer factual evidence to justify discount allowances. d. Promotional allowances also governed by this act--such as allowances for local advertising or for preferred window space. (Example: This act prohibits any payment to a customer, in consideration for any services, unless such payment is made available on proportionally equal terms to all customers competing in the distribution of such products.)

4403

PROBLEM AREA. Using computers in making buying decisions in an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand how computers may be used for purchasing in agricultural firms.
2. Realize the values and limitations of using computers in an agricultural firm.
3. Identify general steps followed in purchasing when using a computer.
4. Identify possible sources of computer services.

STUDENT MOTIVATION. Take the class on a field trip to an agricultural firm without a computer and have the person responsible for purchasing explain the purchasing procedures as to the following: staff involved, time involved, cost of an order, forms to be completed, etc. Follow this with a field trip to a firm that uses a computer in purchasing. Have the person responsible for purchasing explain the purchasing procedures as to the following: staff involved, time involved, cost of an order, forms to be completed, etc. Be sure to indicate the shortcuts that a computer can complete and the information that it can provide to the firm from memory. Encourage students to ask questions.

SPECIAL ARRANGEMENTS.

1. Survey the agricultural firms in your community and determine if they use computers in any way in their purchasing procedures. Identify the companies that use computers or have a computer in their facilities.
2. Prepare for a field trip to an agricultural firm in advance and discuss the points that should be covered as indicated under the motivation area above.
3. Select and order in advance 16 mm films that may be used as an instructional aid.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Ask students to collect and understand the use of all forms used for purchasing in their agricultural firm. Identify the ones used on a computer.
2. Ask students to identify the individuals responsible for operating the computer and determine their functions and importance to the firm.

65 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

Problems and concerns	Guides to solutions and examples of teaching techniques
1. How can computers be utilized in purchasing activities?	1. List following functions on the chalkboard: a. Determining requisition needs. b. Preparing orders. c. Giving daily follow-up reports. d. Writing invoice checks. e. Determining accounts payable. f. Analyzing and evaluating purchasing functions of the firm. 2. Show a 16mm film on electronic processing (EDP) in purchasing. 3. Reference: 10, p. 56.
2. What are the main advantages of using a computer in purchasing activities in an agricultural firm?	1. Refer to the firm visited during the field trip and review the highlights. 2. List the following advantages on the chalkboard and have students understand them clearly. a. Develops efficiency to the purchasing functions of an agricultural firm. b. Reduces labor requirements. c. Reduces paper work. d. Could improve communications within the firm. e. Brings unwritten policies together to help the firm determine good purchasing policy. f. May find the answers for many purchasing decisions. Note: The person in charge of computer section should have adequate skills necessary for making optimum use of the computer in the firm. 3. References: 6, pp. 17-20; 10, pp. 55-61.
3. What are the limitations for using computers in purchasing activities in an agricultural firm?	1. Discuss the field trip and write students' responses on the chalkboard. 2. List the limiting factors on the chalkboard as follows: a. Lack of trained personnel in the firm. b. Costs of computers or their services. c. Volume of the jobs, i.e., too small. d. The nature of purchasing processes of some firms does not permit a favorable computer application. 3 Reference: 6, pp. 20-23.

Problems and concerns	Guides to solutions and examples of teaching techniques
4. What are the basic steps followed in a computerized purchasing operation?	1. List the following steps on a transparent sheet and project on the screen: a. Preparing and proofreading the requisition--give special attention to the code numbers. b. Checking the requisition and selecting potential vendors. c. Selecting the lowest and most responsible supplier. d. Printing copies of purchase orders. e. Sending the purchase orders to proper department. f. Determining accounts payable and putting them on the tape for the later recalls. g. Receiving shipments, processing invoices through computer, and rendering of payments. 2. Reference: 10, pp. 86-87.
5. What are some possible sources where computer services can be obtained?	1. Discuss the following sources in the class. a. Private companies. b. Banks. c. Parent companies. 2. Identify location of computers in the community.

Unit V. Identifying Methods of Transporting and Routing Products to an Agricultural Firm

Problem Area 1--Selecting a Carrier to Transport Agricultural Products

Problem Area 2--Providing Shipping Instructions When Ordering Agricultural Products

Problem Area 3--Expediting and Tracing Delivery of Agricultural Products

References and Instructions Aids for the Unit

PROBLEM AREA. Selecting a carrier to transport agricultural products.

OBJECTIVES. To develop in each student the ability to:

1. Recognize ways to cut transportation costs when ordering agricultural products.

2. Realize how business relationships affect the selection of carriers.

3. Become acquainted with innovations in transportation in order to make sound judgments in carrier selection.

STUDENT MOTIVATION.

1. Select a product that could be brought to the firm by several carriers. Discuss channels of transportation.

2. Have students estimate the transportation costs of several agricultural products.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have each student identify how affiliation influences the selection of carriers in the firm where he works.

2. Have each student develop a list of advantages and disadvantages of using common carriers and in-firm transportation.

3. Have each student identify new or emerging methods of transporting products used by the firm where he is employed.

Problems and Concerns	Guides to Solutions and Examples of Teaching Techniques
1. What factors influence the selection of a carrier for agricultural products?	1. Refer back to Unit IV, problem area 3, for a brief review of influencing factors. 2. List major factors on the chalkboard.
2. How can affiliations between the firm and supplier affect the choice of the carrier?	1. Identify and discuss affiliations that may dictate choice of carriers. 2. References: 6, 7, 8.
3. How can exchange agreements between firms affect the carrier selection?	1. Have students relate their experiences with exchange of products between firms. 2. Analyze how an arrangement may bind a firm to a particular carrier.
4. What are the advantages and disadvantages of providing in-firm carriers?	1. Develop a table on the chalkboard with the class on pros and cons of in-firm carriers. 2. Have students relate ideas gained from structured activity No. 2.
5. Why may it be advantageous to ship a product through several carriers?	1. Identify and discuss situations where more than one carrier may be desirable. 2. References: 6, 7.
6. What legal regulations may influence the selection of the carrier?	1. Discuss I.C.C. (Interstate Commerce Commission) regulations. 2. List legal authorities or agencies governing carriers in the state.
7. How will new developments in transportation affect the selection of the carrier?	1. Have students report the experiences gained by completing structured activity No. 3. 2. Discuss how time and demand factors relate to emerging carriers.

PROBLEM AREA. Providing shipping instructions when ordering agricultural products.

OBJECTIVES. To develop in each student the ability to:

1. Minimize transportation costs when ordering products.
2. Provide adequate shipping instructions when ordering products.
3. Recognize informations that must be included in ordering instructions.
4. Understand the potential use of computers in making shipping decisions.

STUDENT MOTIVATION.

1. Show a film on transporting products to the firm describing the importance of shipping instructions.
2. Discuss and analyze a case problem where inadequate shipping instructions resulted in a financial loss to the firm.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Ask each student to discuss with the manager of his firm the problems resulting from inadequate shipping instructions. Make a list of suggestions that could have prevented such incidents.
2. Have the students secure and bring to class purchase orders used by firms where they are employed.

Problems and Concerns	Guides to Solutions and Examples to Teaching Techniques
1. What information must be provided for shipping instructions?	1. Use the purchase orders secured by the students and develop a list of items necessary for complete shipping instructions. 2. References: 3, 5, 6.
2. How does the nature of a product influence the shipping instructions provided for the supplier?	1. Discuss how specific products (tractor, fertilizer, chemicals, seed, flowers, etc.) may require special shipping instructions. 2. Consider situations involving crating, insulating, moisture proofing, cooling, etc. 3. Identify situations where special shipping instructions may assist the supplier in providing better service to the firm.
3. How may computers be used in providing information for shipping instructions?	1. Show a film that describes the potential use of computers. 2. Arrange a field trip to a business that uses a computer. 3. References: 5.

PROBLEM AREA. Expediting and tracing delivery of agricultural products.

OBJECTIVES. To develop in each student the ability to:

1. Expedite delivery of products from the supplier to the local firm.
2. Trace a delivery.
3. Understand the duties of the traffic manager of a firm.
4. Recognize and understand common shipping terms.

STUDENT MOTIVATION.

1. Using a purchase order, illustrate how a simple mistake may slow delivery of a product. Have students relate experiences of mistakes in ordering.
2. Have the students give examples of when they think each type of carrier should be used to expedite a delivery. Have them give their reasons. Make a list of these reasons and compare this list with what they give after covering this problem area.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have the students assist in preparing purchasing orders for the firm where they are employed. Encourage students to observe shipping instructions provided with the order.
2. Have each student assist other personnel in the firm complete tracer request forms.

Problems and Concerns	Guides to Solutions and Examples of Teaching Techniques
1. What factors must be considered to expedite delivery of products from the supplier to the firm?	1. Have students define what expediting a delivery means. 2. Discuss factors that should be considered when determining the best possible method of transporting a product. Include the following: a. cost of transportation b. urgency of need c. speed of transportation d. nature of product e. carefulness in handling f. convenience in pick up and delivery g. insurance 3. Use a purchase order and review information required on the form discussing how accuracy and completeness are related to expediency of delivery. 4. References: 1, 2, 4, 7.
2. Why may it be necessary to trace a delivery?	1. Discuss what tracing a delivery means. 2. List and explain possible reasons for tracing a delivery. 3. References: 1, 2, 4.
3. What are the duties of a traffic manager in an agricultural firm?	1. List the duties on the chalkboard which should include the following: a. routing of products b. auditing deliveries and freight tickets c. tracing shipments d. handling claims e. calculating shipping costs 2. References: 1, 2, 6.
4. What are some of the common terms used in shipping agricultural products?	1. Divide the class into committees and have each committee discuss assigned terms. Include the following: a. various methods of shipment (parcel post, air express, etc.) b. freight bills c. landing costs d. purchase order 2. References: 1, 2.

REFERENCES AND INSTRUCTIONAL AIDS FOR THE UNIT:

1. Aljian, Purchasing Handbook, Second Edition.

2. Heinritz, Purchasing Principles and Applications.

3. McMillan, The Art of Purchasing.

4. Davidson and Brown, Retailing Management

5. Smith, A. E., New Techniques for Creative Purchasing.

6. Shilt, B. A. and W. H. Wilson, Business Principles and Management.

7. Tonne, Simon, and McGill, Business Principles, Organization, and Management.

UNIT VI. UNDERSTANDING PROCEDURES FOR RECEIVING PRODUCTS INTO AN AGRICULTURAL FIRM

Problem Area 1 Understanding the Personnel Organization of the Receiving Function of an Agricultural Firm

Problem Area 2 Planning the Delivery Dock for an Efficient Product Flow Within an Agricultural Firm

Problem Area 3 Understanding the Procedures for Checking Products Received By an Agricultural Firm

Problem Area 4 Marking and Pricing Goods Received in an Agricultural Firm

Problem Area 5 Handling and Storage of Products Received in an Agricultural Firm

References and Instructional Aids for the Unit

PROBLEM AREA: Understanding the personnel organization of the receiving function of an agricultural firm.

OBJECTIVES: To develop in each student the ability to:

1. Identify the chain of authority during the product-receiving function in an agricultural firm.

2. Understand the chain of command in the receiving department of an agricultural firm.

3. Determine the competencies required for the position desired in the receiving department of the firm.

4. Recognize the possibility of improving the personnel organization of the receiving function in the firm.

STUDENT MOTIVATION:

1. Have a resource man discuss with the class various structural organizations used in his agricultural business with emphasis on the receiving function.

2. Ask the class to discuss the following questions:

   a. What department of an agricultural business would you as a young employee like to work in? (Justify the answer.)
   b. If you were working in the receiving department, what would be your responsibilities?

3. Discuss how local businesses vary in their receiving departments. Present and discuss the following questions.

   a. Why does the variation exist?
   b. Which organization would be most efficient?
   c. Which organization would be the easiest to work in as a young person starting to work?

SPECIAL ARRANGEMENTS: Arrange to have at least two managers of different agricultural businesses to discuss their receiving departments with the class.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS:

1. Ask students to list the positions and names of the employees that are involved in the receiving department at the agricultural business where they are gaining experience.

2. Draw a line chart of a typical business personnel organization and discuss how the department employees coordinate their activities.

3. Describe completely what procedure is followed in the receiving department to affirm an order delivery.

4. Explain how the receiving functions differ with respect to different products handled in a firm.

Problems and concerns	Guides to solutions and examples of teachinn techniques
1. Why is it important that all employees understand the chain of authority?	1. Show a film describing how business personnel are organized. (Most product companies furnish films.) 2. Have the class list the advantages and disadvantages of chain of commands that they are familiar with in receiving departments. 3. Ask students how misunderstandings in chain of commands may affect personnel relationships. 4. Suggest alternatives if a key employee is absent (e.g., on vacation)? 5. References: 9, literature describing business personnel organizations, manager of a local agricultural firm and personnel of a receiving department.
2. How do unlike chain of commands affect the efficiencies of product flow in a firm?	1. Have students form committees of similar businesses and proceed as follows: a. become familiar with the chain of commands that exist in the committee. b. select businesses that will cooperate and from efficiency charts of the commands. c. compare charts. 2. References: 3, literature describing business personnel organization.
3. What are the sequential procedures followed to affirm a product received in the agricultural business?	1. Show to the class sample forms used in the receiving department. a. explain why different forms are used. b. read to the class the main items printed on these forms. 2. List the main steps involved to affirm that various products have been received in a firm. 3. References: 6, manager of a local agricultural firm and personnel of a receiving department, invoice sheets, freight vouchers, requisition forms.

Problems and concerns	Guides to solutions and examples of teaching techniques
4. What are the responsibilities of each employee in various receiving departments?	1. Have the class list several employees' positions and their responsibilities and authorities. 2. Select a committee of four employees to discuss their positions with the class. 3. References: 5, 7, manager of a local agricultural firm and personnel of receiving department.
5. What competencies should one possess in order to qualify for employment in the receiving department of an agricultural firm?	1. Have a class discussion leading to general agreement on answers to the following questions. a. What courses or subjects are needed? b. What courses or subjects should be added to the curriculum? c. What is the effectiveness of a student-work program in preparing for such jobs? 2. References: literature describing business personnel organizations.
6. How could one improve the personnel organization of the receiving department in a given agricultural business?	1. Emphasize the importance of creative thinking. 2. Suggest the following questions: a. What are the advantages and disadvantages of the present receiving department? b. What positions could be changed and why? c. What problems can one expect with the personnel organization that is suggested? 3. References: 1, 6, 9, literature describing business personnel organization.

PROBLEM AREA: Planning the delivery dock for an efficient product flow within an agricultural firm.

OBJECTIVES: To develop in each student the ability to:

1. Recognize the importance of and the need for having one delivery area.

2. Identify factors that determine the efficient use of a delivery dock.

3. Suggest methods of improving the existing delivery system within an agricultural firm.

STUDENT MOTIVATION: Present to students slides of agricultural firms showing receiving, handling, and merchandising phases of various products. Emphasize the importance of good management practices in handling such products.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS:

1. Have each student list methods of receiving agricultural products into his firm.

2. Ask students to list advantages and disadvantages of product movement in the agricultural firm where employed.

3. Have students determine the means of handling the products of a given firm as compared to the products of other agriculture firms in the area.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Why should there be one delivery point?	1. List on the chalkboard students' reasons for having a delivery dock in an agricultural firm. 2. Have students determine alternative methods of handling incoming products. 3. Identify methods of saving labor by having one delivery dock.
2. What are the characteristics of an efficient receiving dock?	1. Direct class discussion on the following questions. a. Where should the receiving are be located? b. What factors influence the location of the receiving dock? c. Why must some products be delivered at different locations (e.g., tractors, fertilizer). d. What factors determine the size of the receiving area? e. How can labor be minimized at the receiving dock?
3. How could the present delivery system in an agricultural firm be improved?	1. Have students identify common methods of handling merchandise. 2. Have students compare each of the handling methods as to cost, speed, maintenance, and ease of operation. 3. Have students survey their placement firms to check amount of physical handling compared to mechanical movement. 4. Show pictures, charts, or slides of an outdated delivery system of a firm and ask class to suggest how it could be improved.

PROBLEM AREA: Understanding the procedures for checking products received by an agricultural firm.

OBJECTIVES: To develop in each student the ability to:

1. Understand the checking procedure of goods received in a firm.

2. Recognize common checking methods used by agricultural firms.

3. Know major attributions of faulty shipments.

STUDENT MOTIVATION: Discuss with students the problems that may arise in checking a load just received in an agricultural firm. List the suggested problems on chalkboard and discuss the importance of the task.

SPECIAL ARRANGEMENTS:

1. Arrange for a field trip to an agricultural firm during the processes of receiving a load of goods in the firm.

2. Bring to class samples of damaged goods resulted from faulty shipments.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS:

1. Ask students to discuss with personnel in their firms and report the checking methods followed.

2. Have students report what is done with products that are not properly shipped to their firms.

4420

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are the common checking techniques applied in an agricultural firm?	1. Discuss techniques as follows: a. matching purchase order against the invoice b. opening the goods containers. c. removing and sorting merchandise. d. checking the quantity of goods received against the invoice. e. inspecting goods for quality. 2. Have each student discuss with personnel of his firm the method of checking followed.
2. What are the main methods of checking quality?	1. List the following three main methods of checking on the chalkboard. a. direct check--check with use of invoice. b. blind check--check without invoice and then match for accuracy. c. bulk check--check without breaking the container. 2. Have students discuss advantages and disadvantages of each method in small groups and report the summaries to the class. 3. References: 6, 10
3. Who should be responsible for making quality check on products received?	1. Emphasize that a trained person in the field should check expensive items and spot check other items--this should be done to make sure the customer is getting the kind of items he demands for the price he pays. 2. Have students discuss with checking personnel in the firm and find out what it takes to be a quality checker. Have them report the information back to the class. 3. References: 2, 6, 10.
4. How are dummy invoices used in checking products received by a firm?	1. Bring several invoice samples to class and have each student fill one out for a container of goods received at school. 2. References: 2, 6.

ESEA

Problems and concerns	Guides to solutions and examples of teaching techniques
5. What are the main characteristics of faulty shipments?	1. List attributes on the chalkboard as follows: a. breakage--broken items. b. damage--rough handling or tear. c. shortage--lack of some goods. d. overage--too many items. e. substitution--wrong items. 2. Bring samples of goods and their invoices to class and ask students to identify the defects. 3. References: 4, 10.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is meant by preretailing?	1. Discuss advantages and disadvantages of preretailing in class. 2. References: 10, pp. 264-270.
2. What are the various kinds of price tickets?	1. Have students bring items from their places of work to the class and through role-playing techniques price and mark each product. 2. Illustrate the following examples: a. fifty pounds seed corn--string ticket $12.95. b. 1010 garden tractor--handwritten ticket $1,020. c. five gallons red barn paint gummed label $22.42. d. juniper shrub--pin ticket $15.20.
3. What methods are used in working out cost codes?	1. Have a personnel manager of a firm visit the class and explain some cost-code methods. 2. Explain methods of coding, as follows: a. word phase--money talks, 0123456789 b. symbols-- 1 | 2 | 3 4 | 5 | 6 7 | 8 | 9 c. add, subtract, multiply, or divide each digit price 10.50 x 3 31.50 3. References: 2, 3, 4, 6.
4. Why should coded dates be used when merchandise is received?	1. List the following advantages on the chalkboard. a. seasonal items. b. deteriation of items. c. slow selling items easily detected. 2. References: 2, 4, 10.
5. What are the advantages and disadvantages of machine marking?	1. Ask students to identify marking methods used in their firms and mention their advantages and disadvantages. 2. References: 2, 4, 10.

Problems and concerns	Guides to solutions and examples of teaching techniques
6. What items require bulk marking, nonmarking, or premarking?	1. List names of some items on a transparent sheet and project on the screen. Ask students to suggest the appropriate type of marking for each item. 2. References: 2, pp. 494-517.

PROBLEM AREA. Handling and storage of products received in an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Recognize how product characteristics affect their handling methods.

2. Determine various means of handling a product in an agricultural firm.

3. Understand the economical and efficiency factors involved in various handling and storage procedures.

4. Realize how proper handling and storage will affect the product quality and indirectly the net return of a business.

STUDENT MOTIVATION.

1. Show a 16 mm film that describes general handling and storage methods in agricultural firms.

2. Show slides or a super 8 movie (film loop) describing local procedures for handling and storing agriculture products.

SPECIAL ARRANGEMENTS.

1. Arrange for a field trip to visit local agricultural firms to identify handling and storage procedures.

2. Plan to take pictures of various handling and storing procedures used in a local agricultural firm.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Ask students to list the ways in which the products are handled within the agricultural firm where they are gaining experience.

2. Have students list the various storage facilities used in the agricultural firm where they are gaining experience.

3. Ask students to select a specific agricultural product and suggest a storage area and handling method for it in a designated firm. (Include arrangement, efficiency factors, costs, sizes, etc.)

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What products are handled within the agricultural firm?	1. Have the students list the main and short line products handled in the agricultural firm, where employed. 2. Have the students start their collection of product information, handling and storage procedures. 3. References: 10, product information literature, resource persons, agricultural business firms.
2. What are the means used to handle the products in the agricultural firm?	1. Have the students develop a line chart indicating the various ways a specific product is handled in the firm from receiving to delivery to the customers. 2. References: 2, 9, agricultural firms blueprints.
3. What determines the handling procedure of products in an agricultural firm?	1. Have the students list the various forms of products handled within the firm. 2. Ask students to estimate the time needed for unloading and moving the products from storage to the customer. 3. Have a manager discuss with the class the reasons for using his present handling equipment. 4. References: 6, time and efficiency charts, resource person.
4. What are the mechanical efficiencies of the present handling methods?	1. Have students compare their estimated times (above) with suggested handling rates. 2. Ask students suggest equipment maintenance needed to improve handling efficiencies (provide operator manuals). 3. Ask students to suggest equipment that would facilitate higher labor efficiency. 4. References: 1, 9, time and efficiency charts.
5. How can the cost of present handling methods in a firm be determined?	1. Have the students price the handling methods. List sources of information as follows: a. manager b. equipment manuals c. employees d. salesmen

Problems and concerns	Guides to solutions and examples of teaching techniques
	2. Have students compare handling costs between different manufactures of the same equipment.
	3. Have students compare leasing costs to buying costs.
	4. References: Product information literature, resource persons from agricultural firms.
6. In what form are agricultural products usually stored and what types of storage facilities are required?	1. Have students list the various types of storage facilities used in an agricultural firm. Ask them to include the form of the product(s) stored in each facility.
	2. Show a set of slides or film to describe the major facilities in an agricultural firm.
	3. Ask students to collect the following information about the agricultural firms where they are gaining experiences. a. when and how much products are ordered? b. how much time is required for transportation of products? c. how long is the expected storage time for the product?
	4. References: 9, 10, product information literature, resource men from agricultural businesses, agricultural business films.
7. How could the present handling and storage procedures be redesigned to improve product flow efficiencies?	1. Have the students list the advantages and disadvantages of the handling equipment and storage facilities before and after they have worked in the firm.
	2. Use blueprints of present facilities and equipment to suggest a new handling and storage system.
	3. Have the students draw new storage facilities within the present firm and relocate and replace handling equipment within the firm.
	4. Have students develop a cost sheet of the new replacements and determine how this will affect the net return of the business.
	5. References: 4, 6, agricultural firm blueprints, time and efficiency charts, product information literature.

10. Wingate and Weiner, Retail Merchandizing.

B. TEACHING AIDS

1. Agricultural business films, slides or film loops.
2. Agricultural firms blueprints (storage facilities and handling equipment locations, etc.).
3. Farm Service Feed Manuals.
4. Informative literature describing business personnel organizations.
5. Invoice sheets, freight vouchers, requisition forms, etc.
6. Product information literature.
7. Resource men from receiving departments of agricultural firms.
8. Time and efficiency charts.

Unit VII. Identifying Ways of Measuring and Reporting Purchasing Performance in an Agricultural Firm

Problem Area 1 Preparing Purchase Reports for the Management of Agricultural Firms

Problem Area 2 Measuring the Performance of the Purchasing Department of an Agricultural Firm

References and Instructional Aids for the Unit

PROBLEM AREA. Preparing purchase reports for the management of agricultural firms.

OBJECTIVES. To develop in each student the ability to:

1. Understand the function of reports.

2. Understand the basic principles of reports.

3. Prepare various types of reports.

STUDENT MOTIVATION. Top management must have reports from all departments to have the necessary information for planning, organizing and controlling operations. People in these key executive positions are constantly looking for men who can be moved up through the ranks. Therefore, if you are a member of a purchasing department and are doing a good job of economically obtaining needed material and can do a good job of reporting savings etc., the boss will soon notice you and then you are well on your way up the ladder of success. Ask each student why he would want to be kept informed if he were a top executive.

SPECIAL ARRANGEMENTS.

1. Prepare a role-playing situation where one would be a purchasing agent and the other a new vendor. Have the agent send a report to management telling about the change in vendors, giving reason for the change, such as better service or a better price compared to previous vendor.

2. Prepare transparencies of various types of reports to be used in class discussion and work.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS.

1. Have each student determine what types of reports are used in the business where he works.

2. Have each student observe how purchase reports are prepared in his business.

3. Have students prepare a purchasing report to be given to head of purchasing department for correction or comments.

Problems and Concerns	Guides to Solutions and Examples of Teaching Techniques
1. What is the purpose or function of a report?	1. Using a visual, show the class a sample copy of a purchase report. 2. Have students determine how similar reports may be helpful to the management of a firm. 3. Discuss the differences between reports and records. 4. References: 2, 4, 6.
2. What are the basic types of purchase reports?	1. Discuss the two basic types--periodic and current reports. 2. Have students identify situations where a "report of proved savings" would be used. 3. Reference: 6.
3. What are the basic principles covered in reports?	1. Have students analyze a sample report in terms of the following principles common in reports: a. selection b. comparison c. interpretation d. summary 2. References: 2, 4.
4. What is the procedure followed in preparing a purchase report for management?	1. Have students report information obtained through completion of structured activity No. 1. 2. Have students prepare reports following the procedure outlined in special arrangement No. 1.

PROBLEM AREA. Measuring the performance of the purchasing department of an agricultural firm.

OBJECTIVES. To develop in each student the ability to:

1. Understand the importance of evaluating the performance of the purchasing phase of a business.

2. Understand the procedure followed in making a performance evaluation.

STUDENT MOTIVATION: Name a local retail agricultural business in the community and identify the different products handled by the business. Then present the student with the task of trying to buy the products to be sold in the store and; how they would determine if they were buying as profitable as possible.

STRUCTURED ACTIVITIES FOR SUPERVISED EXPERIENCE PROGRAMS. Have students interview the head of the purchasing department where they work and determine if there is a specific way which the firm follows in order to determine the effectiveness of its purchasing functions.

Problems and Concerns	Guides to Solutions and Examples of Teaching Techniques
1. Why should the purchasing performances be evaluated?	1. Discuss with the students so they will be familiar with: a. cost of buying in relation to rest of business expenses. b. need of most efficient method of procurement. c. need to improve operations. d. need for evaluation 2. Have a procurement manager discuss buying responsibilities with the class. 3. Have a local business owner discuss efficient buying with the class. 4. References: 1, 3, 7.
2. How should the evaluation of the buying department be conducted?	1. Discuss the procedure using the following lead questions. a. Why is this department so hard to analyze? b. Is there more than one method of determining the effectiveness of the department? c. Who should make the evaluation of the department? d. How often should a survey be made? e. Why must a plan be used for evaluation? f. What should be included in the plan? g. What are the drawbacks to each method used? 2. Determine how each of the following can be used to measure performance: a. outside consulting firm b. special staff c. head of department
3. What information is required for an effective preformance evaluation of the purchasing department?	1. Have students analyze how each of the following influences performance of the purchasing department: a. division of responsibility b. policies regarding quantity c. policies regarding quality d. policies regarding price e. regulations on terms and conditions 2. References: 1, 3, 7.

Problems and Concerns	Guides to Solutions and Examples of Teaching Techniques
4. How should the results of an evaluation be analyzed?	1. Discuss using the following lead questions: a. Why is a comparison necessary for analysis? b. What is the cost of the purchasing function? (May range from two to five percent of total cost.) c. How well does the department follow its guidelines? d. Are there any deviations to the basic policies of the department? e. Is the department doing all of its purchasing functions? f. Is there always a continuous and effective supply of materials? g. Is there a continuous turnover of stock and never a time of "stock-out?" 2. Have students report on structured activities No. 1 and No. 2.

ABSTRACT - Focusing on the knowledges and skills needed by employees in handling products and personnel in nonfarm agricultural firms, this teaching unit was developed by agriculture teachers and the Agricultural Education Division, University of Illinois. The materials are divided into three teaching source units containing 15 problem areas. Divisions are: (1) Understanding the Management of Personnel in an Agricultural Firm, (2) Understanding the Financial Operation, and (3) Understanding the Practices Followed in Storing and Inventorying Products. Each problem area includes teacher objectives, references, anticipated problems and concerns of students, and suggested class and individual student activities. (GB)

FOREWORD

During the summer of 1970 the Agricultural Education Division, University of Illinois, Urbana-Champaign campus, offered the third of a three-part summer program designed to give teachers of agriculture firsthand experience in agricultural occupations other than farming. In addition to gaining experience in a nonfarm agricultural business, the teachers spent time in the classroom intellectualizing their knowledge and experiences in terms of implications for teaching agricultural occupations.

The following teaching source units represent the efforts of the teachers enrolled in the course. The teaching units focus on the knowledges and skills needed by employees in handling products and personnel in nonfarm agricultural firms. The materials are divided into three teaching source units containing 15 problem areas. Each problem area includes teacher objectives, anticipated problems and concerns of students, suggested class and individual student activities, and references. Professor David L. Williams, instructor for the course, edited the materials and arranged the problem areas and units in an order which teachers may find useful.

David L. Williams

UNIT I. UNDERSTANDING THE MANAGEMENT OF PERSONNEL IN AN AGRICULTURAL FIRM

Problem areas included in this unit are:

1. Applying for and Securing a Job in an Agricultural Firm

2. Working and Advancing in an Agricultural Firm

3. Developing Desirable Employer-Employee Relations in an Agricultural Firm

4. Getting Along with Fellow Workers in an Agricultural Firm

5. Determining the Employee Compensation, Incentives and Benefits Offered by an Agricultural Firm

6. Understanding How Labor Laws and Unions Affect Agricultural Firms

References and Instructional Aids for Unit I.

Problem area. Applying for and Securing a Job in an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of how employees are selected for positions in agricultural firms.
2. Understanding of the procedure followed in applying for and securing a job.
3. Ability to interview for and secure a job.

Student motivation

1. Have you ever applied for a job? Did you get the job? Why or why not?
2. Draw comparisons in the way class members applied for jobs.
3. Discuss why it is important to know how to get a job.

Structured activities for supervised experience programs

1. Invite an employer to visit the class and discuss what he looks for in a perspective employee.
2. Have each student find an advertisement describing a job they would like to apply for. Each student should develop a personal data sheet, write a letter of application, complete an application form and interview for a job.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What does an employer look for in a prospective employee?	1. Have an employer discuss with the class what he looks for in a perspective employee. 2. Reference: 25
2. What does a job applicant need to know about the potential employer and his business?	1. Have an employer give his ideas on what a job applicant should know about his business. 2. Reference: 26
3. How can a person find what jobs are available?	1. Discuss sources of information (see attachment, "Hints in Securing a Job). 2. References: 6, 14, 15, 25
4. How does an individual decide what kind of job to apply for?	1. Discuss how to pick the right job by first evaluating your a. mental ability. b. interests. c. physical characteristics. d. social characteristics. e. emotional characteristics. f. motives and goals.

Problems and concerns	Guides to solutions and examples of teaching techniques
	2. Have each student evaluate occupations of his choice on the basis of a. nature of work. b. personality requirements. c. educational requirements. d. training requirements. e. ways to enter the field. f. working conditions. g. where jobs are located. h. trends in employment. i. degree of competition. j. seasonal variations. k. opportunities for advancement or transfer. l. beginning wage. m. average wage.
	3. References: 6, 9, 14, 15, 16, 25
5. How should a person apply for a job?	1. Have each student make up a personal data sheet and a letter of application and complete an application form for a specific job.
	2. Discuss correct form for a personal data sheet and letter of application (see attachments, "Hints in Securing a Job," and "Writing an Application Letter").
	3. References: 7, 14, 15, 25
6. How should a person prepare for a job interview?	1. Review all steps preceding the actual job interview (see attachments).
	2. Conduct mock interviews in class.
	3. References: 6, 25
7. What can a person do to make the interview successful?	1. Develop a checklist of items that are necessary if an interview is going to be successful (see attachment, "Hints in Securing a Job").
	2. Interview for a position at a cooperating training center.
	3. References: 6, 14, 15, 25
8. How should a person follow up an interview to increase his chances of getting a job?	1. Discuss the procedure for following up an interview.
	2. References: 6, 14, 25

WRITING AN APPLICATION LETTER

I. Opening paragraph

A. Create a desire for the applicant's services.
B. Request consideration as an applicant.
C. Explain source of information concerning job opening.

II. Education

A. Avoid dull recitation of subjects taken in school.
B Present the facts in such a way the employer will know you are qualified for the job.
C. Stress subjects that qualify you for the position.
D. Mention awards, honors, good health, and attendance record.
E. Include any specialized knowledge or training you may have that others probably would not have.
F. Include any extracurricular activities and offices held.

III. Experience

A. If you have had no prior experience (paid) of any kind, do not mention or stress this point. Rather, emphasize your scholastic record if it is good or your grades in your area of specialization, if good. If your record is not good, stress your outside activities.
B. Include paid work experience which does not have any connection with the type of work for which you are applying, either in letter or data sheet.
C. Discuss most recent experience first, especially if it is in the same area as the job for which you are applying.

IV. References

A. Always ask permission before using a name as a reference.
B. List names and addresses (include complete information) of three persons, none of whom are relatives, who can give realistic information about your character and working ability. Give complete names and titles of references.

V. Closing paragraph

A. Purpose of application letter is to stimulate action.
B. Write this paragraph in such a way it will be easy for the businessman to make an interview appointment.
C. Include telephone number where you can be reached easily.

HINTS 1. SECURING A JOB

I. Elements to consider in looking for the right job

A. Know something about the firm before applying.
B. Will it offer stable employment?
C. Will it offer advancement possibilities?
D. Will the type of work be compatible with your own likes and dislikes, temperament, and aptitudes?
E. Can you work under supervision?

II. Sources of information concerning employment opportunities

A. Friends or relatives.
B. Inquiry letters.
C. Employment agencies.
D. Want ads in local papers.
E. Civil Service.

III. Job hunting by mail

A. Fifteen fundamentals to follow when writing a letter of application:

1. Use paper and envelopes that are standard; never use personal stationery.
2. Use conventional letter setup.
3. Do not try to be different, coy, or cute.
4. Express confidence in yourself without being untruthful or boastful.
5. Make your letter as easy as possible to read.
6. Use plain English, no slang, correct grammar, and spelling.
7. Open with explanation as to why you are writing.
8. Do not ask for any kind of job that is available.
9. Show an interest only in the type of work for which you are qualified.
10. The second and third paragraphs should explain how your education and experience qualify you for the position for which you are applying.
11. Refer to people who are qualified to be your references and indicate you have their permission.
12. Ask for interview in the closing paragraph.
13. Type your name in the closing lines and sign it legibly.
14. Make sure your letter is perfect in its appearance--no smudges or smeary erasures, strikeovers, good balance, etc.
15. Proof read your letter carefully to see there are no errors of any kind in typing, grammar, spelling, or general setup.

IV. Two kinds of application letters

A. General--written when uncertain whether there is a vacancy in a certain company.
B. Specific--used to apply for a specific job opening.

V. The personal data sheet

A. The listing of personal qualities, education, skills, experience, and references in tabulated form.

4451

B. Parts to be included:

1. Personal description and data.
2. Education record.
3. Experience.
4. References (with permission).

VI. <u>The application form</u>

A. The printed form which the employer asks prospective employees to fill out to give him a picture of their personal, educational, and experience background.
B. Important factors to consider when filling out the employment form:

1. Neat handwriting, including figures.
2. Read form carefully first so you can follow instructions exactly.
3. Bring your own pen.
4. In the experience section, list most recent experience first.

VII. <u>The interview</u>

A. Arrange for interview at time which will permit you to change to appropriate clothing.
B. First impressions are very important.
C. Arrive at least a few minutes early.
D. Give impression of maturity.
E. Wear dress appropriate for job and for appearing in an employment office.
F. Make sure you are personally clean in every respect.
G. Watch your manners in every respect, even in matters you consider not very important. Put yourbest food forward.

1. Do not chew gum.
2. Do not come into the interview smoking a cigarette.
3. Walk briskly, give an alert impression.
4. Avoid bored manner.
5. Do not sprawl in chair.
6. See that your voice is not harsh and unpleasant.
7. If the interviewer offers his hand, shake it firmly.
8. Look employer straight in the eye.
9. Let interviewer do most of the talking.
10. Do not interrupt the employer or interviewer.
11. Try to learn something about the company before you go to the interview.
12. Be truthful about your present employment. Specify you will need to give your employer at least two weeks' notice if you leave his company for this new job.
13. Do not bring up salary until the interviewer mentions it--if asked what you want in the way of salary, ask for the regular starting pay for new employees of your background--or mention your present salary.
14. Be seated only after interviewer asks you to sit down.
15. Return to the employment office or call interviewer later to see if an opening has arisen for which you are qualified--just because the jobs were all filled before you applied does not mean there will never be any others.

Problem area. Working and Advancing in an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the knowledges and skills required to work and advance in an agricultural business.
2. Understanding of the relationship of the worker to the management.
3. Understanding of the etiquetts in working with other people.
4. Understanding of the major techniques used in determining advancements and promotions.
5. Understanding of how the firm can increase profits through improved productivity.

Student motivation

1. Have the class divide into small discussion groups, and then list some of the things that they hope to own in the future, such as a new car, nice home, a farm, etc. Then lead a discussion on how much some of these items will cost, and how they will need to increase the amount that they are making in order to have the things they want, and be able to raise a family, etc.
2. Ask students if the wages that they would receive when starting at a particular job would be enough to provide the things they would like to have in a few years.

Structured activities for supervised experience programs

1. Have students list some of the characteristics, traits, and reasons why they feel that some of the people in the most advanced positions of the firm where they are working were able to obtain their positions.
2. Have each student discuss working and advancing with the personnel manager in the firm where he is employed.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. How can an employee get started off right in a new job?	1. Through a class discussion, develop a list of possible problems that might be encountered at a new job, then discuss how to solve the problems. 2. List some "do's." 3. List some "don'ts." 4. References: 3, 12, 17, 23

Problems and concerns	Guides to solutions and examples of teaching techniques
2. What adjustments may a new employee have to make?	1. Have the students report on individual adjustments they had to make when they started a new job. 2. Relate the adjustments that students have to make after summer vacation or when first starting high school to the types of adjustments that they will have to make on a new job. 3. References: 3, 12, 17, 20
3. How can a new employee learn more about his job?	1. Lead a discussion on facts that should be known in advance about a job. Relate this to the subject matter that they are having in class. 2. Ask this question of the personnel manager the day that he comes to the class. 3. Assign students to work in pairs, and actually research an agricultural firm in the area as it relates to this question. 4. References: 3, 20, 23
4. What does an employer expect of a beginning employee?	1. Have the students develop a list of characteristics and responsibilities that they would expect if they had someone working for them. 2. Discuss this list on the day that the personnel manager visits the school. 3. References: 3, 23, 24
5. What is the basis used for the promotion of employees?	1. Analyze and compare at least two different actual systems used by firms in the area. 2. References: 3, 20, 23, 24
6. What in-service training will be available and helpful to a new employee?	1. Through a discussion, identify as many of the in-service training programs that are available to anyone in the community. 2. Identify some of the in-service training programs that are offered or available once a person begins working in a particular firm. 3. References: 3, 12, 20, 23, 24

Problems and concerns	Guides to solutions and examples of teaching techniques
7. How are pay increases determined for employees?	1. Analyze and compare at least two actual systems used by firms in the area. 2. References: 3, 20
8. How can an employee help his firm increase its profits?	1. Discuss the importance of productivity to the ability that an employer has to pay or increase the wages of his employees. 2. Conduct an actual "work-time" study with students doing some job in the shop. 3. References: 3, 20, 23, 24

Problem area. Developing Desirable Employer-Employee Relations in an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the concept of personnel management.
2. Ability to adjust to a working situation.
3. Ability to get along with the employer.
4. Understanding regarding social and personality development on the job.

Student motivation

1. Ask students what characteristics they would look for if they were employing someone to work for them.
2. Discuss the aspects of changing from a type of work such as farming where one works with things to a kind of occupation where one works with people.

Structured activities for supervised experience programs

1. Have students observe employees in the business and develop a list of characteristics of the employee who has been in the firm the longest.
2. Develop a list of things they like about their supervisor or employer.
3. Have students discuss with the manager of the firm some of the characteristics he likes to see in an employee.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is meant by employer-employee relationship?	1. Have students discuss this relationship. Point out the differences and similarities among employer-employee, teacher-pupil, and father-son relationships. 2. Explain why there must be different levels of supervision and structural organization of a business. 3. Reference: 5
2. What does my employer expect of an employee?	1. Discuss the following desirable traits of employees: a. Regular attendance. b. Adherence to business rules and policies. c. Respect for authority. d. Personal authority. e. Personal characteristics. f. Growth in performance of job. 2. References: 4, 26

Problems and concerns	Guides to solutions and examples of teaching techniques
3. How does an employer select employees for his business?	1. Discuss the steps employers go through in selecting an employee. A procedure followed by some businesses is as follows: a. Determine job specifications. b. Check present personnel records to see if desired employee can be found among present employees. c. Check applications on file. d. Advertise for employees through newspaper, employment agencies and present workers. e. Interview applicants. f. May test specific applicant for special knowledge and skill. g. Give applicant a physical. h. Investigate references given by applicant. i. Applicant may be sent to head of department where he is to work. j. When applicant is hired, his records are prepared for personnel department. 2. Reference: 22
4. How could an employer introduce an employee to a new job?	1. An employee can become an asset to a company much quicker if he understands the company and his duties. a. Give employee information about company. b. Give employee manual on company policies and regulations. c. Inform employee about lunchrooms, clothes and lockers, etc. d. Introduce him to department supervisor. e. Be sure he has complete knowledge of conditions of employment. f. Give him an understanding of importance of safety rules. 2. References: 11, 22
5. How can an employee benefit most from supervision on the job?	1. Discuss the role of the supervisor. a. Supervisors are chosen by the management because: (1) they know the jobs of the people. (2) they know the policies of the store. (3) they can teach the jobs they supervise. b. Supervisors are hired to help the employee improve himself and the business.

Problems and concerns	Guides to solutions and examples of teaching techniques
	2. Discuss foundations for good relations with supervisors. a. Be sold on aim and purpose of business. b. Make good use of constructive criticism. c. Be loyal to supervisors. d. Carry out assigned responsibilities. e. Contribute new ideas. 3. Reference: 4
6. How can a new employee encourage good employer-employee relations?	1. Discuss basic human motives as they affect employer-employee relations. a. Treat people as individuals. b. Do not pass the buck. c. Be loyal to others. d. Seek raises and promotions on merit. e. Help build department and store morale. 2. Explain that an employee has an important human relations role in his business and discuss a. how to do job carefully. b. how to help others when needed. c. how to keep busy doing constructive work. d. how to present your ideas. e. how to make good instead of poor excuses. f. how to gain self-confidence. 3. Reference: 4
7. What are the major responsibilities of the employer?	1. Discuss the total operation of a business and how each employee is a part of the total picture. 2. The employer is to provide a. space and equipment. b. training. c. working conditions. d. financial benefits. 3. The employer is responsible for the safety of the workers. Safety is divided into parts. a: Engineering (1) Plant layout. (2) Plant inspection. (3) Cleanliness and order. (4) Maintenance.

Problems and concerns	Guides to solutions and examples of teaching techniques
	b. Educational (1) Initiate safety programs. (2) Secure interest and cooperation of workers. 4. Discuss that an employee can encourage safety by a. being a good example. b. emphasizing importance of safety to new employees. c. making certain tools are in good repair. d. being alert for and correct unsafe practices. e. looking for and reporting any need for safety devices and guards. f. learning first aid and be prepared to assist when needed. 5. Reference: 11

Problem area. Getting Along with Fellow Workers in an Agricultural Firm

Teacher objectives. The objectives for the instructor of students in this area of study are to develop:

1. Understanding of the importance of developing good working relations with co-workers.
2. Understanding of how to get along with fellow workers in an agricultural firm.
3. Understanding of yourself as a fellow worker or employer might see you.

Student motivation

1. What do you look for when you select a friend?
2. What traits do you find undesirable in some of your school mates?
3. How do you think these traits compare with what fellow workers would think of you?
4. Discuss the comparisons and then work into the problems one might have in a business.

Structured activities for supervised experience programs

1. Prepare a list of points to consider in discussing the question: "What constitutes a full days work for a full days pay?"
2. Observe carefully fellow employees as they work together. Report briefly on a situation showing how a co-worker either used or misused one or more of the fundamentals of good human relations.
3. Make a list of the things the best liked co-worker in your business does to cause him or her to be well liked by the fellow workers.
4. Rate yourself on the ways you have used to get along with your fellow workers.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are some traits which help an employee to be accepted by co-workers?	1. Discuss the following and how they may help people to be accepted as a co-worker: a. Learn the line of authority. b. Be friendly. c. Accept and carry out responsibilities. d. Ask for help when it is needed. e. Show you are willing to learn. f. Compliment fellow workers. g. Learn the names of fellow workers. h. Learn the duties of fellow workers. 2. Reference: 4

Problems and concerns	Guides to solutions and examples of teaching techniques
2. How may an employee discourage the formation of cliques in a business?	1. Discuss the following: a. Do a good job at every task. b. Do not instigate or listen to gossip. c. Compliment fellow workers rather than run down fellow workers to others. d. Do not mix shop talk and social life. e. Do not gripe to anyone who will listen. f. Do not limit favors only to certain people. 2. Reference: 4
3. How may an employee gain and maintain the respect and confidence of co-workers?	1. Discuss the following in relation to maintaining good relationships with fellow workers: a. Treat people as individuals--people differ in their attitudes, abilities and backgrounds. They also face different problems at home and at work. Recognize differences in individuals and treat them accordingly. b. Recognize that human behavior is unpredictable--people's moods vary because they face different problems. They worry about money, children or health. Thus, a co-worker may have to be treated differently depending how he feels on a given day. c. Do not pass the buck--blaming someone else and shifting responsibility to a co-worker is called passing the buck. Using excuses to cover up one's own unsatisfactory performance results in poor relations with fellow workers. d. Be loyal to others--the person who is a loyal friend keeps confidences and respects his promises. He is dependable. e. Help build moral--take a full share of the load. Giving a "little extra" helps build group spirit in a business. 2. Reference: 21
4. What are some traits that may be helpful in developing desirable relationships among workers?	1. Explain that workers develop good relationships with others by possessing and using the following traits: a. Enthusiasm. b. Honesty and dependability. c. Initiative. d. Sense of humor.

Problems and concerns	Guides to solutions and examples of teaching techniques
	e. Loyalty. f. Industriousness. g. Tact and courtesy. h. Friendliness. i. Sense of fair play. j. Cooperativeness. 2. Some undesirable traits of employees include a. "using" other people. b. running down other people. c. taking credit for ideas or achievements of others. d. gossip. e. being indifferent to suggestions and criticisms. f. "acting" superior. 3. Reference: 4
5. How may a person examine his own personal qualities?	1. Discuss how one may analyze his personal qualities and how improvements can be made. 2. References: 4, 14

Problem area. Determining the Employee Compensation, Incentives, and Benefits Offered by an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the difference between compensation, incentives, and benefits.
2. Ability to evaluate and compare the compensation, incentives, and benefits offered by one employer to those of another.
3. Understanding of the basis on which compensation, incentives, and benefits are made.

Student motivation

1. Ask students if they would like to pay someone even if that person did not perform any work or service, etc., for them. Then discuss how wages must have some relation to productivity and/or responsibility.
2. Discuss the total expense that could be involved if one became sick or injured, and missed work for a week or more, and did not have any health insurance or sick leave benefits.

Structured activities for supervised experience programs

1. Ask students to study Employees' Handbook which the firm has where they work to become familiar with the firm's policy on wages, incentives, and benefits.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. How may a person compare compensation, incentives, and benefits offered by potential employers?	1. Discuss the relative merit of incentives and benefits as compared to the flat wage received. 2. As a class, total up the "real" wage received by adding up the value of the "hidden" wage to the value of the actual wage received, and compare for different firms. 3. References: 3, 17, 20, 23
2. What is meant by compensation?	1. Ask what it means to the students to get paid when they work. 2. Discuss why an employer is able to pay an employee a particular wage. 3. References: 3, 20, 23, 24

Problems and concerns	Guides to solutions and examples of teaching techniques
3. What is meant by incentives?	1. Define incentive. 2. Ask if any students have ever received a gift from their parents or someone else for reaching a particular goal or standard such as to make the honor roll at school, then relate this to an incentive. 3. References: 3, 20, 23
4. What is meant by fringe benefit?	1. Define fringe benefit. 2. Lead a discussion to point out that benefits are usually given to all employees, but incentives are only received by those that reach a higher than average standard. 3. References: 3, 23, 24
5. How often are compensation and benefits reviewed and revised by a firm?	1. Discuss the various policies used in the firms in which the students are working. 2. Ask the students if they think their employers evaluates their work each day. 3. References: 20, 23, 24
6. How does an employer establish the wage or compensation for various jobs within the firm?	1. Ask students how they would decide how much a farm is worth per acre. Center the discussion on the basis of productivity. Relate this to the value of an individual in a firm. 2. References: 3, 20, 23

Problem area. Understanding How Labor Laws and Labor Unions Affect Agricultural Firms

Teacher objectives. The objectives for the instruction in this area of study are to develop:

1. Understanding of the labor laws that affect young workers.
2. Understanding of the role of labor unions.
3. Understanding of the worker's responsibilities to the union and the benefits he can derive from the union.

Student motivation

1. Are there any labor laws that affect you as a worker?
2. Why do you think these labor laws were passed?
3. What do labor unions have to do with labor laws?

Structured activities for supervised experience programs

1. Ask students to discuss with their employers how child labor laws have affected them.
2. Develop a list of questions about the provisions of the Fair Labor Standards Act and have students answer them by visiting with their employers.
3. Have business agent of local labor union visit class to discuss union operation and answer questions about union goals and methods.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What are the purposes of child labor laws?	1. Discuss early problems of labor. 2. References: 2, 8
2. What are the principal provisions of the Fair Labor Standards Act?	1. Discuss the following: a. What businesses are subject to the Fair Labor Standards Act. b. What is meant by over-time pay. c. What is a legal work week. d. What workers are exempt from the act. e. What age group is affected by child labor laws. f. What is the minimum wage for workers covered by the act. g. What is meant by a hazardous occupation for minors? h. Under what conditions may a student-learner work in a hazardous occupation.

Problems and concerns	Guides to solutions and examples of teaching techniques
	i. What is an age certificate and under what circumstances do employers file them. j. What is a work permit. k. How and at what age can one obtain a work permit.
	2. References: 1, 13, 19
3. What other laws affect young workers?	1. Discuss laws affecting all employees... minimum wage, overtime, etc.
	2. References: 1, 19
4. In what ways are the lives of all of us affected by labor unions?	1. Discuss strikes, national economy, etc.
	2. Reference: 10
5. Why did unions develop?	1. Discuss early conditions of labor.
	2. Reference: 10
6. What are the goals of unions?	1. Have business agent of local union discuss goals and answer questions.
	2. Reference: 10
7. What methods do unions use to reach their goals?	1. Discuss different types of strikes and collective bargaining.
	2. Reference: 10
8. What are the principal achievements of unions and what can be expected in the future?	1. Have a business agent of local union discuss what labor unions have accomplished in the past and where they are headed and answer questions of students.
	2. Reference: 10

UNIT II. UNDERSTANDING THE FINANCIAL OPERATION OF AN AGRICULTURAL FIRM

Problem areas included in this unit are:

1. Determining the Types of Organizational Structure Used to Finance an Agricultural Firm

2. Understanding and Using Credit Instruments in an Agricultural Firm

3. Understanding the Customer Credit Policies of an Agricultural Firm

4. Understanding the Procedures Used to Collect Bills by an Agricultural Firm

5. Understanding the Role of Insurance in an Agricultural Firm

References and Instructional Aids for Unit II.

Problem area. Determining the Types of Organizational Structure Used to Finance an Agricultural Firm.

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of how a firm acquires funds to start and finance an operation.
2. Understanding of the different types of financial organization of businesses.
3. Understanding of the importance of a sound financial structure to a business.

Student motivation. Select a successful firm in the community and discuss its mode of financial operation. Discuss a short-lived firm and why it may have failed.

Structured activities for supervised experience programs

1. Have each student identify owners or controlling officers of the firm in which he works.
2. Ask student to determine original cost of ownership of a firm and present cost of ownership.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is an organizational structure?	1. Draw a schematic on the chalkboard showing a. Boss. (1) Owner. (2) Stockholder. b. Foreman. c. Worker. 2. Reference 10.
2. What are the common types of organizational structures?	1. Use a transparency to show the ways of doing business a. Sole ownership. b. Partnerships. c. Cooperatives. d. Corporations. 2. Explain how ownership is attained in a cooperative and corporation. a. Briefly explain how cooperative shares are purchased.

Problems and concerns	Guides to solutions and examples of teaching techniques
	b. Explain the difference between common and preferred stock. c. Explain how corporations are financed using a Wall Street Journal as a reference.
	3. Explain the owner's function and method following in making business decisions.
	4. Reference 6.
3. How do structures of businesses differ?	1. List the four common ways of doing business on the chalkboard.
	a. Outline the structural organization of each showing: (1) Owner--stockholder. (2) Officers. (3) Managers. (4) Workers in firm.
	b. Discuss officers required and qualifications for holding office. c. Explain tax laws related to each type of firm.
	2. Discuss the legal features of each type of ownership.
	3. References 6 and 10.
4. How may finances be attained to expand a business?	1. Discuss the use of mortgages, expanding partnerships, issuing additional stocks, and undivided profits and dividends.
	2. Discuss securing outside sources of capital for financing the business.
	3. Reference 9.

Problem area. Understanding and Using Credit Instruments in an Agricultural Firm.

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of how credit may be obtained by a firm.
2. Ability to differentiate between different forms of credit.
3. Ability to properly fill out credit instruments.
4. Understanding of the different types of credit used by a firm.

Student motivation

1. Ask students to explain how credit cards may be used in buying articles.
2. Ask students to identify other ways a person may obtain goods from a firm without a direct cash transaction.
3. Discuss why credit is used in today's business.

Structured activities for supervised experience programs

1. Have students fill out a credit card application.
2. Assign each student to report back to class the types of credit and credit instruments used in the firm in which he works.
3. Develop a list of businesses in the community which extend credit. List those that do not extend credit.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is credit?	1. Define in terms of a "promise to pay."
2. What are some of the common terms associated with credit?	1. Equity. A share or participation in property value.
	2. Capital. Principal available for investment, in accounting, margin of assets over liabilities.
	3. Chattel mortgage. A document by which the owner of goods transfers title to a mortgage.
	4. Commercial paper. Notes, drafts, checks, and certificates of credit or deposite as used in business.
	5. Credit instrument. Any document that identifies a credit obligation.

4472

Problems and concerns	Guides to solutions and examples of teaching techniques
	6. Promissory note. A written promise by the maker of a note to pay on demand or at a definite time a stated sum of money.
	7. Financial statement (net worth). A paper listing all the assets and liabilities of an individual.
	8. Lien. A right or claim against specific pieces of property.
	9. Open account. Short-term credit used in normal purchasing activity--the charge account.
	10. References 6 and 12.
3. What are the legal aspects related to extending credit?	1. Review "truth in lending" laws. Discuss the following: a. Lending charges and rates. b. Lien on property sold. c. Letter stating lien or waiver d. Discounting open accounts
	2. Discuss the method of recording or identifying mortgages in a county.
4. How are interest rates figured?	1. Discuss how interest rates are calculated as follows: $i = \frac{2mD}{P(n + 1)}$ i--annual rate of charge m--the number of payments in one year D--interest charge in dollars P--principal or cash advanced n--total number of payments
	2. Provide an amortized note and have students figure the interest rate.
	3. Explain: a. Discount loans. b. Add-on loans.
	4. Reference 2.

66 OF 327

ED

056 238

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

Problems and concerns	Guides to solutions and examples of teaching techniques
5. Where may credit be obtained?	1. Discuss the following sources of credit: a. Local business-customer credit. (1) Open account or credit card account. (2) Chattel mortgage through parent company. b. Banks--Explain how legal limit affects borrower and how a bank may use a correspondent bank. (1) National bank. Limited to loan of ten percent of the bank capital stock and unimpaired surplus to one individual. (2) State banks. Limitations to borrower vary from state to state. c. Federal agencies. (1) Bank of Cooperatives. (2) Farmers Home Administration (FHA). (3) Federal Land Bank. (4) Production Credit Association (PCA). d. Others: individuals, loan companies, insurance companies, savings and loans, etc.
6. What information is required to properly fill out a credit instrument?	1. Show film, "Back of Every Promise." 2. Discuss the items found in a legal contract. 3. Discuss the following items to be placed on a credit instrument. a. Date of note. b. Amount of note. c. Signatures. d. Repayment clause or schedule. e. Interest rate. f. Deferred payment and repayment privileges. 4. Provide each student with a note and have them fill it out. 5. References 6 and 12.

Problem area. Understanding the Customer Credit Policies of an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the credit policy of a firm that affects customers.

2. Understanding of how a customer credit rating is determined.

3. Understanding how credit is used to increase sales.

Student motivation. Discuss the use of credit for purchasing a product or service and its advantages and disadvantages to a business. Ask students how they would determine the credit rating of a fellow student.

Structured activities for supervised experience programs

1. Have each student fill out a net worth statement.

2. Divide the class into groups and have them prepare a bulletin board of bankruptcy cases and other articles dealing with credit.

3. Have each student study how a selected business determines the credit rating of a customer.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What factors are considered in determining credit risk?	1. Discuss the 4 C's of credit. a. Character of borrower. b. Capacity of borrower to repay. c. Capital of borrower. d. Economic conditions. 2. Character + Capacity + Capital + or - Economic Condition = Credit Risk. 3. Reference 2.
2. What procedure is used to determine a customers credit rating?	1. Discuss how the following may be used in determining a credit rating. a. Individual's bank. b. Local or area credit bureau. c. County court house. d. Other companies where a person was a credit customer. e. Individual's credit references. 2. Have individuals file a net worth statement. 3. References 2, 3, and 5.

Problems and concerns	Guides to solutions and examples of teaching techniques
3. How may the credit policies of a company affect its business?	1. Discuss how credit policies may affect the following: a. Margin of profit in sales. (1) The greater the margin of profit, the greater the risk that may be assumed. (2) Keen competition may force a more liberal credit policy. b. Business decisions. (1) Elastic credit policy strives for a quick turnover. (2) Credit policy and marketing policy must be coordinated. 2. Reference 2.

Problem area. Understanding the Procedures Used to Collect Bills by an Agricultural Firm.

Objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the procedures used in bill collection.
2. Understanding of the different methods of bill collection used by agricultural firms.
3. Understanding of the legal aids related to bill collection that are available to a business.

Student motivation

1. Bring in several types of bill collection letters and discuss them in class. Have students express their opinions on the effectiveness of each letter.
2. Encourage students to identify other types of bill collection tools.

Structured activities for supervised experience program

1. Have each student develop a procedure that may be used by a firm to collect a bill.
2. Have each student discuss the procedure he develops with an official in the business where he works. Have students report findings to the class.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What collection tools may be used by agricultural firms.	1. Have the students relate the type of tools used in collection. Make a list on the chalkboard. The list should include the following: a. Collection letter. b. Note. c. Collection by draft. d. Use of the telephone. e. Use of telegram. f. Personal collection. g. Salesman collection. h. Collection agency. i. Local attorney. 2. Discuss how each of these tools could be used in collection. 3. Reference 2.

Problems and concerns	Guides to solutions and examples of teaching techniques
2. What is a desirable collection procedure that may be used effectively by an agricultural firm?	1. Discuss the characteristics of the customers of a business and their reactions to the collection methods outlined above. 2. Have each student develop a tool that may be used for the collection of a bill. 3. Discuss the advantages and disadvantages of each method. 4. Reference 2.
3. What legal aids may be employed to collect debts.	1. Have a local attorney visit the class to discuss what legal procedures are usually followed in collecting a debt. 2. Discuss how the use of legal procedures in bill collection may affect the business of a firm.
4. How does a business handle insolvent accounts?	1. Discuss the causes of insolvent accounts. 2. Discuss the possibility of extension for debtors to keep them from bankruptcy. 3. Reference 2.

4478

Problem area. Understanding the Role of Insurance in an Agricultural Firm.

Objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the types of insurance available to an agricultural firm.
2. Ability to recognize the liability of a particular business.
3. Understanding of the contents and terms of company insurance policies.
4. Understanding of the decision that must be made to determine what kind and how much insurance a company should carry.

Student motivation

1. Have each student list at least 20 items that could be covered by insurance.
2. Would it be wise for a business to carry insurance for each item identified? Why? Or why not?

Structured activities for supervised experience programs. Ask each student to survey the business where he is employed or would like to be employed and identify one type of insurance policy that the business carries. Have students discuss policies in class.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is insurance? What does it do, and how are premiums rates figured?	1. Show slidefilm on insurance to students. 2. Define insurance as a contract to shift risk. 3. Discuss how premiums are related to risk. 4. Reference 7.
2. What insurance coverage is available to businesses?	1. Discuss the different risks that a business has. 2. Identify the risks that can be covered with insurance. 3. References 7 and 11.
3. How much insurance does a business need?	1. Have the class select a particular business and determine the amount of insurance needed for a certain area. 2. Discuss the factors that might be considered, such as: a. Activities. What products are made or sold? Service offered? How are products shipped?

Problems and concerns	Guides to solutions and examples of teaching techniques
	b. Financial affairs. Amount of the total assets? Amount of fixed and nonfixed costs and expenses? c. Facilities. What facilities are used--buildings, machinery? Where are they located? What are they worth? d. Staff. How many people are employed? What are their duties? Do they use their car in the business? Do they handle money?
	3. Reference 11.
4. Which company should the agribusiness firm place its insurance with?	1. List the major type of insurance companies on the overhead projector.
	2. Divide the class into small groups and have each group determine the advantages and disadvantages of a type of insurance company.
	3. Reference 11.
5. What is the insurance company's obligation to the business?	1. Have students relate experiences regarding insurance settlements. Explore what was expected in relation to what was received.
	2. Reference 11.
6. What factors should be considered when selecting a specific insurance company?	1. Discuss factors and list them on the chalkboard. Some of these factors might be as follows: a. Rate of adjustment of a claim. b. Specific coverage wanted. c. Premiums. d. Wording of the policy. e. History of the insurance company.
	3. Reference 11.

UNIT III: UNDERSTANDING THE PRACTICES FOLLOWED IN STORING AND INVENTORYING PRODUCTS IN AN AGRICULTURAL FIRM

Problem areas included in this unit are:

1. Understanding the System Used to Control or Maintain the Inventory of an Agricultural Firm

2. Planning the Storage Arrangement of Products in an Agricultural Firm

3. Maintaining the Quality of Products Stored in an Agricultural Firm

4. Using and Maintaining Storage Equipment in an Agricultural Firm

References and Instructional Aids for Unit III.

Problem area. Understanding the System Used to Control or Maintain the Inventory of an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the system used by agricultural firms to insure that a proper supply of goods is on hand.

2. Understanding of the vital part each employee plays in the successful functioning of the control system.

Student motivation

1. Whose responsibility is it to insure a proper supply of goods for the firm?

2. Is the system used by all businesses very similar or does each type of business have its own unique system?

3. How does improper functioning of the control system affect the agricultural firm?

Structured activities for supervised experience programs

1. Have students describe the system used to control supplies which is in operation at an assigned agricultural firm.

2. Have a visit with the manager of a firm to identify the consequences of improper control of supplies.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What do we mean by stock control or stock maintenance?	1. State that stock control or stock maintenance is the availability of the materials which are needed for proper functioning of the agricultural firm. 2. Discuss the importance of being able to get the needed materials in a very short time. 3. References: 3, 4
2. How does each employee serve in the efficient functioning of the stock control system?	1. Use on-job experiences and discuss the part which each employee plays in the following: a. storing materials. b. keeping record of materials used. c. keeping record of goods sold. d. preserving the quality of materials on hand. e. keeping record of goods received.

Problems and concerns	Guides to solutions and examples of teaching techniques
3. How can a new employee most quickly become a good stock keeper?	1. Have students list certain materials and supplies on hand at their cooperating business. 2. Have the students draw storage plan showing where each item is stored. 3. Have each student bring to class examples of forms used to assist in the control or maintenance of inventory of goods. 4. Reference: 5
4. Of what importance is the cost of storage and handling to the agricultural firm?	1. Have students prepare estimates of the cost to the firm for storage and handling of materials. 2. Reference: 5

Problem area. Planning the Storage Arrangement of Products in an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the need for efficient storage arrangement of products in a business.

2. Ability to calculate costs of alternative methods of storing products.

3. Understanding of the safety precautions necessary in handling and storing certain agricultural products.

Student motivation

1. Have students make an arrangement of small shelf items to illustrate arrangement principles, advertisement effects, etc.

2. After completing this unit ask students to make improvements in their display.

Structured activities for supervised experience programs. Have each student select a product in his cooperating business and outline methods for improving the arrangement of that product to provide for more economical movement of the product.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. Why should a firm have a planned arrangement for storage of products on hand?	1. Explain that products need to be segregated by type and quality in order to avoid errors when selling to customers, to make up shipments of specific type and quality, to take advantages of prices for various types and qualities of products, etc. 2. Discuss how proper storage arrangement affects the movement of products, advertisement, safety, etc. 3. Have a food store owner visit the class to explain the arrangement of food items in a grocery store. 4. Reference: 5
2. How can goods be arranged "displayed" to their best advantage?	1. Have each student secure an item with advertising material from an agricultural firm and discuss them in class to determine what makes a desirable display. 2. From the above procedure select a different item to display and have the class as a unit be responsible for making a "counter display" of the item. 3. Reference: 2

4485

Problems and concerns	Guides to solutions and examples of teaching techniques
3. What safety precautions should be used when storing certain chemicals, petroleum, etc.?	1. Discuss the items that require safety precautions, then list the safety precautions needed with each item. 2. Reference: 2
4. How may the cost of storage of a product be lower by altering the storage arrangement?	1. Have students determine the costs of storage for items such as feed (bulk vs. sacks), new machinery (outdoors vs. pole buildings), etc. 2. Have each student make suggestions for rearrangement of products in the firm where he works that would lower the storage cost. 3. References: 2, 5

Problem area. Maintaining the Quality of Products Stored in an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the storage requirements for special products.
2. Understanding of the handling techniques required to maintain product quality.
3. Ability to calculate the shrinkage of agricultural products.

Student motivation. Show students some samples of deteriorated items (feed, chemicals, grain, etc.). Ask students to identify cause of deterioration and the estimated economic loss.

Structured activities for supervised experience programs

1. Help students list various products handled by the firm where they work that require special storage conditions.
2. Have students identify problems of quality maintenance and shrinkage in the firm where they work. Have students suggest ways to improve the situations.

Problem and concerns	Guides to solutions and examples of teaching techniques
1. What products are stored by agricultural firms?	1. Have students list the major and minor products handled by agricultural firms.
	2. Discuss why products must be stored by a firm.
2. What special storage requirements are needed for various products?	1. Help students formulate a list of various products that require special storage arrangements to maintain product quality.
	2. Assign a product to each student and have them report to the class the storage requirements for his product.
	3. Reference: 5
3. What agricultural products are subject to shrinkage?	1. List the possible rates for shrinkage for the common agricultural products that are subject to shrinkage.
	2. Discuss how these shrinkage losses can be reduced or eliminated.
	3. Reference: 5

Problem and concerns	Guides to solutions and examples of teaching techniques
4. What handling procedures are used to maintain quality of agricultural products?	1. Visit and observe an agricultural firm that does use several procedures in handling for maintaining product quality. (Also note other problems connected with product quality.) 2. Discuss handling procedures that may be used and how they help maintain product quality. 3. References: 1, 4, 5

Problem area. Using and Maintaining Storage Equipment in an Agricultural Firm

Teacher objectives. The objectives for the instruction of students in this area of study are to develop:

1. Understanding of the proper use of equipment utilized in handling agricultural products.
2. Ability to properly maintain the equipment used in handling agricultural products.

Student motivation

1. Show film on handling agricultural products with modern equipment.
2. Arrange for a field trip to a firm to observe equipment used in moving and storing agricultural products.

Structured activities for supervised experience programs

1. Have students list the various types of equipment used at their training station. Have students review operator's manual for the equipment.
2. Have each student prepare a years service schedule for one piece of equipment used in the firm where employed.

Problems and concerns	Guides to solutions and examples of teaching techniques
1. What is the safe and proper way to use material handling and storing equipment?	1. Have each student give a report on how to use one piece of equipment which is used to handle agricultural products. 2. Discuss how to secure and use operator's manuals for equipment. 3. Explain that operator's manual and service manuals can be secured by contacting the manufacturer through a dealer.
2. Why is proper maintenance of material handling and storing equipment of importance to the firm?	1. Discuss the relative time required to handle and store products using different types of equipment. 2. Discuss how the condition of the equipment influences handling efficiency and safety of operation.
3. What is good maintenance of handling equipment?	1. Explain that properly maintained equipment is available and safe to use.

Problems and concerns	Guide to solutions and examples of teaching techniques
	2. Emphasize that the operator's manual is the best guide to good maintenance.
	3. Use operator's manuals to help students read and understand operating and maintenance instructions.
4. What part does proper product handling play in the reputation of the firm?	1. Have students identify successful agricultural firms in the community and relate reputation of the firms to efficiency of handling products.

ABSTRACT - Intended for extension agents and other agricultural persons, this manual on plant growth of cereal crops was prepared by staff members of North Dakota State University. Sections are: (1) Cereal Crop Development, (2) Specific Crop Production Items, (3) Individual Crops, (4) Supplemental Information, and (5) Glossary. Numerous illustrations are presented for explanations. (GB)

Section A—CEREAL CROP DEVELOPMENT

I. INTRODUCTION

Cereal crops include wheat, barley, oats, rye, corn, rice, grain sorghum and proso millets. These are all grasses grown for their edible seeds. Cereals have the "bunch" habit of growth. This growth habit results from the development of basal buds on the main stem which produce branches or shoots called tillers. These tillers may repeat the process and the bunch habit of growth is built up.

Small grains include wheat, barley, oats, rye and rice.

II. THE PLANT CELL

All living plant parts are made up of cells. Plant cells are of many different sizes and shapes and are specialized in their functions. A group of cells are known as **tissue**, a group of tissues become an **organ** and a group of organs function as a **plant.**

Plant cells have the following basic structure.

Figure 1—PLANT CELL STRUCTURE

Each cell consists of a mass of **protoplasm,** which is the living matter of the plant, confined by the **cell wall.** Protoplasm is a fluid substance varying in density, and chemical analysis shows it to be principally protein. The protoplasm contains special structures, each having definite functions as follows:

The **Nucleus** is located inside the cell and is enclosed in a membrane. Within this membrane is the nuclear sap consisting of water and dissolved substances. **Chromatin,** also found in the nucleus, is a granular substance which gathers into thread-like masses, breaking up into segments called **chromosomes** when cell division is about to take place. For each type of plant the chromatin gathers into a definite number of chromosomes. The inheritance of the plant is determined by **genes** carried within the chromosomes.

Cytoplasm is the protoplasm outside the nuclear membrane. It has dense bodies of protein called **plastids.** These plastids often carry pigments which give the plant or a part of the plant characteristic colors. The green pigments are **chlorophyll** but there may be many other colors such as are found in flowers, leaves, stems or roots of some plants. Starch grains, oil drops, and other food substances also are found in the cytoplasm.

Vacuoles are found within the cytoplasm and may occupy 90 per cent of the mature cell volume. Their major component is water which contains dissolved salts, acids, pigments or other products of cell metabolism.

Plant growth occurs by cell division and cell enlargement. The area where growth is active is known as **meristematic** tissue. Cell division is called **mitosis** and is the basis for all plant growth.

III. THE SEED (CARYOPSIS)

The essential parts of cereal seeds are:

1. **Pericarp** — the protective covering surrounding the endosperm and germ.
2. **Germ** or embryo—the young dormant plant.
3. **Endosperm**—stored food.
   a. Aleurone—outer layer of cells which may contain pigments.

See Figure 2 — "A Kernel of Wheat"

In cereals the endosperm is mostly starch, while the embryo (germ) is high in protein, oil and minerals.

Figure 2—A KERNEL OF WHEAT

4498

IV. GERMINATION

Seeds placed in soil germinate if sufficient **water** and **oxygen** are present, and if **temperatures** are suitable. In the germination process, the embryo, which was dormant in the dry seed, resumes growth.

Several factors influence germination:

1. **Water** absorption is the first step in germination. Since water comes from the soil, the seed must be in close contact with moist soil particles to absorb water. A well prepared, firm seedbed conserves soil moisture. Placing seed in moist soil is necessary for good germination.

   Water absorption by seed also is influenced by concentration of chemicals (principally salts) in the soil solution. If the salt concentration is too high, the seed cannot absorb enough water for normal germination. This is why "fertilizer burn" occurs if high concentrations of fertilizer are placed close to the seed. Seed also may fail to germinate in highly saline soils.
2. **Oxygen**—must be present in adequate quantities for respiration to provide energy. It may be limiting in water-logged soils, which slow down or prevent germination.
3. **Temperature**—seeds will not germinate if the temperature is too low. Various kinds of seeds will germinate at different soil temperatures. See Table 1.

Table 1. SOIL TEMPERATURES FOR GERMINATION

Crop	Degrees Fahrenheit Minimum or Threshold	Optimum Range
Wheat	34 to 36	59 to 65
Barley	34 to 36	59 to 65
Oats	34 to 36	59 to 68
Rye	34 to 36	59 to 65
Corn	48 to 50	80 to 90
Sorghum	48 to 50	80 to 90

Millet (assumed to be like corn and sorghum)

Source: Idaho Agricultural Science

These differences in temperature requirements for germination help explain why some crops can be sown earlier in the spring than others. The danger of frost after growth begins also is a factor to consider in deciding when to seed, since some crop seedlings are more frost-tolerant than others.

Soil temperatures depend on depth and time of year. Figure 3, shows soil temperature isotherms at Fargo. This chart shows soil temperatures at various depths throughout the year.

4. **Light**—cereal seeds will germinate either in light or darkness, but other seeds such as bluegrass germinate faster in light.
5. **Seed Viability**—the embyro (germ) must be alive if the seed is to germinate. The viability of seeds can be determined by a germination test. Some live

Figure 3–SOIL TEMPERATURES AT FARGO

Source: Soils Department NDSU.

seeds are more vigorous than others and will germinate faster and produce more robust seedlings.

6. **Seed Size**—the larger the seed, the more food and energy it can provide to the young seedling. Several experiments have shown that larger seeds germinate faster and produce more vigorous seedlings than do smaller seeds. Large seeds will emerge from greater depths than small seeds. Early seedling vigor and rapid growth provides better crop competition against weeds and seedling diseases. Removing small kernels in seed cleaning is desirable. See Figure 4.
7. **Breaks** in the seed coat (pericarp) may decrease germination in cereals. Broken seeds often have low viability. Injury to the embyro usually is the most serious. Broken seeds often show more mold growth than do whole seeds. Seed treatment protects against mold and fungus growth on the seed surface.
8. **Immature seeds** are attacked more easily by mold growth than mature seeds. Because of less food reserve in the endosperm they also produce smaller sprouts. Good quality seed comes from well matured plants.
9. **Microorganisms**—many kinds of fungi and bacteria in the soil can attack seeds and cause them to rot. Seed treatment protects the seed and seedling against soil borne disease infection.
10. **Diseased seed**—some seed borne diseases cause small, shrunken kernels that should be removed in seed cleaning. Other seed borne diseases such as loose smut and viruses do not affect germination.
11. **Dormancy**—seeds of some cereals may be dormant when newly harvested. They need a storage period for conditioning before they can germinate. Dormancy in wheat, barley and oats often disappears in 20 to 30 days after harvest but may persist for 60 days in wheat. Durum wheat tends to have a longer dormancy than Hard Red Spring wheat. A higher per cent of dormancy also has been observed in wheat harvested before it is mature. Freshly harvested oats and barley kept at a temperature of 36° F. in a relatively high humidity will stay dormant for three years. Dormancy is less common in corn and sorghum than in oats and barley. Varieties of the different cereals differ in dormancy. Temporary dormancy of cereal grains is desirable where prolonged moist weather conditions occur at harvest. There is no dormancy problem in rye or winter wheat. Newly harvested seed can be sown the same fall.

V. EMBRYO STRUCTURE AND GROWTH

The embryo is composed of several distinct parts each having a separate function in the developing

Figure 4—EFFECT OF HARD RED SPRING WHEAT SEED SIZE ON SEEDLING WEIGHT

Source: Cereal Crops by Leonard and Martin.

plant. A plant is composed of several major parts which have an exact organization in relation to one another. The plant axis is divided into the ascending portion called the stem and into the descending portion called the root. The area within the embryo where the stem meets the root is called the first node.

The most obvious structure in the embryo is the **scutellum** which is really the first leaf of the plant and is attached to the first node. See Figure 5 page 9. This modified (first) leaf is involved in the digestion and transport of food from the endosperm into the developing embryo and never emerges above the soil surface. The next leaf is called the **coleoptile.** It is really the second leaf and is attached to the second node. This leaf is very important to the emergence of the seedling plant as it has a very sharp point and is well adapted for soil penetration. The third leaf is attached to the third node and is the first foliage leaf. It emerges through the coleoptile, becomes green in color, and is the first leaf to carry on photosynthesis.

The terminal bud, known as the growing point, is surrounded and protected by the leaves during embryo growth and seedling emergence. The growing point is the origin of all new growth in the cereal plant and will ultimately terminate in the head or the tassel in corn. Loss of this structure through frost, disease, or insect damage causes irreparable harm to normal growth and development.

The **coleoptile,** the **internodes,** and the **radicle** are involved in the emergence of the seedling during and following the germination process. The first embryo structure to enlarge is the radicle which grows downward, provides anchorage and absorbs water and nutrients. See Fig 5, page 9. Next the coleoptile reaches the surface of the soil, but usually will become no longer than 3 inches. When it has emerged through the soil surface, the third leaf (first foliage leaf) breaks through the tip of the coleoptile and becomes a functional seedling leaf. All subsequent leaves and the growing point emerge through the coleoptile. These foliage leaves have little or no soil penetrating power. If the coleoptile fails to reach the soil surface, the foliage leaves do not emerge and a poor stand results. They continue growing for a while but remain below ground folded and crinkled because they are unable to penetrate the soil.

The first internode of wheat, barley and rye for all practical purposes does not elongate and this limits the depth of seeding to the length of the coleoptile. In contrast to wheat, barley and rye the first internode of corn and oats does elongate and pushes the elongating coleoptile up through the soil much like a spear. Hence corn, and to a lesser extent oats, can emerge from greater depths than other cereals.

VI. RESPIRATION

Respiration, transpiration, photosynthesis and **reproduction** are four of the major life processes of a plant. Respiration, which is at a very low level in viable seed, increases rapidly during the early stages of germination and continues throughout the life of the plant, providing a source of energy for all growth processes.

Seedling plant growth begins in the embryo (germ) as food is transported from the endosperm to the embryo cells during the process of germination.

As the seed absorbs water the starch, which is the stored food in the endosperm, is broken down into sugars which are simpler chemical compounds. This conversion of starch into sugars is brought about by the action of chemicals called **enzymes,** contained in the seed embryo. Enzymes influence chemical changes without being changed themselves.

The sugars are further broken down into very simple chemicals (carbon dioxide and water) by a process called **respiration.** This breakdown of sugars releases **energy** which is used by the germinating seedling for its life processes.

The breakdown of starch (respiration) which provides energy is shown by steps below:

(1) starch $\xrightarrow{\text{(enzyme)}}$ sugar

(2) sugar + oxygen $\longrightarrow$ H_2O (water) + CO_2 (carbon dioxide) + **energy**

Seeds need large amounts of energy to germinate. It has been estimated that the germination of a bushel of wheat seed requires as much energy as plowing an acre of land.

VII. GROWTH STAGES OF SMALL GRAINS

A. Growth stages, Figure 6, page 10 of plants are commonly known as:

1. Seedling—a young plant grown from seed to the stage when tillers emerge.
2. Tillering—shoots arising from the crown.
3. Jointing—nodes can be felt in the lower portion of the stem but the head is not prominent in the leaf sheath.
4. Boot—the head is prominent inside the upper leaf sheath and the flag leaf is developed.
5. Heading—spikes or panicles are emerging but pollination has not begun. The exception is barley which pollinates before emerging from the boot.
6. Flowering—florets open and pollen is shedding (anthesis).
7. Filling—the fertilized ovary is enlarging and the kernel assumes full size.
   - Milk—endosperm can be squeezed from the kernel as a white liquid.
   - Soft dough—endosperm is becoming firm.
   - Hard dough—endosperm is firm and the kernel changing color.

4501 S. 0038

Figure 5 **WHEAT EMBRYO**

STAGES OF WHEAT GERMINATION

4503 4502

8. Mature seed—kernel is firm and contains 35% or less moisture.
9. Fully ripe—kernel has about 13% moisture.

B. The growing point

The growing point is composed of a group of closely packed nodes, internodes and the embryonic inflorescence (head, ear or panicle). These component parts of the growing point finally develop into the above ground parts of the mature plant. The growing point is differentiating during the late seedling stage and prior to tillering. The potential plant development, including number of spikelets as a yield factor, is therefore, determined at this very early growth stage. Growing conditions at this early growth stage do influence final crop yield. For example, early season drougth or high temperatures may limit the final yield. Cultural practices such as early seeding and soil moisture conservation usually help to avoid such yield limiting factors.

Make special note of where the growing point Figure 6, is located at each growth stage. The growing point (terminal bud) is **always** located above the uppermost node of each stem in cereals. Generally the growing point is **below** the soil surface until nearly 30% of the mature plant height has been reached. As soon as node (joint) tissue can be felt near the soil surface, the growing point is above the soil surface. Tillering generally is completed before the growing

Figure 6—GROWTH STAGES OF SMALL GRAINS

Arrow shows location of growing point

4503

point is above ground. This delayed emergence of the terminal bud is a valuable protective mechanism and should be considered when investigating frost, wind or hail damage. Cereals will survive extensive damage to the leaves and crown if the terminal bud is not killed. Maturity, however, is delayed following extensive loss of early foliage leaves.

VIII. PLANT PARTS AND THEIR FUNCTION

A. **Roots**—anchor the plant and absorb water and plant nutrients from the soil. There are two main types of cereal roots, **seminal** (primary) and **crown** (secondary). A third type called **brace** roots may develop above ground in corn.

See Figure 7, page 12.

Seminal roots—develop first. They originate from the embyro when the seed germinates, growing downward from the lower end of the embyro. The radicle develops first, followed by three, five or seven additional seminal roots. Sorghum and millet produce only a single branched seminal root.
Seminal roots sometimes erroneously are called "temporary roots," the belief being that they function only in early stages of growth. Seminal roots may function until the plant matures. In corn they penetrate to a depth of five to six feet, but frequently they die soon after the crown roots are formed. In a well tillered wheat plant they may serve as the chief support of the main stem of the plant.
Crown roots—develop after the seedling emerges. They originate from stem tissue (adventitious) and develop after the young plant unfolds a few leaves. They arise from basal stem nodes which remain underground and develop into an elaborate root system. Crown roots usually develop about one inch below the soil surface even though the seed was planted deeper. Internodes below the crown elongate, bringing it up near the soil surface.
Brace roots—may arise in whorls from nodes above the soil surface in corn and sorghum. When entering the soil they function as ordinary roots.

The number of crown roots may vary but they usually form definite whorls. They tend to grow horizontally before turning abruptly downward. Each whorl of roots tends to have a wider, horizontal spread than the preceding one. Each new tiller gives rise to additional crown roots. A well tillered plant, therefore, develops a large crown root system.

a. Root structure:

Stele—central part of root containing specialized cells and tissue (xylem) for the upward translocation of water and dissolved nutrients and (phloem) for downward translocation of food.
Cortex—surrounds the stele and is composed of cells (parenchyma) capable of transport or storage of carbohydrates.

Epidermis—the outer covering of the root including root hairs.

Root hair—a "work horse" simply an enlarged epidermal cell in close contact with the soil particles, soil water and soluble ions. Root hairs have a life span of only a few hours but new ones are formed continuously during active plant growth.

b. Root growth: See figure 8 page 13.

Growth in a root is due to cell division and enlargement at the **tip** of the root. Roots do **not** "search" for water or nutrients, they only "intercept" water and nutrients present in the pore space of the soil with which they happen to come in contact. There is some movement of water and nutrients in the soil and therefore movement towards the root.

With ample space, the roots of a single plant may have a total horizontal spread of four feet in wheat, eight feet in corn and twelve feet in sorghum. Roots of small grains, corn and sorghum normally penetrate downward three to six feet but most of the weight is in the upper 6 to 12 inches of soil.
Some cereal roots may elongate as much as a half-inch or more a day; seminal roots of winter wheat may grow at that rate for 70 days. Corn roots may grow from 2 to 2½ inches a day for three or four weeks. The mature root system of a corn plant may occupy 200 cubic feet of soil.

Roots of cereal plants do not extend into waterlogged soil. A moist topsoil with cold or dry subsoil in the early stage of plant growth promotes a shallow root habit that may cause the plant to suffer in later drouth. Roots penetrate dry soil only slightly beyond available moisture supplies. They do not "search" for water or nutrients. This is why a firm seedbed without air pockets or thick layers of dry straw is desirable.

Soil temperature affects root development of a growing crop. During the growing season temperatures near the soil surface are considerably higher than temperatures at lower soil depths. The optimum soil temperature for root development of spring sown small grains is reported to be in the range of 68-72° F. Optimum soil temperatures for corn and sorghum are 70-75° F. Studies of soil temperatures at the Fargo Experiment Station (Figure 3, page 6) show that these optimum soil temperatures are not reached in the surface soil until the middle of June. If the 60° isotherm is the temperature at which root growth of spring sown small grain crops is slowed considerably, roots may not extend much beyond the 2½-3 foot depth in soil by the time the plant has completed growth.

Since the soil temperatures in the lower depths are sub-optimum for root development, the small grain crop with a rather shallow root system may suffer from drouth during the drier part of the growing season (July and August). Soil water available to the crop is, therefore, limited to that in the top three feet. During periods of high temperature or drying winds, crops may suffer from drouth even though there is good subsoil moisture at the 4 to 5 foot level.

c. Absorption by roots:

Plants absorb water and mineral nutrients through the root hairs. The roots absorb water and nutrient ions by osmosis. The semipermeable mem-

9. First Internode

4505

Figure 8—ROOT GROWTH

brane of the cell wall is the selective tissue that restricts the free entry or exit of nutrient ions. Water, however, moves freely through this membrane independent of nutrient ion exchange.

The more a plant needs **water** the more rapidly it absorbs available soil water. Water taken up in excess of the ability of the plant to transpire water vapor through the stomata is forced out through pores in the leaf. Wilting occurs when transpiration (water loss) of the plant exceeds water uptake. Wilting may be only temporary if it results from hot, dry winds, or it may be permanent if due to a prolonged drouth or saline soil condition. Temporary wilting is not considered injurious to vegetative crop growth but usually reduces yield and delays maturity.

Nutrients are absorbed as **ions** into root hair cells in response to the metabolic needs of the plant. For instance, potassium nitrate (KNO_3) dissolves and becomes dissociated into K+ (positive) and NO_3— (negative) ions. These ions are transported through the semipermeable membrane independent of water uptake. Thus it is possible for mineral nutrients to be absorbed even when the plant is not actively taking up water. Mineral nutrients may be concentrated in the cell sap at concentrations far above that in the external soil solution.

B. **Stems** (culms) hold the leaves up to sunlight and air. Cereals have a single main culm and tillers each divided into a series of **nodes** (joints) and **internodes.** At first the internodes are very short but later each elongates, the length depending upon

its position and the species. The basal stem internodes are short while the upper internodes tend to become progressively longer. The uppermost internode is the longest and terminates in the flower part (inflorescence).

The very young internodes are filled with pith cells but except in corn, sorghum and solid stem wheat varieties the pith disappears as the internode elongates, leaving it hollow. The nodes, however, remain solid.

The growth area of each above ground internode is always at the base. This area contains the meristematic tissue made up of young and actively dividing cells. Stem elongation takes place in this area by both cell division and enlargement. Growth in diameter of the stem is also a result of cell enlargement.

Dwarf varieties of cereal crops are due to less elongation of the internodes, rather than a reduction of the number of nodes, internodes and leaves of the stem within a given maturity range.

Tiller stems usually are slightly shorter and produce shorter spikes or panicles than does the main stem. They also produce fewer and smaller kernels per spike. There may be more sterile florets in a tiller spike than in the main stem spike. The ability of small grains to produce or lose tillers in response to growing season conditions is an important yield and crop quality factor. A crop such as hybrid corn which does not tiller must be planted thicker to increase stand per acre.

a. Stem structure: See Figure 9.

Epidermis—single layer of cells covered with cutin (a waxy covering which conserves water). The stem contains few stomata.

Cortex—parenchyma cells containing chloroplasts. Fibrous tissue plus tubular configuration provide stem strength.

Vascular bundles—these conductive tissues extend up and down through the root, stem, leaf and other structures of the plant. They are designed to transport water, raw materials and manufactured plant food to different sections of the plant. **Phloem** is the outside part of the vascular bundle through which the food materials manufactured in the leaves are transported downward to storage areas. **Xylem** is the inside part of the vascular bundle that transports water and nutrients upward through the plant.

Pith—may or may not be present. Solid stems may contribute to insect resistance. For example, solid stem wheat for sawfly resistance.

C. **Leaves** carry on photosynthesis, which is the manfacture of food from raw materials secured from the soil and air using light energy from the sun. Leaves of cereals arise from stem nodes. Each node produces one leaf. A bud is generally present in the axil of each leaf. In small grains the lower buds may produce tillers while the upper buds remain undeveloped. In corn these upper

Figure 9—CROSS SECTION OF STEM

4507

buds develop into ear shoots. Leaves are arranged in rows on opposite sides of the stem.

The foliage leaf is in two parts, the **sheath** which is wrapped around the stem and the **blade.** Thickened tissue at the junction of the sheath and blade is known as the **collar.** At the base of this junction but on the inner margin of the sheath there occurs a thin membrane outgrowth known as the **ligule.** The ligule is generally regarded as a protective structure preventing rain, dust, insects, etc., from entering and accumulating within the sheath. At the base of the leaf blade there may be appendages called **auricles** which may vary in length and may be partly wrapped around the stem. The shape and size of the ligule and the auricle are often of value in crop identification. See Figure 10, page 16.

The **flag leaf** is the uppermost foliage leaf on small grains. The lower plant leaves die first due to shading, drouth, disease or normal maturity. The flag leaf is the last to remain green and accounts for about 80 per cent of the filling of the grain crop.

a. Leaf structure: See Figure 11, page 16.

Cuticle—is composed of cutin which covers the epidermis and prevents excessive water loss.

Epidermis—a single cell layer containing **many** stomata, especially the underside.

Parenchyma—specialized cells containing chloroplasts separated by extensive air spaces.

Veins—contain the xylem and phloem through which raw materials (water and solutes) are supplied and the products of photosynthesis are translocated.

Stomata—openings in the epidermis with guard cells which control air exchange rate and transpiration in response to light, water uptake and photosynthesis activity.

IX. TRANSPIRATION

Transpiration is the evaporation of water from within the aerial parts of plants, especially the leaves. Often over 99 per cent of the water absorbed by plants is transpired, but a plant is unable to grow unless it has sufficient water. Most of the water that evaporates from the leaves passes out into the air through the stomata, but a small amount of water vapor diffuses through the epidermal cell layers. Liquid water changes to vapor in the transpiration process.

Light, temperature, humidity, wind velocity and soil moisture conditions influence the rate of transpiration in plants. The stomata open in response to light, therefore transpiration is greater in the day time than at night. High temperatures, low humidity and wind movement increase transpiration. When soil water is readily absorbed, the transpiration rate is higher than when soil water is limited and absorbed with difficulty. Cereal plant modifications that reduce excessive evaporation are decreased leaf surfaces, thickened cuticle, and waxy bloom on the cuticle of leaves and stems. A waxy bloom is conspicuous on sorghum, wheat and barley.

The ratio of the total water absorbed to the total amount of dry matter produced by the plant is termed the "water requirement" or "transpiration ratio". It is usually expressed as the number of pounds of water required to produce one pound of dry matter. The mean water requirements of cereals investigated at Akron, Colorado were as follows: oats 635, barley 521, wheat 505, corn 372, millet 287, and sorghum 271 per pound of dry matter. All of these water requirements were based upon the total dry matter in the plants above. The water requirement is not necessarily a measure of the drouth resistance of a crop.

A more practical measure of the water requirement for crops is "consumptive use" which includes evaporation from the soil surface as well as transpiration through the plant. This is frequently referred to as "evapotranspiration". The "drouth resistance" of crops depends on (1) drouth evasion, i.e., ability to complete maturity before soil moisture is depleted, e.g., early maturing small grains. (2) drouth tolerance, i.e., the ability of a plant to go dormant during a drouth and to recover later when soil moisture becomes available, e.g., sorghum. (3) ability of a plant to adjust its growth and development to the available moisture supply, i.e., initiation or loss of tillers and the loss of lower leaves when moisture is limiting, e.g., small grains.

X. PHOTOSYNTHESIS

The manufacture of food substances from carbon dioxide, water and nutrient elements in the presence of light and cholorophyll in living green plant tissue is photosynthesis. The green plant differs from most organisms since it has the ability to reduce atmospheric carbon dioxide to carbohydrate via radiant energy and chlorophyll.

When light of appropriate wave lengths is absorbed by chlorophyll, carbon dioxide and water are converted to sugar and oxygen is realeased. The process is exactly the reverse of that accomplished by respiration. Using the formula $[CH_2O]$ to designate the basic unit of a carbohydrate molecule (six of these would produce $C_6H_{12}O_6$, or glucose), then the empirical equation may be written as:

$$\underset{\textit{carbon dioxide}}{CO_2} + \underset{\textit{water}}{H_2O} \xrightarrow[\textit{(chlorophyll)}]{\text{Light}} [CH_2O] + \underset{\textit{oxygen}}{O_2}$$

This equation gives the impression that the oxygen is coming from the CO_2 molecule. Scientists used radioactive isotopes to prove that the oxygen

Figure 10—EXTERNAL LEAF STRUCTURE

Figure 11—INTERNAL LEAF STRUCTURE

really came from the splitting of the water molecule by light in the presence of chlorophyll. This is the key to the entire process of photosynthesis for it represents a point at which light energy does chemical work. Since two atoms of oxygen (O_2) are produced in the above equation, and each water molecule (H_2O) contains only one atom of oxygen, at least two water molecules must enter into the reaction. Hence:

$$CO_2 + 2H_2O \xrightarrow[\text{(chlorophyll)}]{\text{Light}} [CH_2O] + O_2 + H_2O$$

Figure 12–PHOTOSYNTHESIS

The completed balanced equation for photosynthesisis:

$$\underset{\text{carbon dioxide}}{6CO_2} + \underset{\text{water}}{12H_2O} \xrightarrow[\text{(chlorophyll)}]{\text{Light}} \underset{\text{sugar}}{C_6H_{12}O_6} + \underset{\text{water}}{6H_2O} + \underset{\text{oxygen}}{6O_2}$$

The CO_2 enters the plant through the stomata in the leaf surface. The plant gives up water vapor during transpiration in exchange for fresh dry air containing CO_2. Air contains only 300 ppm carbon dioxide. Hence, in a rapidly growing field with adequate light, CO_2 may become a limiting factor in photosynthesis. The leaf is an ideal photosynthetic factory since it is well supplied with loosely packed cells containing chlorophyll, and veins which provide water and minerals via the xylem and remove sugar via the phloem. The veins branch so profusely that no leaf cell is more than 1 or 2 cells away from a vein.

The stomata are key structures in the plant's control over water loss and the entrance of CO_2. They open in response to light and adequate water supplies and close in dark or drouth. Stomatal closure effectively reduces photosynthesis by impeding the intake of carbon dioxide. Once the CO_2 molecule has entered through the stomatal barrier, it moves into an air chamber with connecting air passages to all parts of the leaf. When CO_2 reaches the wet surface of a cell, it dissolves in the water and becomes available for photosynthesis.

The oxygen released during photosynthesis is liberated to the atmosphere through the stomata. Closure of the stomata also will prevent this gaseous exchange and the oxygen probably would be reabsorbed in respiration, which produces CO_2 that could in turn be used in photosynthesis. Photosynthesis can proceed at 10 to 20 times the maximum rate of respiration but is limited to approximate equalibrium with respiration with stomatal closure. Hence, under stomatal closure the plant is maintained, but doesn't grow.

The water required for photosynthesis is absorbed into the roots and transported via the xylem tissue in the veins to a green cell. Once in the leaf tissue the water moves from cell to cell on diffusion gradients and most is lost by transpiration.

The sugar produced by photosynthesis accumulates rapidly in the green cells and is translocated to other parts mainly as sugar. Most of the sugar is then converted to starch and proteins and deposited in storage tissues of the plant. The stem, roots and seed generally serve as the storage tissues. This stored plant food is available for future plant growth or reproduction by release of energy through the process of respiration.

XI. REPRODUCTION

A. **Inflorescence.** See Figure 13, page 19.

Seed is produced on a spike (wheat, barley and rye), a panicle (oats, sorghum, rice and grain millet), and on a compound spike called an ear (corn). In small grains the entire seed head is known as the inflorescence. In corn the comparable in florescence is the ear. In cereals the inflorescence is composed of spikelets which contain individual flowers.

Each spikelet is a unit of the inflorescence and contains one or more flowers with a number of associated bracts. Nevertheless, it is convenient to speak of the whole system of spikelets as the inflorescence although it is a compound system.

Spikelets are arranged on a central axis of the spike, panicle, ear or tassel known as the **rachis.** The **pedicel** is a rachis branch which supports the spikelets and may be either long or short, or absent as in wheat or barley.

B. **Flower parts**

A cereal **flower** is small and not colorful or showy. It is composed of three stamens (male organs) and one pistil (female organ). A **floret** includes the flower plus the **lemma** (outer bract around kernel) and the **palea** (inner bract around seed). In awned varieties the lemma tip is extended as an **awn.**

C. **Pollination**

Naturally self-pollinated cereals (wheat, oats and barley) are more than 96% self-pollinated, the amount being dependent upon variety and environment. Pollination takes place before the floret opens and before the anthers emerge.

Often cross pollinated cereals include sorghum and the foxtail and proso millets. In these crops the majority of flowers are normally self-pollinated but several are cross pollinated by pollen from another flower either on the same plant or from another plant. Cross pollination among the cereals is done mostly by airborne pollen. Sorghum s are usually 90 to 95 per cent self-pollinated.

Naturally cross-pollinated cereals include corn and rye. Cross-pollination is essential to seed production in rye because many flowers are self sterile. Corn produces male flowers in the tassel and female flowers on the ear, allowing considable natural crossing.

D. **Fertilization**

The fusion of the pollen sperm with the egg cell in the ovary is called fertilization. After a viable pollen grain falls on the stigma it germinates and grows down the style and enters the ovary. There the male sex cells unite with the egg nuclei to produce a new seed.

Pollen grains are sensitive to high temperature. In self-pollinated crops high temperature may sterilize pollen grains within the floret, resulting in no seed set. Pollen grains also are sensitive to desiccation and therefore hot, dry winds during pollination may cause a poor seed set especially in cross pollinated crops. Drouth or mechanical injury also can sterilize pollen and result in poor seed set.

E. **Plant Breeding**

Crossing is done during the flowering stage of plant growth. In self pollinated crops the florets are opened and the pollen sacks (anthers) are removed by hand, (emasculated) before pollen is shed—this plant becoming the female. Two or three days later pollen from a selected male plant is gathered and transferred by hand to the stigma of the emasculated female. The head is then covered to prevent entrance of foreign pollen. If fertilization is successful, a cross has been made and a seed is produced carrying genes from both parents. Several generations later the cross begins to breed true and one or more lines having desirable characteristics from both parents may be selected as a new variety.

New varieties of cross pollinated crops, such as corn, are accomplished by covering the emerging ear silk before pollen is shed and then transferring pollen by hand from a selected male parent.

Commercial hybrids are produced by first crossing the female with a plant that will make it male sterile (no viable pollen). Planting this male sterile female next to a normal flowering plant with bred-in male restorer induces natural cross pollination and the hybrid seed is harvested from the female rows only. Corn hybrids sometimes are produced by detasseling the female rows before they shed pollen.

XII. THE FUNCTIONING PLANT SYSTEM SUMMARIZED. See Figure 14, page 20

The plant is a coordinated system which is compsed of cells organized into tissues, tissues into organs, and finally the organs functioning as a whole plant. The ultimate objective of all plant growth is reproduction of the species. The various plant organs function in relation to one another.

Four basic plant functions resulting in reproduction are:

Respiration is a continuing process which is required in all living plants. Periods of very slow respiration are called dormancy. A stored seed, for example, is dormant. Seed germination is the resumption of rapid metabolic activity which converts stored organic food to simpler compounds, thereby releasing energy. This process continues throughout the life of the plant. This

4511

Figure 13—STRUCTURE OF FLORET AND SPIKELET

Spikelet

Rachis

Floret

energy is chemical in nature and is used throughout the plant, particularly in the meristems, in nutrient uptake and finally in reproduction.

Transpiration occurs whenever the wet cell surfaces inside the plant are exposed to the atmosphere through the stomata. Water vapor moves from areas of high concentration to areas of low concentration through the stomata. The plant receives fresh dry air containing carbon dioxide in exchange for the moisture-laden air, which is low in carbon dioxide. This exchange is vital to photosynthesis, but generally is wasteful of water. The stomata open and close in response to light or the plant-soil water relationship. Closure of the stomata due to wilting effectively stops most photosynthetic activity.

Photosynthesis is a photo-chemical reaction in which light energy is transformed into chemical energy within the chloroplast cell containing chlorophyll, water and carbon dioxide. The products of photosynthetic activity are energy stored as carbohydrates, oxygen and water. This process occurs only in living green plants. The rate of photosynthesis exceeds the rate of respiration by 10 to 20 times and results in a net dry weight gain of the plant. Every cell, tissue and organ in the plant is directly related to the photosynthetic activity including manufacture, transportation or storage.

Absorption involves the very specialized root hair cells and the cytoplasmic semi-permeable membrance inside the root hairs. The rapid absorption of water and certain nutrient ions is important to proper plant growth and development. Water moves freely into or out of the root hairs in response to solution concentration gradients from regions of high water concentration to regions of low water concentration. Nutrients are absorbed as ions. The plant is selective in nutrient ion uptake and must expend energy in the uptake and transport of these nutrient ions. It can take up ions without absorbing water. Absorption involves both underground and above ground plant parts. The chlorophyll in green plant cells absorbs light rays from the sun, supplying the energy needed for photosynthesis. Carbon dioxide (CO_2) an essential element in photosynthesis, is taken in through the stomata as a gas and is absorbed by wet cell surfaces within the leaf.

Figure 14—THE FUNCTIONING PLANT SYSTEM

4513

Section B–SPECIFIC CROP PRODUCTION ITEMS

Growth processes in cereals—the length of the vegetative period of any cereal is determined largely by the temperature, photoperiod, plant nutrition growth hormones, and genetic factors that affect reactions to these conditions. Each cereal species has an approximate minimum, optimum, and maximum temperature at which growth occurs, although varieties within a species may differ. When the average temperature is 18°F below the optimum, the time required to grow a crop to maturity is approximately doubled. Temperature largely determines the length of time a cereal plant takes to reach flowering and to mature after the floral structure has been formed.

The **long day** cereals—wheat, oats, barley and rye —flower earlier when nights are short and days long. The **short day** cereals—corn, sorghum, rice and millet —flower earlier when the nights are long and days short.

A soil rich in nitrogen will keep down the carbon nitrogen ratio (normally 10 or 11 to 1) and delay flowering in the **nitro-negative cereals**—wheat, barley, oats and rye. Excessive nitrogen prolongs vegetative growth in these crops. The **nitro-positive** cereals—corn, sorghum, rice and millets—flower earlier in a soil well supplied with nitrogen unless it is very excessive. Ample phosphorus and potassium often promote earlier flowering. Moisture shortage may cause small grain plants to flower abnormally early, often observed in a dry season, but a moisture deficiency may simply force sorghum plants into dormancy until soil moisture becomes available.

The cereals may be grouped on the basis of certain botanical characteristics as follows:

a. Cool season, long day, nitro-negative, winter or spring habit plants; wheat, oats, barley and rye.
b. Warm season, short day, nitro-positive, spring habit plants; rice, corn, sorghum and millets.

High temperatures reduce small grain yields. High temperatures during the growing season influence final yield, as is well illustrated in Figure 15. This chart shows the relationship of the number of days temperatures reached 90°F. or above during June and July at the four main weather stations and the final state average yield of wheat in North Dakota. Ninety degree temperatures or perhaps a few degrees lower reduce final wheat yields even under favorable soil moisture conditions.

Small grain seedlings may sometimes show sun scald resulting from high soil line temperatures on bright sunny spring days. A light colored line appears across the leaves. This burn occurred when that part of the seedling was at the soil line. This may delay

Figure 15–EFFECT OF 90° F. DAYS ON SPRING WHEAT YIELDS 1958-1965

Source: Federal Crop Reporting Service

maturity slightly but has not injured the growing point.

Growing days required—the number of growing days required to reach maturity by each kind of spring sown cereal crop grown in North Dakota will vary depending on (1) variety, (2) date of seeding, (3) temperature, (4) moisture and (5) fertility conditions. High temperatures and drouth tend to force early heading. Drouth may be only severe enough to cause a plant to slow its normal rate of development. Ample rain following such a drouth stress period may hasten heading or maturity. Seeding too late may force the crop into the short days and cooler temperatures of early fall, thus delaying maturity of day length sensitive crops. The following table gives the approximate number of growing days for each crop.

Table 2. APPROXIMATE NUMBER GROWING DAYS FOR NORTH DAKOTA SPRING SOWN CEREAL CROPS

	Emergence to Heading Days	Heading to Ripe Days	Total Emergence to Ripe Days
Barley	38 - 46	32 - 38	70 - 74
Oats	36 - 46	38 - 43	75 - 86
HRS Wheat	42 - 49	35 - 42	83 - 88
Durum Wheat	45 - 52	38 - 42	84 - 94
Millet	30 - 35	30 - 35	60 - 70
Corn	50 - 60	50 - 64	90 -120

Winter hardiness of fall sown crops—Rye is the most winter hardy crop, followed in order by winter wheat, winter barley and winter oats.

Vernalization changes a plant from winter to spring habit of growth. Winter rye sown in the spring fails to produce heads unless the sprouting seed or the

young plant is subjected to freezing or near freezing temperatures for a two or three week period. Rye may sprout in the fall but not emerge until spring and produce a satisfactory crop. Rye which fails to germinate in the fall must germinate early in the spring, and a prolonged cold spell must follow to produce a crop. Winter wheat also requires vernalization.

Lodging in cereals—there is no single factor that can be used as a measure of standability. Large culm diameter often has been associated with lodging resistance in small grains, but straw size and stiffness may not be a reliable guide to the lodging resistance if the plant has a weak root system. More important plant characteristics related to lodging resistance are length of straw, leaf area, and resistance to bending. Short, heavy stems with thick walls are characteristics which resist lodging.

Abundant soil nitrogen may produce a lush growth of cereals that leads to increased lodging. Lodging usually has been decreased in small grains by applications of phosphorus and potash on deficient soils because these nutrients promote root development. Thick stands keep much of the sunlight from reaching the base of the stems and shade causes the cell walls of the stems to be thin and weak.

When a cereal stem lodges before maturity it usually straightens up. The nodes contain a gravity sensitive hormone which induces cell growth on the lower side, causing the plant to become erect again.

The chief external factors responsible for lodging are:

1. Shading—causing weak straw.
2. Unbalanced nutrition—heavy applications of nitrogen and excess of water may stimulate lodging. Lack of potassium induces weakness in the mechanical tissues.
3. Temperature—warm temperatures can promote lush weak vegetative growth.
4. Disease—several fungus diseases may directly induce stem weakness.

Tillering—varieties of small grain vary in their tendency to tiller. The extent of tillering for any one variety is influenced by environmental factors such as **moisture, soil fertility, temperature** and **sunlight.** Seeding too thick, using small seed and seeding too deep will decrease the amount of tillering. Barley tends to tiller the most, followed by hard red spring wheat, durum wheat and oats in that order.

Leaf stages—counting leaf stages in small grains is important in determining safe crop stages for herbicidal applications. The leaf number refers only to those leaves which are fully expanded and those on the main shoot. It does not refer to tillers or leaves on tillers. A leaf is considered fully expanded when the tip of the next leaf is just visible. See figure 16.

Figure 16—FOLIAGE LEAF AND BOOT STAGES

Roots of cereal plants will not grow into waterlogged soils. Adequate soil moisture near the surface in the early stages of crop growth promotes a shallow root system. The crop may suffer later from drouth even though subsoil moisture seems adequate.

Plant roots will not extend through a dry soil zone to reach moisture that may be available in deeper subsoil. Roots don't "search out" moisture or nutrients. They only intercept those with which they come in contact. There is some movement of soil moisture and nutrient ions towards actively absorbing root parts.

Ratio of grain to straw—the ratio will vary with such factors as variety, rate of planting and productivity of soil. As a rule of thumb, however, the following ratios prevail.

Barley,	1 pound of grain to	1	of straw;	1 T straw	= 41.7 bu.
Wheat,	1 pound of grain to	1½	of straw;	1 T straw	= 33.3 bu.
Oats,	1 pound of grain to	2	of straw;	1 T straw	= 62.5 bu.
Rye,	1 pound of grain to	2	of straw;	1 T straw	= 35.7 bu.
Corn,	1 pound of grain to	1	of stover;	1 T stover	= 35.7 bu.

Amount of N, P_2O_5 and K_2O used. Wheat, oats, barley and flax requirements are calculated from data in N. Dak. Agr. Exp. Sta. Bulletin 378 and corn is estimated from several other sources. These figures give a good indication of the nutrients required for the indicated levels of production under North Dakota conditions.

Table 3. MAJOR NUTRIENT USAGE

Crop		Yield	N	Pounds P_2O_5	K_2O
Wheat	(grain)	20 bu.	36	11	7
	(straw)	1800 lbs.	13	3	41
Oats	(grain)	40 bu.	33	10	6
	(straw)	2560 lbs.	22	6	82

	(straw)	1120 lbs.	10	3	23
Corn	(grain)	50 bu.	46	18	12
	(stover)	2800 lbs.	27	8	35

Fertilized Wheat Uses Moisture Efficiently—crops produced under adequate fertility levels make more efficient use of available moisture stored in the soil and received through the growing season. Fertilizer application at recommended levels is, therefore, beneficial even in dry years. Table 4 shows a summary of many trials conducted on wheat by the Soils Department at NDSU.

Table 4 EFFECT OF MOISTURE SUPPLY ON WHEAT YIELDS IN NORTH DAKOTA UNDER INADEQUATE AND ADEQUATE SOIL FERTILITY LEVELS.

Moisture supply* Range	Average	Unfertilized Yield Range	Average	Fertilized Yield Range	Average
inches		pounds per acre			
5.6- 7.3	6.4	618-1,254	936	822-1,926	1,272

Source: Crops and Soils Magazine, April-May, 1967.

The yield triangle—total yield per acre is the combined effect of (1) weight per kernel (2) number of kernels per head and (3) number of heads per acre as represented in Figure 17. Any crop production factor which limits the maximum contribution of any one or more of the yield triangle sides results in decreased yield.

Figure 17—THE YIELD TRIANGLE

Each crop variety has a genetically determined yield potential; environment determines how closely actual yield approaches genetic potential. It is fairly certain that full yield potential is never achieved, because at some time during the growing season one or more of the environment factors are limiting.

Normal Germination Standards

Table 5 MINIMUM GERMINATION STANDARDS FOR GOOD SEED

HRS wheat	90%	Oats	90%
Durum wheat	85%	Rye	80%
Barley	90%	Corn	90%

Hail damage—effects of defoliation on cereals during active growth reduces the photosynthetic area of the plants and may result in serious yield reduction.

The effect on yield depends largely on the stage of plant development at the time of injury. Experiments with corn have shown that the most serious yield injury results when defoliation occurs at the flowering stage. Earlier defoliation causes less serious yield injury.

Leaf removal was inflicted on oats, barley and wheat in Iowa at weekly intervals from the seedling stage to the hard dough stage of the grain. Cutting off all leaves above the growing point reduced yields about in proportion to the percentage of leaf area removed at each weekly interval. Other experiments have shown that removal of leaf blades also reduces the protein content of grain.

Four trials at the Fargo Station have shown that spring wheat which was beaten fairly severely by hand to simulate hail damage at various stages of growth showed losses as listed in Table 6.

Table 6. YIELD LOSSES FROM SIMULATED HAIL DAMAGE TO SPRING WHEAT AT FARGO

	Per cent Yield Loss	Days Delayed in Maturity
Check—no treatment	0	0
Plants beaten at:		
4 leaf	36	9
jointing	55	12
boot	65	12
headed	84	11
All stems broken at:		
jointing	30	8
boot	41	6
headed	38	4
milk	40	4
nearly mature	12	3

Source: Simulated Hail Injury To Wheat and Flax, North Dakota Report No. 12, July 1964.

These results indicate that hail damage occurring in the boot through the milk stage is the most severe. There was no rain following these treatments such as normally accompanies a hail storm. When estimating field hail loss apply the per cent yield loss from Table 6 only to the percentage of damaged stems in the field.

Recovery may seem to be terrific but final yield is often disappointing because delay in maturity makes the crop more subject to disease, late season drouth and sometimes frost injury.

Fall Frost—early fall frost easily injures **corn** leaves, stopping or restricting photosynthesis. When severe enough it also stops further kernel development, resulting in serious grain yield loss. Table 7 shows effect on germination of fall frost of varying degrees at different corn moisture levels. When germination is injured it can be assumed that further kernel development is stopped.

Table 7. FREEZING TEMPERATURE AND MOISTURE CONTENT AS THEY AFFECT GERMINATION OF MATURING CORN.

Temperature ranges (Degrees F.) Exposure 24 hours. Per cent germination

Per cent moisture in corn kernels	0° - -5°	8° - 4°	16° - 12°	24° - 20°	32° - 28°

Source: Agronomy, Principles and Practices. — Graber and Ahlgren.

The effect of fall frost on **wheat** is dependent on (1) stage of plant maturity (2) degrees of frost and (3) length of the frost period. Canadian data indicates that a light frost of 28°F. lasting 4 hours and occurring prior to the dough stage will severely injure both germination and yield. Such a frost may wrinkle the bran coat but have no effect on germination and little or no effect on yield when occurring at or after the dough stage. In general, the earlier the stage of crop maturity the easier frost damage affects both yield and germination. During late maturity stages even severe frost may not affect yield or germination but can affect market quality. A light frost of 28° to 30°F. may cause sterility in wheat that has just headed or is about to head.

Table 8. BUSHEL WEIGHT, PER CENT GERMINATION AND SOIL EMERGENCE OF THATCHER WHEAT.

Frost Damage[1] Type of	Test Wt. Lbs./Bu.	Germination Per cent	Emergence Per cent
A	60.0	95.0	87.5
B	57.5	88.0	78.5
C	53.0	74.0	68.5
D	42.5	48.0	27.0

[1] Type A — Sound seeds showing no frost damage.
Type B — Bran coat frost damage only.
Type C — Deep seated frost damage. Kernels with or without slight shriveling and usually dark in color.
Type D — Shriveled and shrunken kernels. Bushel weight low.

Source: The effect of Frost on Germination and the Vitality of Seedlings from Frosted Wheat. Bulletin No. 128 University of Saskatchewan, Sask., Canada.

Effect of Weed Competition on Crop Yield—Numerous studies have shown that weed competition during early stages of crop growth lowers yields more than weeds starting and growing during the later stages of crop growth. Weeds compete for soil moisture, soil nutrients and light. Even though both soil moisture and nutrients seem to be available in amounts greater than crop needs, the crop yield is still reduced.

Competition studies show that at five days after

4517

emergence the root system of small grains is larger than the root system of common annual weeds, including wild oats, germinating at the same time. At 21 days after emergence, however, the root system of weeds is considerably larger than those of the cereals. This is apparently true of corn and other cereals as well. Weeds, therefore, have the advantage quite early in the growing season unless they are controlled by selective chemicals, tillage or crop competition.

Table 9 shows the advantage of early mustard control with 2,4-D in wheat.

Table 9 EARLY WEED CONTROL PAYS

Crop Stage	Days After Emergence	Yield Per Acre
Check — weed free	—	42 bu.
No weed control	Not sprayed	18 bu.
4th leaf stage	19	40 bu.
6th leaf stage	29	39 bu.
Shot blade (early boot)	35	18 bu.

Source: 1955 Proceedings Western Canada Weed Control Conference.

Crop management practices that promote good stands of strong, vigorous, fast growing crop seedlings and that get them started ahead of weeds make the crop more competitive and a better "weed fighter." Selective weed control chemicals, to be most effective, should be applied at an early stage of crop growth to remove the weed competition as early as possible.

Plant diseases—A plant disease is a plant growth abnormality caused by living parasites such as bacteria, fungi and viruses. Understanding each disease, how it develops and the damage it does to the plant is necessary as a basis for control.

Types of disease causing organisms and their behavior are:

Bacteria are single celled and reproduce by budding; that is, one cell gives rise to another until colonies develop which are held together by a gelatinous matrix. Infection is spread from one plant to another by splashing rain water, insects, plants touching and other mechanical means. An example is black chaff of wheat (not false black chaff, which is inherited).

Fungi or molds are made up of many cells and grow in thread-like strands. Movement from plant to plant during the fungus growth stage is very limited. Movement from plant to plant or area to area is accomplished by wind carried spores (seeds) of the fungus. A good example is stem rust of wheat.

Viruses are restricted in their growth to the protoplasm of living plant cells. They have no mobility at all except by being carried in the plant sap. They must be moved from plant to plant by insects, plant to plant contact in the field or by man himself. An example is barley stripe mosaic of barley.

A crop plant is susceptible to disease during various stages of growth depending on the life cycle of the disease. Seeds can be attacked by fungi or bacteria present on or in the seed or present in the soil in which they are sown. The young seedling can be attacked by soil borne fungi or bacteria. Some of these diseases can be controlled by fungicide seed treatments.

When leaves are exposed to the air, plants are subject to spore producing fungi such as leaf and stem rust or viruses carried by insects. During flowering the plant is subject to spore producing fungi, such as loose smut, which is carried within the kernel and can be detected only by an embryo test.

Section C – INDIVIDUAL CROPS

This section is not intended to be a complete discussion for each individual crop. When studying individual crops, make frequent reference to the corresponding discussions in Section A and B of this manual.

I. Wheat

Wheat is a cool season crop. It requires a longer growing period and a somewhat higher minimum heat requirement than other small grains.

Optimum preharvest mean temperature for wheat appears to be approximately 60° to 70° F. whereas the annual growing season temperature should be about 12° to 16° F. lower. Annual as well as preharvest daily mean temperatures significantly above 65° F. appear to be associated with low wheat yields. Warm temperatures during the late seedling and tillering stage of wheat may retard heading. Daily maximum temperatures above 90° F. during the three or four weeks after flowering may ripen the grain prematurely. See Figure 15 page 21. Above average temperatures are beneficial at the time of sowing, detrimental during the tillering, flowering and early dough stages and beneficial during ripening.

Germination—as water enters, the seed swells and increases in weight by about 60 per cent. The optimum temperature for germination is about 64° F. The minimum is about 34° F. Much above the optimum causes irregular germination. In soil, under favorable conditions, germination begins in 4 to 5 days. There may be variety differences in speed of germination.

Seedling—when the seedling reaches the soil surface, the kernel is rapidly becoming a mere sack containing diffusable food substances. The coleoptile has grown upward and its tip projects above the soil surface. Seminal roots are developing at this stage. The first foliage leaves appear through the coleoptile and normally are rolled clockwise.

The appearance of seedling leaves is due primarily to the growth of the third internode which brings the **growing point** near the soil surface. The buds on the fourth and fifth nodes which have been developing gradually now swell. The internodes remain very short. This whole area constitutes the crown, which is located just below the soil surface. Adventitious roots and tillers develop from the crown nodes.

Roots—Wheat roots are of two major kinds, seminal and crown.

Seminal roots arise from the embryo. The primary seminal root is the radicle. From the side a pair of lateral roots develop and a second pair may emerge later just above the first pair. Finally, one, two or even three roots, not pre-formed in the embryo, may be produced below the coleoptile. This gives a maximum total of 5 to 6 seminal roots. For a short distance just behind the tip, the root surface bears many delicate root hairs. When the root is from 4 to 6 inches long, many fine lateral branch roots develop. Seminal roots of wheat remain functional throughout the life of the plant, providing nourishment, especially to the main culm.

Crown roots—develop from the nodes of the main axis and from tillers below the soil surface. The first of these roots to form is a pair which grows out from the first tillering node of the main axis, one to the right and one to the left of the first lateral bud. At the second tillering node a similar pair arise, succeeded higher up, where the internodes begin to lengthen, by a whorl of 4 to 6 roots, more or less symmetrically arranged.

Crown roots are larger and thicker than seminal roots. They are at first unbranched and covered almost throughout their length with root hairs. Later numerous lateral branch roots appear. As these develop the older roots become thinner and brown in color and the root hairs disappear except towards the tip.

The first tendency of the crown roots is to spread laterally, the angle depending in part on the variety and on soil conditions. Thereafter they grow downward, branch prefusely and develop a dense mass of roots. Each tiller develops crown roots. A single wheat plant can, therefore, produce a large number of roots. Collectively, these are the **Crown** root system.

The mature system has a depth of 3½ to 4 feet and a maximum depth of 5 to 7 feet. Sixty per cent or more of the whole root system is in the top 12 inches of soil. Winter wheats in general are deeper rooted than spring wheats.

Stems—once at ground level, the stem remains comparatively short for some time, later elongating to full height of the wheat crop. The elongation occurs in the growing region at the base of each internode. The lowest internode elongates first, followed by the others in succession. The number of nodes ranges from 5 to 7. Each node is solid. The internodes generally are hollow but in certain varieties they are solid. The internodes become progressively longer from the bottom to the top of the plant. A crop may, therefore, be short at heading time but tall enough when mature to facilitate harvesting. The lower internodes, and parts of the top internodes, are entirely covered by leaf sheaths.

Tillering—tillers develop from the buds in the axils of the basal stem nodes. In grain sown at a normal depth it is usually the second and third nodes which produce tillers followed by the fourth and fifth nodes. In deeper sown

grain (3 inches and over), the second and third nodes generally remain dormant, with the first tiller arising from the fourth node. Hence sowing too deep tends to reduce the amount of tillering.

Several other factors influence tillering: (1) varietal characteristics (2) thin seeding promotes tillering while thick seeding reduces it; (3) plants from large seeds tend to tiller more than those from small seeds; (4) tillering tends to increase with good fertility; (5) adequate soil moisture and cool early season soil and air temperatures favor tillering.

Leaves—the normal wheat leaf is divided into two main parts, the sheath and the blade, which are separated by the collar.

The **sheath** arises at the node and encircles the stem. The lower three to five millimeters of the sheath is considerably thickened. It is this thickening of the sheath which helps make the node appear thickened. Near the base the sheath is entire (like a cylinder), higher up it is split. It is generally thicker than the blade, with thin transparent margins. In the young plant the sheaths are very short, although the corresponding blades may have reached several inches in length. With the elongation of the internodes, the sheaths rapidly elongate. The junction of the sheath and the blade is the **collar**. The **ligule** is colorless. Its free margin is irregularly cut, and fringed with minute hairs.

Auricles clasp the stem closely. Their size varies with the variety. They are pale green or pinkish in color. Their margins and tips usually are fringed with long hairs.

Inflorescence—the inflorescence of wheat is a **spike** with two rows of spikelets and a single terminal **spikelet.** The initial inflorescence can be seen in the late seedling stage, but the head does not emerge from the enveloping leaf sheaths until some 6 to 7 weeks later.

The main axis (rachis) of the spike consists of a number of short internodes. Each internode is narrow at the base and broad at the top; one side is somewhat convex, and the other side flattened or concave. The position of the concave side alternates so that the rachis has a zigzag appearance. The base of each spikelet is arranged alternately on the rachis. The inside of the spikelet is next to the concave surface of the axis. The length of the rachis internodes varies with variety and species. In some types the internodes are very short, producing a dense head whose spikelets project at a fairly wide angle; in others the internodes are long, producing a long lax head with spikelets pressed against the rachis. Length of head is therefore not necesarily related to number of spikelets or yield.

The common wheat rachis is tough and does not break even when threshed. In certain types of wheat, for example spelt, the rachis is brittle and when threshed the grains remain within the glumes.

The wheat spikelet consists of a short jointed axis, the rachilla, which carries a variable number of alternately placed solitary flowers (florets). There are two glumes at the base of each spikelet. They appear to be opposite one another, but actually one is slightly above the other. The typical glume is somewhat boat-shaped, divided by the mid-rib which divides the glume into unequal parts, the outer being the broadest. The tip of the glume may be broad with a blunt extension of the mid-rib, or narrow with an acute point. The number of florets in a spikelet varies. The lower two florets usually are fertile; the upper and especially the terminal are sterile. As a rule, two grains mature, but three grains may form and very exceptionally four, depending on growing conditions. Thus, we say the heads are filling four rows, six rows or eight rows.

The lemma which encloses the kernel is more or less boat-shaped with several ribs but no distinct keel. The upper margin ends in a point or awn. If the point does not exceed one centimeter, the wheat is said to be beardless; if it exceeds one centimeter, the wheat is said to be awned or bearded. When present, the awn is tapering and somewhat four sided with upward pointing barbs attached along the corners.
Flower opening and pollination—the floret opens a few days after heading. The first head to flower is that of the primary stem, followed by those of the tillers in order of origin. The first spikelet of the head to flower is situated about one third of the way down from the top. Flowering then proceeds upward and downward from this point. In each spikelet the basal floret opens first and the others in succession upward.

The pollen sacs begin to dehisce (shed pollen) as soon as the filaments begin to lengthen within the floret. Much pollen is, therefore, shed before the floret opens and self-pollination normally results. Cross-pollination can occur only if the pollen shed within the flower is sterile.

The time required for a wheat floret to open fully averages three minutes and 36 seconds. Approximately 86 per cent of the florets open in daylight. Florets open over a temperature range of 56° to 78° F. Flowering usually stops in florets below 56° F., although pollen may be discharged from the anthers of previously opened florets down to 52° F. Under ordinary conditions the wheat head completes flowering within two to three days after the first anthers appear. Under certain conditions, such as drouth or high temperatures, some of the

lower as well as the top spikelets of the head may fail to set seed.

Function of awns—the presence of awns on the the florets of wheat has tended to result in the production of heavier kernels. In semi-arid regions awned wheats have rather consistently out yielded awnless types, but usually there has been little or no yield superiority of awn types over awnless types under humid or cool irrigated conditions. Awned heads transpire more than do awnless heads, but the water lost through the awns account for no more than one to five per cent of the total transpiration of the plant. Awns carry on photosynthesis. Under drouth conditions the awns may continue photosynthesis even after the flag leaf dries up. Under some circumstances the contribution of the awns to the total kernel dry matter may comprise as much as 12 per cent. The tips of awned spikes dry less rapidly under hot dry conditions because of the shading or other effects of the awns.

Harvesting—the translocation of material from the straw to the kernels ceases when the moisture content of the kernel drops below 40 per cent. Since field ripening and drying are not uniform some increase in dry matter of the grain continues until the average moisture content drops to 30 to 35 per cent. Wheat that stood in the field for two weeks after it was fully ripe in Nebraska suffered an average loss of 3 to 5 per cent from shattering. The alternate wetting and drying from exposure to rain and dew during this period caused the kernel seed coat to wrinkle after swelling and drying. This lowered the test weight of the grain two pounds per bushel.

Nutrition of wheat plant—nutrients absorbed by the wheat plant include nitrogen, phosphorus, potassium, calcium, chlorine, silicon, sulfur and small amounts of numerous other elements. Most of the mineral matter except nitrogen is absorbed before or by the time the wheat plant blooms, but transfer to the kernel may proceed until about a week before harvest.

The wheat plant absorbs much of its **nitrogen**, usually in the nitrate form, by the time it blooms, but absorption continues until the crop is nearly mature. The whole plant attains a maximum quantity of nitrogen three weeks before harvest. In Kansas winter wheat the amount of nitrogen in the stems and leaves reached its peak at about the time of heading but it decreased in these parts until harvest. Nitrogen began to increase in the heads about the time it started to decrease in the stems and leaves. The amount in the kernel increased from the beginning of its formation until maturity. There are no differences in total nitrogen content of the vegatative parts of high and low protein wheats prior to heading but thereafter nitrogen increases more rapidly in the heads of a high protein variety. The absorption of nitrogen by wheat plants on low nitrogen soils in North Dakota decreased rapidly after they had reached the heading stage, but continued on high nitrogen soils.

Phosphorus is important in the nutrition of the wheat plant even though the total amount in the vegetative parts never reaches one per cent on a dry matter basis. In a phosphorus deficient solution wheat plants develop fewer and smaller kernels and plant respiration is limited.

Potassium is essential to the nutrition of the wheat plant, particularly during the active formation of carbohydrates. In winter wheat in Kansas the postassium absorbed by March 15 did not exceed 12 per cent of the maximum total. The absorption of potassium markedly increases as soon as rapid growth begins in the spring and the plant attains its maximum quantity 7 weeks before harvest. A marked loss in potassium has been observed during the final 6 weeks before ripening of the grain as this element is leached from dry leaves.

Most of the nitrogen and minerals required for the developing kernels have accumulated within the stems and leaves of the plant by flowering time. The following figures indicate the approximate percentage of the nitrogen and minerals taken up by the plant which ultimately go into the grain: nitrogen, 70; phosphoric acid, 75; magnesium, 60; potassium, 30; iron, 20; calcium, 10; sodium, 10; silica a trace and other minor elements even less.

With few exceptions the total dry weight of the wheat plant increases until harvest. The maximum rate of increase occurs between the jointing and blooming stages. The heads of wheat at maturity constitute from 25 to 40 per cent of the total dry weight of the plants. After blooming the dry matter generally decreases in the stems and leaves but increases in the heads.

II. Barley

Germination—Most of the water required for germination enters the seed through the base of the kernel, which is known to possess a semi-permeable membrane.

Seedling—the radicle is visible within 24 to 30 hours after germination begins. It is followed by 5 to 8 other roots which, together with the radicle, form the seminal root system. The coleptile becomes apparent somewhat later, delayed because it does not break through the lemma but forces its way upward beneath it and thus is first seen at the tip of the kernel. The appearance of the coleoptile above ground is mainly due to the elongation of the coleoptile. The length of the coleoptile depends on the depth of seeding. Once above the soil surface the coleoptile tip stops growing, opens and the first foliage appears, followed rapidly by the second and third.

4521

The young leaves of the seedlings are smooth; the yellowish green color is conspicuous and the auricles prominent and clasping. Before development of the first tiller, crown roots appear from a thickening node near the ground surface. This is the start of the crown.

Roots—the radicle, which is the first seminal root, grows downward and may penetrate to a depth of 5 to 6 feet. It is branched throughout.

Other **seminal** roots tend to spread horizontally and later slope downward. They ultimately reach a length of two to 16 inches and a depth which varies from two to 12 inches. They also are branched throughout. Seminal roots remain active throughout the growing season.

Crown roots originate from nodes near the soil surface. They are first noticed just before tillering. Many of these roots are at first short, unbranched and comparatively thick. They are white in color and have root hairs throughout their length. A few of the crown roots penetrate deeply, reaching a depth of some 4 to 5 feet and at times exceeding the depth reached by the seminal roots. The remainder either spread horizontally or grow downward at an angle. They fill the upper layers of soil with a dense mass of roots. On the whole, the root habit is very similar to that of spring wheat and oats.

Differentiation into a shallow growing upper region and a more deeply penetrating lower region if often marked. Soil moisture and fertility influence the development. In heavy soils and under drouth conditions, the roots may be very shallow and widely spreading.

Stem—the stem has 5 to 8 nodes and internodes. Elongation of the stem occurs in the growing region at the base of each internode. The last internode terminates in the spike.

Tillers—develop in the same manner as wheat, but usually are greater in number.

Leaves—the foliage leaves resemble the leaves of the wheat plant but vary in number, color, length and width. The ligule is well developed and the auricles are clasping and more conspicuous than in any other cereal.

Inflorescence—the inflorescence is a cylindrical spike with alternating spikelets, strongly compressed on a zigzag rachis. At each joint of the rachis there are 3 spikelets, each one containing a floret. In 6 row barley all three spikelets are fertile and develop kernels. The center floret produces a straight kernel while the two outside florets produce slightly twisted kernels. In two row barley only the central spikelet contains a fertile floret. Side spikelets are sterile. Six-row varieties usually have 25 to 60 kernels, while 2 row varieties have 15 to 30 kernels per spike.

Development of the kernel—pollination of the floret is normally completed before the head emerges from the boot. After fertilization the endosperm commences to develop and is followed almost immediately by the embryo. The outside layer of endosperm cells is called the **aluerone.** This aluerone layer may contain a colored pigment, such as in blue barley. The lemma and palea (hull) in barley adhere to the outer epidermis of the pericarp due to the secretion of a sticky substance apparently secreted by the pericarp, which, as the grain dries out, more or less glues them to the pericarp. The hull usually accounts for about 15 per cent of the kernel weight, although it may vary up to 25 per cent or more depending on variety and kernel plumpness.

After pollination, increase in kernel length is very rapid and is completed in about 7 days. Thereafter the lateral (side to side) diameter increases and continues until about the 15th day. On the other hand, the growth of the dorsiventral (front to back) diameter is slower and its growth is maintained until near maturity. This is why thin barley nearly always has good length. The secretion of the substance which causes the lemma and palea to adhere to the kernel occurs about the 9th or 10th day after pollination. About the 15th or 16th day the kernel begins to toughen and the lemma begins to lose color on the back side. This stage also approximately ends the period of most rapid increase in dry matter and ash. The per cent of water in the kernel falls almost uniformly from about 80 per cent to about 40 per cent at the rate of 1 to 2 per cent a day, depending on climate.

Mature grain—the hulless kernel of barley is similar to that of wheat but both ends are pointed. The complete barley kernel, however, includes the lemma, palea and rachilla. The kernels in two-row barley are symetrically developed and broadest near the middle. The center kernels of six row barley are symmetrical and generally broadest above the middle; the side kernels, however, are not symmetrical and are slightly twisted. The rachilla is a continuation of the axis of the spikelet and adheres to the threshed kernel. It lies within the kernel crease and may have either short or long hairs, a character often used in variety indentification.

III. **Oats**

Germination—in germinating cereals the first node stays right at the germ portion of the seed and actually divides the embryo into the radicle and the stem. In oats elongation of the first internode carries the elongating coleoptile upward. The coleoptile originates at the second node. The first foliage leaf originates at the third node. The fourth node then becomes the crown

4522

node. This is different than in wheat and barley and is similar to corn. The second internode is short, and therefore the second and third nodes remain close together.

Roots—increase in proportion to variety maturity. Late season varieties tend to have a deeper root system than early maturing varieties. Oat roots are small, numerous, fibrous and densely covered with fine root hairs.

Seminal roots—the first primary root is the radicle and is the first part of the seedling to appear at germination. Later a pair of lateral seminal roots develop almost simultaneously, followed by another pair. This gives a possible total of five seminal roots although the number tends to vary.

The radicle tends to grow almost straight downward. The other seminal roots grow downward at an angle varying up to 45°. All are unbranched and covered by root hairs throughout their length. Later some of these roots reach a depth of 3 to 4 feet and are branched throughout. At maturity they are still active.

Crown roots—the first crown roots develop at the fourth node near ground level just before tillers begin to develop and may become very numerous. They tend to grow horizontally but ultimately curve downwards, reaching depths varying from 1 to 5 feet. Thus, the general habit of the oat is to establish a well developed root system in the first foot of soil by extending laterally for a foot or more.

Stem—the oats stem has 4 to 8 internodes and is generally thicker and softer than wheat. The leaf sheath of certain varieties is somewhat hairy at or below the nodes. Oats hay is of better quality than hay made from other small grains. **Tillers** develop as in wheat but are fewer in number. Oats retain greater ability to tiller late than other small grains. A field of oats may therefore green up and sometimes even head after harvest, especially when drouth forces early maturity and rains follow.

Leaf—the leaf sheath closely envelopes the main stem and is united at the base. The ligule is well developed, oval in shape, and ends in a number of fine teeth. There are no auricles. There are variety differences in the leaf blade. The color ranges from a dark green to a light green. In some varieties the blades are long and narrow, tapering to an acute tip; in others they are shorter and broader, narrowing somewhat suddenly at the tip. Fine hairs often are present on the back and on the margins and this characteristic especially, when studied in younger plants, is so constant that it may be used to differentiate certain varieties.

Inflorescence—the flowering head of oats is called a panicle. The main axis is either erect or pendulous, terminating in a spikelet. Along the main axis are four to nine nodes (average 5 to 6) and at each node main lateral branches delevop on alternate sides.

Each main lateral is again branched, the lowest being the most profusely branched. The nodes towards the top of the panicle have fewer and fewer branches, and the top lateral generally is unbranched. There is a tendency for the lower branches to be so crowded together that certain of the lower nodes on the main axis may appear to be carrying not one main lateral branch but a whorl of laterals of various size. Each lateral branch ends in a slender pedicel terminated by a spikelet. In certain varieties the pedicel is one sided because the lateral branches all converge to one side.

Spikelets—the spikelet consists of from two to seven florets enclosed in a pair of bracts called glumes. The average number of florets is three. The basal floret plus one (occasionally two) may be fertile and develop a kernel. Generally the upper florets are sterile.

When an awn is present on oat kernels, it arises from the back of the lemma and is an extension of the midrib. In wild oats an awn is found in all kernels of the spikelet, is strongly developed and twisted below the knee (bend). A few cultivated varieties also have awns but in the majority of these the awn is found on the basal kernel only and is usually small, curved or straight and not twisted. In cultivated types the awn expression may vary. The awn may serve as an organ of transpiration. There is no doubt, however, that it is of importance in wild oats, serving to transport and to bury the the kernel in the soil to promote germination.

Pollination—blooming begins at the top of the panicle and progresses downward, lasting 3 or 4 up to 8 days. In any one spikelet the lower floret opens first, followed by the second and third. All panicles of a single plant usually complete blooming in about 10 days, but plants with many late tillers may bloom for a month when the weather is cool. Oats usually bloom when the temperature starts to drop in the afternoon but may bloom in the forenoon if the temperature drops.

Oats is naturally self pollinated. Cross-pollination can occur, but much less frequently than in wheat. The most frequent percentage is considerably below one per cent. Pollen grains that fall on the stigma germinate quickly and the pollen tube reaches the egg nucleus within 30 minutes. Florets close within an hour after pollination.

Mature grain—except in hull-less oats the lemma and the palea tightly enclose the kernel. The lemma and the palea together form the

"hull". The hull-less kernel, called the "groat", makes up 65 to 75 per cent of the whole kernel. The groat is covered with moderately long, fine, silky hairs.

The basal kernel of a spikelet is the largest; it has a higher percentage of hull than the upper kernels; it may be awned; its base is blunt and has a short rachilla which varies in length, shape and hairiness in the different varieties. The second kernel, if formed, is smaller, has a lower per cent of hull, no awn. a pointed base and may have a rachilla. If a third grain is formed, it resembles the second but is smaller.

So called "double" or "bosom" kernels occasionally may be found. They are so called because the second kernel is wholly or partly enclosed within the lemma of the first kernel. The double grain condition is an abnormality due to incomplete floral development and is more frequently found in certain varieties than in others.

Double kernels as described above are different than two complete normal kernels which remain attached to the same rachilla.

"Fatuoids" or false wild oats, occasionally appear in some cultivated varieties and resemble the common wild oat. A tendency for occurrance of fatuoids in a variety is generally included in the official varietal description.

IV. RYE

There are two types of rye. Fall rye, a winter type sown in the fall, and spring rye, sown in the spring.

Germination begins at a temperature as low as 33° F., but the optimum temperature ranges from 55 to 65° F. Northern rye varieties often cease germination above 85° F. Rye usually germinates after it has absorbed water equal to about 56 per cent of the kernel weight.

Roots—seminal roots are few in number, the radicle and usually only three other seminal roots. They are followed by the crown roots in whorls from the basal nodes. All are functional throughout the life of the plant and a few may penetrate to considerable depths. Rye roots usually spread 6 to 10 inches at a working depth of about 4 feet and a maximum penetration of 5 to 6 feet. Environmental conditions influence the habit of root development. Compared with the other small grain cereals, rye roots are in general more profusely branched, especially near the soil surface.

Stems—the stems are erect and slender, tougher and longer than those of wheat. A purplish pigmentation is common.

Leaves—the sheaths are smooth and tight; the ligules are very short and rounded but may be absent in certain spring ryes; the auricles, when present, are white and narrow, tending to wither early. Most leaves and stems have a waxy covering.

Inflorescence—the inflorescence is a long uniform spike. The rachis is generally tough, with 20 to 30 joints which are somewhat irregular in outline and densely hairy on the edges. Each joint bears a fertile spikelet but there is no terminal spikelet. The number of spikelets averages about 37.

Spikelet—each spikelet has two narrow pointed glumes. There are normally three florets, the two lower fertile and the third sterile. The lemma of each fertile floret is broad and keeled with long hairs on the keel, especially the upper third. It terminates in a medium long awn.

Flower opening and pollination—the first florets to open are those about one third below the top of the spike, anthesis preceeding thereafter both upward and downward. Flowering is said to commence between 5 and 6 a.m. and to continue throughout the morning until 9 to 10 a.m. Thereafter flowering is at a minimum until the evening, when it tends to rise again. The opening of each floret is rapid and, if pollination takes place immediately, the floret may close again within 30 minutes. Winter rye requires vernalization, i.e., exposure to cool temperatures of about 35° F. to induce flowering.

Rye is crossed-pollinated—96 to 99 per cent of the individual flowers of rye are self-sterile. Cross pollination is accomplished largely by wind borne pollen. Insects are not important pollen carriers in rye.

Mature grain—the ripe kernel is threshed free from the lemma and palea. It is longer, more slender, more sharply keeled, more pointed at the base and darker in color than wheat. The kernels also are less uniform in shape, size and color.

Temperature and growth—fall rye makes faster growth under cool temperatures of both fall and spring than winter wheat.

Under normal conditions, winter rye tillers mainly in the fall. Appreciable growth ceases in the fall when mean temperatures drop below 40° F and begins again in the spring when temperatures rise above 40° F.

V. MILLETS

The term "millet" is applied to a number of warm weather annual grasses used both as forage and cereal crops.

Foxtail Millets

Roots—there are three seminal roots. The crown roots are numerous, thin and wiry, developing from the lower nodes near ground level. All roots appear to function throughout the life of the plant but they are shallow and the plant is subject to drouth injury. The crop may escape drouth injury due entirely to its short growing season.

Stems—the stems are erect, slender, leafy and hollow except at the nodes, which are solid and somewhat swollen below. The internodes are short at the base of the stem, becoming longer in the middle region and again shorter above. The last internode, which ends in a spike-like compressed panicle, is the longest. **Tillers** develop from the buds of the basal nodes.

Leaves—the leaf sheafs are in most cases longer than the internodes. The ligule is short, thick, and has fringed edges, but auricles are lacking. The blades are long, broad and tapered gradually to an acute point; the upper surfaces are smooth and the lower are ridged, with a prominent midrib. Leaves extend well toward the top of the stem.

Inflorescence—the inflorescence is a dense, cylindrical, bristly panicle.

Spikelets and florets—there are 1 to 3 bristles at the base of each spikelet. These bristles are about twice the length of the spikelet, which gives the whole spike a bristly appearance. Self-pollination is the rule, though some cross-pollination occurs. The first florets may open when three fourths of the panicle has emerged from the sheath. Flowering proceeds from the top downward. A large head may require 8 to 16 days to complete flowering. Flowering is hastened by high temperatures and low humidity. Most of the flowers open from 8 a.m. to 10 a.m.

Mature grain—the lemma and palea firmly enclose the mature kernel. The color may vary from yellow, pale straw, orange, red, pink, brown or black.

Proso Millet (variations from Foxtail)

Stems—proso millet stems are stout and erect but the lower part may tend to lie on the ground, erecting itself at the lower nodes. Stems are hairy.

Leaves—are covered with hair. The leaf sheath is open and extends well up the stem.

Inflorescence—the proso inflorescence is an open panicle similar to oats. The panicle base is more or less enclosed in the sheath and is usually nodding and rather compact. The numerous branches are rough and bear spikelets near the tips.

Mature grain—when threshed, most of the seed remains enclosed in the hull (lemma and palea). The hulls are of various shades and colors, including white, cream, yellow, red, brown, gray and black. The seed coat of all varieties, however, is a creamy white.

VI. CORN

Corn is an annual cereal known only as a cultivated crop and almost certainly of Central and South American origin.

Germination—some authors state that corn germinates in from ten to twenty days at 43.7° F.; in from five to ten days between 48.6° - 58.5° F. The optimum temperature is given as 86° F.

Water appears to penetrate with equal rapidity over the whole surface of the kernel during germination. There is no evidence of a localized semi-permeable membrane as in barley. About 40 per cent of water by weight is required for germination.

The groove above the embryo widens as the cells become turgid. The coleorhiza enlarges and in some twenty hours breaks the pericarp and protrudes beyond the kernel surface. The radicle at the same time swells, and bursts through the coleorhiza a few hours later. When the radicle is about two centimeters long, the first internode elongates and pushes the coleoptile through the pericarp. At the same time the seminal roots begin to develop. In the very early stages of germination the embryo appears to be largely dependent on its own food reserves and not upon those of the endosperm. The endosperm dissolves much slower than in wheat.

Seedling—when the coleoptile appears above ground, the seedling normally possesses four seminal roots, one primary, which is the radicle, and three lateral. Additional laterals may form later.

The elongating first internode is largely responsible for the appearance of the coleoptile above the soil surface. The length of the first internode depends upon the depth of planting. At normal planting depths of 2 to 3 inches, it is about twice the length of the coleoptile. When planted deeper the first internode increases in length until the node from which the coleoptile grows is within about 2 inches of the soil surface.

This elongation of the first internode occurs to some extent in oats, sorghum and millet, but not in other small grains. It is one reason that corn can be planted deeper than small grains and still emerge. When the tip of the coleoptile is past the ground level, it splits into two lobes and the first of the foliage leaf emerges through

4525

this split, followed rapidly by the second, third and fourth leaves. Meantime, the node which gave rise to the first true leaf begins to thicken and in a short time the first crown roots emerge, usually in a whorl of four. The later formed crown roots develop from the nodes above.

Roots—the roots are fibrous and of three types.

Seminal roots—the primary seminal root is the radicle. It appears early and, after growing to a considerable length, branches. The seminal roots are typically three in number. Some workers have found the number of seminal roots to vary from 3 to 10.

Crown roots—develop from the nodes near the ground level. They form about an inch below the soil surface no matter how deep the planting. Crown roots develop in whorls from several nodes crowded together at the base of the stem, forming the crown. The early formed crown roots (in plants up to 5 weeks old) may number 10 to 15. They grow almost parallel to the soil surface or at a slight downward angle and are confined almost entirely to the surface foot of the soil. They vary in length from 1 to 2.6 feet and are branched profusely. In older plants the above roots and certain newer ones from the same nodes spread laterally for a distance of 2 to 4 feet and then turn sharply downward. They penetrate the soil from 1.5 to 4.6 feet. All roots, especially those near the surface, are much branched. The color is either brown or white, depending on the age. The more vertically growing and in general the later formed roots may number 20 to 35. They grow straight downward or outward for about 2 feet. Others are much longer and may reach a depth of 7 feet or more. All are profusely branched. In general, corn appears to have a lateral spread of 3½ feet and a penetration of from 5 to a maximum of 8 feet.

Brace or prop roots—at the time of rapid elongation of the stem, several of the nodes just above the ground level may send out whorls of branch or prop roots. These roots are thicker than normal roots and often deeply pigmented. Most of the brace roots enter the soil and function as other roots.

Stems—have easily recognized nodes and internodes. The lower internodes are short and thick, the upper ones become gradually longer and thinner. The result is a stem tapering gradually upward to the tassel. Both nodes and internodes are solid. On the side next to the leaf the stems are furrowed, the position of the furrow alternating at each node. The last node ends in the tassel.

Tillers and branches—a branch bud is present in the axil of every corn leaf. The lower buds may develop into tillers (suckers) while the buds in the larger foliage leaves produce ears. Present day hybrids are non-suckering. The remaining branch buds generally form very small ear shoots which do not develop.

Leaves—foliage leaves arise from nodes, which vary in number from 8 to 20 depending on relative maturity of the plant. They are arranged alternately and each possesses the four parts - sheath, blade, ligule and collar.

The sheath is attached to the node and encircles most of the internode. The sheath wraps around the stem, with the left margin over the right on one side of the stalk and in the opposite direction on the other side. The sheath structure is somewhat similar to the blade. It has fewer stomata, less photosynthetic tissue, but contains considerable stalk supporting tissue.

The blade is continuous with the sheath. It is thin, flat, almost ribbon-like, with an acute tip. Along the edges and at the base it may form a number of folds or wrinkles. A firm midrib, yellowish in color, traverses the entire length. The leaf area of a corn plant is extensive. It has been estimated that the upper leaf surface area of a one acre corn field may exceed 4 acres.

The ligule is nearly one half inch long, colorless, and closely surrounds the stem.

Inflorescence—the stamens and pistils are borne on the same plant. The staminate flowers are borne terminally on the tassel and the pistillate flowers on the ear.

The **tassel** is a terminal panicle which has a variable number of spirally arranged lateral branches. On the central axis the spikelets are arranged in rows, varying in number from 4 to 11. Each row consists of a pair of spikelets, one above the other. On the lateral branches the spikelets, also in pairs, are reduced to two rows.

The shank, husk and ear are produced on a short lateral branch which develops from a bud on the stem node and emerges from within the sheath of one of the larger foliage leaves. Sometimes two, very rarely 3, ear buds may develop into ears. The development succession is then from the top down.

The structure of the **ear shank** is somewhat similar to the main stem. All its internodes are very short, but the nodes just below the ear are the shortest. The leaves arising from these nodes constitute the husk which overlaps and protects the terminal ear.

The **husk** is composed of modified leaves. The sheath in each case is well developed but the blade is reduced, becoming more and more so on the inner husks. A ligule is visible on the outer husks but is a mere trace or absent on the inner husks.

The **ear** is a modified spike and consists of a thickened central axis called the cob, bearing a series of paired spikelets in longitudinal rows. Since each row of paired spikelets develops two kernels (one from each spikelet) the regular occurrence of an even number of kernel rows is inevitable.

Flower opening and pollination—on the tassel the first flowers to open are those of the older spikelets near the tip of the central axis. Thereafter blooming spreads upward and downward,

reaching the tip of the tassel long before it reaches the base. A tassel continues to produce pollen for several days, depending on the variety, the relative development of the tassel and weather conditions. Under favorable conditions pollen discharge commences at sunrise and is more or less complete by noon. Dry bright weather favors the shedding of the pollen; cold weather delays it.

Insects frequently visit the flowers of corn but as agents of pollination they are almost negligible. Wind and gravity are the key distribution agents.

From the corn tassel, the pollen showers down on a calm day over an area with a radius of some three to four feet. In a high wind the pollen may be carried several hundred feet. Thus isolation is necessary to prevent cross pollination in pure seed production of open pollinated varieties. Controlled cross pollination, however, is necessary for hybrid corn production.

The oldest spikelets on the ear are those at the base; the youngest at the tip. The silks of the older spikelets begin to elongate as much as seven days before the silks toward the tip. These older silks have to travel a much greater distance and this reduces silk emergence from the ear to from two to five days. A silk is receptive to pollen whenever it emerges. It remains receptive for nearly fourteen days, and during that period it may continue to elongate until pollinated. As the silks do not emerge simultaneously, but in succession over a period of from two to five days, if follows that the pollination of every silk on an ear takes place over a period of several days. An average plant produces about 25,000 pollen grains for each silk. Usually a corn field will shed pollen over a two week period, thus assuring good pollination under most field conditions.

Mature grain—the corn kernel is a caryopsis with a thick pericarp enclosing a single seed. The mature kernels vary in shape due to variety and position on the ear. The tip end of the kernel may readily be broken off, exposing a small pigmented spot. The embryo is visible beneath a shallow groove on the side of the kernel facing the ear tip. The soft area just above the embryo is a convenient place to visually check kernel maturity. Milkiness or firmness of the endosperm indicates degree of maturity.

Growing temperature—corn is a warm weather plant that requires high temperatures day and night during the growing season. The crop is seldom grown for grain where the mean summer temperature is less than 66° F or where the average night temperature for the three summer months falls below 55° F.

Plants are quite susceptible to injury from high temperatures at the tasseling stage. Pollen may not be produced or may dry up before pollination takes place, resulting in poor kernel set.

Corn plants can be injured by freezing temperatures any time during the growing season. Generally corn is able to recover from freezes that occur before the plants are six inches tall. Frosts early in the fall before the grain is mature kill the leaf tissue and reduce both yield and quality.

VII. SORGHUMS

The discussion of sorghums will be divided into two groups: (1) grain sorghums and (2) grass sorghums.

Grain Sorghums

Roots—at germination a single primary seminal root, the radicle, is produced which grows almost vertically downward and produces numerous lateral branches throughout its length. No additional seminal roots are produced.

The crown roots develop in succession from the basal nodes situated just below or at ground level. Their directional growth is very similar to corn roots. The root system is very abundant, as plants with 6 to 8 leaves may have a lateral spread of 3 feet. Later the roots may have working depths of 3 to 4 feet and maximum depths of 4½ to 6 feet. They are more fibrous than roots of corn and, according to one authority, develop more than twice as many laterals at any stage of their development. This would mean that the root system of the sorghum plant is about twice as extensive as the root system of a corn plant.

The profuse branching and wide distribution of the root system is one of the main reasons why the sorghums are so drouth resistant. Other factors of importance are: (1) the plant grows slowly until the root system is well established; (2) the plants have approximately half the leaf area of corn; (3) the lower transpiration rate reduces water demand; (4) the plant can remain dormant during a prolonged drouth period and resume its development following rainfall.

It is well known that sorghums influence the yield of succeeding crops. This was formerly attributed only to the depletion of soil water and available nutrients by the extensive root system and late summer growth. This depression also is due to the rapid buildup of microorganisms that feed on the high sugar content of sorghum stubble and roots. These organisms

require large amounts of soil nutrients, especially nitrogen which is "tied up" temporarily but becomes available later in the season as the microorganism population declines.

Stems—the stems are erect, solid and slightly furrowed on alternating sides. The nodes are somewhat thickened, the internodes are short at the base, becoming longer toward the top; those of the middle region are nearly equal in length but the terminal internode which ends in the head, is the longest of all.

The buds at ground level may develop as tillers, the number depending partly on the variety and partly on environmental conditions. Up to 15 tillers may develop on certain varieties. These tillers are, in the majority of cases, shorter than the main stalk; they all develop heads which are smaller and mature later than the main stalk. Above ground there is a bud at each node except the terminal node. After the main stem has headed and often not until its seeds are half ripe the uppermost bud may elongate to form a true lateral branch which may develop a late maturing head.

Leaves—the foliage leaves vary somewhat in different varieties. The sheaths are long, in most cases exceeding the length of the internodes but considerable variation is found in different varieties. The ligule is short, membranous and fringed. The leaf blades are very similar to corn. They are, however, more erect and the midrib is more prominent and the edges are smooth. The total leaf area of sorghum is less than of corn.

Flower opening and pollination—the first flowers to open are those near the top of the main stalk. Thereafter, flowering proceeds downward. The whole process of flower opening is within minutes of its inception. Flowering usually takes place between midnight and early morning. The total duration of flowering on the panicle usually is from 6 to 9 days. Self pollination does occur and pollination between flowers on the same panicle is very frequent. Cross pollination also occurs readily.

Grass Sorghums

The term "Grass Sorghums" was first used by Piper to include the grass-like sorghums which are annual in habit, the most important of these being sudangrass. The name sudangrass was given to **Sorghum vulgare sudanense** when it was introduced to the USA from Africa.

Germination—sudangrass germinates over a wide range of temperatures, but best at 86° F.

Roots—the root system is similar to that of the other sorghums.

Stems—the stems are slender, solid and slightly furrowed on one side, the position of the furrow alternating at each node. Buds develop at all the nodes, those at the base develop as suckers, a few of those above as lateral branches.

Leaves—are 6 to 24 inches long by ½ to ¾ inches wide. The sheath overlaps strongly at the base, but in the lower leaves is open nearly the full length of the internode. The blades have a distinct midrib. The ligule is long.

Inflorescence—the inflorescence is an open panicle, erect, 6 to 14 inches long, and up to 10 inches wide at the base. Spikelets appear in pairs, one above the other.

Mature grain—the kernels vary from light reddish-brown, with occasional light color or almost white. In outline they are more or less elliptical, flattened on one side, slightly convex on the other.

VIII. FLAX

Although flax is not a grass and not a cereal, it is sometimes included in the small grain group because of its general production characteristics. In discussing or writing about crops, we should be careful to say "small grains and flax" or "cereals and flax" if flax is included in the discussion..

North Dakota produces seed flax harvested for seed, as distinguished from fiber flax harvested for fiber.

Seeds—flaxseed is a true seed because the pericarp is a part of the boll and is removed in threshing. The embryo is surrounded by a thin layer of endosperm. Cotyledons make up a large portion of the seed and are the first leaves to emerge above ground as the seed germinates. Seeds start germination as low as 38-40° F. Seeds have a smooth, shiny surface resulting from a mucilaginous seed coat covering. One bushel (56 pounds) of flaxseed produces about 19 pounds of linseed oil. The oil percentage usually is lower when drouth occurs within 30 days after blossoming and to the extent that it results in shriveled seed. Differences in seed size, shape and color are important characteristics in distinguishing varieties.

Roots—flax has a single taproot with numerous branches. The root system is relatively short, so that flax is largely dependent on moisture in the surface 2 feet of soil.

Branching habit—the flax plant has a distinct main stem but branches freely from the crown near ground level when grown in thin stands. Such basal branching is partly or entirely suppressed in thick stands. The upper part of the

stem branches freely, with each branch terminating in a flower bud or boll.

Growing point—the growing point is exposed at the tip of each stem. Damage to the growing point of very small flax seedlings can kill the plant. When damage occurs after a few true leaves have emerged, buds in the main leaf axils will develop new stems but crop maturity is delayed.

Stems—three principal tissue areas are recognized in the stems - pith, wood and bark. The **bark** contains the compartively long flax fiber cells that constitute the linen fibers. The **woody** cylinder surrounded by the fiber bundles gives the flax stem its strength and resistance to lodging. Flax in the green boll stage is the most susceptible to lodging. The **pith** disintegrates as flax matures and the stem becomes hollow.

Leaves—stalks, (petioles) are nearly absent; leaves are linear and may be erect or spreading. They have three veins, with the mid-vein prominent. The leaves are arranged spirally around the stem except at the base of the stem, where they are opposite.

Flowers and bolls—the flax flower has 5 petals which vary in size, color and shape, depending on variety. The petal color may be blue, pale blue, white or pale pink. Petal colors may be a lighter shade of color under drouthy conditions. The flowers open at sunrise on clear warm days, the petals falling before noon. Flowering is indeterminate and continues until growth is stopped.

The boll is 5 celled, each cell containing 2 seeds. When completely filled, the boll contains 10 seeds. The bolls of our varieties are semi-dehiscent but rarely dehisce (shatter).

Growing conditions—flax requires moderate to cool temperatures during the growing season. Drouth and high temperatures (about 90° F.) during and following the flowering stage reduce the yield, the seed size, oil content and oil quality. This is why the oil content and quality of northern grown flaxseed is generally higher than when grown further south.

Frost damage—flax just emerging is easily killed by frost. Flax in the seedling stage with several true leaves may not be damaged even when temperatures are as low as 18° F. but a light freeze of 30° F. may cause injury in the blossom or green boll stage. Between these stages, plants generally are not injured even at temperatures of 15° F.

Salt tolerance—flax is less tolerant to alkali or high saline soils than corn.

Section E. GLOSSARY

Anther—A structure at the tip of a stamen in which the pollen grains are produced.

Anthesis—The period during which the floret is open and the anthers are extended from the glumes.

Auricles—Ear-shaped appendages at the base of leaf blades.

Awn—The beard or bristle extending from the tip or back of the lemma.

Axil—The angle between the leaf and stem or between a branch or pedicel and its main stem.

Axis—The main stem of a flower or panicle.

Blade—The part of the leaf above the sheath.

Boll—The sperical fruit of flax.

Boot—The top leaf sheath.

Boot Stage—The growth stage at which inflorescence expands the boot.

Brace Root—A root that originates above ground and functions to brace and nourish the corn plant.

Branch—A lateral stem.

Bristle—A short, stiff hair.

Bud—Specialized cell tissue from which a new plant part can develop.

Carbohydrates—The chief constituents of plants including sugars, starches and cellulose containing carbon, hydrogen and oxygen in which the ratio of hydrogen molecules to oxygen molecules is 2 to 1.

Caryopsis—The kernel (fruit) of a cereal without the lemma and palea.

Cell—The basic unit of structure in plants.

Chloroplast—A structure within a cell, usually green in color due to the presence of chlorophyll, within which photosynthesis takes place.

Chlorophyll—The green coloring matter of plant cells which takes part in the process of photosynthesis.

Chromosome—A structure within the nucleus of the cell on which the genes are situated.

Coleoptile—A sheath covering the first leaves of a cereal seedling as it emerges from the soil.

Coleorhiza—A sheath covering the radicle.

Collar—The thickened area at the junction of the sheath and blade.

Cutin—A waxy substance covering the leaves and stems of most plants forming the cuticle.

Crown—The base of the stem where adventitious roots arise.

Culm—The stem, including nodes and internodes.

Cuticle—The outer corky or waxy covering of the plant.

Dehiscence—The opening of florets and emergence of anthers.

Dormant—Being in a state of reduced activity in which neither cell division nor growth takes place and in which metabolic activities like respiration are reduced to a minimal rate.

Egg—The female reproductive cell.

Embryo—The undeveloped plant within a seed (germ).

Endosperm—The interior food storage area of a kernel.

Enzyme—An organic catalyst.

Epidermis—A protective tissue on the outer surface of leaves, young roots, stems and all plant parts.

Food—The product of photosynthesis which is stored or used in respiration as a source of energy.

Floret—The flower plus the lemma and palea.

Flower—The reproductive structure of a floret, not including the lemma and palea.

Gene—A physiological unit carried on chromosomes within the nucleus of each cell, which determines hereditable characteristics of the plant.

Groat—An oat kernel with the hull removed (caryopsis).

Hull—The lemma and palea covering the caryopsis such as in barley and oats.

Husk—The leaves on an ear of corn.

Hybrid—The offspring of two parents unlike in one or more hereditable characters.

Imperfect—Flower lacking either stamens or pistils.

Inflorescence—A group of spikelets forming the flowering part of plants.

Internode—The part of a stem or a branch between two nodes.

Ion—An electrically charged particle formed from an atom or group of atoms which has either gained or lost one or more electrons.

Joint—A node.

Kernel—The seed of a cereal.

Leaf—The lateral branch of a stem.

Lemma—The outer (lower) bract of a floret.

Ligule—A membranous projection at the top of the inner side of a leaf sheath.

Lodicule—The organs at the base of the ovary of a cereal floret that swell and force the lemma and palea open during anthesis.

Meiosis—The division of the sexual cells in which the number of chromosomes is halved.

Meristematic—Young plant tissue capable of rapid cell division.

Metabolism—The life processes of plants.

Mitosis—Cell division in which one cell gives rise to two cells, both of them genetically identical to the cell which produced them.

Node—The joint of a stem where a leaf is attached.

Nucleus—The heredity determining part of a cell containing the chromosomes and genes.

Nutrient—A chemical element taken into a plant that is essential to its growth, development or reproduction.

Ovary—Basal portion of a pistil in which the embryo or seed develops.

Palea—The inner (upper) bract of a floret lying next to the caryopsis.

Parenchyma—Soft tissue having cells with thin walls and relatively large cytoplasm usually adapted for food storage.

Perfect Flowers—Flowers containing both stamens and pistils.

Pericarp—The outer covering of a kernel.

Phloem—The part of a vascular bundle through which food materials manufactured in the leaves are transported.

Photosynthesis—A process by which carbon dioxide and water are converted to food and oxygen in the presence of chlorophyll, utilizing the energy of light.

Pistil—The female structure of a flower, consisting of the ovary, style and stigma.

Pith—Parenchyma tissue in the center of a stem.

Pollen—The male germ cells produced in the anthers.

Pollination—The transfer of pollen from the anther to the stigma.

Primary Roots—The seminal root system.

Protoplasm—The contents of a living cell.

Protoplast—Living part of a cell; everything inside the cell wall.

Rachilla—The axis of a spikelet.

Rachis—The axis of a spike.

Radicle—The embryonic root of a germinating seed.

Respiration—A process constantly going on in every living cell by which food is broken down into carbon dioxide and water with a release of useable energy.

Root—The below ground part of the plant which lacks nodes.

Root Cap—A mass of cells protecting the tip of a root.

Root Hair—A single-celled protrusion of an epidermal cell of a young root.

Sclerenchyma—A cell, with a thick, usually lignified cell wall or a tissue composed principally of such cells for example the xylem or cork.

Scutellum—A shield-shaped organ surrounding the embryo.

Seed—A dormant embryo enclosed in a seed coat with the endosperm containing food reserves necessary for its germination.

Seedling—The early growth stage of a plant.

Seminal Roots—Roots developing below the first node of the embryo.

Sheath—The lower part of the leaf that encloses the stem.

Spike—An unbranched inflorescence in which the spikelets are attached directly to the rachis.

Spikelet—The unit of inflorescence consisting of two glumes and one or more florets.

Stamen—The pollen bearing organ of a flower.

Sterile—Incapable of sexual reproduction.

Stoma—An opening in the epidermis for the passage of gases and water vapor.

Stomata—Plural for stoma.

Style—The slender part of the pistil supporting the stigma.

Tiller—An erect shoot arising from buds in the crown.

Tissue—A structural unit of the plant made up of cells which together perform a specific function.

Translocation—Movement of food, water and nutrients from one part of the plant to another.

Transpiration—The loss of water through plant tissue, primarily the open stomata.

Variety—A population of plants having many characteristics in common; a variety may be a pure line or a mixture of pure lines.

Vernalize—To make spring-like in growth habit; thus, a process by which the seeds of winter annuals can be made to behave like spring sown annuals.

Viable—Having life; viable seed is thus live seed.

Xylem—A complex tissue in the vascular bundle of roots, stems, leaves and other plant parts through which water and minerals are transported from the soil to positions of use.

Yield—The net photosynthetic production of a crop, especially the portion harvested and used by man.

NOTE: The office dictionary or Agronomy and Botany textbooks are good sources for information on additional plant terms you may encounter.

DESCRIPTION OF
HOME ECONOMICS INSTRUCTIONAL MATERIALS CENTER

The Home Economics Instructional Materials Center was established September 1, 1967, as a continuing project. It is a cooperative project between the Division of Homemaking Education, Texas Education Agency, and the College of Home Economics, Home Economics Education Department, Texas Tech University at Lubbock, Texas. The instructional materials which are being developed at the Center are intended to assist teachers and coordinators in promoting and teaching home economics gainful employment programs or consumer education.

To provide a background of information for the establishment of the Home Economics Instructional Materials Center, a Planning Grant Project was approved by the Texas Education Agency for February 1 through August 31, 1967. The major purposes of the Planning Grant Project were (1) to assemble and catalog an occupational reference library, (2) to develop procedural steps for preparation of instructional materials, and (3) to illustrate the first sequence of these steps, that is, to develop job analyses and to list competencies needed for employability of students.

The present major objectives of the Home Economics Instructional Materials Center are (1) to develop instructional materials designed for use by students enrolled in cooperative part-time training programs and in pre-employment laboratory training programs in preparation for employment in occupations requiring home economics knowledge and skills, (2) to develop materials in consumer education, and (3) later to develop materials designed for use in home and community service programs.

Acknowledgement is given to:

Miss Louise Keller, former Consultant in Job Training, U.S. Office of Education, who directed the Planning Grant phase of the project.

Miss Rua Van Horn, former U.S. Office of Education Regional Home Economics Supervisor, who served as consultant during the Planning Grant.

Mrs. Elizabeth Smith, Director, Division of Homemaking Education, Texas Education Agency, who conceived the original and continuing plan for establishing the Center.

Miss Barbara Clawson, Director of the Center from 1968-1970, and Mrs. Thelma Whigham, Assistant Director of the Center from 1967-1970.

Dr. Camille G. Bell, Chairman, Department of Home Economicd Education, and Dr. Willa Vaughn Tinsley, Dean, College of Home Economics, Texas Tech University, who continue to serve in an advisory capacity.

Linda Glosson, Acting Director
Home Economics Instructional
Materials Center

Betty Robinson, Assistant Director
Home Economics Instructional
Materials Center

ACKNOWLEDGMENTS

This guide in Consumer Education for High School, prepared by the Home Economics Instructional Materials Center at Texas Tech University, is the result of the combined efforts and ideas of many people, namely:

Miss Barbara Clawson, Director of the Center during the writing of this publication, who wrote portions of the materials and directed the preliminary writing of the entire publication.

Mrs. Fern Alexander, Big Spring, Texas, and Mrs. Mary Lois Scott, Wellington, Texas, Home Economics Teacher-Coordinators, who spent a month at the Center helping with the writing of the Consumer Education instructional materials.

Mrs. Melinda Holcombe, College of Home Economics, University of Nebraska, who worked with the teachers as a subject-matter specialist in consumer education.

Mr. Howard Welborn, Lubbock, Texas, who drew part of the illustrations for the instructional materials.

Mrs. Virginia Thompson, Lubbock, Texas, who drew part of the illustrations for the instructional materials.

Mrs. Patricia Beachy and Mrs. Carolynn Cohorn, Graduate Research Assistants, Texas Tech University, Lubbock, Texas, who prepared first drafts of the outline and materials.

Miss Janet Sargent, Graduate Research Assistant, Texas Tech University, Lubbock, Texas, who wrote one section of the guide and developed two supplementary programmed instructional units.

4538

FOREWORD

The emphasis placed on consumer education by Part F of the Vocational Education Amendments of 1968 prompted the development of the two bulletins in Consumer Education, Parts One and Two, for use in teaching high school students.

Because of the increasing complexity of the marketplace, it is imperative that home economists evaluate their past efforts in teaching in this area, update their teaching materials and emphases, and develop a philosophy of teaching Consumer Education based on decision-making and the management process. These are the beliefs which guided the development of the curriculum materials presented in Parts One and Two in the Consumer Education series.

Facts concerning best buys soon become obsolete due to rapid technological developments and consequent changes in goods and services available. For this reason, little emphasis has been given to buymanship in the bulletins; instead, the major emphasis has been on decision-making as individuals and families use it in the management process. Consumer education taught from this point of view will remain timely. Such teaching will enable students to identify and analyze their values, needs, wants, resources, and goals and consequently will enable them to make rational decisions regarding the myriad of choices that confront them in the market place, regardless of the technological changes which may occur. It is hoped that this kind of consumer education will contribute to family stability and happiness as students establish homes and begin the family life cycle.

The Consumer Education Bulletins are designed for a one-semester course for both boys and girls at the 11th and 12th grade levels. The comprehensive coverage of the consumer education topic necessitated the presentation of the contents in two bulletins--Parts One and Two. The introductory pages are repeated in each bulletin as are the Tables of Contents.

Both Parts One and Two contain four sections: Allocation of Resources, Consumer Buying, Consumer Citizenship, and the Consumer in the Economy.

In Part One the sections follow this format: Behavioral Objectives, Suggested Learning Experiences, Key Points, and References for both students and teacher. Part Two contains a wide variety of related teaching-learning materials for both students and teacher. Among these are directions for making transparencies, instant slides, bulletin boards, posters, and other visuals; suggestions for using simulation games, case studies, skits, stories, etc; illustrations of programmed instruction, objective tests, crossword puzzles, and cartoons. These may be used in carrying out one or more of the suggested learning experiences in Part One.

Both Part One and Part Two are closely interrelated and supplement each other to provide students and teacher with the potential of achieving the behavioral objectives identified in Part One. Directions for using materials in Part Two are given in the Suggested Learning Experiences in

Part One. References in Part One to the accompanying teaching-learning materials in Part Two are clearly identified.

The learning experiences are written from the student's point of view for both boys and girls. Many learning experiences are included. The teacher is not expected to use all the suggested experiences given in these bulletins in one semester. She may adapt, supplement, and/or expand the suggestions included in view of the specific needs, interests, abilities, and backgrounds of her students. The wide variety of experiences included should enable the teacher to select and assign those teaching-learning experiences that will help her students reach the objectives important to them. Many of the experiences may be used as means of evaluating the progress of students.

"NOTES TO TEACHER" are inserted occasionally throughout the lists of learning experiences. These notes usually give specific suggestions and/or references to material in Part Two.

Key points or summary statements of desired learnings follow each learning experience section. Student references and teacher references are included. Materials suggested in the teacher references give a broader, deeper coverage of the topic under discussion than do the student references and should be helpful to the teacher for background information. The numerous student references given enable the teacher to be selective in choosing those appropriate and available for her students.

INTRODUCTION

Note to Teacher: If students are included in the planning of this course, or unit, in consumer education, they are more likely to become actively involved in the course and find it meaningful to their lives.

A number of techniques may be used to gain from students the competencies they feel they need to be able to function effectively in the market place. One way this can be done is to ask students to respond to a Consumer Interest Inventory. You might want to ask students to work in buzz groups to list topics of interest in consumer education. Another possibility would be to read a story or describe a situation in which a bewildered and confused consumer made poor choices in the market place and use this as a basis for listing competencies needed by the consumer. Included on pages xiv and xv is an example of a Consumer Interest Inventory. Directions for administering this inventory follow.

> Directions: Listed on the inventory are some topics which are a part of the area of consumer education. In the column labeled "HAVE STUDIED," write "X" below "Yes" beside each topic you have studied in school, church, or club; mark "X" below "No" if you have never studied this topic. In the column labeled "IMPORTANCE OF INCLUDING IN THIS COURSE" indicate with an "X" the importance of including each topic in this course or unit on consumer education. For example, if you feel that "Values" are a "Very important" topic to include, place "X" under "Very Important" beside the word "Values;" if you feel they are "Of Some Importance," place "X" under this column.
>
> Note: Even though you checked that you have studied a topic, you may feel that it is important to include it. If, however, you feel that you have a good understanding of the topic, you may feel that it is of little importance. Likewise, a topic you have never studied may or may not be of importance to you for this course. Mark the inventory as accurately as you can. Do not skip any items.

PART ONE

SECTION ONE: ALLOCATION OF RESOURCES

SECTION ONE: ALLOCATION OF RESOURCES

UNIT I: Management, What It Is

BEHAVIORAL OBJECTIVES

Be able to (1) define management
(2) explain the over-all purpose of management
(3) identify the factors involved in management

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 81-82 in Your Family and Its Money by Thal and Holcombe, pp. 14-20 in Management for Better Living by Starr, or pp. 10-12 in Managing Livingtime by Raines to see what management is, why management is important, and the process involved in management.

2. Discuss such questions as: What is the meaning of management? Why is management important to our lives today? What is the process involved in management? When should the management process be used?

3. View a transparency on what home management is (see Part Two, p. 3). Notice the relationship between family resources and achievement of goals. Discuss.

KEY POINTS

Management is largely a mental process which is made up of many decisions directed toward a certain goal or goals.

Management consists of three parts: planning, controlling, and evaluating.

The ability to manage can be learned.

Management needs to become a vital part of our everyday lives.

SECTION ONE: ALLOCATION OF RESOURCES

UNIT II: Values, Goals, and Standards

BEHAVIORAL OBJECTIVES

Be able to (1) distinguish between values, goals, and standards and determine their relationship to each other
(2) identify individual differences in values, goals, and standards
(3) realize that people who have different values, goals, and standards may have conflicts in relating to each other
(4) clarify your values, goals, and standards

SUGGESTED LEARNING EXPERIENCES

1. Write on a sheet of paper what you think of when the word "value" is mentioned. Share your idea with the rest of the class. Do you all have the same idea of what "value" means?

2. Read pp. 17-19 in Your Family and Its Money by Thal and Holcombe; pp. 4-5 in Money Management; Your Shopping Dollar, a pamphlet from Household Finance Corporation; or pp. 116-118 in Relationships: A Study in Human Behavior by Westlake to clarify what values are and how values affect the way money is spent.

3. Decide on the values you think the teen-age puppets have by just looking at the couples. (The puppets are from the J.C. Penney, Inc. materials in either "How to Furnish a First Home" or "Financing a New Partnership" kit.) Then listen to the description of their values. Are your ideas the same? Can you sometimes tell by looking at a person what some of his values are? Explain.

4. List several of your values. Ask your mother and father to list their values. Compare your list with that of your parents. Are they they same? different? Which values are the same? different? Why? Would you be able to rank your values in order of their importance? Why is this difficult to do? Are these the same values that were important to you three years ago?

5. Take the Forced Choice Value Test (see Part Two, p. 4). Tabulate the results. Then take another value test, if possible, such as the one in the Michigan State Extension Bulletin, No. E 648; Allport, Vernon,

Lindzey's, Study of Values, 3rd edition; or ask your guidance counselor for another value test. Are the results similar? If not, why do you think there is a difference? Do you agree with the findings? Why or why not? Compare these test results with the list made by you and your parents. Are the results consistent?

6. Participate in a discussion on such questions as: Where do we secure our values? Why do we need to recognize our values? Can values be changed? Should people impose their values on others? Explain. What do you think are the major American values? How do values relate to our life styles?

7. Fill in the Values Questionnaire (see Part Two, p. 10) to help you recognize how values influence behavior. Discuss with your classmates how they answered some of the questions.

8. View the instant slides on Directing Your Dollars adapted from the Institute of Life Insurance (see Part Two, p. 13) to identify ways in which the use of money reflects one's values. Discuss. [NOTE TO TEACHER: Instructions and materials for preparing these instant slides are found on p. 12 in Part Two.]

9. Select a book or magazine article about a famous person who has impressed you, or read about values in another culture in a book such as Fifth Chinese Daughter by Jade Snow Wong or The Diary of a Young Girl by Anne Frank. Ask your librarian to help you select a book or article for this assignment. Write a paper on the values you feel that person held and the sources of his or her values. How do values relate to his or her life style? Justify your reasoning.

10. Watch a current movie, TV show, or play and examine it for values. Write a short paper on the values held by one of the characters.

11. Read pp. 26-31 in Management for Better Living by Starr, pp. 19-21 in Your Family and Its Money by Thal and Holcombe, or pp. 6-9 in the booklet, A Date with Your Future by the Institute of Life Insurance to see how goals are related to values. Notice the difference between short-term and long-term goals. Discuss.

12. Look up the word "goals" in the dictionary and compare this definition with the definitions secured from the readings. Discuss.

13. Look at a flannel board (see Part Two, p. 22) that shows how values influence goals. Participate in a discussion on how values are related to both short-term and long-term goals. What are some of the factors that must be considered in establishing goals?

14. Work in small groups and, from the list of items below, decide which would be short-term goals and which would be long-term goals.

A new dress for the Jr.-Sr. Prom
A new car
A tape deck for my room
A record album
A c[illegible] education
A vacation home at the lake

Cowboy boots
A position on the "A" team in basketball
Passing grades on semester exams
A good job

4553

Listen to all groups report their decisions concerning short- and long-term goals. Do all groups agree? Why or why not?

15. Use the format of the flannel board and identify a value that is important to you. Develop long-term and short-term goals you want to reach because of that value.

16. List some short-term goals and some long-term goals that are very important to you. Try to arrange them in the order of their importance to you. Ask your family to list their short-term and long-term goals. Compare their listing with yours.

17. Keep a record of your money expenditures for a period of about two weeks. Study your record in terms of your values and goals. How did the results relate to your values and goals? Do you present spending habits appear to help or hinder you in reaching your goals? What changes would you make?

18. Read the stories, (see Part Two, pp. 23 and 27) I Am A Lazy Housekeeper and My Family Loves It by Jean H. Maysilles and I've Found a Schedule That Really Works by Norma Duerst, to see what their values and goals are. Do you agree with their philosophies? Why or why not?

19. Read the book, Mama's Bank Account by Kathryn McLean to determine the values that this family holds. Were they forced upon them? What were the goals of this family?

20. Fill in the chart on p. 10 in the booklet, A Date with Your Future, to help you clarify your own goals.

21. Take the case study of Mrs. Esther Strom (see Part Two, p. 36) and analyze it for the values she holds. What is her goal? Choose another of the case studies given in the article, Poverty, U.S.A. (see Part Two, p. 31), and analyze it for values and goals.

22. Read pp. 371-378 in Management for You by Fitzsimmons and White or pp. 60-62 in Your Family and Its Money by Thal and Holcombe to understand what is meant by standard of living and level of living.

23. Discuss such questions as: What factors influence our standard of living? What is the difference between level of living and standard of living? What is the relationship between standards and standard of living? How do certain standards originate? What standards are traditional in your community? What is meant by living on one standard of living but dreaming on a mental standard of living? How can flexibility in standards help a family adapt to changing circumstances?

24. Look at the puppets again from the J.C. Penney's kit on How to Furnish a First Home or Financing a New Partnership to see what conflicts existed between their standard of living and their level of living. What suggestions for solving their problems do you have?

25. Look at a bulletin board to see the relationship of values, goals, and standards (see Part Two, p. 37). Discuss how these three factors influence our standard of living.

26. Fill in the chart (see Part Two, p. 39) to see if you can distinguish between values, goals, and standards. Compare and discuss. What accounts for differences of opinion?

27. Read the first part of the article, How Do Those Joneses Do It? (see Part Two, p. 40). What appear to be the goals of each of the five families described on p. 42 in this article? What values do these goals reflect? Since all five families have a similar standard of living, how do you account for the differences in their values and goals? Why did each family seem dissatisfied with its own way of life? [NOTE TO TEACHER: Give students the first three pages of the article to read and discuss, then give them the last three pages, as indicated below.]

    Tell which of these statements you think is true and justify your reasoning. (a) If each family had managed its income better, they could have had most of the benefits they envied the other families for having. (b) Most families have to establish spending priorities and purchase goods and services that give them the most satisfaction, realizing that some things must be given up.

    Finish reading the article when your teacher gives you the rest of it.

    Were you surprised at the facts behind the scenes? What had you expected?

KEY POINTS

A value is always important to the person who holds it; it is desirable and satisfying; it has the ability to develop in a self-creative way; and it tends to endure.[1]

The rank order of an individual's or family's values may vary in different situations.[3]

Values serve as guides for developing goals.[3]

Families holding similar values may seek different goals.[3]

The extent to which goals are realistic is affected by the assessment of resource potential.[3]

Standard of living is the term used to indicate the level at which families aspire to live as represented by the quality and kinds of consumer goods they seek to enjoy.[2]

Level of living indicates the level at which families actually do live, based on the amount of money they have to spend.[2]

Flexibility in standards influences adaptibility to changing circumstances.[3]

Clarity of values, goals, and standards is affected by experience in management.[3]

Management by individuals and families reflects differences in values, goals, and standards.[3]

Some of the most influential and compelling values are held unconsciously.[3]

SECTION ONE: ALLOCATION OF RESOURCES

UNIT III: Needs and Wants and Family Life Cycle

BEHAVIORAL OBJECTIVES

Be able to (1) identify some of the needs common to most families
(2) comprehend the different stages of the family life cycle and the characteristics of each stage
(3) become aware of and examine differing wants and needs of the family throughout the family life cycle
(4) examine the differences in individual wants and needs
(5) interpret your wants and needs

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 17-19 in Managing Livingtime by Raines, pp. 31-41 in Your Family and Its Money by Thal and Holcombe, or pp. 2-11 in Relationships: A Study in Human Behavior by Westlake to clarify the difference between wants and needs, and to see how people meet their needs. Discuss.

2. View the filmstrip Umpteen Ways of Shopping from the J.C. Penney's kit on Decision Making for Consumers to see how external forces contribute to family's wants and needs. Discuss.

3. Watch a flannel board presentation on Maslow's Hierarchy of Needs to see the basic needs of people. [NOTE TO TEACHER: See Part Two, p. 46 to help with the presentation.] Find realistic examples to illustrate the various needs. Discuss these needs.

4. Discuss in small groups such questions as: What is the relationship between one's values and the ways in which his needs and wants are met? What major needs do people have? What are the needs that must be considered in planning the expenditure of money? Do all families have the same needs? What are some of the reasons for differences in individuals' wants and needs? How do social group pressures affect needs and wants? What are some of the wants and needs of teen-agers today?

5. Participate in a role-playing situation showing how different cultures influence individual and family needs and wants. Discuss backgrounds, traditions, and goals of individuals in each role-playing situation. Discuss such questions as: What is the result when individual and family needs and/or wants differ? How does your family influence your wants and/or needs?

4559

6. Make two columns on your paper, one for needs and one for wants. Write items such as the following in the appropriate column: food, wig, housing, radio, stereo, car. Add to this list some items you need and want. Do the items in your columns agree with those of the rest of the class? Why or why not?

7. View the filmstrip, Our Role as Consumers, by the Institute of Life Insurance to gain a better understanding of wants and needs in relation to our role as consumers and to examine the external forces that contribute to needs and wants. Discuss the questions in the filmstrip.

8. Read pp. 2-8 in Housing and Home Management by Lewis, Burns, and Segner; pp. 10-16 in Your Family and Its Money by Thal and Holcombe; pp. 387-409 in Living in Families by Smart and Smart; or pp. 3-25 in Family Development by Duvall to become acquainted with the various stages of the family life cycle and the characteristics of each stage.

9. Watch a flannel board presentation on the various stages of the life cycle to see what proportion of time is spent in each of the stages. Discuss. [NOTE TO TEACHER: See p. 13 in Family Living by Duvall for an example of the various stages in the family life cycle.]

10. Read The Family Life Cycle of Ted and Norma by Dr. David Fulcomer (see Part Two, p. 49) to aid in thinking through the different stages of the family life cycle and the characteristics of each of the stages.

11. Work in small groups to analyze the characteristics of one of the stages of the family life cycle. Share your findings with the rest of the class by using the circle graph from the flannel board presentation of the family life cycle and other illustrative materials, such as transparencies, pictures, charts, slides, or filmstrips, to help make your report interesting. Be sure to include goals you think are important at that particular stage and discuss how changing roles influence these goals. Tell how the goals are interwoven and why they are important at each stage of the life cycle. [NOTE TO TEACHER: Students might enjoy making their own filmstrips as part of this project. A kit for making filmstrips is available from Hudson Photographic Industries, Inc., Irvington-on-Hudson, New York 10533. Filmstrips are made on "U" Film, which is a tough plastic film with a blank surface that can be written or typed upon, erased and reused, in color or black and white. It is made to the exact size of standard filmstrip (35mm.).]

12. Listen to a symposium composed of people or couples at different stages in the life cycle. Describe some of the problems and needs they have encountered at the different stages. Discuss such questions as: At what stage in the life cycle does the homemaker have the most time? the least time? When does she probably have the most energy? the least energy? When does she probably have the most money? the least money? Is it possible for families to be in several stages at the same time? If so, explain. Is the life cycle the same for all families? Explain your answer. How can families provide for their own welfare in each stage? How does society help families provide for their needs and wants?

13. Find pictures in a magazine or book showing as many stages of the family life cycle as possible and discuss how each stage affects wants and needs.

14. Find and bring to class a picture, poem, cartoon, or song to show how people meet their needs or satisfy their wants. Be prepared to share your example with the rest of the class. Discuss.

15. Use the hypothetical situations (see Part Two, p. 59) to clarify wants vs. needs.

KEY POINTS

All people have the same basic needs.

Families' wants and needs change as the family life cycle changes.

Individuals in a family may have different wants and needs.

Different factors influence a person's wants and needs.

Individuals and families have the responsibility to provide for their own welfare beyond the basic expectations of, and protection provided by society.[1]

Value systems are developed as a person's needs are met, as he thinks about and reacts to his experiences, and as he adjusts to change.[1]

The family life cycle is a way of looking at most families' needs and wants as they journey from one stage to another.

4562

SECTION ONE: ALLOCATION OF RESOURCES

UNIT IV: Resources

BEHAVIORAL OBJECTIVES

Be able to (1) recognize human and material resources
(2) suggest ways of adding resources or combining resources to reach goals
(3) show how resources can be used in a given situation
(4) identify and relate available resources to individual and family needs
(5) explain factors that affect and change the availability of resources
(6) recognize the relationship between one's values, goals, and standards and his use of resources

SUGGESTED LEARNING EXPERIENCES

1. Write what comes to your mind when the word "resources" is mentioned. See what the other class members think. Look at your definition again after you have done the reading on resources. If necessary, change your original definition.

2. Read pp. 26-31 in Management for Better Living by Starr, pp. 347-367 in Management for You by Fitzsimmons and White, or Chapter 4 in Your Family and Its Money by Thal and Holcombe to secure a better understanding of resources. Discuss such questions as: What resources are available to everyone? Which ones are limited? How can people increase their resources?

3. View the 3M transparencies (Home Economics 25G, 25H, or see Part Two, p. 63) to help you identify some of your own human and material resources.

4. Make a list of all the resources you can think of that are available to you. Tabulate your list with the rest of the class. Does your list include resources other than time, energy, and money? Look at the list and divide the resources into human and material categories.

5. Read the article, Toward Self-Actualization: Managing Resources (see Part Two, p. 65), to see how human resources should be managed and not manipulated in order for a person to develop toward self-actualization.

16. Read the articles, Resources--What Do We Mean? and Managing Resources to Achieve Goals (see Part Two, p. 89 and 93), to see what resources mean and how people manage resources in order to achieve goals. Discuss these two articles.

17. Take some of the resources such as time, energy, knowledge, health, community facilities, and skills, and relate these to the family life cycle. Some questions might be: When does the homemaker have the most time? least time? When does the homemaker probably have the most energy? least energy? How can knowledge help a family save money? Discuss other resources, also.

18. Discuss questions in regard to resources, such as: Where can a family go for help when their home is destroyed by a tornado? Where can an older single person secure additional resources? What resources are available to a husband who is unemployed? What help is available to a family who has a handicapped child?

19. Write a paper describing a situation in which you have used resources to good advantage. Describe a situation where you feel you did not make wise use of your resources. Be sure to justify your conclusions.

20. Read the case situation, Help (see Part Two, p. 98), and answer the questions at the end of the story. This should help you apply the information on resources. Save this story to use again in the decision-making process. Also keep your answers to the questions so you will not have to do them again.

21. Unscramble the following terms and put them in the right category of human or material resources: knowledge, time, interest, food, money, skills, health, shelter, community facilities, services, transportation, private facilities. Be sure to add a few of your own.

22. Take the case stories of Joseph Crowley and Esther Strom (see Part Two, pp. 34 and 36) and list the resources these persons have available. What additional resources might be available to them?

23. Fill in the chart, My Resources (see Part Two, p. 100), to help you assess the resources you have available, or use the chart on p. 11 of the booklet, A Date with Your Future.

KEY POINTS

The perception of available resources may enhance or limit the management potential of individuals and families.[1]

4565

The assessment of a resource in terms of other resources or managerial activities clarifies its contribution to management.[1]

The availability and/or scarcity of resources affect the range of choices.[1]

Different forms or combinations of resources may yield similar satisfactions.[1]

The cost of using resources for any purpose is that which must be given up because of such use.[1]

The optimal use of resources varies with differences in families and situations.[1]

The changes in the circumstances accompanying family life stages influence the availability of resources and the demands made upon them.[1]

Families differ in resources available to meet economic needs and risks.[1]

Both human and material resources can be used to meet individual and family goals.

Resources available to individuals and families are limited and vary with changing situations and stages in the family life cycle.

Efficient use of all available human resources may reduce the cost of material resources.

Different resources or combinations of resources can be used to reach the same goal.

4587

SECTION ONE: ALLOCATION OF RESOURCES

UNIT V: Decision-Making Process

BEHAVIORAL OBJECTIVES

Be able to (1) define the term "decision"
(2) identify the factors involved in making a decision
(3) identify the steps in the decision-making process
(4) apply the decision-making process

SUGGESTED LEARNING EXPERIENCES

1. Take the pre-test on decision-making to see how much you know concerning this process (see Part Two, p. 101).

2. Make a list of some of the decisions you or your family face to identify problems to which you can apply the decision-making process. Do not sign your name to the paper. [NOTE TO TEACHER: Use this list to help plan realistic problems for the class to solve.]

3. Read pp. 10-14 in Management for Better Living by Starr; pp. 163-167 in Living in Families by Smart and Smart; pp. 16-19 in Managing Livingtime by Raines; or pp. 84-101 in Your Family and Its Money by Thal and Holcombe to find out what a decision is, the characteristics of a decision, and the factors involved in making a decision.

4. Work in small buzz groups and discuss questions as: What is a decision? What are the characteristics of decisions? What factors are involved in making a decision? When is a decision not a decision?

5. Make a bulletin board to show how the various factors influence decisions. Discuss these factors.

6. Think of a decision you made today and identify the factors that influenced your decision. Share with each other the decisions you made. Discuss these questions: How did you arrive at these decisions? Were they based on past experience, chance, habit, emotion, snap judgment, or some other factor? Give at least one example of a decision you have made that was based on each of these influences: habit, emotion, past experience, and snap judgment. Classify the decisions of your classmates according to these categories.

7. Read Chapter 5 in Your Family and Its Money by Thal and Holcombe; pp. 10-12, 34-40 in Management for Better Living by Starr; or pp. 16-22 in Managing Livingtime by Raines, to see what is involved in making a decision and the steps involved in making a decision. Discuss.

8. View the transparency on the decision-making process from the J.C. Penney kit, Decision Making for Consumers, to clarify the steps in decision-making in your mind. [NOTE TO TEACHER: If this kit is not available, use the diagram of the decision-making process in Part Two, p. 102.]

9. Follow the steps in decision-making as you and your teacher analyze Ann Marie's selection of a hairpiece from the J.C. Penney kit, Decision Making for Consumers. Discuss and clarify each step of the decision-making process.

10. Analyze Henry Buys a Hotrod, as a class, to gain further experience in using the decision-making process. Use the steps in the decision-making process (see Part Two, p. 104).

11. Read the situation, Mrs. Howe Goes to the Circus (see Part Two, p. 106). Use the steps in decision-making to help Mrs. Howe solve her problem. Follow the questions given with the story to guide your thinking.

12. Make a bulletin board to review the steps in making decisions (see Part Two, p. 107).

13. Work in small groups and use the decision-making process to solve a problem given to you by your teacher. [NOTE TO TEACHER: Use some of the decisions students listed in the second learning experience.] If necessary, refer to the bulletin board showing the steps in making decisions. Report to the class how you solved the problem. See if the class agrees with the way you solved the problem.

14. Review the decision you made in the previous situation and analyze the decision in relation to such questions as: To what degree was the decision rational? emotional? based on habit or past experience? To what extent was examination of alternatives necessary? Why? What factors were most influential in the final decision? In what ways is the decision flexible? inflexible? How did clarification of values influence choice of goals? When more than one person is involved in a decision, what complexities arise?

15. Participate in the academic game, Life Career, by Western Publishing Company to practice making decisions. [NOTE TO TEACHER: This game takes from one to six hours to play.]

16. Listen to a student give a review of the book, Cheaper by the Dozen, by Gilbreth and Carey to see how this family made decisions. Be sure to look for types of decisions, simple or complex; and goals, long- or short-term; factors that influenced the decisions; and evidences of the decision-making process in action. Discuss.

17. Play the game, Decision-Making, to see if you understand the terminology used in decision-making (see Part Two, p. 109).

18. See the filmstrip, Marriage and Money, by the Institute of Life Insurance. Write a paper or discuss the following questions:
    a. If I were the couple, I would _____.
    b. The reason I would make this decision is _____.
    Show how you used the decision-making process to arrive at your answer.

    Analyze the filmstrip you just viewed to identify some of the advantages of using the decision-making process. List and discuss the advantages.

    How did your plan differ from your classmates' plans?

19. Take the post-test on decision-making (see Part Two, p. 101) to see if you can apply the decision-making process to one of your problems or a problem given to you by your teacher.

20. Review the story called Help. Answer the following questions about it:
    a. What is Judy's problem?
    b. What goals does she want to reach?
    c. What values does Judy seem to hold?
    d. To help her plan a solution to her problem, consider the alternatives listed below.

    ALTERNATIVE 1. Take Sally in her own (Judy's) car to the doctor. Call the child's parents and tell them about the accident and ask them to meet her at the doctor's office to pick up their little girl.

    ALTERNATIVE 2. Call a cab for Sally. Help her get on her way to the doctor's office. Arrange for a neighbor to keep the child.

    ALTERNATIVE 3. Call her date and ask him if they could possibly arrive late at the Fireman's Ball, explaining the emergency that has arisen--then--take Sally to the hospital and the child to another baby-sitter.

    Answer these questions about each alternative:
    1. What would be the results or outcome of following this alternative?
    2. Would she reach her goal?
    3. What resources would she have to use? Does she have enough of each of these resources to pursue this alternative? Would the outcome be worth the resource cost?
    4. If she chooses to do this, what can she fix for supper?
    5. How might her feelings, values, and previous experiences influence her decision?
    6. What steps still would need to be taken (or decisions made)?

    e. Which one do you think she should choose and why?

4570

f. Do you think she would be willing to live with the consequences of this decision? Explain.

21. Read the book, The Story of the Trapp Family Singers, by Maria Augusta Trapp. Use the Case Analysis on Decision-Making (see Part Two, p. 112) and analyze the story according to the outline.

KEY POINTS

Decision-making reflects varying degrees of rationality.[1]

Decisions are affected by the interaction of factors which influence managerial behavior.[1]

Rational decisions represent choices resulting from logical analyses of the elements of situations.[1]

The decisions of individuals and families reflect differences in the perception of goals and goal achievements.[1]

Satisfactory decisions may involve family members in different ways at different times.[1]

Disadvantages as well as advantages are usually inherent in the alternatives involved in a decision or choice.[1]

Risk and uncertainty in decision-making vary with people and situations.[1]

SECTION ONE: ALLOCATION OF RESOURCES

UNIT VI: Management Process

BEHAVIORAL OBJECTIVES

Be able to (1) identify reasons management is important in our lives
(2) apply the management process

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 14-19 in Management for Better Living by Starr or pp. 74-82 in Your Family and Its Money by Thal and Holcombe to understand the steps in the management process. Discuss these steps.

2. View the 3M transparencies, No. 25, The Rational Decision-Making Process, to review the management process. [NOTE TO TEACHER: Transparencies A-M cover the planning phase of the management process; N-O, the controlling phase; and P-T, the evaluating phase.]

3. Develop a bulletin board or visual aid showing the elements and steps involved in the management process (see Part Two, p. 114). Use this visual as a guide to help you analyze examples of the management process in action and to help you apply this process to a problem you will be given later.

4. Read the story, "Getting Dad Back into the Family" in Management in Families, Decision-Making from Michigan State University, Cooperative Extension Service. Identify elements in the story related to planning, controlling, and evaluating. Discuss these question as you analyze the story:

   A. Planning: What was the problem this family faced? What was their central goal? What does this reveal about the values they hold? What resources did this family have in abundance? What resources were limited? What were their greatest resource expenditures? Could they afford this? What was the original big decision made during the planning stage?

   B. Controlling: What were some of the little decisions made during the controlling stage that contributed to the success of the big decision and the family's reaching its goals? What were some of the circumstances this family could not control?

C. Evaluating: As you evaluate this family's solution to their problem, do you think you would have been as pleased with it as they were? Why? Discuss alternative solutions that might suit other families better. What would be the possible outcome of each alternative? What resources would be required to carry it out?

5. Work in small groups to apply the management process to the problems of the couple in the filmstrip, Marriage and Money, from the Institute of Life Insurance. Use questions similar to the ones in the preceding experience to guide your thinking. Discuss your proposed plans with the class.

6. Read the situation, Honeymoon or House (see Part Two, p. 116), and apply the management process to this situation.

7. Play the game, Management Roulette (see Part Two, p. 118), to review management terminology.

8. Fill in the crossword puzzle on Management Mix on p. 27 of the December, 1969 issue of What's New in Home Economics to review management terminology or, as a class project, build a crossword puzzle.

KEY POINTS

Decision-making reflects varying degrees of rationality.[1]

Decisions are affected by the interaction of factors which influence managerial behavior.[1]

Rational decisions represent choices resulting from logical analyses of the elements of situations.[1]

The decisions of individuals and families reflect differences in the perception of goals and goal achievements.[1]

Satisfactory decisions may involve family members in different ways at different times.[1]

Disadvantages as well as advantages are usually inherent in the alternatives involved in a decision or choice.[1]

Risk and uncertainty in decision-making vary with people and situations.[1]

Organization is the way in which individuals and families carry out activities.[1]

The organization of different individuals and families differs in aim and effect.[1]

Plans may incorporate more than one decision.[1]

The implementation of plans may involve reappraisal and adjustment of procedures and coordinating activities.[1]

Individuals and families may facilitate management through creating routine procedures and coordinating activities.[1]

The ways in which plans are communicated may affect their implementation.[1]

Effective organization is related to optimal use of resources.[1]

Anticipated outcomes and incentives energize organizational processes.[1]

4576

SECTION ONE: ALLOCATION OF RESOURCES

UNIT VII: Budget or Spending Plan

BEHAVIORAL OBJECTIVES

Be able to (1) comprehend the importance of setting up some type of spending plan
(2) examine various types of budgets
(3) select a personal budget plan that is suitable
(4) apply the management process to setting up a budget

SUGGESTED LEARNING EXPERIENCES

1. Write the first word that comes to your mind when the following terms are called out: bargain, rent, utilities, flexibility, planned spending, charge account, donations, insurance, savings, fixed income, emergencies, budget. Put a star by each word that has an unpleasant association for you. Compare your ideas with those of the other members of the class. With which words did you have an unpleasant association? Why?

2. Ask for a volunteer to put all the money he has with him on the desk, tell when he will secure more money, and identify the expenditures he has to make with this amount of money and tell how he will allocate this money. Discuss such questions as: Does your family budget? Do you budget? How does it work for your family? For you? How does your family reach long-term goals? Is your plan written? How often do you examine it for adjustments? Do you use the envelope system?

3. Conduct a survey to determine the various ways students in your school obtain money and the frequency with which they receive it (see Part Two, p. 120). Ask such questions as: Do you earn your money; receive allowances, doles, or gifts; or receive money in a combination of these ways? Do you receive your money on a weekly, monthly, or irregular basis? What are the major items for which your money is spent?

4. Keep a record of all your income for the next two weeks, indicating sources from which it is received. Also keep a record of all expenditures. You will use this information later in this unit to analyze your spending habits.

5. View the Visual Master TM 10--Basic Budgeting--from Coed to introduce general principles of money management and budgeting as they apply to teen-agers. Discuss.

6. Review the story of Mama's Bank Account by Kathryn McLean. When Papa brought home his week's earnings, what did Mama do? When all the money had been accounted for and put into the various piles, what did Mama do and say? Do you think she budgeted? Did she have short and long-term goals? Was her budget successful in relation to her family's needs?

7. Read the "Thought of the Day" on the bulletin board. Discuss what this means in relation to budgeting. [NOTE TO TEACHER: Be sure to put up a new quotation concerning budgeting each day while studying this concept and use it as a basis for discussion. See the Sears booklet, A Department Store in the Classroom, or ask your librarian to help you find quotations if others are not available.]

8. Take the $25.00 in play money given to you by your teacher and list ways in which you would spend it. Does your spending reflect your values and goals? Do not sign your name to the paper. Hand in your paper to the teacher, who will shuffle them and distribute them. Evaluate the anonymous paper you got for the values and goals reflected by the items purchased. Discuss.

9. Listen to a resource person from a bank speak on budgeting. Ask him to discuss the influence budgeting has on the standard of living in the community. Discuss his ideas.

10. View the film, Budgeting, from Bailey Films to see the need for planned spending, how easy it is to buy more than we can afford, and how you can plan a budget to suit individual needs and situations. Discuss.

11. Read pp. 368-413 in Management for You by Fitzsimmons and White; pp. 66-82 and 102-120 in Your Family and Its Money by Thal and Holcombe; or pp. 162-164 in Consumers All (USDA yearbook) to learn about the various parts of a budget and some factors to consider when setting up a budget.

12. Discuss such questions as: Why do we need to plan our spending? What are the advantages and disadvantages of a spending plan? What are the steps in planning a budget? What are the differences and similarities between a family budget and the government's budget? What does the government do when it is short of funds? Can individuals do the same? Why or why not?

13. View a bulletin board or transparency summarizing the advantages of planned spending (see Part Two, p. 121). Hold a "Quaker Meeting" and view this presentation silently for the assigned time period (not more than five minutes). Use this five minutes to think about and explore the ideas presented. Write down every example you can think of that illustrates one of the points made. At the end of the meditation period, share your thoughts with classmates. You may comment on another's statement if you repeat what he said, to his satisfaction, before proceeding.

14. Make a list of all the categories a family must consider when building a spending plan. Are there items that you had not considered before? Take a look at the various categories and see how these might change in

relation to the family life cycle. Discuss. Which items are fixed expenses? flexible expenses?

15. View the cartoon (see Part Two, p. 123) and discuss the questions that go with it to help you recognize the ways individuals live with money.

    Role play the situations described in question 4 accompanying the cartoon to show how people use money in different ways. Discuss the situations. Can you think of other ways people live with money? Which way do you use?

16. Read the article, "One Family's Spending: The First Ten Years," from Changing Times, The Kiplinger Magazine, January, 1970, pp. 25-30. Discuss this article in terms of the family's values, goals, and standards. How did they use their resources to meet their goals? Did they involve the management process? If so, illustrate the steps showing that they used the management process. Would you be able to copy their spending plan? Explain.

17. Look in textbooks and pamphlets to find a variety of forms and guides to be used in setting up a budget. Compare these forms. What are the items that need to be included in a budget? What are some guides that would work for you in setting up a budget?

18. Devise a form that you believe would meet your needs and goals. [NOTE TO TEACHER: Students will use the form they devise later on in the unit. One example is included in Part Two on p. 124.]

19. Find out what salaries are paid for the different jobs available to people in your community. Share your findings. Plan a budget for one of the situations listed below or another one of your choice: Young married couple with one attending college, young married couple with small child and the wife trying to finish high school, single person living in an apartment trying to meet car payments. Use findings obtained above as income to budget.

20. Listen to case studies to see the problems families face in planning their budgets. Situations can be obtained about the first or second Sunday each month in the New York Times on the 100 neediest cases in New York City or in local newspapers prior to the Good Fellow Fund Drive in Texas. Discuss.

21. Interview a case worker or someone who works with various families in your community. Find out what is being done to help families live within their income. Report your findings to the class.

22. Read the article, My Husband and I Never Argue About Money (see Part Two, p. 125). How did this couple handle their budget or spending plan? Was it successful for them? Discuss tensions that may develop when there is no spending plan.

4579

23. View the film, The Owl Who Gave a Hoot, from the Office of Economic Opportunity to see how foolish everyone was who did not budget his money. Notice the names given to the various people in the film. Also listen carefully to the words of the song. Discuss such questions as: Why were the Pigeons unwise in what they purchased? Why were they named Pigeons? Who were the Owls? Why were they named Owls? How were the Owls "smart buyers"?

24. Read the article "Impulse Buying--Does it Exist?" on page 16 in the Penney's Forum, Fall/Winter, 1968, to see what constitutes impulse buying.

25. Write on a slip of paper what "impulse" buying you participated in this past week or month. Take one item and evaluate it in terms of your values and goals. Would you purchase it again? Why or why not?

26. List a purchase from which you received so much satisfaction that you felt you had gotten more than your money's worth. What enhanced its value to you? Had you earned the money for it? planned to buy it and wanted it for a long time?

27. Listen to a panel discussion on "Money Is a Concern of the Whole Family" to see that a family needs to be involved in planned spending. Include a mother, father, and children. [NOTE TO TEACHER: At least one child should be a teen-ager. Ask each member to discuss purchases that he has made recently or wishes to make. Ask other family members to tell why or how these purchases affect them individually and the family as a unit. Discuss ideas presented.]

28. Visit with homemakers or other students in the school to see how they satisfy their needs and wants and still live within their budgets. Are all family members involved in planning? Discuss your findings.

29. Divide into small groups and develop some guidelines on "How to Be a Careful Shopper and Not Waste Money." Share your ideas with the rest of the class.

30. Read the booklet, A Guide to Budgeting for Young Couples, from U.S. Department of Agriculture or Money and Your Marriage by National Consumer Finance Association and write a short paper on "Two Can Live as Cheaply as One" or "Two Cannot Live as Cheaply as One." Justify your reasoning.

31. Use the information you have accumulated about your own spending habits and plan a budget that you might be able to live with. Work out your spending plan by applying the management principles to it. Use the form that you developed earlier in the unit.

32. Take another resource besides money, such as energy, and study using it "wisely." An example might be: washing windows by using several different items or methods for cleaning them. Your plan might include trying ammonia and water, window cleaner, vinegar and water, or newspapers. Which method gave you the most satisfaction and the results you wanted? Why?

33. Play the bulletin board game from the J.C. Penney Consumer Education materials, Financing a New Partnership, to gain some experience in analyzing individuals' values and goals as reflected in their financial planning and in the way they handle unexpected financial situations. [NOTE TO TEACHER: This could be a class activity to help prepare students for a similar individual experience.]

34. Make a spending plan for the couple described in the situation, The Morris's Spending Plan, (see Part Two, p. 128) to gain further experience in financial planning based on values, goals, and resources.

35. Apply what you have learned in this unit by solving the financial problems of the couple described in the story, Steve and Kathy (see Part Two, p. 129).

KEY POINTS

Plans may incorporate more than one decision.[1]

Organization is the way in which individuals and families carry out activities.[1]

The organization of different individuals and families differs in aim and effect.[1]

The implementation of plans may involve reappraisal and adjustment of procedures to meet changing conditions.[1]

Effective organization is related to optimal use of resources.[1]

Anticipated outcomes and incentives energize organizational processes.[1]

Management by individuals and families reflect differences in values, goals, and standards.[1]

The perception of available resources may enhance or limit the management potential of individuals and families.[1]

A financial plan is a necessary tool in managing money.[2]

The four parts of a financial plan are related.[2]

A successful financial plan fits the specific needs of the family.[2]

A successful plan is based on realistic facts and figures.[2]

Good consumer habits help make a budget work.[2]

SECTION ONE: ALLOCATION OF RESOURCES

UNIT VIII: Savings and Investments

BEHAVIORAL OBJECTIVES

Be able to (1) recognize the importance of savings in relation to life style
(2) recognize the importance of saving even small amounts systematically
(3) identify the distinguishing features of savings and investments available from different institutions
(4) clarify personal philosophy regarding savings

SUGGESTED LEARNING EXPERIENCES

1. Look at the flip chart and read the various quotations on savings. Discuss what these mean to you. [NOTE TO TEACHER: Ask your librarian to help you find famous quotations on savings if others are not available.]

2. Brainstorm about various ways of saving to see the many different ways of saving. List all ideas on the board.

3. Read pp. 208-218 in Your Family and Its Money by Thal and Holcombe; pp. 234-237 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks; pp. 249-256 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 10-13 in the pamphlet; or pp. 76-89 in Consumer Economics by Wilhelms, Heimerl, and Jelley to find out the reasons for savings and the different ways of saving.

4. Discuss what savings mean to you. Make a list of all the assets you feel you possess (see Part Two, p. 134).

5. Examine the suggestions listed on the board in terms of the following questions: Which are "regular" savings? Which are investments? Which are determined and carried out by the individual? by his job? by laws? Are some expenditures actually ways of saving? Which ones?

6. Discuss such questions as: What do you save? What are the reasons for saving? What can you save other than money? Where do people put their savings? Who are the savers? Why do you need to set goals for saving? How does your family save? What are some of the factors that affect saving?

7. Write a paper on "Why do people save?" "What do you save?" and "Why do you save?" to see if you understand the philosophy for saving. Is your method of saving haphazard or systematic?

8. View the cartoon (see Part Two, p. 135) to identify some of the money-saving habits of people.

9. Review the story, Mama's Bank Account, by Kathryn McLean to see how Mama saved for her family. Was it haphazardly or systematically? Read the story, The Money Tree (see Part Two, p. 136), and compare the two methods of saving. Did they use the cookie jar method of saving? Why or why not? Discuss the questions at the end of the story.

10. Discuss ways that you could involve the whole student body in developing a regular habit of saving by participating in a savings program. Talk with school administrators to see about putting the program into action.

11. Listen to a symposium composed of representatives from a bank, a savings and loan association, a mutual savings bank, and a credit union explaining their savings programs. Discuss.

12. Make a chart showing the various places where you can save money, the rate of return, stability of value, safety of value, and the advantages and disadvantages of each of the different types of savings. Add any other factors you want to learn concerning savings. Discuss the chart after it has been completed and compare the distinguishing features of each type of savings.

13. Listen to a speaker from a credit union answer the following questions: What is a credit union? How does it operate? Who manages the credit union? How is it chartered? What are some of the "extras" they can do for their members?

14. Take a field trip to a bank and/or savings and loan company to find out about their savings program and the advantages and disadvantages of the various programs.

15. Find some references in the library on the Christmas Club savings, or interview a bank officer to find out about their purpose and how they operate. Discuss such questions as: Do banks pay interest on these savings? What is the difference between the old "cookie jar" way of saving and the Christmas Club? Why are Christmas Club saving accounts sometimes referred to as a "hole in the saving sock"? Who is really being helped? Discuss.

16. Read pp. 219-225 in Your Family and Its Money by Thal and Holcombe; pp. 77-87 in Managing Livingtime by Raines; pp. 92-104 in Consumer Economics by Wilhelms, Heimerl, and Jelley; pp. 256-271 in The Consumer and His Dollars by Schoenfeld and Natella; or pp. 253-258 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks to find out about investments and the ways people may invest their money for future goals.

4585

4584

17. Discuss such questions as: What is the difference between savings and investments? What is the difference between investing and speculating? What is the difference between stocks and bonds? What is a mutual fund? Should you buy a mutual fund? What are risky investments?

18. Listen to a review of a book, How to Buy Stocks, by Louis Engle to give you a better insight into the world of investing. Discuss.

19. Listen to a superintendent or business manager explain how your school was financed. Ask him to discuss such questions as: When and why were the bonds issued? What is the rate of interest on them? Where did the money come from?

20. Inquire about municipal bonds from the city manager or mayor. Do they have some relation to the school bonds? If so, what is it? Discuss.

21. Discuss the two old sayings, "Don't put all your eggs in one basket" and "Before you invest, investigate." How do these apply to one's decisions about saving and investing money?

22. Work in small groups to devise some guidelines on "How to Be a Careful Investor." Discuss with classmates and compile a composite list.

    Build a hierarchy of savings and investment possibilities based upon your readings and discussions.

23. Listen to a broker discuss your list of guidelines and the heirarchy you developed. Ask if he agrees with your list or would offer other guides to help one be a careful investor. Ask if he agrees with your ranking of savings and investment possibilities. If he does not, what changes would he make? Ask other questions to clarify any points you do not understand concerning investments.

24. Calculate the dividends or benefits of a regular savings program and/or investment in a stock for a period of time.

25. Take one of the different ways of savings and investigate it further by the use of reference material and resource people. Report your findings to the class by the use of illustrative material.

26. Find articles in periodicals on either savings or investments. Write a short review of each article. Have a sharing session in which articles are passed around for all classmates to read.

27. Read this situation and discuss the questions: Johnny Thomas has accumulated $2,700 during the three years he has worked since finishing high school. He has no immediate need for the money and forsees no need for it until sometime in the future after he is married. Johnny has no marriage plans at the present time. The $2,700 is now in his checking account.

a. Should he have all of this money in his checking account? Why or why not?
b. Discuss three places where he could keep his money. What are the advantages of each?

28. Use the case study of Steve and Kathy (see Part Two, p. 129) and analyze their situation in terms of savings. Suggest alternate savings plans and the advantages and disadvantages of each. Decide on a final plan and tell the basis on which the decision was made. Determine what savings goals Kathy and Steve might hold at each stage of the family life cycle. How could they achieve these goals?

KEY POINTS

A regular habit of savings is one of the best ways to build a savings fund.

A savings plan helps an individual or family develop financial security.

Values and goals will influence the type of savings plan an individual or family will select.

Saving is assigning present income to future use.

The choice of a savings program will differ with individuals or situations.

Savings and investments may take many forms.

There is a certain amount of risk and uncertainty in investing money.

The wise saver and investor will secure information before putting his money into any form of savings and investments.

A savings and/or investment program needs to be evaluated periodically to see if it is meeting goals.

Money is only one resource that can be invested.

SECTION ONE: ALLOCATION OF RESOURCES

UNIT IX: Credit

BEHAVIORAL OBJECTIVES

Be able to (1) recognize the role of credit in helping individuals and families maintain a satisfying life style
(2) identify the sources of credit available for different purposes
(3) describe the type(s) of credit available from different sources and the advantages and disadvantages of each
(4) identify factors which influence the cost of credit
(5) recognize the precautions one can observe to protect himself from deceitful practices and unwise use of credit
(6) exercise judgment in the selection of a source and type of credit for a given situation

SUGGESTED LEARNING EXPERIENCES

1. Take the pre-test on credit terms to see how many of the terms you can identify. Also answer the other questions on parts II and III of the pre-test about your feelings and those of your parents and friends concerning credit (see Part Two, p. 139).

2. Find as many advertisements as you can on credit and bring them to class to see how widely advertised credit is. Plan a bulletin board display of them. Are you surprised at the quantity? Why? Are you familiar with any of these advertisements?

3. Role play some television commercials advertising credit. Analyze these commercials. To what emotions and concerns of people do they appeal? Give examples. In your opinion, how strong is the influence of advertising on the individual's selection of a source of credit? Do the advertisements give sufficient information on which to make rational decisions? What other information is needed?

4. Read Chapter 7 in Your Family and Its Money by Thal and Holcombe, Chapter 10 in How to Live Better and Spend 20% Less by Dowd, Chapter 9 in The Consumer and His Dollars by Schoenfeld and Natella, or Chapter 10 in Consumer Economic Problems by Wilson and Eyster to find out what consumer credit is, why families use credit, types or kinds of credit available, and places where one can go to borrow money.

5. Develop a definition of credit from references and previous experiences. Explain what credit means to individuals, families, businesses, and society.

6. Discuss such questions as: What is credit? What are some examples of using credit wisely? Misusing credit? Do all families have or use some kind of credit? If so, what kind? How do people use credit? Do you feel that credit is responsible for our high standard of living? Explain. How does the family life cycle relate to the use of credit?

7. View the film, Consumer Education: Retail Credit Buying, from Bailey Films, to identify some of the problems involved in using credit. Discuss these questions: (1) How are the problems these two girls faced typical of situations in which you might become involved? (2) How could you use retail credit to good advantage, yet avoid getting into such difficulties as these girls experienced? (3) What is the significance of a credit rating?

8. Work in small groups and list the advantages and disadvantages of credit. Report your ideas back to the class. Can you add other ideas to the list?

9. Find out how widespread the use of credit is at the present time. Ask your librarian to help you find this information or find a magazine or newspaper article that discusses the current use of credit. Report your findings to the class.

10. Discuss such questions as: What is the basis of credit? What is a credit rating? What factors affect your credit rating? Discuss what the 5C's or 6C's of credit buying are and see what these things mean in relation to your credit rating. [NOTE TO TEACHER: Some references refer to 3C's others to 5 or 6C's.]

11. Make a chart with the 5C's or 6C's of credit and put down adjectives that you think would fit under each of the 6C's. The 6C's are: character, capital, conditions, collateral, capacity, and common sense. An example of an adjective would be responsible. Under which of the 6C's would this fit?

12. Visit the credit bureau or listen to a representative from the local credit bureau explain the procedures used to judge an individual's credit rating and the way businesses use this service. Ask how you might establish a good credit rating. Discuss such questions as: What is a credit bureau? Why is it needed? Who belongs to the bureau? What services does it provide? What are its purposes?

13. View the filmstrip, Credit Sources, from Visual Education Consultants to identify sources and the criteria each source requires for granting credit. Fill in the chart and answer these questions to summarize information: What determines the availability of credit? What factors affect the cost of a loan? (see Part Two, pp.140 and 144) Discuss with classmates.

4590

CRCD

14. Participate in "Swing Around" the class to see the different items you have acquired through the use of credit. Group the items under the type of credit used. Be sure to include mortgages, telephone service, gas and water among the items named.

15. Examine the yellow pages in the telephone book to determine the types and numbers of lending agencies in your community. Some examples are: banks, credit unions, small loan or consumer finance companies, life insurance companies, pawnbrokers, savings and loan companies. Discuss.

16. Compile a list of all the different agencies that are in the business of loaning money. Investigate the advantages and disadvantages of each kind cf loan organization and make reports to the class. Discuss.

17. Work in pairs on a consumer credit project. Investigate one place that loans money to people and fill in the information on the form, Use This Chart to Compare Credit Costs (see Part Two, p. 145). Complete your chart when the other members of the class report on the agency that they went to visit. Which one would you select if you had to borrow money? Why?

18. Examine several loan application blanks used by various lending agencies to see what type of questions are asked on the forms. Why do they need to ask such questions? Discuss.

19. Present or read the skit, The Cashless, Checkless Society of the Future (see Part Two, p. 146), to find out what is meant by a "checkless" society. Discuss.

20. Interview attorneys, credit department managers, and loan agents to determine what happens when an individual or family cannot meet its credit obligations. Find out what help is available in your community when a family is in financial crisis and what the position of a minor is in relation to credit contacts. Ask if they think we will soon be a "checkless" society. Report findings to class.

21. Listen to some case studies of consumers who over-extended their use of credit. Discuss possible ways of helping them out of this financial crisis. An example of such an article would be "We Went Bankrupt--On the Installment Plan" by Helen Arnold on pp. 30-35 of the January, 1961 Reader's Digest.

22. Find articles in the newspapers concerning personal bankruptcies to become aware of the increase in the filing of bankruptcy among individuals. What is the law in Texas on filing bankruptcy? Discuss this in relation to the number of families filing today compared to the number filing thirty years ago.

4591

23. Visit a pawn shop and have the manager explain how his business operates and who uses his business. Ask an attorney what the state regulations are on pawn shop operations. Share this information with the rest of the class. Discuss.

24. Listen to a speaker from a credit union explain how it is organized and how it operates. Discuss.

25. Discuss such questions as: What is the statutory maximum small loan rate in Texas? Why are interest rates from small loan companies higher than those of some other kind of lending agency? If you were a lender, what questions would you ask a person before you loaned him money? What can a consumer do for his own protection when borrowing money? Should you co-sign another person's note? Why? Why are low-income families sometimes forced to obtain credit from illegal lenders? Where can you borrow with collateral? Without collateral? What are some gimmicks to watch for when borrowing money?

26. Read the play, The Signature, by Betty K. Gipson (see Part Two, p. 148) to determine some of the factors one should consider before signing a contract. What conclusions would you draw regarding the value of one's signature on a contract? The reliability of a salesman's promise? What is the significance of a contract? What information should Mrs. Bates have acquired before she purchased the sewing machine? What two resources did she find from which she could receive aid for this financial legal problem? What similar resources do you have in your community? [NOTE TO TEACHER: You may wish to expand this activity by discussing the questions and information at the end of the story.]

27. Interview an attorney to see if there are any illegal lenders in your community. If so, what is being done to eliminate them? What makes their operations illegal? Report findings to class.

28. Write a brief description of the different types of lending agencies in your community. If you had to borrow $200.00, which one would you select? Explain.

29. Read "Credit as a Resource" from Penney's Forum (see Part Two, p. 156) to gain an understanding of the uniform consumer credit code. Discuss article.

30. View the filmstrip, Truth in Lending, by the Federal Reserve Bank to identify federal efforts to protect the consumer. Discuss.

31. Role play a situation showing a father who has just opened the monthly bill from the department store. He is disturbed by his wife and daughter's purchases. Listen to all three present their viewpoints. Discuss the validity of their viewpoints. [NOTE TO TEACHER: Use this to introduce a study of the specific types of credit arrangements.]

32. Read pp. 157-161 in Consumers All by United States Department of Agriculture to identify some of the characteristics of installment credit. Discuss.

4592

33. View the filmstrip, The Installment Contract, by Visual Education Consultants to identify precautions one should observe before signing such a contract. Work in small groups to make "caution signs" which you think a prospective installment buyer should observe. Make "go" signs indicating the circumstances under which installment credit might be used. Share with class members.

34. View the film, Consumer Education: Installment Buying, from Bailey Films to examine the factors which affect the cost of installment credit. Discuss: How do the following affect credit costs? (a) high-risk loans, (b) length of loan period and (c) rate of interest. Give an illustration to demonstrate your points. What is sliding-scale interest? add-on interest? When and by what kinds of agency might each of these be used? Show how each of these kinds of interest is computed.

35. View the filmstrip, Charge It, Please, by Visual Education Consultants to identify the different types of charge accounts and the costs and distinguishing features of each type. Answer the following questions: (1) In what ways are charge accounts different from installment buying? (2) What are the types of charge account credit available? (3) What factors influence the cost of charge account credit?

36. Visit several stores to find out what types of credit they use. Contrast a regular charge account and a revolving account; and contrast a revolving account and the installment plan. List the advantages and disadvantages of each type. Discuss such questions as: What is cycle billing? Why have some stores adopted this? What factors determine one's ability to get a charge account? What is a credit card? What are the types of credit cards available? What are the advantages and disadvantages of using credit cards? What are some points to remember when using credit cards?

37. Read the article in the May, 1970 issue of the McCall's magazine, "Hazards of Unsolicited Credit Cards" by Betty Furness, to see the problems involved in unsolicited credit cards. Discuss this article and what can be done about the situation. Plan to take some action as a class to help eliminate this problem, such as writing to your senator.

38. Discuss such questions as: Do you know of anyone who has lost a credit card? If so, what happened? What should one do if he loses a credit card?

39. Work in small groups to investigate the cost of using the different types of charge account credit. As the basis for your investigations select one item that all groups agree to use. Determine the distinguishing features of the type of account you investigate. Let group A investigate the cost of an item if purchased on an open 30-day

4593

account; group II, a revolving charge account; group III, the 90-day account (a variation of the 30-day account); and group IV, a credit card account.

Compare costs and determine which type of credit would cost the least for this item. Under what circumstances would you use each of the other types of credit?

40. Work in small groups and develop a questionnaire that could be used in your school to find out how the student body feels about credit. Some of the questions on the questionnaire might be: Should you pay cash for everything? Why or why not? Is it cheaper to pay cash? Explain.

41. View the filmstrip, Credit Concepts, by Visual Education Consultants to help you summarize this unit on credit.

42. Work in small groups to write guidelines for the wise use of credit. Develop an appropriate title for your paper. Present your guidelines to the class in an interesting way.

43. Write your personal philosophy regarding the use of credit or write a paper to clarify your own feelings about credit. Compare these feelings with the ones you listed at the beginning of the study on credit. How have they changed?

44. Listen to excerpts from the book, Buy Now, Pay Later, by Black to find out about some of the different forms of consumer credit and some of its abuses on the unsuspecting public. Discuss. Find out whether the use of teen-age credit has increased since the book was written.

45. Listen to the words from the song, "Dollar Down, and a Dollar a Week," to identify what the song is telling us about credit. What do the words tell us as consumers?

46. Use the decision-making process to solve the case study of Steve and Kathy (see Part Two, p. 129 and 159). [NOTE TO TEACHER: The purpose of this activity is to give students an opportunity to apply previous learnings and make judgments regarding the use of credit.]

47. Shop for an item you feel you must have. What would the cost of the item be if you paid cash for it? If you purchased it by the use of credit? Which method would you select to use to pay for the article? Explain.

48. Find an article in one of the current periodicals concerning credit. Write a review of the article to show that you know where to secure recent information on credit. Be sure to list the periodical and the date.

49. Play the academic game, Consumer, by Western Publishing Company to gain experience in coping with the problems and economics of installment buying. [NOTE TO TEACHER: This game requires 11 to 34 players and requires 1-1/2 to 2-1/2 hours playing time. It can be played for two or three days if you have conventional scheduling or it could be played

4594

without interruption if you have modular scheduling. It also could be used with Future Homemakers or in summer homemaking.]

50. Play the game, Baseball, to summarize the unit on credit (see Part Two, p. 160).

KEY POINTS

Credit can be used to help individuals and families maintain a satisfying life style.

Credit is available from a variety of sources for a variety of purposes.

Each source of credit may offer several types of credit arrangements.

Each source and type of credit offers some advantages and some disadvantages.

The cost of credit depends on a combination of factors.

Individuals and families should select credit wisely to avoid deceitful lending practices or overextending their ability to repay.

4292

SECTION ONE: ALLOCATION OF RESOURCES

UNIT X: Insurance

BEHAVIORAL OBJECTIVES

Be able to (1) recognize the necessity for life and health insurance
(2) explain the different types of life insurance policies
(3) explain the different kinds of health insurance policies
(4) apply insurance information to some family situations

SUGGESTED LEARNING EXPERIENCES

1. Take the pre-test on insurance (see Part Two, p. 161) to determine your understanding of life and health insurance.

2. Read the story, Life Is a Risky Business, (see Part Two, p. 164) to identify some of the dangers involved in the story and then analyze the kinds of insurance needed by the people on Sycamore Street.

3. Read pp. 23-26 in A Date with Your Future by the Institute of Life Insurance; pp. 225-231 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 193-200 in Your Family and Its Money by Thal and Holcombe; pp. 29-34 in Personal Money Management by American Bankers Association; pp. 23-28 in Money and Your Marriage by National Consumer Finance Association; pp. 205-214 in How to Live Better and Spend 20% Less by Dowd; or pp. 3-9 and 13-23 in Policies for Protection by the Institute of Life Insurance to see the purpose of life insurance, the time to purchase life insurance, the amount to buy, and the characteristics of the different types of life insurance. Discuss.

4. Look in the yellow pages of the telephone book to see how many insurance firms are listed. How many different types of insurance are represented? Discuss.

5. Interview your parents or adult friends and find out how many different kinds or types of insurance they have. Share this information with the rest of the class. Identify the different kinds of insurance the class found.

6. Discuss such questions as: What are the major hazards a family faces? How can insurance help provide security to families? What are the psychological advantages of having adequate life and health insurance? How can insurance provide security upon the death or disability of the family's breadwinner?

7. Examine sample copies of life insurance application forms. Discuss the types of information needed on the forms. What minimum health requirements must be met? Why is it important to give accurate information on the form? Are life insurance contracts legal documents? Read the story, $100,000 or Nothing (see Part Two, p. 165) to realize what can happen when one fails to give accurate insurance information. Do the role playing situation suggested at the end of the story. Discuss the points made at the end of the story.

8. Work in small groups to analyze one of the types of life insurance. Be sure to identify the purpose of that particular type and the advantages and disadvantages. Compare costs and length and type of coverage. Report your findings to the rest of the class with the use of illustrative materials. As the reports are given, prepare a chart showing the major features of the various forms of life insurance. Use the following form as a suggestion to help you.

   TYPES ADVANTAGES DISADVANTAGES WHO SHOULD BUY THIS TYPE?

9. Listen to an insurance agent explain what he feels is the minimum amount of insurance a person needs to carry in the various stages of the family life cycle. Ask him to answer some of the following questions: Who needs life insurance? Should the mother carry life insurance? Should children in the family have life insurance coverage? What are the advantages in adult life of having had insurance coverage as a child? How should life insurance premiums be paid? Do you feel families carry enough insurance? Do people buy insurance for investments? If so, is it a wise practice? Discuss.

10. Examine some sample life insurance policies to become aware of what is included in the various policies. Jot down any questions you might have to ask the insurance agent to clarify points you don't understand.

11. Listen to another insurance agent explain the basic types of life insurance as well as the procedure for converting from one policy to another type of policy. Also ask him to answer questions such as: What are the advantages of group life insurance to the employee? To the employer? Would a person need to buy additional insurance if he is already covered by a group policy? Why? Why is it important to select an insurance agent with care?

12. Work in small groups to develop some guidelines that would help an inexperienced shopper select insurance wisely. Let an insurance agent check over your guidelines.

13. View the filmstrip, Dollars for Security, by Institute of Life Insurance to find out what insurance can do for you. Discuss questions asked on filmstrip.

14. Consult with your parents on the different types of life insurance they have. Do you feel it is adequate? Why? What changes would you make?

15. Discuss such questions as: How can consumers be protected from "fly by night" insurance companies? What are the basic regulations in Texas concerning insurance? What kind of protection do consumers have against fraudulent insurance?

4598

16. View the filmstrip, Consumers in Action, by Institute of Life Insurance to evaluate their goals in relation to the future. What place did insurance play in their decision making? What other factors influenced their decision? What changes may this couple decide to make in their present insurance program? What factors will influence these decisions?

17. Find out if your school has accident insurance. If so, ask the principal or proper authority to come in and discuss why he feels students should carry this type of insurance. Find out also how many claims have been made by students in your school.

18. Read pp. 10-23 in Policies for Protection by the Institute of Life Insurance and pp. 185-192 in Your Family and Its Money by Thal and Holcombe to determine the major reasons for health insurance, the different kinds of organizations which provide health insurance, the different kinds of health insurance policies which are available, and the factors which contribute to the cost of health insurance. Discuss these factors.

19. View the instant slides on Dollars for Health adapted from the Institute of Life Insurance (see Part Two, p. 167) to determine some of the benefits individuals and families derive from health insurance. Discuss. [NOTE TO TEACHER: Instructions and materials for preparing these instant slides are found on p. 12 in Part Two.]

20. Obtain sample accident and health insurance policies to see the various types of coverage. What is meant by a deductible clause? Discuss.

21. Listen to an insurance agent discuss the variations among health insurance policies. Formulate a list of questions on health insurance and give them to him so he can answer your individual questions.

22. Discuss such questions as: What are the advantages of health insurance? Why is it important? What are the different types of health insurance policies? How does each type fit into an individual's needs?

23. Find some interesting facts concerning health and life insurance and develop a bulletin board. Ask your librarian to help you find some statistics on insurance.

24. Review the filmstrip, Marriage and Money, by Institute of Life Insurance to determine the kinds of insurance the couple might need. Use the management process to arrive at your decision for this couple.

25. Recommend the type of life insurance policy you think is appropriate for the individuals described in the situations on p. 27 in Policies for Protection. Give reasons for your recommendations.

0034

4599

26. Answer the questions on "What Have We Learned?" (see Part Two, p. 176) from Policies for Protection to evaluate what you have learned about life and health insurance.

27. Complete the crossword puzzle (see Part Two, p. 179) from Policies for Protection to review terminology you have used during this unit.

28. Review the story, Steve and Kathy (see Part Two, p. 129). Analyze their needs, resources, and goals, and plan a suitable life and health insurance program for them for their first year of marriage. How will their insurance needs change during the various stages of the family life cycle?

29. Work in small groups to analyze the needs, resources, and goals of the four couples described in Financing a New Partnership. Recommend suitable life and health insurance policies for the couple you were assigned. Give reasons for your recommendations and report all this information to your classmates. You may wish to role play a transaction with one of the couples, do a bulletin board or instant slide presentation, or use some other media to make your report interesting.

30. Continue working in small groups to develop questions on insurance for the game, Jeopardy (see Part Two, p. 181). Play this game with your classmates. This should help you review and summarize what you have learned.

KEY POINTS

There are several types of life insurance and health insurance.

The consumer needs to adapt his insurance coverage to his income and needs.

The security derived from life insurance appears to be a value of the American people.

Personal insurance reduces economic risk and increases family security (actual and psychological) by protecting against possible financial loss.

Insurance can be an investment as well as a protection.

SECTION ONE: ALLOCATION OF RESOURCES

UNIT XI: Social Security

BEHAVIORAL OBJECTIVES

Be able to (1) describe the social security program and the benefits that are derived from the program
(2) recognize the need for keeping up-to-date on social security information and benefits
(3) identify the times when it is necessary or desirable to consult the social security office

SUGGESTED LEARNING EXPERIENCES

1. Find out how many classmates have a social security card. Discuss what this card means to them. Report your findings to the class.

2. Read pp. 200-207 in Your Family and Its Money by Thal and Holcombe; pp. 289-304 in Consumer Economics by Wilhelms, Heimerl, and Jelley; pp. 563-580 in Consumer Economic Problems by Wilson and Eyster; or pp. 330-335 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks to find out the major provisions of the federal Social Security Act.

3. Read the two pamphlets secured from your local social security office called Social Security Information for Young Families and Social Security in Your Financial Planning to see what is included in the Act, who is included in the Act, and how social security claims are figured.

4. Listen to a sociologist or a social studies teacher discuss the background of the Social Security Act, why the Act was passed and amended, the philosophy upon which it is based, the constitutional grounds for such legislation, and varying public opinions concerning it.

5. Discuss such questions as: What is social security? Why was the federal social security program developed? What are the major provisions of the federal Social Security Act and how do they affect us as individuals? Why do we need financial protection against risks of unemployment, old age, disability, and accidents? What are the benefits derived from social security? Who pays for these benefits? What is the relationship of the federal government to the social security program? Who qualifies for social security? When does a person need to consult the local social security office?

4603

6. See the film, The Social Security Story, from your local social security office. Discuss the following questions based on information from the film: What happens to the reports of earnings employers send in? How are earnings records kept? What should you do when you lose your social security card? Why do you need to contact the social security office every three years?

7. Listen to a resource person from a local social security office explain the factors that people need to understand about social security, the benefits received from the program, when they should consult the office, and how to figure social security claims.

8. Interview grandparents or older people to find out if they are familiar with the benefits they can receive from social security. Also discuss such factors as: Do they feel that the benefits are adequate for them? If not, why not? Report your findings to the class.

9. Complete the following open-ended statements to assess your understanding of social security.

   1. The basic idea of social security is _____.

   2. A person needs to keep up with changes in social security because _____.

   3. You need a social security card if _____.

   4. Social security benefits are paid for a. _____, b. _____, c. _____.

   5. Three rules for keeping social security records are 1. _____, 2. _____, 3. _____.

KEY POINTS

The changes in the circumstances accompanying family life stages influence the availability of resources and the demands made upon them.[1]

The family economy affects and is affected by the larger economy.[1]

Social security benefits are divided into three broad categories: the unemployment insurance program; the old-age, survivors, and disability insurance program; and the medicare program.

It is important to maintain reliable social security records including your card and account number, earnings credited to you, and documents that prove marriage and date of birth of family members.

4605

SECTION ONE: ALLOCATION OF RESOURCES

UNIT XII: Taxes

BEHAVIORAL OBJECTIVES

Be able to (1) examine the effect of taxes on the family income
(2) identify benefits derived from taxes
(3) recognize the various types of income tax forms and the financial records necessary for completing them
(4) accept willingly your future responsibility for paying taxes

SUGGESTED LEARNING EXPERIENCES

1. Take a pre-test to determine your Tax I.Q. (see Part Two, p. 183).

2. Read pp. 275-288 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 378-405 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks; or pp. 424-448 in Consumer Economics by Wilhelms, Heimerl, and Jelley to identify who pays for goods and services provided by the government and to become familiar with the different types of taxes.

3. Discuss benefits citizens receive as a result of taxes, such as recreational facilities, parks, library, protection, highways, and educational materials.

4. Look at the various forms that are used to calculate federal income tax and county and local taxes to become familiar with information that is on the various forms. Discuss what items are included.

5. Discuss ways of securing and recording the necessary information for tax forms and develop a form that would be suitable for you. Why is it important to keep accurate information?

6. Discuss what is meant by the statement made by Oliver Wendell Holmes, "I like to pay taxes. With them I buy civilization."

7. Discuss questions such as: Who pays for parks? Who pays for streets and roads?...repairing them? Who pays the salaries of policemen?... firemen?...city librarians?

8. Listen to a resource person, such as the county clerk, explain the local or county tax levy and the way in which taxes are collected. Discuss his talk.

4606

9. Work in small groups and complete a list of ways in which our financial resources are shared with others. Classify according to voluntary and compulsory categories and indicate which ones are local, county, state, and federal. Discuss the listing. Do you all agree?

10. Listen to a person from the Department of Internal Revenue discuss factors you need to follow when filling out a form. Work with him on completing a form.

11. Find a cartoon, editorial, or quotation concerning taxes. Write a short paper on what this means to you as a person.

12. Listen to a senator explain the uses made of the federal income tax collected or write to one for this information. Discuss.

13. Interview the principal, superintendent, or business manager to find out if your school receives any financial aid as a result of taxes besides the amount of school tax paid in your community. Find out how taxes pay for school supplies, buses, food, salary, and building upkeep. What is the cost per pupil? Discuss this cost in terms of financing your education. Could you afford to pay this cost each year?

14. Work in a small group and see if you can find the distribution of the tax dollar on the local, state, and federal level. Ask your librarian to help you find this information. Report your findings to the class in an interesting way.

15. Compile a list of ideas showing different ways consumers can help reduce taxes. Include such ideas as the prevention of littering, vandalism in schools, and vandalism in public buildings. Make posters to convey these ideas to the rest of the student body and your community.

16. Interview adults who are paying taxes and ask them for their opinion concerning the local and state taxes. Report findings to the class. Do you think these adults were aware of the benefits they receive from the tax dollar? Explain.

17. View an exhibit to see the various types of forms used for tax purposes. Examples of these forms would be appraisers' schedules, income tax blanks, and city and county tax notices. Examine them.

18. Make a list of the kinds of protection against hazards we receive as a result of taxes. For example: crime, pollution of air and water, contagious diseases, and unsafe food.

19. Write a paper showing different ways the government, through the use of taxes, provides financial assistance to individuals, families, business enterprises, and international agencies.

20. Write a short paper explaining why people should accept willingly the responsibility for paying taxes.

4607

4608

KEY POINTS

Tax funds help to secure for the citizens certain benefits in the form of property for public use, welfare services, and protection. These benefits can be provided more economically through the use of tax funds than from individual sources.

Accurate records are necessary for some aspects of family finance. The accuracy and completeness of these records is the responsibility of the person filing the return and paying the tax.

Resentment toward taxes may stem from failure to understand the tax structure and the benefits derived from taxes.

PART ONE

SECTION TWO: CONSUMER BUYING

SECTION TWO: CONSUMER BUYING

UNIT I: Factors Influencing Consumer Purchasing

BEHAVIORAL OBJECTIVES

Be able to (1) recognize factors which affect the attainment of goods and services
(2) relate these factors to the judgments individuals make in selecting goods and services
(3) identify individual pressures which influence buying decisions
(4) recognize and appraise pressures which businesses exert on consumer purchasing decisions
(5) evaluate relevant factors, formulate judgments, and establish priorities in the purchase of goods and services

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 28-37 in Managing Livingtime by Raines to determine factors which affect one's attainment of goods and services. Discuss.

2. Role play a situation in which a mother, father, and children have widely differing opinions on plans to make a major purchase. For help in structuring the situations, refer to But Couldn't We Buy This Car? (see Part Two, p. 225). Discuss the effects of factors such as the following on each member's choice of a car: amount of money available, standard of living each aspires to maintain, personal preferences and satisfactions sought, personal resources (e.g., physical and mental abilities, judgment, age, sex). Analyze the influence of these factors on the selection of a car if your family were buying another car--if your grandparents were buying another car.

3. View the 3M Transparencies 29, E, I, J, and K, Consumers: Who? Why? How? to stimulate discussion of economic, psychological, and sociological pressures which influence buying decisions.

4. Read pp. 44-53 and 159-166 in Consumer Economics by Wilhelms, Heimerl, and Jelley and pp. 81-85 and 106-119 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks to learn about motivations which affect buying. Discuss.

5. Work in small groups, with each group member listing five purchases that he or his family members have made recently. Analyze the motivations

these purchases and classify purchases under these types of motivations:[1]

1. Physical well-being
   a. appetite
   b. comfort and rest
   c. exercise
   d. self-preservation
2. Creativity
3. Recognition
4. Knowledge
5. Beauty and fashion
6. Recreation
7. Financial gain

Discuss each group's analysis of purchases. Discuss such questions as: What other factors influenced the purchase of these five items? Which purchases were planned--which impulsive? Did you plan to buy some item(s) and then change your mine? What prompted decisions not to buy or impulses to buy? With which purchases have you been most satisfied--dissatisfied? Why? Draw conclusions regarding types of business pressures which influence purchases.

6. Go through the self-instructional program, Advertising...Friend or Foe, to learn about advertising appeals, forms of advertising, consumer protection agencies, and consumer responsibilities for truthful advertising. Take the post-test and then discuss the questions.

7. View 3M Transparency 29-N from Consumer: Who? Why? How? as a basis for discussion of these advertising techniques: conformity, imitation, association, suggestion, intellectual appeal, and snob appeal.

8. Bring to class copies of two or three advertisements that make you want to buy what is advertised. Analyze the advertising techniques used in each. Compare and evaluate the claims made in the advertisements, and rate the ads as (1) excellent and probably valid, (2) mediocre, or (3) fantastic and unrealistic.

9. Observe and note the types of things advertised on TV at different times of the day and the types of commercials which accompany certain shows (e.g., cereals with children's programs). What advertising techniques are most frequently used? Which advertisements are realistic? Which ones are most fantastic? Discuss.

10. Collect examples of promotional devices that stimulate consumers to buy and list others that you have seen. Analyze the basis of their appeal. Discuss advantages and disadvantages of such devices as prizes, premiums, trading stamps, coupons, contests, discounts, special introductory offers, sales (one-cent, anniversary, inventory) price reductions, referral sales, special displays, unusual packaging and labeling, free merchandise, and others you have experienced.

---

[1]Taken from Consumer Education. Albany, New York: The University of the State of New York, The State Education Department, Bureau of Secondary Curriculum Development, 1967. p. 6.

4611

11. Present the skit, Americans Spend Money on the Word "Free" (see Part Two, p. 261), as a basis for discussion of gimmicks used by merchants to encourage people to buy.

12. Write a short paper titled "Money to Burn" in which you describe a most unsatisfactory or useless item bought on impulse or as a "bargain." Discuss the factors which motivated the purchase of this item.

13. React to the following situations to become familiar with the idea of opportunity costs.

    A. Think of the last major item your family bought. Write at least three other ways this money might have been spent. What influenced your decision to spend the money as you did?

    B. Write at least four things you would like to buy that cost about $5. Realizing that only one item can be purchased, which one would you probably choose? What is meant by opportunity costs? What factors would influence you to give up the other four?

KEY POINTS

Goods and services attained by individuals and families are affected by values, amount of money available, price of merchandise, standard of living, personal preferences, satisfactions sought, and personal resources.

Individual differences in the factors which influence one's attainment of goods and services are related to the judgments consumers exercise in their selection of goods and services.

Most people hold in common certain sociological and psychological motivations which influence their purchasing decisions. Producers recognize and appeal to these motivations.

The wide variations in goods and services bought and in buying habits reflect individual and family differences within this motivational framework.

Knowledge of advertising techniques may help the consumer to become a more discriminating buyer and enable him to make educated choices.

Promotional devices may be misleading, but if the consumer evaluates them carefully, he may make some excellent buys.

The decisions to buy one item may involve not only the dollar cost of that item but also foregoing the purchase of other items the consumer wants or needs.

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

SECTION TWO: CONSUMER BUYING

UNIT II: Principles of Consumer Purchasing

BEHAVIORAL OBJECTIVES

Be able to (1) recognize the advantages and disadvantages of shopping different types of facilities
(2) recognize the relationship between customer services and prices of merchandise
(3) establish priorities for spending based on what you already have and your long range goals
(4) compare and evaluate product information from a variety of sources
(5) establish criteria for selection of purchases
(6) acquire knowledge of appropriate use and care of products purchased
(7) investigate alternatives you may pursue when a product does not meet expectations
(8) apply guides which lead to more effective purchasing when making personal purchases
(9) test a product by adapting procedures used by testing organizations

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 22-25 in Your Shopping Dollar by Household Finance Corporation for a discussion of the different types of shopping facilities. Classify shopping facilities in your community as:

   Retail stores--department, specialty, variety, discount

   Non-store retailers--door-to-door salesmen, mail order services, vending machines

   Cooperatives

2. Listen to a representative of a consumer cooperative explain the operation of co-ops. Discuss.

3. View the transparencies (see Part Two, p. 185), and discuss types of shopping facilities and services each may offer that would appeal to consumers. Include such items as physical plant facilities, credit for customers, approval privileges, consultation services, installation service and repair, and trade insurance.

4. Work in small groups and visit the various kinds of shopping facilities. To secure information quickly and concisely, use the check sheet, Services of Shopping Facilities (see Part Two, p. 189). Select three items that each of these facilities might stock and secure prices on them as you obtain the other information. Report findings to class and discuss advantages and disadvantages of each type of shopping facility visited. Compare costs of the three items which were priced. Draw conclusions regarding the cost and quality of consumer services available in the different types of shopping facilities.

5. Interview and evaluate the spending habits and shopping ability of three adults. Use the questionnaire and opinionnaire on p. 16 in A Department Store in the Classroom by Sears, Roebuck and Company. Discuss responses.

6. Read pp. 150-168 in Consumer Economics by Wilhelms, Heimerl, and Jelley to find out what factors contribute to effective planning and selection of purchases. Solve some of the consumer problems and projects at the end of the chapter. Discuss.

7. View the transparency (see Part Two, p. 97) to outline guides for effective shopping. Relate the guides listed below to the decision-making process:

   a. Take an inventory of what you have.
   b. Look ahead to what you hope to achieve.
   c. Establish priorities.
   d. Make a plan for purchase of your top priority. (Guides 1-4 were covered in Part II, Allocation of Resources.)
   e. Locate, study, compare, and evaluate information from varied sources relevant to the product you wish to purchase. Include reports from consumer sponsored agencies, catalogs, exhibits, periodicals, government publications, salesmen, manufacturers' pamphlets and brochures, consumers' opinions, labels, seals, tags, instruction booklets, guarantees, and warranties.
   f. Establish criteria for selection.
   g. Acquire knowledge of appropriate use and care of purchase.
   h. Investigate alternatives one may pursue when product does not meet expectations.

8. Read pp. 234-237 in Consumer Economics by Wilhelms, Heimerl, and Jelley; pp. 41-50 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 399-401 in Consumer Economic Problems by Wilson and Eyster; or pp. 85-88 in Legal Protection for the Consumer by Crown to learn about the following consumer-sponsored agencies: Consumers' Research, Inc., Consumers Union of United States, Inc., American Council on Consumer Interests, Consumer Cooperatives, and Cooperative League of the U.S.A. (Also see Part Two, p. 190.)

9. Discuss these questions: What services are provided by each of these agencies? What publications do they prepare? What information is included in the publications? Is advertising used in the publications? Why or why not? How do manufacturers feel about Consumers' Research, Inc. and Consumers Union? How can their attitudes be explained? Which type of information would you consider most reliable: a product

4615

evaluation published by Consumers Union, a test report issued by a manufacturer, or a testimonial given by a satisfied customer? Explain.

10. Work in interest groups and select a product to test, adapting the procedures used by the Consumers Union. For example: girls might develop a score sheet to rate cosmetics, hand lotions, or similar items they already have. Boys could rate shaving lotions, food items, or similar products. Share results with class. Discuss.

11. Select a product in which you are interested and find out what Consumer Reports and the Consumer Bulletin have indicated about these items. Which brand and model would you select if you were going to buy the product? Give reasons for your selection.

12. Discuss the topic, "Resolved: Ratings from consumer-sponsored testing organizations are reliable," to clarify views on these agencies.

13. Read: "Nice People to Do Business With," Consumer Report, June, 1967, pp. 332-333, to find out what companies look into consumer complaints for the customer. Discuss.

14. Read pp. 401-402 in Consumer Economic Problems by Wilson and Eyster or pp. 55-56 in The Consumer and His Dollars by Schoenfeld and Natella for information about services provided by professional organizations. Discuss.

15. Volunteer to interview businessmen who belong to these organizations (see Part Two, p. 192):
American Bar Association
American Retail Grocers Association
National Furniture Merchants Association
National Farm Federation
AFL-CIO
Ask them what kinds of information these organizations have provided for consumers. Report your findings to the class.

16. Invite members of professional organizations to discuss with the class the contributions their organizations have made to consumer welfare and their reasons for making these contributions. Ask them to discuss reasons their professions deal with issues of concern to the consumer. Discuss their presentation.

17. Discuss such questions as: What are the advantages of mail-order shopping? What are some of the disadvantages of mail-order shopping? How do catalog prices compare with those in the store? Why? Does this indicate it is more economical to shop by catalog? In what way could checking information in catalogs before going shopping in other types of retail outlets be helpful? What procedures must be followed for returning items purchased from a catalog?

4616

18. Bring articles to class that were purchased through a mail-order catalog or contact a mail-order store and borrow items that are described in the catalog. Compare the actual items with the descriptions in the catalog and evaluate the adequacy and accuracy of the description.

19. Select an item in which you have an interest and compare descriptions of different levels of quality of the same item. What makes the difference in the prices? In other words, what determines quality? Does the information given in the descriptions adequately explain the price differences?

20. Look for information on wear, care, and use of items in catalog descriptions. How does the amount of information compare with what the customer would like to find in a place of business? Fill out an order blank for several articles in the catalog to find out what information must be included.

21. Discuss types of information that can be obtained from exhibits and/or exhibitions at trade fairs, home shows, conventions, or other gatherings where there are displays of merchandise.

22. Plan a visit to a home show or trade fair or exhibit of some kind during the semester. Discuss the type of information gained from exhibits of this sort and advantages of obtaining product information from this source.

23. Work in small groups and examine publications such as the following to find out what kind of product information they give. How reliable is it? On what do they base their information? Discuss reasons popular magazines carry articles which give consumer information. (What's New in Home Economics, Forecast, Co-ed, Seventeen, Good Housekeeping, Parents' Magazine, Changing Times, Redbook, newspapers, and publications from Sears and Penney's)

24. Write to the Superintendent of Documents, Government Printing Office, Washington, D.C. and ask for their publication list in an area of interest to your class; or visit your local extension office and ask about the publications they have available. Examine these publications and discuss the variety of information provided.

25. Discuss such questions as: How much information are salesmen usually able to give about their products? How reliable is information given by sales personnel? What kind of training programs do stores provide for their sales employees? What is the purpose of the training programs? What responsibility is left to the consumer?

26. Read or adapt for a skit presentation the story, Julie Meets a Salesman (see Part Two, p. 193) and discuss the way in which Julie handled the situation as well as the techniques used by the salesman.

27. Role play situations in which a sales person is trying to sell a product. Evaluate the information given by the sales person and the decision made by the customer.

4617

28. Keep a record of the information given by sales personnel when you shop during the next week. Report findings to the class and discuss accuracy and adequacy of the information given.

29. Interview at least two sales people, asking them to complete these open-ended statements: a. I wish I could refuse to wait on customers who... b. It is a pleasure to wait on customers who...

30. Discuss such questions as: How can information from other consumers be used? What factors need to be considered when asking others for advice? Under what circumstances would you follow the advice given by other consumers?

31. Go through the self-instructional program, The Great Label Question from Home Economics Instructional Materials Center to find out what information is provided on labels, the difference between voluntary and mandatory labeling, and the consumer's responsibility for improving labeling practices. Take the post-test to evaluate what you learned from the program.

32. Read pp. 202-223 in Consumer Economics by Wilhelms, et al. to learn about the value of labels, requirements and standards for labeling of processed foods, grade labeling, acts affecting labeling of textiles and clothing products, and reliability of labels. Discuss.

33. Read the pamphlet, Look for That Label, U.S. Government Printing Office, and discuss the laws which regulate the information to be included on labels on furs and fabrics.

34. Bring to class labels from clothing, food items, furniture, appliances, cosmetics, drugs, and medicines. Work in small groups, with each group examining one type of label, such as clothing or foods. Use the check sheet (see Part Two, p. 195) to compare the information given on the various labels. Report findings to the class, including answers to the following questions:

    What information is found on all the labels?
    What additional information tends to be found on labels?
    Which labels would be most helpful to consumers? Least helpful? Why?
    What information on the label would help the owner of the product in the use and/or care of the product?
    Of what value is the information on the labels?

35. Read pp. 402-405 in Consumer Economic Problems by Wilson and Eyster; pp. 227-234 in Consumer Economics by Wilhelms, Heimerl, and Jelley; or pp. 50-54 in The Consumer and His Dollars by Schoenfeld and Natella for information on some of the associations and organizations which have developed seals, certifications, grade marks, and ratings.

36. Select a private business or industrial organization (see Part Two, p. 196) and find out its functions and purposes. Present the information in a "question interview" television program or prepare an idea for a transparency which would illustrate the products covered by the agency and the seal used, if there is one. Discuss the information presented.

37. Bring in labels or products which carry the seals used by the organizations and agencies discussed in class. Discuss the product on which it was used, the standards which had to be met by the product, and the meaning of the seal or label.

38. List the products advertised in a magazine and indicate whether there is any seal, label, certified test, or testimonial to indicate the standard of quality of the product. Compare lists and discuss.

39. Write to Parents' Magazine, Good Housekeeping, and McCall's magazines and to some of the other private agencies for information about their testing procedures and the standards they set for evaluating products. Report findings to the class.

40. Invite a representative from the Better Business Bureau to talk with the class about their services and their suggestions about evaluating the various testing and certification programs. Discuss.

41. Show the film, The Better Business Bureau, which can be borrowed from your nearest Bureau to see the services provided by the Bureau and become aware of examples of fraudulent schemes. Discuss.

42. Discuss such questions as: Why do you think some manufacturers organize an association and use a seal to indicate that products of the association members meet certain requirements? Why do companies like Burlington, DuPont, Sears Roebuck, and J.C. Penney operate quality control laboratories? What contributions have testing and rating agencies made to consumer welfare? How reliable are certification seals and ratings as buying guides? What factors should be considered when rating the values of magazine endorsements?

43. Read pp. 90-101 in The Consumer and His Dollars by Schoenfeld and Natella to give you some help in establishing criteria for selection of a product. Discuss the "Seven-Way Test of Buymanship" and the factors to consider regarding off-season purchases, bargains, and sales included in this chapter.

44. View filmstrip, Consumers in the Market Place, from the Institute of Life Insurance to review decision-making and to introduce comparative shopping. View a display of pictures of three different items (e.g., a garment, an appliance, and a car). Work in one of three groups and establish general criteria for the selection of any one of these items. Apply these criteria to the selection of the other two items until they are general enough to guide the selection of almost any product. Pool ideas. Include criteria related to durability of materials and workmanship, satisfactions received from ownership, availability and reliability of service, and appropriateness for intended use. Discuss.

4619

45. Collect a variety of guarantees and warranties. Work in small groups to analyze and evaluate the guarantees and warranties. Use the following questions as guides for evaluation:

    a. What part(s) of the product is(are) guaranteed or under warranty?
    b. What is not covered by the guarantee?
    c. What is the purchaser's responsibility to make and keep the guarantee valid?
    d. Under what circumstances will it become invalid?
    e. For how long is the guarantee effective?
    f. Will the guarantee refund money or replace product in case of defects or failures?

    Classify guarantees as valuable or of little value. Discuss findings with class. Give reasons for your evaluations of the guarantees and warranties.

46. Write a guarantee which is of value and one of little value for some product(s) of your choice. Share with class members. Choose the ones which would be of value to consumers and discuss limitations of the other ones.

47. Examine use and care manuals for appliances in the homemaking department. Work in small groups to read manuals and role play the following situations:
    a. A young couple planning to buy this appliance asks a sales person to explain how it works, the care it requires, and what special features it has.
    b. A homemaker has just purchased this appliance and the company's home economist has come to her home to demonstrate use, care, and special features of the appliance.
    c. A very dissatisfied customer comes to the dealer's office to wage a complaint about an appliance that does not work properly. An investigation proves that the customer has not read or followed the manufacturer's instruction booklet.

    Discuss kinds of information included in instruction booklets and the importance of reading this information in order to get the best use of the product.

48. Plan a bulletin board display emphasizing importance of reading manufacturers' pamphlets and brochures.

49. Ask a serviceman to discuss the importance of appropriate use and care of appliances and how to avoid unnecessary service calls. Encourage serviceman to give examples to illustrate his points. Discuss his comments.

50. Work in small groups and look for information about procedures for minimizing service and repair costs. Report findings to class.

51. Read and discuss pp. 375-377 in Consumer Economics by Wilhelms, Heimerl, and Jelley to identify alternatives the consumer may pursue when a product does not meet expectations.

52. Listen to a panel of three or four sales managers or persons in charge of investigating customer complaints of defective merchandise discuss their stores' policies and problems in making good the warranties and guarantees on merchandise sold. Discuss the information they present.

53. Write a paragraph on the consumer's rights and responsibilities regarding merchandise that does not meet expectations.

54. Select one item for purchase. Work individually or in small groups to acquire information from as many of the sources studied as possible about three or four brands and at least two different qualities of this product. Record information and its source. Include information regarding use and care of product and alternatives one may pursue if product does not meet specifications. Establish criteria for selection of this product. Report experiences and findings to class.

55. List major purchases you will probably make during the next year. Choose one of these anticipated purchases and develop a spending plan for it, using the decision-making process. [NOTE TO TEACHER: This activity could be used for a home experience.]

KEY POINTS

The efficient shopper needs to familiarize himself with the advantages and disadvantages of the various shopping facilities available and the services each offers.

Services and conveniences available to the consumer may increase the cost of merchandise.

Use of decision-making process when planning purchases may help one to acquire more of the things he needs and to receive greater satisfaction from his purchases.

Planned spending is usually more effective when one establishes priorities based on what he already has and his long range goals.

The consumer who studies, compares, and evaluates the information available from a variety of sources is better prepared to make intelligent, satisfying purchasing decisions.

Knowing appropriate use and care of products purchased and applying that knowledge may help the consumer receive maximum satisfaction from his purchase and may help him avoid costly or embarrassing service calls.

4621

The consumer has certain rights and responsibilities regarding merchandise he has purchased that does not meet expectations. In each instance, there are certain alternatives he may pursue.

4623

SECTION TWO: CONSUMER BUYING

UNIT III: Buying Services

BEHAVIORAL OBJECTIVES

Be able to (1) appraise the variety of choices within each service area and select those that best meet personal needs
(2) recognize some of the rights and responsibilities of the buyer and the seller in the purchase and execution of a service
(3) recognize the relationship between these two factors: (a) the quality of a service and the efficiency with which it is performed and (b) the degree of understanding that is reached between buyer and seller regarding what each expects of the other

SUGGESTED LEARNING EXPERIENCES

1. Make a list of all the services you and your family have purchased during the past six months. Compile findings under the headings suggested below to determine in what areas services have been most frequently needed.

   Personal services (dry cleaners, beauty shops, laundries, barber shops)
   Professional services (doctors, lawyers, dentists, accountants)
   Household help (yard care, household help, child care)
   Repair services (appliances, equipment, cars, TV sets, record players)
   Financial services (banking, credit, insurance, and investments)

2. Study p. 13 in Your Shopping Dollar by Household Finance Corporation to become familiar with guides for selecting services. Discuss these guides.

3. Role play the following situations in order to explore what the buyer and seller of a service expect of each other. [NOTE TO TEACHER: Further role play situations for selecting financial services and personal services may be developed if desired.]

   The hiring of a person for household help, baby sitting, or yard care (Household help)
   The making of an agreement between a parent and an orthodontist to begin the process of having a child's teeth straightened. (Professional services)

4624

Taking a television set into a shop to have it repaired and adjusted. (Repair services)

Discuss the role play situations and compile general guides one would consider in selecting services in each of the areas discussed. Include these points:

Cost of service, when and how they will be paid.
Exactly what you will receive for your money.
An understanding of the terms of any paper you sign.
Hours the service is available.
How complaints are handled and adjustments made.
How to evaluate the reliability, competence, training, licensing, and honesty of the service person.
What the seller of the service expects from you, the buyer.

4. Invite a representative from each service area, if possible, to participate in a panel discussion of the guides compiled for selecting services. Ask panel members to discuss points made under each guide and to suggest ways whereby the consumer could help the service person render his best and most efficient service.

5. List one service with which you or your family are sufficiently pleased to use repeatedly when this service is needed. Describe this service in terms of the guides one should consider when selecting a service. Form groups according to the types of services represented. Within each group, compare your choices. Analyze reasons for different choices. Discuss with all class members. Draw conclusions regarding the wide variety of choices available within each service area and the influence of individual differences on making choices.

6. Work in groups to describe an unpleasant and unsatisfactory situation involving the use of a service. Each group may present its situation to the class in whatever way it chooses. Possible techniques are:

   (1) Role play the situation, asking the rest of the class to identify with the buyer or the seller; then reverse roles in order to view the other side.
   (2) Write and present a simple skit.
   (3) Conduct an informal debate.
   (4) Find or draw a cartoon depicting a dissatisfied consumer and a harassed service person.

Analyze each situation to determine what went wrong and how it could have been prevented or improved.

KEY POINTS

Consumer services may be classified under these headings: professional, personal, household help, repair, and financial.

The wide variety of choices within each service area affords the consumer an opportunity to be discriminating in selecting those best suited to his needs.

Both the buyer and seller of a service have certain rights and responsibilities in the purchase and execution of a service.

The quality of a service and the efficiency with which it is performed may be influenced by the degree of understanding that is reached between buyer and seller regarding what each expects of the other.

STUDENT:

Pamphlet

Your Shopping Dollar. Chicago, Illinois: Money Management Institute, Household Finance Corporation.

4626

SECTION TWO: CONSUMER BUYING

UNIT IV: Housing and Home Furnishings

BEHAVIORAL OBJECTIVES

Be able to (1) recognize factors influencing housing and home furnishings choices
(2) examine and appraise the types of housing available
(3) identify reliable sources of housing information
(4) examine current developments in housing
(5) investigate possible methods of financing a home
(6) form judgments in selecting appropraite housing and home furnishings in a given situation
(7) consider criteria for selecting a home and recognize factors that may alter these criteria
(8) recognize personal responsibilities related to renting or owning some form of housing

SUGGESTED LEARNING EXPERIENCES

1. View the filmstrips, Homes Are for People, by J.C. Penney Company to see the psychological and sociological needs a home can fulfill. Discuss other ways that you have observed homes fulfilling these needs. Consider how these factors influence housing choices.

2. Read and discuss pp. 143-148 in Your Family and Its Money by Thal and Holcombe; pp. 4-7 in Your Housing Dollar from Household Finance Corporation; pp. 369-373 in Thresholds to Adult Living by Craig; pp. 159-166 in Managing Livingtime by Raines; or pp. 195-222 in The Consumer and His Dollars by Schoenfeld and Natella to identify other factors that influence housing choices. Discuss these factors: (1) style of life, including amount and stability of income and other available resources, standard of living, and family mobility; (2) values, goals, needs, and wants; and (3) family life cycle.

3. Think of the different homes in which you have lived. Write a paper telling what you really liked about each home and what you disliked most. Also discuss the factors which influenced your family to make each housing choice. What future housing goals does your family have? What factors are responsible for their working to reach these goals? Compare your responses with those of other class members. Identify factors that many of you hold in common. These shared factors will

probably include:
(1) human factors--style of life, values, goals, and needs; stage of family life cycle; skills, abilities, and other human resources.
(2) environmental factors--amount and stability of income; family mobility, safety, culture, social, technological, physical, and governmental influences.

4. Write a paragraph discussing this apparent paradox: Though similar factors influence the housing choices of most people, the housing choices they make vary greatly. This will help you clarify the influence of values on housing choices.

5. Identify your personal values in choosing a home. Take one of these values tests: Your Values in Choosing a Home by Cutler (see Part Two, p. 199) or Housing and Personal Values Test by Beyer (see Part Two, p. 209), and tabulate your score. Discuss. [NOTE TO TEACHER: Use Values in Housing (see Part Two, p. 212) as a guide for planning this discussion.]

6. View the floor plans from Houses Are for People by The Center for Urban Development to identify major values reflected in each home. Choose the house you like best. Is your choice consistent with your scores on the values test? What values would be important to the people who choose the other houses? Analyze the relationship between the values people hold and the housing choices they make. For what stage(s) in the family life cycle would each house be suitable? Which of the plans are adaptable to the changing housing needs inherent in the family life cycle?

7. Work in small groups to collect three or four pictures of houses and floor plans that appeal to you strongly. Analyze your pictures to decide what values have been given major emphasis. Also identify the stage(s) in the family life cycle for which each house would be approriate; give reasons for your opinion. Use the "Swing Around" technique to let each group present its favorite house plan for the other class members to analyze and identify the values emphasized. What other human factors have been considered in each house design? What environmental factors have received special consideration?

8. Find pictures of houses and house plans that illustrate Cutler's or Beyer's list of values. Then find pictures of families or individuals who you think would value each house highly enough to choose it for their home. Give reasons for the "matches" you make. Be sure to consider the stage(s) in the family life cycle for which each house would be suitable. Discuss the appeal of environmental factors and any other human factors incorporated in these house designs.

9. Read and discuss one or more of the following references to determine the types of housing available along with the advantages, disadvantages, and costs of each: pp. 10-17 in Your Housing Dollar from Money Management Institute of Household Finance Corporation; pp. 318-325 in Consumer Economics by Wilhelms, Heimerl, and Jelley; or pp. 148-153 in Your Family and Its Money by Thal and Holcombe. [NOTE TO TEACHER: The types of housing discussed are: single family residences; apartments, cooperatives, and condominiums; and mobile homes.]

4628

10. Study the classified ads to secure the information outlined below. [NOTE TO TEACHER: If you do not live in a city or large town where a variety of housing is available, buy newspapers from other cities for this activity.]

    1. Find the cost of renting three furnished apartments that you would consider desirable for yourself and a roommate, if the description in the ad is accurate. What services and restrictions are listed? What features appeal to you and make you consider these apartments good choices? Which bills, if any, are paid? Find the same information about three unfurnished apartments that sound attractive to you.

    2. Find the cost per month of water, electricity, gas, sewage, and garbage disposal for at least two couples whose rent does not include these costs. Share with class members and find the average cost of these services. Compare the costs of renting an apartment with bills paid and renting one for which you pay your own bills.

11. List the most essential items of equipment and furnishings you would have to have to live in an unfurnished apartment. How would the cost of these items affect the total cost involved in renting an unfurnished apartment?

12. Go in small groups or as a class on a field trip to visit several of the apartments you chose on the basis of the advertised descriptions. Ask a manager of one or more of the apartments to show you a copy of the lease you would have to sign if you rented one of the apartments. Discuss these questions when you return to class: How accurate were the descriptions in the newspapers? Did you discover any desirable features about the apartments that were not mentioned in the ad? Any undesirable features? What are the obligations of the tenant and the landlord? [NOTE TO TEACHER: If you cannot interview an apartment manager, secure a copy of a lease and study it to determine the rights and responsibilities of the renter and the owner. See the example in Consumer Economics by Wilhelms, Heimerl, and Jelley, pp. 334-335. Also refer to pp. 12 and 13 in Your Housing Dollar by Household Finance Corporation for points to check in the lease agreement.]

13. Study the classified ads to secure information on homes for sale and homes for rent. On the basis of descriptions given, choose four homes for sale that especially appeal to you. List this information about each home: price and terms for financing, house size, and special features. List the same information about four homes for rent. Discuss and compare findings.

    Visit several of the homes for sale and for rent that sounded desirable from the advertised descriptions. Try to visit homes of different price levels. Use the check sheet on pp. 20 and 21 in Your Housing

4629

Dollar from Household Finance Corporation to evaluate both types of housing. Take notes on the following features: privacy, accessibility to facilities and services you consider desirable, character and appearance of the community and neighborhood, and other significant features. Discuss check sheet evaluations and written observations when you return to class and compare the rental properties with those for sale. List advantages and disadvantages of each.

Develop a three-column chart for comparing the costs of renting with the costs of buying. In column one, list these expenses: rent, mortgage payments including principal and interest; taxes (if not included in mortgage payment); insurance (if not included in mortgage payment); utilities (list those not included in rent)--electricity, gas, water; repairs; maintenance; services--garbage disposal, parking, yard care and others; other costs. What economic advantages and disadvantages does this chart reveal for renting? For buying? [NOTE TO TEACHER: If making a number of field trips is difficult (or impossible) in your school situation, one field trip--well planned, directed, and evaluated--could serve as an excellent guide in helping students establish criteria for evaluating housing. The other field trips suggested might evolve into home experiences for individuals or small groups who could report their findings to the class.]

14. Visit a mobile home agency and tour mobile homes of different sizes. Find the costs involved in buying and living in a mobile home (trailer park rental, utilities, operating costs of vehicle to tow trailer). Report to class. [NOTE TO TEACHER: If there is no mobile home agency in your town, ask if you may visit some of the mobile homes in a nearby trailer park. Interview occupants and ask them to list advantages, disadvantages, and problems unique to this kind of housing.]

15. Visit a cooperative, condominium, town house, or other type of housing somewhat different from the other types of housing visited to become acquainted with innovations in housing. List desirable and undesirable features of these types of housing. [NOTE TO TEACHER: Visit some of the different types of housing listed in the preceding experiences - when realtors or builders hold "Open House." Secure the information indicated in the preceding activities.]

16. Listen to a review of the book, The Crack in the Picture Window, by John Keats to gain an insight into the problems of suburbia. Discuss.

17. Read the descriptions of the couples in the J.C. Penney material How To Furnish a First Home or Financing a New Partnership. Do the following:
    1. Compare the human and the environmental factors that would influence the housing decisions of these couples.
    2. Use the decision-making process and prescribe for each couple the requirements each should seek for their first home. Consider their short-term and long-term goals, their resources, the alternatives from which they could choose, and possible outcomes of each alternative (suggest at least two for each couple). Recommend a specific housing choice for each couple. You may refer to the housing you selected from the classified ads or from one of the field trips. Give reasons for your recommendations.

4630

3. Trace the housing needs and decisions of any one of the couples through the various stages of the family life cycle. Recommend decisions you think they should make during each stage.

18. Read and discuss the information presented in the extension bulletin B-1034, Know Your Home Financing, from Texas A & M; pp. 153-165 in Your Family and Its Money by Thal and Holcombe; pp. 344-354 in Consumer Economics by Wilhelm, Heimerl, and Jelley; or How to Finance Your Home by Sidney Margolius to identify factors involved in home financing. As you read, keep a list of terms, with simple definitions, that are new to you. Share with other class members and make a composite list of terms you should know which are related to home financing.

19. Listen to a banker, FHA representative, and a savings and loan association representative discuss types of loans available, sources of loans, the amount one can borrow from each source, down payment requirements, interest rates, and length of loans and special features or characteristics of each type of loan. Explain these terms: prepayment privilege, open-end mortgage, package mortgage, and insured loans. [NOTE TO TEACHER: Develop a visual aid, such as a transparency in chart form, showing current figures for interest rates, terms (length) of loan, and sum of the monthly payments necessary to pay off an amortized mortgage for a given amount. This will enable students to see more clearly what credit actually costs. See p. 162 in Your Family and Its Money by Thal and Holcombe or pp. 30 and 31 in Your Housing Dollar by Household Finance Corporation.]

20. Interview a building contractor, realtor, and architect to determine the services they can perform for the prospective buyer, the cost of these services, and recommendations they would make to help a buyer control costs. Discuss.

21. Listen to an attorney speak on the legal aspects of buying or building a home. Ask him to analyze and explain a mortgage agreement, contract of purchase, title protection, deed, and other papers and legal procedures the buyer must cope with in making property transactions. Discuss.

22. Secure bulletins on selecting and financing a home from your local extension agent or other governmental agencies in your community. Arrange a display of these materials. Work in small groups to select one or more of these materials and prepare a report for presentation to the class on the topic discussed.

23. View filmstrip, Patterns for Protection, from the Insurance Information Institute to acquire the following information: definitions of standards, requirements for protection, factors influencing the cost of insurance rates, and types of liability insurance available. [NOTE TO TEACHER: You may wish to use the related leaflet, Insurance for the

Home, from the Insurance Information Institute which summarizes the filmstrip.]

24. Work in small groups to plan the home furnishings and equipment needs of one of the couples described in How to Furnish a First Home or Financing a New Partnership. Consider the values, goals, needs, and resources of each couple and list items you think they would choose. Establish criteria for the selection of these items. [NOTE TO TEACHER: It is assumed that there will be students in your class who have studied selection of home furnishings and equipment. If so, you may wish to include one or more of these students in each group with those who have not studied this material. If your students have not studied selection of furnishings and equipment, you may wish to spend a limited amount of time to teach them the facts that will enable them to make intelligent selections.] Take your list and find prices for each item. Establish priorities. Which items should be bought first? Within a short period of time? Within a year or two? As the couples progress through the various stages of the family life cycle, how will their furnishings and equipment needs change? What factors, other than the family life cycle, may influence these changes? Present your plans to the class in an interesting way. Role play a planning session between one of the couples, develop a flip chart, use cartoons to make some of your points (and illustrate some of their conflicts), or choose some other interesting means of presentation. Justify your selections by indicating how they will support the life style your couple has chosen.

25. Ask an insurance agent to visit your class and answer any questions you may have about property insurance. Ask him to compare the costs of the different kinds of coverage. Discuss.

26. Conduct a "housing search" by clipping over a two week period of time the articles from newspapers and magazines which tell about current developments in housing for special groups, e.g., low-income families, the disadvantaged, the aging and other groups. Share these with class members on the day assigned. Distinguish between governmental and non-governmental agencies sponsoring the development. [NOTE TO TEACHER: Secure current copies of Newsweek, U.S. News and World Report, McCall's, Changing Times, American Home, Better Homes and Gardens, and similar sources available to you for students to use in the "housing search."]

27. Fill in the crossword puzzle (see Part Two, p. 218) to help you review terminology related to selecting and financing a home.

28. Read the situation called Housing Decisions (see Part Two, p. 222). Use the decision-making process to help the couple described make their first major housing decision as well as some of the decisions they will face at other stages in the family life cycle. Use the questions given with the story to guide your thinking.

29. Complete these open-ended statements to help you clarify your own thinking regarding what is important to you in housing.

4632

From all the different types of housing I've seen and read about, the type that appeals to me most is _____ because _____.

It would be important to me for a house to have these features: _____ _____ because (Give a reason for wanting each feature you listed.) _____.

My desire to have such features in my home indicates that these values are very important to me: (List values.) _____.

Features I would try to avoid, that might even make me reject certain kinds of housing, are _____ because _____.

In summary, this is what I want my home and my home life to be like: _____.

Some of the circumstances that would cause me to alter my present housing values are _____.

30. Develop a bulletin board display of pictures and articles to show current technological trends in housing. [NOTE TO TEACHER: Be sure to include articles about housing for persons with special needs.]

KEY POINTS

The interaction of many factors influences one's criteria for selecting housing and home furnishings. These criteria may change with changing circumstances.

Although similar factors affect the housing choices of most people, the choices they make vary greatly.

Each type of housing has its own advantages and disadvantages.

A critical appraisal of the different types of housing available may help one establish personal criteria for the selection of housing.

Reliable information regarding the legal aspects and financial obligations involved in housing selections should be acquired before contracts are signed.

Both governmental and private agencies are currently working to assist certain groups of people in meeting their housing needs.

SECTION TWO: CONSUMER BUYING

UNIT V: Buying and Maintaining Automotive Products and Services

BEHAVIORAL OBJECTIVES

Be able to (1) identify reasons for the need for personal transportation
(2) compare factors involved in buying a new car, used car, or motorcycle, or leasing a car
(3) recognize the risks involved in owning and operating a car or motorcycle
(4) explain the state automotive insurance regulations
(5) identify principal types of automotive insurance and compare costs involved
(6) plan an automotive budget

SUGGESTED LEARNING EXPERIENCES

1. List reasons why you feel you need and/or want an automobile to determine whether your reasons are needs or just wants. Discuss.

2. Find articles in current periodicals on the problems of getting to and from work. Share ideas and discuss such questions as: What can be done to ease the traffic problem during the rush hours? Are there others forms of transportation for getting to work besides a car?

3. Read pp. 168-177 in Your Family and Its Money by Thal and Holcombe; pp. 125-138 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 173-174 in Consumers All by U.S. Department of Agriculture; or pp. 3-20 in Your Automobile Dollar by Household Finance Corporation for information on costs of operating a car. Discuss such questions as: What are some of the main factors to consider when buying a car? What are some guides for selecting a type of engine? What are the advantages and disadvantages of optionals? How do they affect the price? When is the best time to buy a car? Why is the dealer important? What does the warranty mean? Of what value is it? What can you find out about used cars from on-the-lot-driving and shop tests? Role play the situation, But Couldn't We Buy This Car? (see Part Two, p. 225), and answer the questions which follow.

4. Take a field trip to a car lot that has new and used cars. Find out what information you need to know as prospective buyers and ask the salesman to give his interpretation of the buyer's responsibilities. Discuss.

4637

5. Work in a group and make a poster on "Tips for Used Car Buyers." Place this poster in a place where the rest of the student body can read it.

6. Work in groups and study what it would cost in terms of transportation to buy a new car, a used car, and a motorcycle or to lease a car. Be sure to include such factors as: purchase cost (down payments, availability of financing, interest rates); taxes; optionals; maintenance; safety ratings; operation cost; license; and trade-in value. Report findings to class. Compare and evaluate results. Then formulate a check list for purchasing a new car, a used car, and a motorcycle or leasing a car to help you in the selection of one.

   Ask the various dealers to examine your check list to see if they agree with the items. Share check list with the rest of the class.

7. Read pp. 69-86 in How to Live Better and Spend 20% Less by Dowd, or pp. 168-183 in Your Family and Its Money by Thal and Holcombe to gain an insight into buying a new or used car. Discuss.

8. Participate in a "fishbowl" discussion on buying a new or used car or leasing a car to help you understand factors you need to consider when securing a car. [NOTE TO TEACHER: Three resource people need to be invited to participate in the discussion. A student acts as a moderator and is seated along with the three resource people. Three empty chairs are placed opposite the moderator and resource people and are occupied by class members who want to ask questions of the guests.]

9. Work in groups and secure additional information on whether it would be cheaper to buy a car or to lease one. Share findings and discuss.

10. Listen to a symposium composed of a banker, car dealer, and a representative from a small loan company to find out the costs of buying a car on credit. Ask them how they finance a car and whether it is cheaper to pay cash for a new car.

11. Complete the following open-ended statement: "If I had to buy a car on time, I would _____."

12. Select a car advertised in the classified ad section of a newspaper. Describe the procedures you would go through before deciding if this was the car you wanted.

13. Read pp. 178-183 in Your Family and Its Money by Thal and Holcombe to secure information on the different kinds of automobile insurance. Discuss.

14. Read the Texas Drivers Handbook to become familiar with the insurance laws and regulations in Texas. Discuss.

15. View the filmstrip, Automobile Insurance, by the Insurance Information Institute to secure information on bodily injury coverages, property damage coverages, and how the cost of automobile insurance is determined. Discuss.

4638

16. Listen to a car insurance salesman to find out what he thinks is the necessary and adequate coverage for an automobile. Discuss.

17. Obtain copies of automobile insurance policies from several insurance companies. Examine and evaluate to see which offers the best protection.

18. Look at your automobile insurance policy to see if you feel you have adequate insurance. If not, what changes would you make? Give reasons for your decisions about the coverage you selected.

19. Write to AAA or other automobile associations to find out current information on driving costs or find articles that discuss transportation costs. Discuss findings.

20. Prepare a budget for automobile costs, using your personal or family car. Keep an actual record of costs for one month. Evaluate budget in relation to actual expenses.

21. Work in groups and use the formula (see Part Two, p. 224) to figure out what it costs to operate an automobile. Share findings.

KEY POINTS

The automobile is a major purchase.

The cost of operating a car needs to be considered in setting up a budget.

There are many factors to consider before selecting a car.

A person needs to investigate lenders before financing a car.

Automobile insurance is a form of protection.

Insurance is an essential part of a person's financial program.

A plan for financial protection through insurance provides security for an individual or family.

Individuals and families have the responsibility to provide for their own welfare beyond the basic expectations of, and protection provided by society.[1]

4640

SECTION TWO: CONSUMER BUYING

UNIT VI: Food

BEHAVIORAL OBJECTIVES

Be able to (1) relate food to cultural and socio-economic influences and psychological satisfactions
(2) give reasons for the increasing cost of foods
(3) recognize factors influencing family food costs
(4) identify the advantages of making a shopping plan
(5) recognize the need for flexible planning
(6) identify methods that are used to encourage shoppers to do impulse buying
(7) relate use of resources for meeting family food needs to values, goals, standards, and available resources
(8) become aware of and recognize the widespread use of food additives

SUGGESTED LEARNING EXPERIENCES

1. Find out what changes have occurred in the food habits of individuals during the past 20 years. Consider such factors as the change from rural to urban living, increased education of the homemaker, and availability of fresh fruits and vegetables. Share your findings with the rest of the class. Summarize factors that influence food choices today.

2. Pick one cultural group and find information on the eating habits and patterns of that particular group. Relate these habits and patterns to the values, goals, standards, and resources of that cultural group. Discuss.

3. Read Chapter 1, 2, and 3 in People, Food, and Science by Cote to see how man has always had to secure food for survival, the influences on food in the United States, and the nutritional problems around the world. Discuss such questions as: What is food for? Why is food important? Why are food habits difficult to change? What are some of the factors that influence a person's food habits? What does food mean to you? Why are America's teen-agers so poorly fed? What can be done to help this age group improve their eating habits? What are some ways in which food money is being wasted?

4. Listen to your teacher discuss the social and psychological factors of food from an anthropologist's point of view. What are some factors that influence our food habits? Which of these factors affect your food habits?

5. Read Chapter 22 in People, Food, and Science by Cote to see how the food industry has changed. Discuss such questions as: How has the food market changed? What are some factors that have caused food costs to rise at a rapid rate the past ten years? What are some of the predictions concerning supermarkets in the future? What has the consumer done to change the food market?

6. Read Chapter 23 in People, Food, and Science by Cote on making decisions in the market. Discuss such questions as: What factors determine how much you spend in the market on food? What are the different types of stores available for buying food? What factors will need to be considered when selecting the store(s) in which you plan to shop? What are the advantages of making and following a shopping list? disadvantages?

7. Discuss the various stages in the life cycle in relationship to food selection and preparation. Discuss such questions as: What resources are available to each stage? When does the homemaker have the most time to prepare food? least amount of time for food preparation? most energy? least energy? How do food needs change during the family life cycle? What factors affect the choices of resources to use at the various stages?

8. Find a picture of a food item that is consumed by teen-agers. Bring it to class. Analyze it for such things as: the amount of money spent in relationship to food value and the reasons for buying the item. See what food items the other members of your class brought.

9. Read the article, "Twenty Ways to Save Money in the Supermarket," by Robert O'Brien in the May, 1970, issue of The Reader's Digest found on pp. 68-70. Do you agree with the suggestions? Can you think of others?

10. Review the article "The Truth That Saves Money in the Supermarket," by Vivian Cadden in the July, 1970 issue of Redbook Magazine to see what her philosophy is on saving money in the supermarket. Do you agree with it? Explain.

11. Divide into three groups to compare ways of planning and shopping for family meals. Each group will shop for food for three days' meals for a family of four. All meals must meet the Basic Four requirements. Assume that you have such staple items as flour, sugar, shortening, and spices. Groups I and II plan menus for the three days and make a shopping list of all items needed before you go to the grocery store. Group III will do no pre-planning. When you go to the grocery store, Group I, follow your list precisely; Group II, make substitutions that you consider wise or desirable; Group III, structure your meals as you shop.

    Compare cost of meals, time required for shopping, appetite appeal of meals, and problems encountered in relation to the type of shopping you did. Draw conclusions regarding the advantages and disadvantages of

4642

each type of planning. Under what circumstances might each type be used to good advantage? Discuss findings.

12. Listen to a panel discussion composed of three homemakers discuss what proportion of the family income is spent on food, ways to cut the food budget, unwise or impulsive practices they participate in, and ideas on how to make the best use of what they buy after the food has been purchased. Discuss their ideas.

13. Work in pairs and with the permission of the manager of a local grocery store to see if you can observe the different shoppers in his store. Watch for people making "impulse" purchases. Discuss findings.

14. Identify some store practices that managers use to encourage impulse buying. Some examples are: free samples, grouping of items, special displays. Go to several grocery stores and notice how the manager has arranged displays to encourage people to do "impulse" buying. Report your findings to the class and discuss. Compare prices of items in special displays with identical items on the shelves. Are they the same? If not, which is higher?

15. Ask your mother what items she has purchased on "impulse" buying. Ask her to evaluate her purchase as to whether or not she would buy it again. What foods have you purchased on the "spur of the moment"? Was it a "wise" buy? Why or why not?

16. Collect ads of different food sales. Analyze the reason for the promotion of the food. Discuss such questions: Is this a good buy? Is it a "leader"? Is it a seasonal item?

17. Bring to class the food advertisements from the weekly newspaper to see how ads can be used in planning. Take the grocery list of 25 items that your teacher developed and work in teams to shop for the listed items from the advertisements. Give this information: store, advertised price, brand, and size. The team that completes its list first and with the least amount of money is the winner. Discuss results.

18. Interview a grocer to find out how many different items he has stocked in his store. Find out why he has stocked these items and on what basis he makes a selection. Report your findings to the class. Discuss such questions as: Why is it difficult for the grocer to stock certain items in the store? Does the consumer have any influence on the availability of products on the market? What can the consumer do to increase his influence?

19. Go to a grocery store and find the many different forms in which you can purchase such items as potatoes, apples, bread. Be sure to secure the form, the name given to it if it is prepared, net weight, and cost.

Report your findings to the class. Are you surprised at what you found? In what types of situations would you use the various forms of the foods? How would you justify use of the more expensive items?

20. Take one item such as biscuits and do a comparative study to compare resources required to prepare different forms of a food (see Part Two, p. 226). What are your conclusions? Are convenience foods a wise buy? Explain your answer.

21. Role play or read the story of The Cost of Home Cooking by Mary Lumsden (see Part Two, p. 227) to see what factors besides money need to be considered in planning. Discuss.

22. Examine several cookbooks, such as Joy of Cooking by Rombauer, to see the emphasis that is placed on food selection and preparation. Notice how some of the recipes are written and the reasons for writing the cookbook.

23. Look at the cartoon on additives (see Part Two, p. 229) to become aware of the use of food additives. Discuss the questions.

24. Listen to students give short reports on the history of food additives and on current legislation on food additives. Discuss. [NOTE TO TEACHER: You may wish to adapt this entire section on food to your individual situation. Some students may have had a wide variety of learning experiences in food management; other students may have done very little in this area.]

KEY POINTS

The primary satisfactions provided by eating include the relatively immediate sensory and psychological effects it produces and the psychological meanings it has acquired.[1]

Food habits of individuals change as a result of indirect influences such as changes in supply resulting from advances in production, technology, and distribution; economic resources; and the educational, social, and cultural environment.[1]

Technological growth and current sociological trends promote developments in food processing, acceptance of a variety of food forms, and changes in patterns of consumption.[1]

As more services are built into foods, the control of industry over the kinds and quality of food increases while that of the home decreases.[1]

Family food costs will vary with the size and composition of the family, the value placed on food, and the resources available.[1]

Rational choice becomes more difficult as the number of food products and ways of merchandising them increase.[1]

4644

Use of resources for household food production is influenced by the values (nutritive and non-nutritive) placed on food, the kind and quality of resources available, and the personal satisfaction derived from producing food.[1]

When there is evidence that the addition of a particular nutrient or other additives to a food serves a useful purpose, the government defines and regulates such additions.[1]

The resources available for meeting personal and family food needs include personal capacities, available goods and services, and purchasing power.[1]

The choice of which resource to use in providing food for the family depends upon the quality of each resource available, the cost of the alternatives and their effectiveness in producing the desired result, and the ability of the user to employ the resources for the purpose desired.[1]

Discrimination is required in the selection of foods that contribute a balance of nutrients to the daily diet and at the same time fulfill such non-nutritive requirements for daily meals as are involved in meeting food budgets, family traditions, and individual preferences.[1]

Consumers' choices are a determinant of marketing practices, prices, and qualities of foods in the market.[1]

Informed consumers making rational and discriminating choices in the purchase of food can influence the functioning of the market to serve consumer interests and to improve the effective use of resources.[1]

4642

4646

SECTION TWO: CONSUMER BUYING

UNIT VII: Clothing

BEHAVIORAL OBJECTIVES

Be able to (1) perceive the socio-psychological aspects of clothing selection
(2) examine individual differences in values, goals, and available resources as related to clothing selection
(3) recognize clothing needs at the various stages of the life cycle
(4) apply the decision-making process to the selection of clothing

SUGGESTED LEARNING EXPERIENCES

1. Write your response to the picture (see Part Two, p. 230) to see what your response would be if everyone dressed alike in a uniform. Share your response with others in the class. Discuss.

2. Discuss such questions as: Why do we wear clothing? Is this the same reason people in other cultures wear clothing? Why do you select your own clothing? Is it difficult to select clothing for someone else? Why?

3. View the filmstrip, The Psychological Importance of Clothing, by J.C. Penney Company to see the relation of social and psychological factors to clothing. Discuss such questions as: Why do we need to express our individuality in our clothing? What do we communicate through clothing? How is clothing used to help make adjustments from one role to another? How is clothing used as a means of satisfying basic needs? How does clothing give a clue to one's personality? Why is it important for a person to clarify his values and goals? Relate these factors to clothing selection. When have you formed an opinion of another person by his dress? Explain.

4. View the cartoons (see Part Two, p. 232) to recognize individual differences in clothing values. Discuss the questions.

5. Find a cartoon, editorial, or quotation that illustrates factors such as values and roles as they relate to clothing. Write a short paper interpreting what the author is communicating. Share your findings with the rest of the class. Do they agree with your interpretation?

4648
4647

6. Look at several teen-age magazines, such as Seventeen, Coed, or Ingenue, to see what proportion of the magazine is related to clothing. What do they do to appeal to teen-ager's values and goals? What are some of the values and goals that influence the clothing selection of women and/or men?

7. Read "The Apricot Dress" in the April, 1970 issue of the Coed Magazine and identify Barbie's values and the ways in which these were related to her goals. What basic needs were met? Did she use the management process in selecting the apricot dress? Explain your answer.

8. Look at several examples of clothing in magazines. What does the clothing communicate to you about this person? Share your ideas with the rest of the class. Discuss.

9. Find an illustration in which the clothing seems important and write a short paper to explain what you think this person is communicating to you by his dress. Explain your answer.

10. Review the stages of the family life cycle and discuss clothing needs and/or wants at the various stages. Discuss such questions as: When is there the most demand on the clothing budget? least demand? What can families do to ease the clothing budget when the greatest demands are being made on it? How do clothing wants and needs change during the different stages?

11. Write a paper on how you extend your clothing dollar. Include ideas on how you can make your clothes last longer.

12. Bring a clothing advertisement and label to class. Identify the appeal in the ad. What information is given in the ad? What information is included on the label? What additional information would you need to secure before purchasing the article?

13. Discuss such questions as: How does fashion relate to clothing selection? What factors does one need to consider before selecting clothing? Why do people sew today? Is it for the same reasons as 25 years ago? What determines the amount of clothing we need? What are the factors that influence your own clothing choices? By what criteria do you make your clothing selections? What influences the standards that are acceptable to you in clothing?

14. Use the story, Jane Decides, by Maurietta Cusey (see Part Two, p. 234) to see how she arrived at a decision. Discuss the questions at the end of the story.

15. Work in small groups with a situation in which a family lost all of their clothing in a tornado. Plan what a teen-ager would need to purchase for herself. Her proportion of money to spend is $75.00. Itemize how she plans to spend the money. Share your plan with the rest of the class.

16. Read pp. 28-59 in You Are a Consumer of Clothing by Garrett and Metzen. Discuss such questions as: What resources do you have available for meeting your clothing needs and wants? Which resources do you use most often? Why? What effect does this have on resources available to the

rest of your family? Have your resources for meeting clothing needs changed any in the last two years? If so, how?

17. Describe an article of clothing you would like to purchase. Explain ways in which this garment reflects your values and goals. What do you think it will communicate to others about you? Which of your values and attitudes toward clothing are influenced by your parents? Your friends?

18. Suppose you have $15.00 to spend on clothing. Apply the decision-making process (see Part Two, p. 107) as you plan the way in which you would spend this money. Do you usually make clothing decisions in this way? Why or why not? How might use of this process increase the satisfaction you receive from your clothing dollar?

19. Read the situation, Alice Selects a Coat, (see Part Two, p. 236) and use the decision-making process as you help her select a coat.

KEY POINTS

Clothing is a means of communicating one's role.[1]

An individual may be more readily accepted in a particular role if he conforms to the group's clothing expectations for that role.[1]

Clothing may help the individual to make adjustments when changing from one role to another and to attain success in that role.[1]

Clothing may be used as a means of satisfying basic needs when these needs are not met in other ways.[1]

Clothing reflects an individual's self-concept.[1]

Clothing is a cue to personality; it conveys an impression of what the individual is, does, and believes.[1]

An individual uses clothing as a cue in forming impressions of others.
- a. Impressions made by appearance and dress have greater impact in limited contact situations.
- b. In order to create desired impressions through dress, the individual needs to be aware of the meaning dress communicates to others.[1]

The factors involved in making clothing decisions include the individual's resources, needs and desires, family composition, and stage in the life cycle,

and on the mobility of people, climatic conditions, social environment, and stage in the fashion cycle.[1]

The choices made in the acquisition and use of clothing are influenced by the individual's value patterns and the relative importance of his various clothing goals.[1]

The resources available for meeting clothing needs include available goods and services, purchasing power, personal information, ability, time, and energy.[1]

The availability and use of resources for achieving clothing goals are related to the allocation of resources to other individual and family goals.[1]

---

PART ONE

SECTION THREE: CONSUMER CITIZENSHIP

SECTION THREE: CONSUMER CITIZENSHIP

UNIT I: Government Protection of the Consumer

BEHAVIORIAL OBJECTIVES

Be able to (1) differentiate between the services provided by the various federal government agencies which protect and/or aid the consumer
(2) compare the services provided by federal, state, and local government agencies in a particular community
(3) collect and analyze newspaper and news magazine articles about the activities of the various government agencies
(4) recognize the relationship between government services and consumer cooperation
(5) inform others of services provided by government agencies

SUGGESTED LEARNING EXPERIENCES

1. Take pre-test on abbreviations of Federal agencies (see Part Two, p. 239) to see how many agencies you can identify.

2. Read pp. 41-49 in The Consuming Public by McClellan; pp. 398-411 in Consumer Economics by Wilhelms, Heimerl, and Jelley; pp. 15-35 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 406-421 in Consumer Economic Problems by Wilson and Eyster; pp. 20-78 in Legal Protection for the Consumer by Crown; or the pamphlet, Guide to Federal Consumer Services.

3. Work in pairs to investigate government agencies (see Part Two, p. 240) their backgrounds, reasons for formation, aims, functions, responsibilities and publications. Present information learned via skits, posters, or transparencies, and radio or TV interviews. As information is presented, fill out summary sheet (see Part Two, p. 241).

4. Go to hardware store, drugstore, or the appliance section of a department store and list ten items that are sold under the provisions of the fair-trade laws. Make another list of ten items that are not sold under the provisions of the fair-trade laws. List selling prices for each item. Next go to another store similar to the first one and list prices they charge for the same items. Compare lists and explain similarities and differences in prices.

5. Answer the following questions: Which federal agency is responsible for each of the following activities or commodities? (a) meat or poultry sold in interstate commerce (b) counterfeit money (c) gas used for heating or cooking (d) unfair competition (e) impure cosmetics (f) use of mails for the promotion of lotteries (g) illegal issuing of stocks and bonds.

6. Discuss such questions as: What federal agencies operate in your community? In what ways do they protect the consumer? Would this service be supplied by anyone else if it were not by the Federal Government? What might be the result if this service were not supplied?

7. Listen to representatives of federal agencies in your community discuss the services available through their agencies. Discuss.

8. Watch for and clip newspaper or news magazine articles for one week about the activities of the various government agencies. Discuss articles and analyze ways in which these activities affect the consumer.

9. Volunteer to study two of the recent News Summary reports of the Federal Trade Commission. Report to the class on the nature of the FTC activities as seen through these reports. [NOTE TO TEACHER: News Summary may be obtained from the Federal Trade Commission, Washington, D.C. 20580.]

10. Write to the Special Assistant for Consumer Affairs (White House, Washington, D.C.) and ask what your class might do to strengthen the position of the consumer. Report to class.

11. Write a letter to your state legislator to find out what state agencies offer services or enforce laws that protect the consumer, such as those affecting foods and drugs, labeling, advertising, frauds, public utility services, small loans and credit, and sanitation practices. Report to class.

12. Interview or listen to a local government official to find out what services are provided locally. Discuss.

13. Prepare a chart to show the relationship among services offered by federal, state, and local agencies. Share the chart with the rest of the class.

14. Visit a local grocer and find out what inspections are made on food before he gets it and what inspections are made in his store. Discuss.

15. View the filmstrip, Inspection for Your Protection, by the U.S. Department of Agriculture to find out about inspection practices.

16. Work in committees to investigate standards or grades for such items as tires, beef, poultry and eggs, butter, margarine, jams and jellies, carpeting, fuel oils and gasoline. Interview respective merchants to find information and/or find out where you can get the information. Present your findings to class.

17. Check the court docket in your community to see if any cases involving consumer problems are being tried. Plan to attend court during these sessions, if possible. Report to class.

18. Invite a local lawyer or judge to discuss his experiences with cases involving consumer problems. Discuss the information presented.

19. Listen to a panel consisting of a housewife, student, businessman, and representative from a government agency discuss such questions as: Do you believe business gains or loses as a result of government regulation? What consumer protection should be provided by the government and what responsibilities should be assumed by the consumer? Why is it necessary to have state legislation in addition to federal legislation for consumer protection?

20. List things you did during the first two hours after you woke up which were affected by government services or read Consumer Information (see Part Two, p. 243). Examples might include:

    listened to radio (regulated by Federal Communications Commission)
    heard the weather forecast (courtesy of Weather Bureau)
    shaved or sprayed with aerosol bomb (regulated by federal agencies)
    dressed (measurements of clothes determined by Bureau of Standards, and fiber content policed by Federal Trade Commission)
    used make-up (checked by Food and Drug Administration)
    ate breakfast (bacon, ham, eggs, and milk checked or regulated by agencies; labeling information on cereal box regulated by Fair Packaging and Labeling Act)
    rode a bus (safety standards and rates regulated by Interstate Commerce Commission)
    used electricity or gas (rates controlled by Federal Power Commission)
    heard an advertisement (regulated by Federal Trade Commission)

21. Discuss need for consumer protection by government agencies. Point out problems involved in enforcing the laws, the necessity of consumer cooperation, and the action consumers should take when they believe laws have been violated.

22. Volunteer to read The Jungle by Upton Sinclair and report on the effect it had on government protection.

23. Volunteer to give a report on the "Muckrakers" and their contribution to the emphasis on the need for reform and government action.

24. Place a question box in the classroom and bring questions from parents and friends about protection given to the consumer. Draw questions and find the answer. Share with class.

4655

25. Plan a "newspaper" or some other type of communication which would include information on the many agencies and services provided for and available to the consumer. Assume roles of a reporter, layout man, and cartoonist. Distribute the end product to students, parents, or other groups you think would be interested in receiving the information.

26. Discuss the possibility of setting up an agency for other students that would provide information on services available to them as consumers.

KEY POINTS

Consumers are provided informative and protective services by government agencies at the local, state, and federal levels.

The federal government helps to assure better products at reasonable prices by promoting free and fair competition among business firms and among individuals.

Government agencies protect the consumer by insuring the purity, potency, and truthful and informative labeling of drugs and cosmetics and by regulating food additives and labeling practices for certain types of foods.

There are many resource agencies to which consumers may turn when they suspect unfair or illegal practices.

Cooperation and public interest are necessary for the enforcement of laws which protect the consumer.

Pressure by consumers can eventually bring about legislation to change marketing practices.

Some states have fewer agencies which work to protect the consumer than others.

The closest contact the consumer has with government agencies is at the local level.

The powers of the local government are generally derived from the state.

In most situations, the consumer will appeal to local agencies for aid or protection.

Consumer protection by government agencies is necessary because the variety of goods and services now available prevent the consumer from being knowledgeable about all of them.

0657

SECTION THREE: CONSUMER CITIZENSHIP

UNIT II: Government Legislation

BEHAVIORIAL OBJECTIVES

Be able to (1) relate provisions of federal legislation to the acts which protect the consumer
(2) contact federal and state legislators to determine pending laws related to consumer protection
(3) analyze provisions of "Fair Packaging and Labeling Act" and "Truth-in-Lending Act" to determine protection provided by them
(4) discuss fair-trade laws from the viewpoint of the consumer, retail merchant, and manufacturer
(5) state position in regard to government regulation of consumer affairs
(6) investigate local ordinances which protect the consumer

SUGGESTED LEARNING EXPERIENCES

1. View the transparencies (see Part Two, p. 245) and discuss the main points of the laws dealing with consumer protection. Use handout sheets (see Part Two, p. 250). Discuss such questions as: During which period was the most done for the consumer? Why do you think this happened? What do you predict for the next ten-year period?

2. From the laws previously presented, select one in which you are particularly interested and write your Congressman for more information.

3. Select a law and use a poster to interpret it to other consumers. Display these in your school, in local stores, or other places in your community. Report comments made by those reading the posters.

4. Write your Congressman in Washington, D.C. and your state congressman to request information about recent and pending legislation related to consumer protection. Report reply.

5. Read pp. 49-53 in The Consuming Public by McClellan, about the "Fair Packaging and Labeling Act." Discuss how this act affects shopping for food and household supplies. [NOTE TO TEACHER: This reference points out the limitations, as well as the strengths, of the Act.]

6. Volunteer to read pp. 53-61 in The Consuming Public by McClellan, and the booklet, What You Ought to Know About Truth in Lending, Consumer Credit Cost Disclosure from Federal Reserve System to secure information on the truth-in-lending bill. Report to the class giving background, reasons for the bill, and the strengths and weaknesses of the bill. Discuss.

7. Bring copies of statements from revolving charge accounts, time payment contracts, or installment contracts. Evaluate the information using the Yardstick for Comparison (see Part Two, p. 254). Discuss such questions as: What does the information mean to us? How do we use the information? Is there other information we need to know?

8. Read pp. 415 in Consumer Economic Problems by Wilson and Eyster or interview consumers, retail merchants, and manufacturers. Assume the roles of consumer, retail merchants, and manufacturers and discuss the arguments for and against the fair-trade laws.

9. Read pp. 61-77 in The Consuming Public by McClellan or other available sources to find out about federal control of deceptive advertising. Discuss the scope of federal activity in relation to the control of deceptive advertising.

10. Work in buzz groups and discuss pros and cons of government regulation in regard to consumer interests and protection. In what areas does the government need to act as referee? Who best speaks for the consumer--government, congress, consumer groups, market researchers, manufacturers, or Cabinet officers? What is the consumer's role? the role of business? What limitations are there to government protections? [NOTE TO TEACHER: Refer to pp. 36-41 and 91-114 in The Consuming Public by McClellan for discussion of these issues.]

11. Write a statement of your beliefs about government regulation of consumer affairs to clarify your understanding concerning government regulation.

12. Volunteer to read and clip newspaper and magazine articles about legislation related to consumer protection. Start a class file of such articles. Show ones of particular interest to class, using opaque projector. Discuss with class the implications of the news.

13. Role play the situation in which a new consumer law is put through channels to become familiar with the process. One group could serve as representatives, one as senators, and one as committee members. Introduce bill, debate, vote, and obtain President's signature.

14. View the slides, The Law Behind the Label, by Food and Drug Administration to see services provided by the Food and Drug Administration. Discuss.

15. See the film, A Reason for Confidence, by Association Films to find out how the Food and Drug Act assures consumers of safeguards surrounding foods and drugs. Discuss.

16. Work in committees to investigate state laws and local ordinances in your area. Some possible measures taken by state and local governments are listed on p. 392 in Consumer Economics by Wilhelms, Heimerl, and Jelley. Report to class.

KEY POINTS

Individuals and families, as consumers, are protected by federal, state, and local laws.

Knowledge of laws which protect the consumer enables him to be a more responsible consumer citizen.

There is considerable debate over fair-trade laws in our economic system.

As the marketing system becomes more complicated and impersonal, the need for government protection increases.

Laws are continuously being made to uphold consumer rights.

SECTION THREE: CONSUMER CITIZENSHIP

UNIT III: Fraud, Deception, and Quackery

BEHAVIORIAL OBJECTIVES

Be able to (1) analyze various types of offers and recognize examples of fraud, deception, and quackery
(2) recommend action to take in response to fraudulent or deceptive practices
(3) conduct a survey to determine types of frauds and schemes in area
(4) plan a way to share information gained in this study with others
(5) analyze own reaction to certain types of "gimmicks"
(6) prepare a guide for protecting yourself from fraudulent schemes

SUGGESTED LEARNING EXPERIENCES

1. View the transparencies (see Part Two, p. 255) for an introduction to types of fraudulent and deceptive practices. Discuss.

2. Present skits (see Part Two, p. 259) to become familiar with fraudulent schemes. Discuss questions such as: What schemes were shown in these skits? What approach did the salesmen use? How do you think you would have reacted?

3. Use the "In-Basket, Out-Basket" technique to solve the problems presented by your teacher. Read each of the situations described on the "In" sheet and decide what you would do. Write your decision on the "Out" sheet and go on to the next situation. As a class, review all responses in the "Out" basket and discuss differences in the decisions which were made. [NOTE TO TEACHER: See Part Two, p. for examples. Design additional ones or collect real examples using legal and illegal situations.]

4. Select one of the following schemes which you would like to investigate. Read the following references and work in pairs to plan a presentation on the scheme selected.

Schemes

Door-to-door salesman
Unordered merchandise
Telephone solicitations
Accepting C.O.D.'s for neighbors
Photography schemes
Charity gyps
Homework schemes
Packaging deceptions
Health quackery
Mail fraud
Magazine subscriptions
Home improvement swindles
Bait advertising
Referral racket
Debt consolidation schemes
Business opportunity schemes
Wholesale prices, sales, "free" items, contests
Others

Better Business Bureau. Consumer Information Series--Fulfillment Complaints.
Better Business Bureau. Consumer Information Series--Bait Advertising.
Chief Postal Inspector, U.S. Post Office Department. How the Postal Inspection Service Protects You Against Mail Fraud.

4. Prepare an interview schedule as a class project and make a survey of parents and classmates to determine types of frauds and schemes they have seen and/or experienced. As the results of the survey are tabulated, discuss reasons these schemes were successful.

5. View the film, Too Good to Be True, to see the examples of bait advertising portrayed. Discuss. [NOTE TO TEACHER: This film may be obtained from your nearest Better Business Bureau.]

6. Bring any articles you might have which give examples of mail fraud, misleading advertisements, phony contests, and whatever else you can find. Discuss the appeal made by these gimmicks.

7. Discuss aids the consumer can obtain in cases of possible fraud, deception, or misleading advertising. Listen to representatives from the Better Business Bureau, Chamber of Commerce, Legal Aid Society, and/or Post Office and discuss action consumers can and should take.

8. Read Fight Back! The Ungentle Art of Self Defense by Federal Trade Commission and discuss action which can be taken by the consumer before and/or after being gypped.

9. Set up a situation in which someone has been the object of a fraudulent scheme. Write a letter of complaint to the proper agency. Document the facts (who, when, where, what), decide to whom the complaint goes, and state action you wish taken.

8. Clip and bring to class advertising you believe is misleading. Look for those which offer "wholesale" prices. In committees, compare the "wholesale" prices with those for the same item at other stores. Report findings.

9. Listen to a representative of the Food and Drug Administration discuss health quackery. Discuss.

10. Role play a situation in which a piece of unsatisfactory merchandise is returned to the retailer. Discuss the situation.

11. Plan a program dealing with fraudulent practices which could be presented at a school assembly, PTA meeting, FHA meeting, or some community function to acquaint citizens with these practices. You may want to use some of the ideas you prepared for previous class presentations.

12. Work in buzz groups and discuss your reaction to trading stamps, premiums, coupons, prizes, and contests. What effect do these have on your buying practices? Explain.

13. Prepare, as a class, a guide for protecting oneself from fraudulent schemes and plan some way to share this guide with others.

14. Select advertisements from newspapers and magazines or various types of offers received in the mail and analyze them to determine which ones seem legitimate and which ones seem questionable.

KEY POINTS

There are a number of types of fraudulent and deceptive schemes used by unscrupulous salesmen and businessmen.

The consumer is less likely to be influenced by fraudulent or deceptive schemes and health quackery if he is aware of the approaches used in the promotion of these.

The consumer who takes time to shop for what he wants and who can judge quantity and quality accurately is less likely to be cheated than the uninformed consumer.

When fraud or deception is suspected, the consumer should report it to the proper authorities.

Although the consumer is given some protection by laws and government agencies, it is the responsibility of the consumer to be alert to questionable schemes.

Fraudulent schemes succeed because they are aimed at such human goals as the desire to make money, remain young, stay healthy, or get a "good deal."

4666

SECTION THREE: CONSUMER CITIZENSHIP

UNIT IV: Rights and Responsibilities

BEHAVIORAL OBJECTIVES

Be able to (1) give illustrations of each of the rights of consumers in our society
(2) plan ways to protect your rights as a consumer
(3) recognize responsibilities of the consumer
(4) analyze yourself in terms of acceptance of consumer responsibilities
(5) recognize relationships between rights and responsibilities of consumer
(6) dramatize situations in which consumer responsibilities are being met
(7) willingly practice ethical responsibilities of consumers

SUGGESTED LEARNING EXPERIENCES

1. View the visual (see Part Two, p. 266) and discuss the rights of consumers as outlined by President Kennedy in 1962. Work in buzz groups with each group taking one right. What does this right mean to you? What are some examples of ways in which we use these rights?

2. Interview a foreign student and/or someone who has lived in another country to determine consumer rights in other countries. If possible, tape record the interview. Discuss.

3. Discuss ways in which consumers' rights are protected in the United States. Are there differences in other societies in the rights of consumers? For example, do people in other countries have as much right to choose and to be heard as American consumers?

   Clip magazine and newspaper articles which deal with consumer rights and indicate, in a sentence or paragraph, with which right the article deals.

4. Read pp. 335-344 in The Consumer and His Dollars by Schoenfeld and Natella to see the responsibilities consumers have in contrast to their rights and the relationship between these responsibilities and consumer education. Discuss.

5. View transparencies (see Part Two, p. 268) and answer discussion questions dealing with responsibilities of the consumer.

6. Select a consumer responsibility and plan a display illustrating your concept of that responsibility. You may prefer to investigate in depth one of the responsibilities and report your findings to class. For example, you might investigate the use of natural resources which are limited.

7. Develop a rating scale for measuring the extent to which you assume your responsibilities as a consumer. Use three columns and describe what the expert, average, and uninformed consumer would do. For example:

Expert	Average	Uninformed
Reads labels carefully and knows what to expect of products	Glances at labels	Completely ignores labels

8. Dramatize situations such as the following, to see how consumers should assume their responsibilities:

   Deal only with reliable businesses
   Report unlawful practices to proper authorities
   Read labels and directions
   Evaluate carefully printed consumer aid materials

9. Identify ways in which consumers can assume responsibility for legislation affecting the consumer, for unfair business practices, and for customer services provided by business. Discuss.

10. Discuss some of the ethical responsibilities of consumers. What effects do shop-lifting, unnecessary return of goods due to careless buying, and refunds or exchanges for products abused by the consumer, have on business? How can the public be informed of the way in which their consumer practices increase the cost of goods and services? Plan a project for informing the public of their responsibilities. Use such media as newspaper articles, radio and TV "spot" announcements, and posters.

11. Volunteer to read one of the following books or other similar books to become familiar with consumer problems in our society. Report to the class.

    The Spenders by Steuart Henderson Britt
    The Tastemakers by Russell Lynes
    The Hidden Persuaders by Vance Packard
    The Waste Makers by Vance Packard
    The Status Seekers by Vance Packard
    The Naked Society by Vance Packard

4667

4668

12. Complete the following statements to summarize what you have learned about consumer rights and responsibilities:

    My rights as a consumer are:
    My responsibilities as a consumer are:

13. Rotate the responsibility of writing a newspaper column each week for several weeks on "Consumer Citizenship," to stimulate interest in consumer's rights and responsibilities. Publish the column in school or local newspapers.

KEY POINTS

Consumers have both rights and responsibilities within our economic system.

Rights of consumers include the right: to be informed, to choose, to safety, and to be heard.

Rights of consumers in the United States are more varied than those of consumers in some societies.

Consumer education helps citizens to assume their responsibilities as consumers.

Our personal consumer power and economic system can be protected and improved only if consumers assume their responsibilities for being better consumer-citizens.

Individuals and families can promote their economic welfare by using their consumer rights as citizens in the market place.

Consumers have certain ethical responsibilities as they function in the business world.

PART ONE

SECTION FOUR: THE CONSUMER AND THE ECONOMY

SECTION FOUR: THE CONSUMER AND THE ECONOMY

UNIT I: The Consumer in the United States

BEHAVIORIAL OBJECTIVES

Be able to (1) recognize the role of the consumer in the economy
(2) explain how the level of living changes at various stages of the family life cycle
(3) identify ways in which teens contribute to the national economy
(4) understand the motivations which stimulate consumers to purchase
(5) analyze influences on consumer choices

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 47-65 in Your Family and Its Money by Thal and Holcombe, pp. 28-44 in Consumer Economics by Wilhelms, Heimerl, and Jelley; pp. 18-58 in Economics for Our Times by Smith; or pp. 72-88 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks to gain an understanding of the role of the family in the functioning of the economy.

   Discuss questions such as: What is a level of living? How does your level of living compare with that of your parents? your grandparents? How does the level of living change during the various stages of the family life cycle? What are some of the problems facing consumers today? How and why is the family essential to our economy?

2. Find current articles in magazines such as Changing Times, U.S. News and World Report, Business Week, Time, or Newsweek which are concerned with the national economy to become aware of current economic problems. Report on one article and share with class.

3. View the filmstrip, The Role of Consumers, by Joint Council on Economic Education to understand the importance and present status of consumers. Discuss questions such as: How important is the consumer in today's economy? What is the consumer's status compared to that of business? Government? What is the role of an intelligent consumer citizen? [NOTE TO TEACHER: The booklet accompanying the filmstrip gives additional suggestions for discussion questions and student activities.]

4672

4. Read Youth's Place in the Economic Cycle (see Part Two, p. 279). Discuss such questions as: How many members of the class have a regular income? How is this income distributed? What kind of buying practices do you use? Do you exercise your responsibility as a consumer? In what ways?

5. View the filmstrip, Exploited Generation by Guidance Associates to understand teen-age spending. Discuss such questions as: How do the teen-ager's spending habits affect the economy? From what sources does the teen-ager receive the money he has to spend in the market place? What do merchants do to encourage teen-agers to spend their money? How are teen-agers' needs and wants satisfied? What are some creative things that could be done in high schools to help teen-agers understand their shopping habits? How do teen-agers determine what kinds of goods are to be produced and in what quantity? How will the teen-agers' buying habits of today influence the economy 10-15 years from now?

6. Discuss such questions as: Do you feel that most advertising is informative? Why? How do you react to most advertising claims? Do you feel that advertising influences your purchases to a great extent? Give examples.

7. Take an ad and work in buzz groups to discuss such questions as: What kind of information do you as a consumer want in this ad? How should this information be made available to the consumer? How can we educate consumers to be more informed about this product? What are you as a consumer going to do about it?

8. Take turns imitating advertising slogans from TV and radio to determine the effect each one has on you. Discuss.

9. View the filmstrip series, Consumer Education Series, by Institute of Life Insurance to understand the influences consumers have on production of goods and services. Discuss questions posed in the filmstrip as you progress through the filmstrips. [NOTE TO TEACHER: See filmstrip guide for possible questions.]

10. Discuss the following questions to understand the influences consumers have on production of goods and services. What is the greatest single influence on consumer choice-making? What other factors influence consumer choice-making? Explain.

11. Write a paper answering the following questions to understand the problems consumers face in a changing society. In what ways are students an important economic force? What problems do students face as consumers? parents face as consumers? What can be done to eliminate these problems?

KEY POINTS

The family has changed from a productive unit to a consuming unit and is dependent upon national conditions for economic well being.

4673

Consumers' needs and wants are satisfied by economic goods and services.

Consumers have a part in determining what kinds of goods are to be produced and in what quantities.

The family is essential to the functioning of the economy.

The family's level of living is affected by its stage in the family life cycle.

Teen-age spending plays an important role in the national economy.

Because teens are big spenders today, and will spend even more tomorrow as heads of families, it is essential that they recognize their role in the economy.

Consumer choices in the market place are influenced by a number of factors.

SECTION FOUR: THE CONSUMER AND THE ECONOMY

UNIT II: The Economic System

BEHAVIORAL OBJECTIVES

Be able to (1) explain how the economic system operates
(2) recognize the dependence of consumers upon business to satisfy economic needs and wants
(3) familiarize yourself with the economic principles essential to a citizen for effective participation in our economic system

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 21-39 and 57-71 in Applied Economics by Kennedy, Olsen, and Dodd; pp. 1-14 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 4-16 and 452-463 in Consumer Economics by Wilhelms, Heimerl, and Jelley; pp. 1-61, 143-156, 215-275 in Consumer Economics by Wilson and Eyster; pp. 58-160, 338-374 in Economics for Our Times by Smith; or pp. 26-62 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks to understand how the economic system operates. Discuss.

2. Review the filmstrips II and III of The Role of Consumers by Joint Council on Economic Education to recognize the dependence of consumers upon business conditions. Discuss such questions as: What is a free enterprise system? What is inflation? What is deflation? Recession? In what ways does government help individuals to consume more wisely? How are changes in the economy measured?

3. Listen to an economist or other qualified person discuss "The Economic System in the United States," as an introduction to basic economic principles. Participate in a class discussion of the points made in the presentation.

4. Listen to a symposium in which a banker, an attorney, a savings and loan director, and a financial management expert explain the problems of our changing economy. Discuss the issues brought up by the panel.

5. Read The Mystery of Economic Growth by Federal Reserve Bank of Philadelphia, The Spark of Economic Growth by National Research Bureau, Profits and the American Economy by United States Department of

Commerce, or Understanding and Using Economics by Better Homes and Gardens Reader Service to gain a better understanding of our economy. Report findings to class.

6. Write a paper or present an oral report to the class on the role of the family in the economic system.

7. Prepare a circle graph that shows the Gross National Product for the past year to become aware of the distribution of consumer income in the economy. Data for the chart may be secured through a public library or a school library.

8. Scan newspapers and magazines to become aware of consumer economic issues affecting consumers. Report to the class on one article of particular interest to you.

9. Read pp. 340-348 in Economics for Our Times by Smith; pp. 229-241 in Applied Economics by Kennedy, Olsen, and Dodd; pp. 255-264 in Consumer Economic Problems by Wilson and Eyster; or pp. 17-37 in The Consumer and His Dollars by Schoenfeld and Natella to understand the role of government control in our economy.

10. List examples of government control at the federal, state, and local levels that affect the marketing of certain goods to become aware of types of government control. Why are these controls necessary? How do they protect the consumer?

11. Write a paper explaining ways in which the federal government controls or regulates the stability of our economy. Give your reactions to these controls.

12. Identify the goods and services sold by a food market, car dealer, and a laundry service and then write answers to the following questions: Which of the goods and services could you have provided yourself? Which goods and services could you not provide for yourself? Why are we not entirely self-sufficient?

KEY POINTS

Our economy is not stable, but fluctuates according to the influence of many complex factors.

The economic activities of government are protection, service, regulation of private economic activities, and promoting economic stability and growth.

Modern production, characterized by specialization, standardized products, and mass production, increases the consumer's dependence on business for satisfying his economic needs and wants.

A capitalistic economic system is one in which private individuals own the capital and enjoy free enterprise in its use.

SECTION FOUR: THE CONSUMER AND THE ECONOMY

UNIT III: Sources and Functions of Money

BEHAVIORIAL OBJECTIVES

Be able to (1) recongize the function of money in our economy
(2) recognize the relationship between the supply of money in the economy and the prices of goods and services
(3) describe the circular flow of money in the economy

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 149-167 in Applied Economics by Kennedy, Olsen, and Dodd; pp. 181-199 in Consumer Economic Problems by Wilson and Eyster; pp. 228-237, 284-296 in Economics for Our Times by Smith; or pp. 62-72 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks; Money and Economic Balance by Federal Reserve Bank of New York; Money and You by The American Bankers Association; or Money: Master or Servant? by Joint Council on Economic Education to recognize the function of money in the economy.

2. Read Two Sides of Money (see Part Two, p. 283) and What Is Money? (see Part Two, p. 287) to gain an overall view of the functions of money. Discuss such questions as: What is money? What are the functions of money? What is the relationship between government and money? What is the relationship between production and consumption? What is the role of money in this process? What are the eight basic functions of a business? Give examples of how each of these operates in business and in the family. What are some differences between social business situations and family business situations? What mediums of exchange have been used in the history of money? What mediums of exchange are used today? What qualities must a satisfactory money possess?

3. Work in groups and prepare a bulletin board or chart to illustrate the development of money in the United States. Discuss.

4. Write a paper on "An Unusual Form of Money" or "How Money Has Changed Through the Years" to become aware of the history of money. Check with your librarian for sources of information.

4681

5. Discuss the circular flow of money in order to better understand the relationship between money and the business cycle. [NOTE TO TEACHER: Use transparency The Circular Flow of Money (see Part Two, p. 288).]

6. Read pp. 38, 42, 44, 278, 315 in Economics for Our Times by Smith; pp. 8-12 in The Consumer and His Dollars by Schoenfeld and Natella; pp. 64-66 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks; or pp. 113-121 in Consumer Economic Problems by Wilson and Eyster to understand the difference between money and real income.

7. Write a paper comparing money income and real income to clarify their similarities and differences.

KEY POINTS

The value of money depends upon the total quantity of money in the economic system and the stability and growth factors.

The value of money is measured by what it will buy.

Money income represents the purchasing power of consumers and the national economy.

Money is a serviceable means to an end of producing and distributing economic goods and services.

SECTION FOUR: THE CONSUMER AND THE ECONOMY

UNIT IV: The Market System

BEHAVIORAL OBJECTIVES

Be able to (1) define terms related to the market system
(2) identify the steps in the marketing process
(3) identify and explain the functions of types of markets

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 78-84 in Applied Economics by Kennedy, Olsen, and Dodd; pp. 16-28 in Consumer Problems by Wilhelms, Heimerl, and Jelley; pp. 61-79, 101-125 in Consumer Economic Problems by Wilson and Eyster; or pp. 17-26, 43-52 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks to gain an overall understanding of the market system.

   Discuss such questions as: What is marketing? What are the functions of marketing? How are consumer goods marketed? How much does marketing cost? How do convenience goods affect prices in the market? What determines the size of a market? What are some types of markets? What middlemen are involved in our market system? How does marketing contribute to our standard of living?

2. Read pp. 32-45 in Economics for Our Times by Smith, pp. 3-4 in The Consumer and His Dollars by Schoenfeld and Natella; or pp. 80-85 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks.

   Devise a list of factors which influence consumers in the choice of a market.

3. Prepare a chart or bulletin board showing the characteristics of the marketing system to illustrate the relationship between functions of the marketing system in the economy.

4. Listen to a local merchant speak on his role in the marketing process. Discuss such questions as: At what level of the marketing system does this business operate? How is this business related to the total economy?

5. Work the crossword puzzle (see Part Two, p. 290) on marketing terms to check your understanding of marketing terminology.

4685

7. Report on one step in the marketing process to understand the functions of each stage in the marketing process. [NOTE TO TEACHER: Steps which students might select are: determining and developing products to be marketed; assembling raw materials; transporting goods; processing or manufacturing; standardizing, sorting, and grading of products; packaging and labeling; storing; conducting research; gathering, assembling, and using information about economic and market conditions and trends; financing and risk taking; determining prices; selling; communicating with different elements of market system.]

KEY POINTS

Price is determined by the balancing of supply and demand.

Marketing helps families achieve a high level of economic living.

In our economy, the role of government is to regulate and promote business for the benefit of the public.

Each step in the marketing process has a unique function and affects production and distribution of products.

4687

SECTION FOUR: THE CONSUMER AND THE ECONOMY

UNIT V: Banks and Banking Services

BEHAVIORIAL OBJECTIVES

Be able to (1) identify the functions and services of the three different kinds of financial institutions: savings banks, commercial banks, and savings and loan associations
(2) list the advantages of using bank services
(3) reconcile a bank statement

SUGGESTED LEARNING EXPERIENCES

1. Read pp. 182-222, 234-253 in General Business for Everyday Living by Price, Musselman, Hall, and Weeks; pp. 248-274 in Economics for Our Times by Smith; pp. 208-245 in Your Family and Its Money by Thal and Holcombe; pp. 76-92, 364-371 in Consumer Economics by Wilhelms, Heimerl, and Jelley; or pp. 199-215, 317-343 in Consumer Economic Problems by Wilson and Eyster to gain an understanding of banks and banking services.

   Discuss such questions as: What is the role of savings and loan associations in our economy? Is this the only type of savings institution? What are others? How does the role of the commercial bank compare to the role of the savings and loan association?

2. Find out the different types of banks in your community and the functions of each of the banks. Report findings to the class.

3. View the filmstrip Money and Banking by Association Films, as an introduction to banking services. Discuss such questions as: What is the role of commercial banking as part of the enterprise system? What service do banks perform? What types of deposits are made at banks? What is the process for handling checks in a bank? What types of loans are made at banks?

4. Read Money and Banking in Our Everyday Living, How Banks Help, or Using Bank Services from the American Banking Association or The Story of Checks from the Federal Reserve Bank of New York to see the relationship between banking and the economy.

   Discuss such questions as: What is the role of banks in our economy?

What are the different kinds of banks and bank services? How do the different banks serve the consumer? Why are banks important to our economy?

5. Take a field trip to a bank and have the banker explain how the bank operates to become aware of the operation of the bank. Discuss.

6. Prepare a bulletin board illustrating functions of a bank to clarify banking operations.

7. View the filmstrip from the kit, Paying By Check, by American Bankers Association, as an introduction to checking account services. Discuss.

8. Take a field trip to your bank and obtain forms frequently used by depositors. Ask about the requirements for opening a checking account and the regulations for operating a checking account.

   Discuss such questions as: How do I open a checking account? A savings account? Why should I open a checking account? Why can't I just save my money at home? What are the benefits of bank services?

9. Do a field study by going to visit one or more banks in your community to find out what services they have to offer the depositors. For example, you might want to find out such things as building facilities, convenience, service, and free and educational materials.

10. Read Protect Your Checking Account (see Part Two, p. 293) to become aware of the importance of check writing procedures. Discuss.

11. Reconcile a bank statement with a check book record to develop skill in caring for a personal checking account.

12. Listen to a banker explain how a savings and loan association operates. Participate in a discussion of ideas brought out by the speaker.

13. Play the Money Game (see Part Two, p. 295) to check your knowledge of banks and bank services.

14. Play Economic Jeopardy (see Part Two, p. 303) to check your understanding of the consumer in the economy.

KEY POINTS

Banks facilitate the exchange of money in the economy.

Checks are used in place of cash for safety and convenience.

Banks loan and invest the savings of individuals and/or groups to benefit the entire economy.

Banks deal in money lending services for a profit.

4689

The status of the economy and accompanying government regulations determine a bank's willingness to lend money.

DESCRIPTION OF
HOME ECONOMICS INSTRUCTIONAL MATERIALS CENTER

The Home Economics Instructional Materials Center was established September 1, 1967, as a continuing project. It is a cooperative project between the Division of Homemaking Education, Texas Education Agency, and the College of Home Economics, Home Economics Education Department, Texas Tech University at Lubbock, Texas. The instructional materials which are being developed at the Center are intended to assist teachers and coordinators in promoting and teaching home economics gainful employment programs or consumer education.

To provide a background of information for the establishment of the Home Economics Instructional Materials Center, a Planning Grant Project was approved by the Texas Education Agency for February 1 through August 31, 1967. The major purposes of the Planning Grant Project were (1) to assemble and catalog an occupational reference library, (2) to develop procedural steps for preparation of instructional materials, and (3) to illustrate the first sequence of these steps, that is, to develop job analyses and to list competencies needed for employability of students.

The present major objectives of the Home Economics Instructional Materials Center are (1) to develop instructional materials designed for use by students enrolled in cooperative part-time training programs and in pre-employment laboratory training programs in preparation for employment in occupations requiring home economics knowledge and skills, (2) to develop materials in consumer education, and (3) later to develop materials designed for use in home and community service programs.

Acknowledgement is given to:

Miss Louise Keller, former Consultant in Job Training, U.S. Office of Education, who directed the Planning Grant phase of the project.

Miss Rua Van Horn, former U.S. Office of Education Regional Home Economics Supervisor, who served as consultant during the Planning Grant.

Mrs. Elizabeth Smith, Director, Division of Homemaking Education, Texas Education Agency, who conceived the original and continuing plan for establishing the Center.

Miss Barbara Clawson, Director of the Center from 1968-1970, and Mrs. Thelma Whigham, Assistant Director of the Center from 1967-1970.

Dr. Camille G. Bell, Chairman, Department of Home Economicd Education, and Dr. Willa Vaughn Tinsley, Dean, College of Home Economics, Texas Tech University, who continue to serve in an advisory capacity.

Linda Glosson, Acting Director
Home Economics Instructional
Materials Center

Betty Robinson, Assistant Director
Home Economics Instructional
Materials Center

4697

ACKNOWLEDGMENTS

This guide in Consumer Education for High School, prepared by the Home Economics Instructional Materials Center at Texas Tech University, is the result of the combined efforts and ideas of many people, namely:

Miss Barbara Clawson, Director of the Center during the writing of this publication, who wrote portions of the materials and directed the preliminary writing of the entire publication.

Mrs. Fern Alexander, Big Spring, Texas, and Mrs. Mary Lois Scott, Wellington, Texas, Home Economics Teacher-Coordinators, who spent a month at the Center helping with the writing of the Consumer Education instructional materials.

Mrs. Melinda Holcombe, College of Home Economics, University of Nebraska, who worked with the teachers as a subject-matter specialist in consumer education.

Mr. Howard Welborn, Lubbock, Texas, who drew part of the illustrations for the instructional materials.

Mrs. Virginia Thompson, Lubbock, Texas, who drew part of the illustrations for the instructional materials.

Mrs. Patricia Beachy and Mrs. Carolynn Cohorn, Graduate Research Assistants, Texas Tech University, Lubbock, Texas, who prepared first drafts of the outline and materials.

Miss Janet Sargent, Graduate Research Assistant, Texas Tech University, Lubbock, Texas, who wrote one section of the guide and developed two supplementary programmed instructional units.

4698

FOREWORD

The emphasis placed on consumer education by Part F of the Vocational Education Amendments of 1968 prompted the development of the two bulletins in Consumer Education, Parts One and Two, for use in teaching high school students.

Because of the increasing complexity of the marketplace, it is imperative that home economists evaluate their past efforts in teaching in this area, update their teaching materials and emphases, and develop a philosophy of teaching Consumer Education based on decision-making and the management process. These are the beliefs which guided the development of the curriculum materials presented in Parts One and Two in the Consumer Education series.

Facts concerning best buys soon become obsolete due to rapid technological developments and consequent changes in goods and services available. For this reason, little emphasis has been given to buymanship in the bulletins; instead, the major emphasis has been on decision-making as individuals and families use it in the management process. Consumer education taught from this point of view will remain timely. Such teaching will enable students to identify and analyze their values, needs, wants, resources, and goals and consequently will enable them to make rational decisions regarding the myriad of choices that confront them in the market place, regardless of the technological changes which may occur. It is hoped that this kind of consumer education will contribute to family stability and happiness as students establish homes and begin the family life cycle.

The Consumer Education Bulletins are designed for a one-semester course for both boys and girls at the 11th and 12th grade levels. The comprehensive coverage of the consumer education topic necessitated the presentation of the contents in two bulletins--Parts One and Two. The introductory pages are repeated in each bulletin as are the Tables of Contents.

Both Parts One and Two contain four sections: Allocation of Resources, Consumer Buying, Consumer Citizenship, and the Consumer in the Economy.

In Part One the sections follow this format: Behavioral Objectives, Suggested Learning Experiences, Key Points, and References for both students and teacher. Part Two contains a wide variety of related teaching-learning materials for both students and teacher. Among these are directions for making transparencies, instant slides, bulletin boards, posters, and other visuals; suggestions for using simulation games, case studies, skits, stories, etc; illustrations of programmed instruction, objective tests, crossword puzzles, and cartoons. These may be used in carrying out one or more of the suggested learning experiences in Part One.

Both Part One and Part Two are closely interrelated and supplement each other to provide students and teacher with the potential of achieving the behavioral objectives identified in Part One. Directions for using materials in Part Two are given in the Suggested Learning Experiences in

4699

Part One. References in Part One to the accompanying teaching-learning materials in Part Two are clearly identified.

The learning experiences are written from the student's point of view for both boys and girls. Many learning experiences are included. The teacher is not expected to use all the suggested experiences given in these bulletins in one semester. She may adapt, supplement, and/or expand the suggestions included in view of the specific needs, interests, abilities, and backgrounds of her students. The wide variety of experiences included should enable the teacher to select and assign those teaching-learning experiences that will help her students reach the objectives important to them. Many of the experiences may be used as means of evaluating the progress of students.

"NOTES TO TEACHER" are inserted occasionally throughout the lists of learning experiences. These notes usually give specific suggestions and/or references to material in Part Two.

Key points or summary statements of desired learnings follow each learning experience section. Student references and teacher references are included. Materials suggested in the teacher references give a broader, deeper coverage of the topic under discussion than do the student references and should be helpful to the teacher for background information. The numerous student references given enable the teacher to be selective in choosing those appropriate and available for her students.

PART TWO

SECTION ONE: ALLOCATION OF RESOURCES

SECTION ONE: ALLOCATION OF RESOURCES
UNIT I: Management, What It Is
I-1. Management Is a Mental Process

(See Suggested Learning Experience No. 3, p. 3 in Part One)

Numerous transparency masters are included throughout the units in Part Two for the teacher's convenience. Using transparency masters can save hours of work in producing visuals and provide professional results at low cost. Transparencies should be helpful in explaining an idea in simple terms, in showing relationships between ideas, and in holding class attention while points on the transparency are discussed.

Directions for Using Transparency Masters:

1. Remove the Transparency Master from the book.
2. You will need a sheet of heat-transfer (transparency) film for each transparency to be made.
3. Run the transparency master and film through any transparency-making heat-transfer machine following directions for using the machine. Most heat-transfer machines operate in the same general way:
   a. Place master, face up, on flat surface.
   b. Place heat-transfer film on the master. (Film is usually notch-coded to indicate the side which goes against the master.)
   c. Adjust heat control setting to proper position.
   d. Feed master and film into machine.
4. Mount the transparency in a cardboard frame, if desired.
5. Add color, if desired. Adding color adds to the cost and time required for making the transparency. Colored overhead pencils, felt-tipped or nylon-tipped markers and pens can be used to add brilliant color to your visual. Diazo can be used. Tinted acetate will provide basic colors for materials copied. Colored adhesive film may also be used.

Additional Uses for Ideas Depicted on Transparency Masters:

1. Remove Transparency Master from book and project using an opaque projector.
2. Use the idea shown on the Transparency Master to aid in developing a poster or bulletin board.
3. Duplicate the Transparency Master for use as a handout.

The Use Of FAMILY RESOURCES

SECTION ONE: ALLOCATION OF RESOURCES
UNIT II: Values, Goals, and Standards
II-1. Forced Choice Values Test[1]

(See Suggested Learning Experience No. 5, p. 5 in Part One)

Directions: Circle the number opposite the one statement in each pair which most appeals to you. You must choose one number in each pair of items.

1--to be reasonably sure about the future for myself and my family.
12--to do things well.

3--to have people think well of me.
5--to have as much freedom as possible to do things I want to do.

11--to have as many good things as possible.
12--to do things well.

6--to do new and different things often.
11--to have as many good things as possible.

7--to have friends.
10--to have things neat, orderly, and organized.

6--to do new and different things often.
8--to create an atmosphere that makes for satisfying family living.

3--to have people think well of me.
9--to do what is right according to my beliefs.

8--to create an atmosphere that makes for satisfying family living.
10--to have things neat, orderly, and organized.

4--to do things for my family and others.
11--to have as many good things as possible.

10--to have things neat, orderly, and organized.
12--to do things well.

2--to have influence with people.
11--to have as many good things as possible.

4--to do things for my family and others.
10--to have things neat, orderly, and organized.

9--to do what is right according to my beliefs.

7--to have friends.
12--to do things well.

Directions follow for scoring the FORCED CHOICE VALUES TEST. Read the directions and score your responses.

DIRECTIONS FOR SCORING FORCED CHOICE VALUES TEST

1. Count the number of times you circled number 1 on the Values Test and insert the number counted in the blank to the left of statement number 1 below. Do this for each of the items through number 12.

2. Rank the items in the column to the right by assigning number one to the item that you circled the most times, number two to the item circled the second highest number of times, etc. In case of a tie give the items all the same rank, but allow a full number count for each item. For example, if there is a tie on number 3, assign two number threes, which take up the three and four spots, making five the next rank.

3. When you have completed ranking, you may look at the key to the left of the ranking and determine the highest to lowest values. Example: If #10 is ranked 1, that means your highest value is "orderliness."

   Be sure to check with your teacher if you have any questions on scoring or ranking.

No. of times circled	Key		Rank
_____	Security	1. To be reasonably sure about the future for myself and my family.	_____
_____	Influence	2. To have influence with people.	_____
_____	Recognition	3. To have people think well of me.	_____
_____	Helpfulness	4. To do things for my family and others.	_____
_____	Freedom	5. To have as much freedom as possible to do the things I want to do.	_____
_____	New Experience	6. To do new and different things often.	_____
_____	Friend-liness	7. To have friends.	_____

(Concluded on next page)

4712

No. of times circled	Key			Rank
_____	Family Life	8.	To create an atmosphere that makes for satisfying family living.	_____
_____	Religion	9.	To do what is right according to my beliefs.	_____
_____	Order-liness	10.	To have things neat, orderly, and organized.	_____
_____	Wealth	11.	To have as many good things as possible.	_____
_____	Workman-ship	12.	To do things well.	_____

SECTION ONE: ALLOCATION OF RESOURCES
UNIT II: Values, Goals, and Standards
II-2. Values Questionnaire[1]

(See Suggested Learning Experience No. 7, p. 6 in Part One)

Values are those things which are very important to us. It's fun to think and talk about values because there are no right or wrong answers regarding them. At any given time some things will be much more important to you than others. Later, when the situation changes, you may value other things more highly.

1. If you had some free time, which of these things would you do?

   _____watch TV

   _____go riding around

   _____read a book

   _____go to a ball game

   _____do a chore you had been putting off

2. If you were given $50, would you...

   _____save it?

   _____buy records, gadgets for a car or a room?

   _____spend it for clothes?

   _____buy gifts with at least part of it?

   _____or _____?

3. A girl has just enough time to dress and get to a party. Suddenly, after she is dressed, she discovers a rip in her dress. If she takes time to change, she will be late.

   If she changes her dress, what value is influencing her behavior?

   If she does not change her dress, what value is influencing her behavior?

4. If students placed a high value on popularity, name some things they would insist on doing.

---

[1]Adapted from Training Home Economics Program Assistants to Work with Low Income Families. Bulletin PA 681, United States Department of Agriculture, Federal Extension Service. p. 41.

4714

5. If students placed a high value on cleanliness, name some things they would insist on doing.

6. If students placed a high value on order in their surroundings, name some things they would insist on doing.

7. If students placed a high value on beauty, name some things they might try to do in their rooms.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT II: Values, Goals, and Standards
II-3. Making Instant Slides

(See Suggested Learning Experience No. 8, p. 6 in Part One)

Several suggestions have been made in this publication for using instant slides. These are a slide series that the teacher herself can do quickly.

These slides can be used in any 2" x 2" slide projector and cost less than $1 for twenty. The inside area of a 2" x 2" slide may differ. The instant slide area is 127 (1 7/16" square, the largest available). Also remember that most filmstrip projectors have a slide attachment.

Directions for Making Instant Slides[1]:

(1) Run the master sheet through a transparency-making machine as for transparencies.

(2) Cut each frame on the outside lines.

(3) Put each section in a #127 slide holder.

(4) Seal with a hot iron. Professional slide sealers are available, or the teacher may borrow a Se Lin Iron from the library.

(5) Add color if desired. Colored overhead pens will do small areas quickly and efficiently. Diazo can be used. Tinted Acetate will provide basic colors for materials copied. Colored adhesive film may be used to cover the entire slide. Adding color adds to the cost and time expenditures.

The script to read with the instant slides follows the pages of slide masters.

---

[1]The idea for making instant slides was developed by Jeff Miller, Media Specialist, John H. Glenn Junior High School, San Angelo, Texas.

II-4. Directing Your Dollars (Script)

(See Suggested Learning Experience No. 8, p. 6 in Part One)

1. Directing Your Dollars

Presented by
The Educational Division: Institute of Life Insurance

Developed with the cooperation of
Miss Amanda Ebersole
Former Head, Home Economics Education Division
Drexel Institute of Technology
Dr. Hazel Huston Price
Former Itinerant Teacher Trainer, Home Economics
Ohio State Department of Education
Dr. William Smith
Professor of Family Relationships
Pennsylvania State University
Miss Grace Woodward
Supervisor of Homemaking
Springfield Township School District
Chestnut Hill, Pennsylvania

Few of us ever have enough money. Instead, we must constantly plan how best to spend each dollar. This is often difficult because the choices are seldom clear cut. To direct our dollars wisely we must know what we want from life--in other words, we must define our personal values. For example...

...To choose between spending for an expensive date or saving for college, we must first decide whether immediate satisfactions are more important than future goals.

What's right for one person is not necessarily right for another. It depends on the individual's values. What are your values? Perhaps these slides will help you clarify them.

2. Today is something special at Jackson High...

3. ...The Big Dance has just been announced; and that's the high point of the social year.

4. It's an event that many have looked forward to for a long time. They're happy it's here.

5. That group at the table seems even happier than most, and for good reason. Their dates are set and everything looks simply great.

6. But is everything as great as it seems? Not quite. Take Alice Downs, over at the right.

7. Behind Alice's pretty smile, there's a pretty grim girl. Let's see what's on her mind.

8. Alice's problem is money--or rather, the lack of it. She needs $35 for a prom dress. She has exactly $2.83 and a bus token.

9. Alice's dad gives her $6.50 a week, plus $200 a year for big expenditures, such as dresses, a coat, and the class trip.

10. In Account with Alice Downs

Date	Withdrawal	Deposit	Balance	Account No.	Tran.
1 Jun 2		$200.00	$200.00		ANE
	**$27.00		*** 173.00		NE
	** 33.00		*** 140.00		NE
	** 75.00		*** 65.00		NE
	** 15.00		*** 50.00		NE
	** 30.00		*** 20.00		NE
	** 20.00		*** 00.00		NE

With so many things happening in her senior year, she finds that, by prom time, none of her $200 is left. Her bank balance is zero.

11. Some months ago, she realized she could buy a prom dress only if she saved money from her allowance. What went wrong?

12. First, she had to pay for necessities. It cost her $1.00 a week for bus fare, plus another $3.00 for lunches and school supplies.

13. Then there were things like cosmetics--which are practically necessities, don't you think?

14. And how was she to know there would be so many wonderful hit records this year?

15. As a member of her gang in good standing, she naturally had to have that wiglet. This year, it was a <u>must</u>. But absolutely!

16. So it went, until she ended up with the $35 question: "How will I get the dress I need for the senior dance?"

17. She could, of course, wear her two-year-old party dress. But she's worn it too often. And it looks so unsophisticated.

18. What about Dad? "I'd <u>like</u> to help; but I just gave $25 to your brother, Bob, to get parts for <u>his</u> hot rod. I can't spare another cent."

19. "That kid brother!" Alice mutters to herself. "Always making things miserable for me..."

20. Bob hasn't yet spent the $25; so Alice tries, very sweetly, to talk him out of it.

4722

4721

21. Surprisingly, Bob agrees. He'll put off his purchases for two months, provided Alice pays him back by then from her allowance.

22. "That means," Bob says firmly, "no new records, no extra clothing, no nothing."

23. "And, oh yes, I'll expect you to take my place mowing the lawn the next three Saturdays so I can play ball with the league team."

24. "So that's it," says Alice angrily. "I should have known it wasn't generosity--and those are the days I'm to play tennis, too."

    And off she went, wondering how she'd find a way out of her fix.

    How does Alice's predicament reveal her sense of values? What do you think is her best way out? How do your answers reflect the values you hold? Decide how Alice might have avoided such a situation. Later on, prepare a budget based on Alice's income, and on <u>your</u> values!

25. Now let's return to the group and see what's behind Jack Brandt, the boy in the sweater.

26. Jack's mind is on the problems of becoming a doctor.

27. Medicine takes a lot of time, study, and money. Jack's folks have made it clear that part of the financial burden is his.

28. By working Saturdays and summers and by conserving his allowance, Jack has been able to save several hundred dollars.

29. Jack is reluctant to part with his savings. However, he <u>can</u> see drawing from his bank for prom tickets and flowers for his date.

30. He can also see the sense in a new suit, since he'll be able to use it at college.

31. But he's not happy about the gang's proposal to go to a night club after the dance.

32. Jack thinks night clubbing is too expensive. Anyway, he feels it's more fun gathering at someone's home.

33. Say, why <u>not</u> have a home party after the prom? The boys could chip in for refreshments.

    But Jack leaves without making the suggestion. He thinks he'd be called a cheap skate.

Jack could pay for the date by working afternoons for a week or so, in addition to Saturdays.

34. But track practice is in the afternoon. Taking a job would mean quitting the team, and the team needs him.

35. Jack considers a job that requires late hours.

36. But he knows that without a good night's sleep, he falls apart. What to do?

    What do you suggest for Jack? What appears to be one of Jack's dominant values? Do you think he is a cheap skate? How might Jack be hiding his real motives when he thinks (a) the team needs him; (b) he prefers home affairs to night clubs?

37. Now, let's watch Babs Block, who's at the far end. Incidentally, she's engaged to Joe Rand, sitting opposite her.

38. Like the others, Babs' problem is also spelled M-O-N-E-Y.

39. There is little spare cash at the Blocks'. Most of the family's modest income goes for doctor bills for a sick sister.

40. The Blocks haven't much money; but they do have the pleasure of working together closely.

    The whole family has been saving to help Babs. Jointly, they have accumulated $20.

    But $20 isn't enough for the good dress and accessories that Babs needs. And she hasn't anything else remotely suitable.

41. Babs can sew beautifully. But she feels her friends would secretly look down on a "home made" prom dress.

42. "You're imagining things," Mother says. "If you make your own dress, it will be the prettiest there." But Babs isn't convinced.

43. There are still several weeks before the prom. Perhaps if she'd do without lunches...

44. Or maybe she should look for a cheaper dress--though she knows this doesn't pay in the long run.

45. She can't get a job because she's needed at home. Oh well, maybe she won't go to the prom. She'll save the money for her wedding.

46. Later she suggests to Joe, as cheerfully as she can, that they stay at home.

47. "On the other hand, the prom might be the most important dance we'll ever attend. What do you think, Joe?"

What should Babs do? How does your answer reflect the values you hold? Is Babs right in thinking others would look down on a "home made" dress? Discuss the worn yet durable statement that "money isn't everything." Illustrate by considering Babs' relations with her family.

48. You've just seen the money management problems of three typical young people. Have their problems helped you to understand yours?

Once you've decided on the values you want, use them as a guide whenever you're faced with Directing Your Dollars.

II-6. I Am a Lazy Housekeeper and My Family Loves It[1]
by Jean H. Maysilles

(See Suggested Learning Experience No. 18, p. 7 in Part One)

Sixteen years ago, when I was married at the tender age of 20, I settled down to keep house like everyone else I knew. My methods were patterned after my mother's and my mother-in-law's--daily dusting, mopping, wiping; weekly scrubbing, polishing and waxing; and the all-out semi-annual house-cleaning, when every piece of ceiling, wall, floor, furniture, cloth, china, glass, and silver was either scrubbed, waxed, cleaned, polished, vacuumed, or washed. By this method I not only devoted two thirds of my life to my housekeeping, but gained myself the reputation of being an "excellent little housekeeper."

How long my health and disposition would have stood up under this strain I don't know, and fortunately never had to find out because about this time I made a very interesting discovery. One day shortly after the birth of my first child, Cindy, when the duties of a good housekeeper and mother were weighing a mite heavily on my frail shoulders, I visited my mother-in-law unexpectedly. She immediately began to apologize about the condition of her house, explaining that she had been ill for two days and hadn't been able to do a thing. As I looked around, her house seemed the same to me as always, except that the flowers on the dining table needed to be changed and there was a pile of old newspapers beside a chair. It took me about two minutes to realize a basic truth--other people don't see your home in the same light that you do. Most people who come to your home are interested in you and your family, and as long as the general view is pleasant they don't know, or care, whether or not you've run the vacuum that day or polished your furniture that week.

With this fact in mind I began to change my housekeeping tactics. Over the past 13 years I have developed a method of housekeeping that seems to please everyone, including me, and that, though it is not entirely a "no-work" way, grows more painless every year.

I was not able to throw off my bad habits of good housekeeping overnight, of course, but within a few months after my delightful discovery I had worked out a beautiful plan. I arose with my husband at 7 o'clock, saw him off to work, tore through our apartment in a whirlwind pickup-dust-over program and relaxed with a second cup of coffee and the morning paper before the baby even woke. During her morning nap I attended to whatever other housekeeping I had to do. And I had already begun to cut corners. Did the kitchen floor really have to be scrubbed today or could

4727

I wipe up those spots and make it do until Saturday? Did the windows really need to be washed this afternoon? Why not just fold those pajamas instead of ironing them?

A little disguise that I discovered then and have since developed into a full-fledged hobby was flower arranging. Most people are so dazzled by lovely arrangements of flowers that they are not likely to notice a little bit of dust in the corner of the living room or the tarnished silver in the cupboard.

With a few adaptions in my schedule, I was able to continue at the same happy pace even when two years later I had a baby boy, and we moved from our three-room apartment to a seven-room house. In fact, within a year or two I had improved my status. As the children outgrew morning naps I was able to convince them that dusting was fun. Even at three years of age Tim had developed the old competitive spirit and took pride in occasionally having his bedroom judged neater than his big sister's.

When my second little girl, Molly, was born I almost gave up and decided that with three children aged five years, three, and one, I could no longer escape the drudgery of a routine. But after a few hesitations, a few fumbles, and a few weeks of utter chaos, we developed quite a comfortable program.

First of all, we declared that no one was to leave his bedroom in the morning until Mommy came up to dress the baby. This provided my husband and me with time for a pleasant and unharried breakfast. It also provided the two older children with the opportunity to show Mommy just how well they could dress themselves and make their beds. Sometimes this was not at all well, but at least they tried, and they seem to enjoy the responsibility. Usually with a few well-placed strokes on a wrinkled bedspread, the tying of a knotted shoelace or the straightening of a hair part, all was well.

The only hard and fast rule I ever found necessary consisted of just three words--"Put it back." With three children we had the inevitable mountain of toys, thanks to doting grandparents. With some tears, much repeating of "Put it back" and occasional paddling of small rears, all three children came to understand that they were free to drag out even the most mess-making toy, provided they put it back before dragging out the next one or running outdoors to help Mommy plant flowers. We provided a roomy toy chest for each child--which added nothing to the decor of the dining room but served admirably as the place to "put it back." I'll admit these toy boxes became "somewhat cluttered" at times; sometimes, if the children dug deep enough, they found a toy that hadn't been seen for months or even a lollipop that hadn't been quite finished yesterday. Thank goodness, each box had a sturdy lid so that to the casual observer they presented a tidy appearance, even though it was deceptive.

You are thinking that this is all very well, but what about washing and ironing, changing bed linens, scrubbing the bathroom, and running the sweeper? Remember, I told you my method was not one without work. So on two miserable mornings a week I had to work like a demon. On whatever morning seemed best, while the children played in their rooms upstairs

4728

(and/or occasionally interrupted me), I would scrub and clean and wax and polish the downstairs, and by afternoon I would be ready to collapse. After lunch, while the children took their naps, I would go to bed for two hours.

The upstairs would get the same treatment on Saturday mornings, when Daddy was able to take over playtime downstairs.

A year and a half ago my second son and fourth child, Andy, was born and we moved into an eight-room house. But by this time the older children were growing up, and my method of housekeeping took great forward strides. Let me give you an example of how the day goes in the household of a bad housekeeper with four children.

Simple arithmetic tells you that with four children there are likely to be five unmade beds every morning. These, if all of them were made by Mother, would consume the better part of an hour with the hanging up of pajamas, picking up of dirty clothes, and scrambling under the beds for slippers and last night's book. So, thinking only of the fine character this will develop in my children, I have trained them to make their beds, hang up or put away their clothing or toys and generally leave their rooms in an orderly condition. While this is being done I'm preparing breakfast, and incidentally, this is one area where I don't spare the work--perhaps because I enjoy cooking and it does not seem like work.

Within three quarters of an hour after rising, everyone but the baby and I has left the house for school or work. In 15 minutes I've washed the dishes, dusted any obvious dust, straightened pillows and picked up in our room. Now it's time to dress and feed Andy, who at 20 months seems to approve wholeheartedly of our design for living. If Mommy will play horsie and "Where's the baby?" for a while and then indulge him in an uproarious bath, he is quite content to spend two hours each morning and each afternoon in his crib (he hates his playpen). He sits in there and mumbles to himself in a language only he can understand, then chuckles at his own jokes or jumps up and down with great abandon. Sometimes he even goes to sleep.

Andy's obliging ways leave me plenty of time for myself, except on the one day a week when I go through my old Demon Housewife routine. With the older children in school I have been able to consolidate my former two frantic mornings into one frantic day. I tear through the house from top to bottom, cleaning everything in sight. When four o'clock rolls around I'm literally half dead. But--and this is the good part of that day--that is the night Dad has his special togetherness with the kids. At five-thirty they all pile into the car, drop the baby off with my mother and go out for hamburgers or what-have-you at a local diner. As soon as they leave I quickly eat a bowl of canned soup and go to bed, where I sleep or read for two leisurely hours. When my family returns I'm once again fit to live with.

4729

As for washing and ironing, I put a load of clothes in the washer every day before I do the breakfast dishes. With that wonderful convenience, a dryer, I take about 15 minutes to fold most of the clothing and save the few things that have to be ironed. I iron for about two hours one night a week while we watch television. It is a practically painless chore.

Having read this far, I'm quite sure you have arrived at the conclusion that here is undoubtedly a very lazy woman. Well, you are right; I am lazy, and you might even say selfish, except that my children and husband would disagree with you wholeheartedly. They like me to be happy; they like to know that I'm not too busy to play a new game, discuss the unfairness of the sixth-grade arithmetic assignment, examine a bird's nest; or too tired to be an interesting and loving wife. They like the fact that I have time to read profusely on all subjects and to pursue my hobby of growing and arranging flowers--a hobby which has grown more dazzling year by year.

I'm generally considered a good housekeeper, a wonderful mother, and "how she ever gets time to do all that gardening" is a "miracle." Frankly, I love to hear these opinions expressed, and have never before gone into the details of how I accomplished this so-called "miracle."

But as you can see, it's all done with smudgy mirrors!

SECTION ONE: ALLOCATION OF RESOURCES
UNIT II: Values, Goals, and Standards
II-7. I've Found a Schedule That Really Works[1]
by Norma Duerst

(See Suggested Learning Experience No. 18, p. 7 in Part One)

I wonder how many mothers have felt at times that the job of managing a home while bringing up small children is a chaotic, never-never job--never ending, never satisfying, never really well done.

It was not until my third child was born that I began to feel that way. When my husband Gene and I were married, seven years ago, I gave up my secretarial position and we moved to a small Wisconsin town, where my husband had accepted a job teaching social studies and physical education at the local grade school. We bought a small, two-bedroom house overlooking a lake just outside of town, and I slipped fairly easily into the role of housewife. I had time to read, to sew, to make friends and visit with them, and to be cheerful and relaxed for my husband when he came home at night. When our first child, Kim Susan was born and three years later our second child, Paul, my daily routine was somewhat disrupted, to be sure, but I still managed to run the house and have time for myself and my family. So when I became pregnant for the third time, I paid little attention to friends who told me: "Two isn't bad, but wait till you have three! You won't have time for anything." I paid little attention, but as soon as Peter Eric made his appearance I discovered that they were right!

Suddenly I just couldn't seem to cope with the everyday demands of the children and the house. Toys began to clutter up the living room; beds began to go unmade. Dust gathered on the television set and dishes collected in the sink. Although Gene always helped with the children--bathing them in the evening and taking them from underfoot whenever he could--my housework just overwhelmed me. And unlike some women, I couldn't be philosophical about the disorder that surrounded me; it depressed me terribly.

It took one exceptionally hectic day to make me see what was wrong. On this particular day I had worked constantly--making beds, wiping noses, picking up toys, fixing lunch, changing diapers, picking up toys, settling arguments. I had managed to find just enough time to be impatient with the children. When shortly before lunch Kim had taken out her dolls and dishes to play, I had snapped, "Don't mess now--pick up your things!" When Paul's attention had wandered from his blocks to his trucks I had frantically scooped up the blocks and put them away.

4731

At 4:30 in the afternoon I sat down for the first time since breakfast, and suddenly I realized that although I had worked steadily from seven o'clock on, I hadn't accomplished a thing. The living room was a mess, in spite of the fact that I had picked it up at least three times. There were unwashed bottles in the kitchen sink. The pie I had planned to bake for Gene was unmade. I was still dressed in the Bermuda shorts and limp blouse that I had thrown on that morning.

It just didn't make sense. I was wearing myself out and accomplishing nothing. Wasn't there some way to have a reasonable smooth-running and calm household? Couldn't I have a dusted, clean living room and still have time to do my nails? Wasn't there some way of getting the washing and ironing done that would leave time for me to play with Kim and Paul? Did I really have to choose to cuddle and rock my darling baby?

The next day I timed myself to see how long my household jobs really took. I found, to my surprise, that I needed just 20 minutes to vacuum my living room and hall and that dusting the living room took a mere 9 minutes. Bed-making--17 minutes for three beds and the crib. The breakfast dishes could be washed, dried and put away in 14 minutes. These figures, of course, didn't include time out for wiping noses, distributing cookies or zipping up fly fronts for a little boy who can't quite manipulate the zipper. Nevertheless, I came to the conslusion that even with untimed interruptions, housework <u>could</u> and <u>should</u> get done in less time and in a more orderly manner.

What was using up my precious time? One thing, I now realized, was my habit of picking up the toys a dozen times a day. Another was spending too much time in the morning on my second cup of coffee (which usually stretched to three or four). Another was long visits on the telephone. One of my biggest time wasters was hopping from one job to the next. I'd make Kim's bed and then, instead of completing the room, I'd go and throw some things into the washer. Or I'd clear the breakfast table, and instead of doing the dishes then and finishing in the kitchen, I'd shift to the beds or pick up clothes.

Finally I worked out a schedule. I know that some girls hate the idea of a schedule, but I've found it has worked wonders for me. Let me say, however, that mine is not an extremely rigid one. Instead, it is a workable, changeable routine that allows me time for myself, my children, and my husband.

First, I get up earlier in the morning. Peter usually wakes at 6, and rather than snuggle back into bed as I used to do after giving him his bottle, I stay up. I spend this quiet time, from about 6:30 until 7, in showering, getting dressed, putting on make-up and doing exercises (trying to reduce that after-baby roll around my middle).

Gene gets up at 7, and while he's showering and shaving I make our bed, put away pajamas and robes and pick up in our room. Then I make breakfast and have time--usually--to scan the paper and drink my juice before my two little Indians are up and at 'em for the day.

While Paul and Kim are drinking their juice, if all seems calm, I go to their rooms and make beds and pick up there. Before I changed my routine,

Kim and Paul often would be walking around until 10:30 or 11 in their pajamas and robes before I got around to dressing them for the day. Now I've made a rule: Neither of them can watch "Captain Kangaroo" until they are dressed. As a result, they dress eagerly so that they can watch their favorite program.

By 8:30 or 9 I have my beds made, my children dressed and myself neatly dressed and ready to begin the rest of my work for that day. If I can't get around to dusting the bedrooms that particular day or vacuuming the living room, at least things are neat and uncluttered. It's surprising how clean a home looks if it is just picked up and straightened. No one will ever notice whether the windows have tiny finger smudges, if the pillows are on the couch and the papers and toys off the floor. And if the beds are made and pajamas put away, nobody will notice whether the rugs have been shaken and the floor dust-mopped that morning. Don't misunderstand me--these jobs get done too; but sometimes, with the countless "unscheduled" interruptions, it's hard to accomplish everything in one day.

My weekly schedule I follow quite closely. Monday I do my entire washing and steam-iron part of it from the dryer. I prefer this way to my former method of washing a load or two of clothes every day. True, Mondays are busy, but then I'm done with my laundry for an entire week. This does not include, of course, the baby wash, which I do every day after the baby has his bath.

Tuesday I finish my ironing. Wednesday and Thursday are relatively "free," except for the daily cleaning and any odd job that may need doing. Friday I do a thorough cleaning, which includes scrubbing and waxing the kitchen and bathroom, washing windows, wiping out my refrigerator, and so on.

Before going to bed each night I pick up all newspapers, books, and glasses in the living room and plump the pillows on the couch. I stack any stray dishes in the sink so my kitchen won't be messy in the morning. I also put all the toys away. What takes me ten minutes to do at night would take me three times as long with the children underfoot in the morning.

One thing I have learned to live with is a certain amount of clutter in the living room. Our house is small, and Kim and Paul invariably make the living room their playroom. However, instead of picking up toys a dozen times a day and frustrating both myself and the children, I wait now until naptime and then all three of us make a "game" of it. In all honesty, sometimes it takes quite a little cajoling to get the children interested in this particular game. Then in the evening, at 4:45, "Bozo the Clown" comes on, and the children must pick up all their toys again before they can watch the program. In this way the house is all picked up when Gene comes home at 5:30.

4733

It seemed that the odd jobs around my home were always so hard to squeeze in--things like sewing a button on a coat, straightening out drawers, washing the light fixtures, mending socks, shampooing the furniture or cleaning the oven. I'm a great one for making notes anyway, so I started jotting down all these little extra jobs that weren't getting done. Every day I try to cross one of these jobs off my list. Surprisingly enough, sometimes thinking about a job takes longer than doing it. It gives me a sense of accomplishment, too, to cross them off one by one.

And some short cuts I've discovered have helped me immensely. One thing I do now while I'm preparing dinner is to clean my silverware drawer or scrub the baby's high chair or polish my silver. It's surprising how much can be squeezed in between peeling the potatoes and tossing the salad.

I must admit that even with a schedule and good intentions, a certain number of days are bound to be far from calm and serene. There will always be days, no matter how well planned, when things will all go wrong--when the oatmeal boils over on my clean stove or Paul scribbles with crayons on my floor or the baby is unusually fussy.

However, I've found that with my new system I can find time for myself--to sew a new dress, fix my hair or read a book, visit with friends and entertain occasionally. I've found time to enjoy my children, more time for playing with them, reading to them, appreciating them. I've found time to be pleasant and attractive for my husband, to have appetizing meals for him and still maintain a reasonably calm and clean home.

I've found time for the most important things--my husband, my children, me.

4734

4734

SECTION ONE: ALLOCATION OF RESOURCES
UNIT II: Values, Goals, and Standards
II-8. Poverty, U.S.A.[1]

(See Suggested Learning Experience No. 21, p. 7 in Part One)

The impoverished are people, too. And here are a representative eight, chosen from many others interviewed by Newsweek throughout the country and keyed on a map of the U.S. They are at once typical of their plight and individual in their response.

Some have always been poverty-stricken, some only recently; some are not there yet, though headed in that direction. Significantly perhaps, none has ever been wealthy, nor even prosperous. And none is an "operator," able or even willing to exploit all the relief and charity possibilities open to him. Finally, nearly all have pressing health problems, and nearly all, somehow, have hope.

ALICE AND HOWARD NEIPERT

The living room of the Neipert apartment in Portland, Maine, is small and warm and filled with accumulated bric-a-brac of a 50-year marriage. Alice Neipert, a neat, buxom woman with a drawn face, sits quietly in a rocker near the window. She has crippling arthritis. Her husband, Howard, a benign 78-year-old, canes about the house. He has osteomyelitis.

Eight years ago Howard retired with $6,000 in savings and the intention of working at his old job as a shoe salesman three days a week and thus earning $1,200 a year. Within six months, however, he had become too sick to work. All the savings went for medical bills. "That was money we were going to have fun with," Mrs. Neipert says mildly. "We had a few little trips planned, maybe one to Florida."

Now they live on social security--$141 a month.

They eat sparingly, but "well enough," they both say, spending $10 to $15 a week on food and carefully balancing their diets. Mrs. Neipert can't walk very much, but she cleans the three-room apartment every day, does all her own laundry, ironing, and cooking. Howard vacuums, and they have a relay from closet to table for setting the table.

The Neiperts own a TV set, acquired before his retirement. (They think programs are going downhill fast.) Recently they have acquired a toaster

---

4736

4735

and some blankets with grocery-store stamps saved over the years. They also have a phone--"the last thing I'd give up," says Mrs. Neipert. "Our son calls from South Portland every night."

Doctor bills and medicine costs menace their future. "Still, we don't owe one nickel, and we have a lot of wonderful friends," says Howard Neipert. "I'm not able to work, so we just have to get along, or else!"

The couple also retains a few "luxuries"--the morning newspaper (Pa'd just be lost without his paper"), and now and then a present. "Last week," says Howard, with a devilish glint, "I brought my wife a pint of sherbert."

MRS. PAULINE VELIZ

A family under siege, Pauline Veliz and her six children huddle in their four-room railroad flat in New York's Spanish Harlem and shut out the world. Their enemy is the fanged street below, which extends into the tenement, up the clammy, urinous stairways, past the occasional dozing junky who sometimes grabs for the children.

And there is a second enemy, sickness, the classic foe of the poor: 10-year-old Rosalinda has asthma. "They tell me she shouldn't climb stairs," says her mother bitterly. Five-year-old Bertile has a rheumatic heart. Antonio, 11, once spent over a year in a convalescent home in Connecticut. "All that time," says Mrs. Veliz, "I never saw my son. Finally I told the welfare people, 'You give me visiting money, or else I'll use the rent money.'" Welfare refused. Mrs. Veliz defied them, went to see her son, and got away with it: "I'm not afraid of welfare anymore. They can't throw you out unless you have a man around. I don't have one and I don't want one. I don't want any more children."

A round vivid woman of 38, Pauline Veliz was born in the U.S. of Puerto Rican parentage. She mentions the two husbands in her life, both now disappeared. Her children are entirely supported by welfare--$133 every two weeks. They attend parochial schools; Pauline accompanies them in the morning, picks them up in the afternoon, and they return via Girl Scout meetings and the like, to the dingy, spotless apartment.

It is not an easy place to keep clean. Periodically the rats appear and must be driven out, their holes boarded up. A month ago a large chunk of kitchen ceiling fell to the floor. There is a puppy. "The children need entertainment," Pauline explains. "They don't have many toys." In the living room bookcase is The Golden Home and High School Encyclopedia, bought on time years ago.

The Veliz children seem frightened, slow, not up to their vital mother. She caresses them often. They run up frequently to touch her hair, hold her hand. "I try to keep them happy," she says, "and safe. These days, there's no safety in the streets."

4736

CALUDIE MAE LOWE

Every morning a timid, round-eyed Negro mother named Caludie Mae Lowe sweeps the clay front yard of her two-room home in Taliaferro County, Georgia. It is the country way to show a family is living in a house that otherwise appears uninhabitable.

Claudie Mae's two rooms are teeming with humanity. She has eight children, only three of school age, only one now in school. (The others have dropped out, she explains, "till we kin git 'em up some clothes.") She has a husband named Tobe, patient, stocky, middle-aged, "a sawmill man" jobless since last fall after eighteen years with one company, three years with another. Sawmilling is fading out in Central Georgia, so Tobe farmed for a while, "goin' halfs" on 40 acres of cotton with a white man who put up the land, equipment, and $50 a month "run money" for groceries. Since harvest time, however, he has had no work.

Somehow the ten Lowes sleep and "set around" in one room. It is darkish from boarded-up windows, and full of beds and boxes and has an old easy chair with makeshift board seat. The flowered wallpaper has been torn and shredded by children up to a height of four feet. Above are decorations, large advertisements of Stokely's Beans and Van Camp's Pork and Beans.

In the kitchen are several battered electrical appliances, though the electricity was turned off months ago. Last week, the oven of the broken down stove contained a hunk of white fatback, the size of a man's hand and some grits. Claudie Mae was making the family staple--hoe cake. "Ain't got no milk," she said with a bewildered little giggle. "You spose to use milk; I uses water."

As she told of her last visit to the doctor, Claudie Mae's giggle was like that of a sad child. "He say I got dis here thing. Say I got to have my womb took out."

Tobe still hopes to be a sawmill man again, still applies for every opening he hears of. "When de wages went up, de mills just shet down," he says. "This week I been to these heyar planing mills, where dey puttin' up a new mill, and de man say 'I ain't goin' to keep all the hands I got 'cause now they's machines doin' what hands used to do.'"

The rent for Tobe's house is $7 a month, but his landlord, a sympathetic Negro who lives in a more substantial house up the road, is not pressing for his money. "I just don't see how families live like that," he says.

The landlord also lets the Lowe children fetch pails of water from his house. Tobe's well is muddy and unsatisfactory. On days when Claudie Mae is boiling clothes, the children bring the water to the big black pot in the Lowes' front yard. But lately the pot is seldom used; the children have nothing to wear while their clothes are being washed.

Now and then Tobe considers moving his family to the city, but he believes it is not for the likes of him and Claudie Mae. "Hit's right smart fast in town," he says. "Reckon maybe hit's too fast."

THOMAS RAY SPRAY

A glum, pudgy 21-year-old, Thomas Ray Spray already has the mark of the loser upon him. He finished the eleventh grade in a special class at North High School in Des Moines, but the school felt he had gone as far as he could. He wasn't permitted to enter the twelfth grade and get his diploma.

Tom Spray still feels the shock of being given a 1-Y (limited trainability) classification by the Army. "I'd looked forward to going in," he says. "I figured it would be my chance to learn a skill or something. No reason why I couldn't either. I can read well enough to learn a lot of things." Tom lives with his divorced mother and 15-year-old sister in a dingy two-bedroom apartment with cracked walls, chipped paint, and an atmosphere of near-hopelessness. He has worked two and a half months in the past year--mixing fruit cakes in a bakery for the Christmas trade. The rest of the time he has been looking for another job--or else slouching unhappily before the TV set in the living room.

His small, harassed mother supports the family on her $32.50-a-week take-home pay as a pie maker. "Sometimes I just feel like giving up," she says. "Why can't the boy get a job? Why didn't they let him finish school? Why did the Army reject him? Nobody ever tells us. It's not his fault. He tries."

His ambition is to get back into bakery work. "There's a future in that, and it's the only thing I know anything about. I might even get myself classified as a skilled worker on my past experience."

But nothing has turned up lately in bakeries or anywhere else. Tom visits the Iowa Employment Service offices twice a week. "All they ever say," he sighs, "is they ain't got nothing. Leave your application, and we'll be calling you, they say, but nobody ever calls."

JOSEPH CROWLEY

Three years ago Joseph Crowley and his family were moving up in the world. He was a warehouse leader, making $2.49 an hour, at the Essex Wire Corp. in Detroit. He'd moved to a two-story brick and shingle house, bought a new TV set and a new turquoise davenport. Then he was laid off.

Crowley hasn't found a steady job since. Now the family income ($243 a month) comes from neat, little Dolores Crowley, 33, who housekeeps at the rectory next door. When she's at work, Joe cooks for the five children. "Sometimes I get way down in the dumps," he says. "Then I do something extra, like maybe wash down the bathroom walls."

The Crowleys are still eating reasonably well, and the children (3 to 13 years old) are neatly dressed, but there are health problems. Both adult

TEFA 4738

Crowleys need dentures, and the children have cavities. Because they can't pay their family dentist, the Crowleys have not visited him lately. "Two or three years ago," Dolores says, "the doctor told me to have a hysterectomy, or at least a checkup every six months. But it would cost $12.50, and more for blood tests, and I haven't been for a year."

The Crowleys are not on welfare. "I was raised on it," says Mrs. Crowley. "I don't want it for my children. Anyway, this is the hand God dealt us and we have to play it."

And Joseph Crowley pulls his 3-year-old son on his knee and says: "If I'd just gone through high school and had a trade, things would be different."

SLIM LEMERT

Sodden, hopeless, living on 10-cent wine and self-disgust, Slim Lemert is on the bottom of any man's pile. He is 37, a former mechanic, divorced, with three children he never sees. Now he is a Main Street wino in Los Angeles.

He has one remaining point of pride. "I've given up a long time ago," he says, "but I've never had to go to no mission. One thing I won't do is become a mission stiff."

Last week Slim had on the same blue jeans he has worn for three years. He hadn't washed in over a week. He hadn't eaten since yesterday, when he'd managed to get down a bowl of beans.

Now and then Slim Lemert works, but he is choosy: "I could make three or four bucks passing out handbills--but you got to walk your feet off twelve hours a day. I'm not about to wear out my shoes for some rich man."

There have always been Slim Lemerts in the world--in good times and bad. They are a part of poverty's landscape; they belong in the land of the poor. Many don't even consider liquor their major problem. "As long as there's a celler," Slim says, "there's going to be a rat in it. I'm the rat, I guess."

Lemert nurses his wine slowly at first, sipping half the glass meditatively, then suddenly gulps the rest all at once. "I'll tell you something very funny," he says. "I hate wine. I almost puke every time I drink it. But if I didn't stay drunk, the chances are I'd kill myself."

JOHN AND CLARA KESTER

People in Adair County in the Ozark foothills of Oklahoma respect John Albert Kester. He is a homeowner, a member of the local school board; for the past ten years he has held the same full-time job.

0848

4739

He makes $48 a week.

"Handyman's wages," he says, "top pay for farmers, but it's not enough." And an apologetic smile creases the 43-year-old face that looks a dozen years older. Last week, John's wife, Clara, wearing a faded shirt, men's work pants, and shapeless brogans, talked about feeding her seven children: "They get dry beans cooked with grease, 'taters, and when the cow's giving, most of 'em drink milk three times a day. And every month we get the government 'commodities'--about a week's worth of butter, two weeks' of flour, and such like."

The Kesters live on 25 mortgaged acres in a tar-paper "brick" four-room house jammed with castoff furniture. Worn linoleum covers the living-room floor and a bare lightbulb glares over an old TV set and a stove smelling of burning oak.

Now and then the family considers leaving the area. "Sometimes, I get plumb mad because I don't have some of the things I'd like," says Clara, "but mostly I don't think about it." Then she looks about and smiles softly. "We do like it around here. It's the prettiest country in the spring you ever did see."

MRS. ESTHER STROM

Proudly the old woman lifted a bottle of $3.75 cologne from the bureau of her 9 by 10-foot hotel room. "I would rather miss a meal than be without my perfume," she said. "I am still a lady."

Esther Strom is small and plump and 68. She lives on $118.50 a month from social security and her late husband's World War I pension. Her room in the tired old Hotel Tynan half a block off Market Street in San Francisco is $35. She spends $2 a day on food, and for entertainment has the public library.

Esther Strom emigrated from Finland in 1928 as the wife of an American seaman, who disappeared for long periods. "You know how men of the sea are. From the first I was on my own." She became a cook in many of the wealthy homes around Nob Hill. "I'd cook now, if I had the chance. But of course I haven't--not with these hands." Esther's hands are crippled with arthritis.

For a few years, in the '30's, she was a writer. A Finnish publisher brought out two of her books on early Finnish settlements in America. She has also experienced her share of life: "I was a woman who loved wine and song and the men. But now there doesn't seem to be anything left..."

And sitting in her tiny room, she listens to the sounds of traffic and runs her fingers over the worn cloth of her skirt and looks at a picture of herself as a young woman. "Those were the days," she whispers, "when I was alive."

UNIT II: Values, Goals, and Standards
II-11. How Do Those Joneses Do It?[1]

(See Suggested Learning Experience No. 27, p. 8 in Part One)

If others seem to manage better than you can, remember--every family is different and the differences seldom show.

Nearly everyone knows how much his neighbor makes, approximately. Although folks don't go around reporting their incomes out loud, money still has its ways of sounding off. It talks, as they say, and you don't need especially sharp ears to hear its message.

Take your neighbor Jim Jones. Nice fellow, Jim. Good neighbor. Your two families enjoy a casual, easy, back-fence relationship. Yet you're quite capable of discussing the Joneses' financial affairs--in the privacy of the kitchen, with the kids out of earshot and the dishwasher going.

A husband might speculate: "Oh, I don't know, but Jim must make around $15,000." Or $10,000. Or $20,000. Whatever the going rate may be on your block for gross annual incomes of envied neighbors.

A wife puts her comments differently: "They've had three new cars since we got the Edsel.... They plan to send Martha to camp this summer--for two whole months!.... They're ripping out every last bit and doing it all over in avocado.... Some mob scene they had last night. It must have been 3:30 or 4 before those patio lights went off."

A certain brittleness underneath suggests: "How come we can't do all those nice things they do?"

Sex and Your Neighbor's Income

Interest in how much others make and how they spend it seems to be universal. Both men and women crave details on this topic, and whether the information offered is real or imagined, observed or merely sensed, both sexes perk up and pay attention.

But the sexes react to the data differently, especially when the neighborhood financial news has a sting to it. Suppose that Neighbor Jim, so like you in so many respects that you consider yourselves equals, turns out to be sustaining a higher level of material well-being at his house than you've managed to achieve at yours. How do male and female respond?

A man can take this punch and roll with it. It smarts, of course. He thinks of all his efforts and good intentions and wonders, edgily, just what ol' Jim ever did to deserve topping him this way. But a man is likely to be rueful rather than jealous, to feel chagrin rather than indignation.

CPTP

4744

Superior character? Not really. The fact is, a man doesn't prove himself here on Willow Street. He makes his mark or misses it downtown on Main Street, on the job.

To be sure, he thinks a lot about "being able to do for Jane and the kids, really take care of them," and this goal provides much of his motivation. But in a man's world there is no such thing as being a success on Willow Street and a flop downtown. If his career is successful, he won't rate himself a failure just because his neighbor has a classier car.

With a woman, it's not quite the same. She too can tolerate differences in material matters, but they must be sufficiently remote. How people live in the country club district a mile down the road doesn't bother her. Neither does she feel measured or challenged by families in the lower-priced neighborhood a mile up the road in the opposite direction.

What does get to her are the disparities she discerns right in her own neighborhood, on Willow Street. There she is among families who she assumes, probably rightly, are neither much more nor much less affluent than hers. Each breadwinner probably brings home about what hers does, give or take a little. In age, education, circumstances, even in aspirations, everyone on Willow Street is pretty much alike.

So Willow Street is a wife's real world. And what does she find there? Where all reason and justice lead her to approximate equality, she observes inequality everywhere. Almost every home offers its little evidence of a comfort or an abundance that is absent from hers. Each reminds her of some pinching little economy, postponed pleasure, makeshift expedient. She fumes, not because she can't manage beautifully with what she has--she is in fact, more than willing to do so--but because "it's all so unfair!"

If you live in a highly diversified neighborhood where high-income people rub shoulders and share interests with those of more modest means, there may be less of this green-eyed concern about the Joneses. But most people don't live in such places. They tend to get sorted out by age, family size, and income into neighborhoods of look-alikes.

And then, being merely human with human doubts, everyone is quick to take note when a similarly situated neighbor gets dissimilar results for his money.

A Columbia University sociologist, Herbert J. Gans, recently published a study of a community that symbolizes the big-scale, middle-income, homogenized suburb: the New Jersey Levittown, outside Philadelphia. Gans himself lived there for two years. In The Levittowners he reports that problems and worries were general. About 60% of the people interviewed confessed to problems, 93% admitted worries. Since having problems carries some stigma, Gans thinks that the percentage of worriers probably is a better indicator of the prevalence of anxiety. Low-status people reported

more problems than higher-status people, but worriers were everywhere.

No doubt you can guess the main cause of concern. "The principal irritant was family finances," Gans found. And apparently you can't get away from money problems simply by having more money. "Obviously,...low-income people (earning under $6,500) worried most over finances, but high-income ones (earning over $9,000) reported financial problems as often as the rest--they just did not worry so much about them."

And money problems, as ever, led to other problems, particularly marital ones. "It's money that causes all the other problems," one wife explained. "When my husband and I quarrel, it's because of not being able to do things and have things."

Facts Behind the Scenes

A decade ago, Changing Times took a look at another superfically homogeneous suburban community for the express purpose of discovering what kinds of family financial activity provoked envious comment and what facts lay behind the talk.

This community--we called it Oakmill Valley Estates--was no Levittown. It was much smaller, a bit higher-priced, and populated by junior executives and young professionals who earned a bit more than the Levittown norm. This investigation was not conducted on the Gans pattern, either. It was a journalistic, impressionistic inquiry rather than a sociological, statistical one. Out of it came reports on five families whose fiscal behavior in one way or another tended to disturb the neighborly peace.

--Family #1 always seemed to have money left over, a condition rare elsewhere in the vicinity. The source of the surplus was a mystery. But the fact of its existence was not; for the head of the household had a lively oftexpressed interest in investments and was capable of dropping such depth charges as, "I don't have a dime's worth of oil stock right now."

--Family #2 were the lively ones, always on the go--theater, night spots, the best restaurants, football games, weekend trips, frequent vacation trips.

--Family #3 were outstanding in only one way, but a way that bespoke an opulence that had wives reeling for blocks around. Imagine, a maid five days a week! How on earth did they manage it?

--Family #4 won attention not for anything it did but for what it possessed, mainly an elegant car--this year's, every year--and a houseful of furniture that looked just like the pictures in House Beautiful.

--Family #5's conspicuous distinction was owning a summer home at the seashore. The minute school closed in the spring, the wife and kids vanished until Labor Day. The husband joined them every weekend.

4746

How did these families come by their exceptional arrangements? Had they found some magic? Did they simply manage better, more expertly? Or did each hold some secret his neighbors had yet to unlock?

Through circumspect inquiry we learned that there were indeed some special reasons behind these special circumstances. And while the inside stories were in a sense secret, they were scarcely miraculous or arcane. On the contrary, they were prosaic, disillusioning and even anticlimactic.

Once inside, the facts were these:

--The secret of the family that had the inexplicable surplus available for saving simply was split-level economics. They earned at one income level and lived at a slightly lower one. Result: surplus. Their economies were not drastic ones but little ones, spread widely and evenly so that they never pinched and didn't show to onlookers. Because the family had been living this way for some years, they were beginning to enjoy the fruits of their prudence. Their investments' earnings were paying for occasional small splurges, the kind that other families had to carve out of their regular budgets.

--The facts behind the family whose endless round of entertainment caused such consternation proved to be equally mundane. He had a good sales job. Most things the family did had business connections for him, thus bringing his generous expense account into play. Others in the community had various fringe benefits from their jobs, too; this family just happened to have unusual ones about which they were unusually close-mouthed.

--There was sad irony in the story of the family with the full-time maid. Instead of being better off than most, they were below par for the community. And they had a bigger family, a bigger house, a bigger mortgage, and bigger monthly payments. They had to economize heavily in ways no neighbor needed to, on clothes and food and recreation. And that full-time maid didn't figure in their budget at all. A concerned in-law paid for her, in full, an arrangement that began "just to help out temporarily" when the youngest boy was born. That was six years earlier.

--The family with elegant car and elegant furniture had nothing special at all to reveal. They just preferred to use their money for car payments and furniture rather than for fancy food or lots of clothes or away-from-home entertainment. So cars and furniture are what they spent it for.

--As for the family with the seaside summer home, their affluence traced back to financial help from well-heeled relatives and inheritances that had come to them at the time they bought in Oakmill Valley Estates. That financial leg-up enabled them to pay mostly cash, so they had a very small mortgage. They could budget a darned sight more for recreation than any other family in the community--and a darned sight less for mortgage payments.

4747

Are Some Envies Eternal?

Now ten years have passed. Have things changed in the meantime? Not long ago Changing Times returned to Oakmill Valley Estates, just to see.

Yes, there have been changes, for one thing, everybody calls the place plain Oakmill Valley now, "estate" having come to seem a vulgar pretension to apply to a third of an acre. All incomes have gone up, mostly in step with each other and, happily, a step ahead of prices in general. Now two cars per family are customary, with enough instances of three to suggest a trend. The families that once scrimped for clothes dryers now have them. They also have air-conditioning and now scrimp to see kids through good colleges.

There have been changes in the cast of characters, of course, and there has been one fundamental change in the script. Ten years ago, the community consisted solely of young families with small children. By this time, there has been an infusion of older families, those whose children have left home for college or to strike out on their own. Some of yesterday's young families remain in residence, now playing character roles as "older families." And the vanguard of a brand-new generation has entered, heralding another round of young families just starting out. This generation gap produces a new Jones-type problem that could not have existed in Oakmill Valley a decade ago. The box on the following page explains.

On the whole, there seems to be less anxiety about money now than there was ten years ago. Perhaps the general rise in personal incomes is responsible, although, as Gans remarked of Levittown, those with more money are as prone to money problems as the rest but just don't worry about it as much.

Yet the old nagging wonder at how the man next door manages better living per dollar still persists. Similarly, there seems to be no change in the explanations for the disparities that provoke envy. Today's Joneses, like yesterday's, appear to owe the little material successes that set them apart from their neighbors to such humdrum, practical factors as these:

Earlier savings. Having a pile on tap at a propitious moment helps a lot. It can eliminate long-running drains on current income and thus be the equivalent of extra income for years.

Money-managing skill. Income can be wasted. Some of the most-envied families may be wasting theirs. Those with the will to make deliberate spending choices, to keep records and to stick by their financial decisions eventually wind up ahead of those who manage largely by whim.

Hidden help. Extremely common, usually unacknowledged, immensely useful. Whether it comes as one big bundle, occasional boosts or regular, continuing subsidy, it substitutes for cash and/or savings.

Job-related benefits. These take many forms. All share two cha cteristics: low visibility and high income equivalence.

Options. Life offers alternatives. Whatever the Joneses have that you covet--be it boats, bonds or beagles--may be theirs by choice alone. If you want boats or bonds or beagles badly enough to assign them your top financial priority, you can have 'em--instead of something else, naturally.

Cues from the Joneses

One could draw a couple of lessons from the Joneses and their neighbors. They go like this:

--Never conclude that because someone else affords something, you should be able to afford it, too.

--Never conclude that because some people spend in ways that you cannot, you aren't managing right.

Maybe you aren't managing right. But did it ever hit you that maybe the Joneses aren't, either? All you know for sure, remember, is that you and the Joneses manage differently. The judgments on what's right and wrong--for you--remain in your hands, exclusively. Make them. Leave the Joneses out of it.

THE JONESES & THE GENERATION GAP

Another reason why people over 50 and those under 30 don't quite connect is that the over-50's were traumatized by growing up during the 1930's Great Depression.

In those days, Chicago was bankrupt, families lived on day-old bread at 3-1/2 cents a loaf, zoo animals were shot to save money for relief, the family dole in New York was $2.39 a week (only half the needy could get it) and one-fourth of the whole state of Mississippi was sold off in a single day's foreclosure actions.

Witnessing such events marks a person with what a book written two years ago by Caroline Bird called The Invisible Scar. It leaves an over-50 wary about his money.

Now pension plans, social security and amortized mortgages give us built-in savings. We get to enjoy our savings in our own lifetimes, too. And credit is a workaday tool instead of a desperate last resort.

So today's young people confidently expect and get all kinds of things before they earn them--car, house, baby, every convenience, every appliance. And they have a good time while their scarred elders marvel and cluck in alarm over these cock-sure kids, a baffling new breed of Joneses.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT III: Needs, Wants and Family Life Cycle
III-1. What Is Self-Actualization[1]

(See Suggested Learning Experience No. 3, p. 13 in Part One)

Self-actualization is defined as one of the basic human needs--it is the need to become the most effective person a human being is capable of becoming with the potentialities he has. It is more easily explained through an understanding of its relationship to other human needs.

All human behavior is motivated by a desire for satisfaction of several different kinds of needs. These needs have been classified by Maslow and ranked in order of most demanding (physiological) to the highest and ultimate need, which is for self-actualization.

HIERARCHY OF NEEDS (3)

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. p. 4.

4750

Once the lower needs are fulfilled, to some degree, then the next level begins to emerge. As stated by Maslow, "gratification of one basic need opens consciousness to domination by another 'higher' need." (2)

But, usually all the various levels of needs exist to some extent most of the time. That is to say, that hunger does not have to be fully satisfied in order for a desire for safety, love, esteem and self-actualization to be present also. Each individual interprets his needs and the strength of these needs according to his own culture, tastes, values, attitude about self, feelings, family, job and money. (4)

In describing self-actualization in relation to the other basic needs Maslow states--

"Even if all these needs...(the lower level needs)...are satisfied, we may still often (if not always) expect that a new discontent and restlessness will soon develop, unless the individual is doing what he is fitted for. A musician must make music, an artist must paint, a poet must write, if he is to be ultimately at peace with himself. What a man can be, he must be. This need we may call self-actualization." (1)

"...the human being has within him a pressure (among other pressures) toward unity of personality, toward spontaneous expressiveness, toward full individuality and identity, toward seeing the truth rather than being blind, toward being creative, toward being good, and a lot else. That is, the human being is so constricted that he presses toward fuller and fuller being and this means pressing toward what most people would call good values, toward serenity, kindness, courage, knowledge, honesty, love, unselfishness, and goodness." (2)

If an individual is not doing what he can do best or using his capabilities to achieve a feeling of self-fulfillment, he will feel restless and discontent. As educators, our responsibility is to help each individual understand himself and his potentialities and to help him grow and develop to his fullest potential.

In order for an individual to keep striving toward the ultimate in his development, there has to be growth and a feeling of accomplishment so that he knows he is achieving. "Achieving basic-need gratifications gives us many peak-experiences, each of which are absolute delights, perfect in themselves, and needing no more than themselves to validate life." (2) These experiences give reinforcement and keep the individual striving forward.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT III: Needs and Wants and Family Life Cycle
III-2. The Family Life Cycle of Ted and Norma[1]
by Dr. David Fulcomer

(See Suggested Learning Experience No. 10, p. 14 in Part One)

Although this case study is dated in the sense that it is written about a couple who were known by the author in the early fifties, it provides a realistic view of the couple's progress through the family life cycle. It depicts Ted and Norma as husband wife, father and mother, father-in-law and mother-in-law, grandfather and grandmother. The first part of the case study is based on information from Dr. Fulcomer's files regarding an actual couple. The last part is his projection of events that might have occurred in the couple's lives after he knew them.

Ted and Norma were married within two months after he got back from overseas after World War II. They had been engaged since one month before he went overseas, the year before.

He was an attractive fellow, not handsome, but with a happy, active personality in a 5'10" frame which was definitely masculine. In college he was well liked by most students and faculty. He made slightly better than average grades and played basketball.

Norma had a way of arranging her 5'5" in a neat, clean fashion. She had her share of dates in college. Though she would never have won a beauty contest, she made the most of what she had, and that was quite a bit. Almost everyone liked her. She was a good singer and made a "B" plus average. Also, she was very active in other college activities.

They wanted to marry before he went overseas, but both sets of parents had advised waiting. Both felt a loyalty to their families; and, besides, it seemed to be pretty good advice. So they waited, neither ever dating during this period of engagement.

Norma remained at home with her parents and younger sister. Both she and Ted graduated from the same college the year he joined the Air Force. She took a job teaching in a music studio in her home town, and within a year she had made quite a reputation for herself. She decided to open her own studio in the same town and did so just a few months before Ted returned from overseas.

---

[1]Permission for use granted by Dr. David M. Fulcomer, Director of the Family Studies Center, Temple Buell College, Denver, Colorado.

Ted did well in the Air Force. He went over as a second lieutenant and came home a major.

ESTABLISHMENT STATE

And so they were married! It wasn't a tremendous "social splash" but even a simple church wedding takes a lot of planning and energy, they discovered. It was in her church. Both were Protestant--he a Baptist and she a Presbyterian. Their home towns (both cities of less than 25,000) were about 70 miles apart.

Wedding plans went fairly smoothly. Norma knew what she wanted and stuck to it pretty well. She and her mother clashed over the flower arrangement in the church and the list of guests at the reception, but Norma finally won out. By the morning of the wedding, everything was all set and the wedding went off as scheduled, with the exception of a few minor details. Both groom and bride's father remained in the background most of the time, except for a small stag party the night before the wedding, when both men, ordinarily very careful about limiting their consumption of liquor, had a bit too much. Both felt the effects the next day.

The reception was a huge success. It was nearly 6 p.m. before the bride and groom got away from the reception and eluded three carloads of well-wishers. The clock had struck eight before they finally got to the hotel in the large city where they were to spend their one-week honeymoon. But they were very happy and very much thrilled with each other.

They enjoyed each other in every way during that week. It did seem to Norma that Ted was awfully abrupt about this sex business. (They had refrained from heavy petting and sexual intercourse before marriage, despite strong temptations.) He didn't seem his usual think-of-Norma-first self here. Also, she was surprised to find that he was a lot more careless about throwing his clothes around and leaving the bathroom in a mess than she had expected. But this didn't bother her very much; after all, she could soon change that, and he didn't mean anything by it! Ted found Norma to be everything he had expected; he had absolutely no complaints.

Next, back to his home town, a one-room apartment three blocks from his parents' home, and his job as a post office employee. He liked the work, the fellows there and the various activities of the work group, such as playing on the softball team in the city league. They kidded each other a lot, and had a lot in common, and had a happy time in general. Ted's salary wasn't too high and he knew he would never get rich in the post office, but he figured it would always give them a sufficient income. Other things in life are a lot more important than money!

Norma had closed her music studio two weeks before their wedding. She spoke of opening one when they got settled, but Ted wouldn't hear of it. By golly, he wanted to support his own wife, besides they agreed that they wanted a couple of kids! And you can't be a good mother and work, too. Oh, if she wanted a few pupils, that would be all right, but none of this full-time work stuff for her. Norma tried to argue with him, but she felt that she could enjoy a life with Ted and without work, so she didn't argue too long about the matter.

4754

Those early months of marriage went along pretty well. They had lots of good times together. It wasn't long before Norma had a few close girl friends. They were married, too; and sometimes the couples would go out together to shows, games, and picnics. Norma liked a good softball game and often went to see the post office team play. But, sometimes, this got to be too much of a good thing, with two or three evenings a week taken up by softball. In the fall and winter it was bowling.

She wasn't aware of it at first, but she had begun to resent the time some of Ted's friends and activities took away from them as a couple. A few of his close friends were "crude," even though they meant well. Even their language was hard to take sometimes, what with the poor grammar and frequent swear words. But she loved Ted, and she guessed his friends were just a part of him.

Ted agreed to let her take on an increasing number of music students. Expenses were more than he had figured. She was a good manager, he knew, but why did she have to buy such expensive priced stuff, like the new Kimball piano, for instance? True, she had saved up over $400.00 before they were married and used that as the down payment, but the monthly payments really placed a strain on his monthly check. They had a big argument about it several months after they were married--really got sore at each other. She cried and he felt like a fool. But she was her old self the next day, so he forgot the incident.

In the more personal side of their lives, neither had any big complaints. Norma did feel that Ted had a lot to learn about the psychology of women, but they never talked about sex in any thorough way, and she didn't quite know how to begin. So she didn't.

She did wish that they lived farther from his folks. At first it didn't bother her, but after a month or two, she found herself resenting suggestions that his mother made. When she said something to Ted, he would just laugh at her and tell her she was imagining things. True, his mother wasn't the dominating type, but Norma hated the subtle little ways she made hints about the room arrangement, the cooking, etc.

EXPECTANT AND CHILDBEARING STAGE

Then it happened! Norma discovered she was pregnant just at the end of their first year of marriage. Gosh, they had wanted to wait about two years, until they had saved some money and collected a few more pieces of furniture. Ted seemed very happy about it from the start and said that it is good to have your children while you are young. Norma wasn't so sure. She had been planning on approaching Ted with the idea of opening a music studio. Now that was all washed up.

4755

Ted's mother insisted on a certain doctor, and Norma wanted another. At first Ted sided with his mother, but when he saw that this was upsetting Norma, he took her side and they chose the doctor she wanted.

Everything was so new and strange to Norma. None of her girl friends were pregnant. She had confidence in her doctor and followed his advice to the letter. He gave her a booklet to read about pregnancy and some rules to follow.

Ted didn't pay much attention to her pregnancy, Norma felt. About all he seemed to consider was how it would affect their sex life. He believed women were made to have children and should be able to do it without much trouble--his father had often voiced this opinion. Ted really felt uncomfortable about his ignorance of what pregnancy means to a couple, but he kept this to himself! If anything, he spent more time with his own friends. It got so bad that Norma finally "told him off." He apologized and did spend more time with her for a few weeks.

Norma felt pretty good most of the time--in fact, she was surprised. She did have trouble with coffee (one of her great favorites) and a few other types of food, but she never got awfully sick. During the last two months she felt awfully awkward and lazy, and it embarrassed her to go out in public. When she began to "show," Ted seemed even more embarrassed than she. So she kept pretty much at home. It really made her angry sometimes to see Ted having such a good time--his life seemed little changed. Only a few times did she mention her feelings to Ted, mostly it was a matter of inner resentment. The only thing he seemed to be concerned about when she gave up her music pupils the last month was the reduced income--or so it seemed to her.

Jimmy was born almost two weeks before he was expected! Before she went to the hospital, Norma was afraid, but she didn't let anyone know about it. Ted seemed to have little knowledge and understanding of what it was all about, but when she began labor pains and they had to rush to the hospital, he was really scared. She had a kind of a "rough" time, too; she was in labor for twenty-four hours.

But once Jimmy was born and found to be a fine, healthy 7 lb. 8 oz. young man, Ted was all smiles and thoroughly enjoyed the cigar-passing and the usual jokes by his men friends. Three days later Ted took Jimmy and Norma home. Both excitement and bewilderment reigned the first few days. Norma was glad to have the help of Ted's mother. Then her mother came for two weeks. Finally things settled down to a routine. They were both so proud of Jimmy--and themselves.

But there were troubles, too. Ted wanted to keep up with his social and recreational life. Norma thought he should be home more. Look at the changes she had to make. Ted was really good to her, but he seemed to have little insight into how life was different now. When Jimmy was born, Norma was 24 and Ted 25.

Jimmy was a healthy boy, but it seemed to Ted that the bills for drugs and baby supplies were awfully high. He found it necessary to go more easy on the money he spent, and he didn't like that particularly, especially when

Norma would bring up the subject. Furthermore, he resented her harping on his staying home. Good Lord, a baby shouldn't make that much difference!

Norma met a few young mothers in church and got very friendly with them. They loved to talk about their babies--and did. Ted enjoyed so much of this talk, and then, enough was enough! He missed going out to dances and parties, as they used to do. He was proud of Jimmy and liked to show him off, but how he hated the diapers, the crying and the getting up at night. Norma expected him to take his turn at these things. Well, he guessed he should, but he didn't like it!

Then when she started taking some music students again, she expected him to take care of Jimmy more. That really hurt--but they needed the extra income so he didn't complain, at least not to Norma.

Her mother came up more often now, and that wasn't good. She helped with Jimmy, but she had too many suggestions and was in their way too much, according to Ted. Norma agreed, but she said that it would be hard to get along otherwise. And when the two mothers got together, then Ted, Norma, and Jimmy hardly had a life of their own!

Things went along pretty well, but Ted and Norma seemed to have more difficulties than formerly. Each realized it, but they seldom talked with one another about it; in fact, they never did talk it over freely. Ted began to see the "ball and chain" aspect of marriage, so he thought. Norma began to wonder about Ted, her music career, and their marriage. And they had their share of difficulties about his going out, their expenditures, and their relatives.

Then it happened again! Jimmy wasn't two years old when Norma got pregnant. This certainly wasn't planned. Both Ted and Norma were really unhappy when they found out; each tried to cover up this feeling.

PRESCHOOL STAGE

Pregnancy was more understandable this time, but it wasn't any easier to take. She hated to give up her music income, she thought Ted should really become "somebody" now, and he disagreed; if they thought money was scarce before, it really was now.

Tommy was a healthy 8 lb. 2 oz. baby. They were really happy about his birth when it actually came. They were grateful for the many enjoyments that went with it. It was nice to have a brother for Jimmy, who was just over two and a half years of age when Tommy was born.

Hospital insurance paid for most of the hospital bill, but not for the doctor. They had to arrange to pay that bill by the month. Norma wanted to pick up her music pupils as soon as possible, but Ted objected strenuously.

8C5A

4757

He began to feel the pressure of getting a raise or in some way increasing the income. After all, he was almost 28 now. He was beginning to feel older than some of the fellows at the post office. Funny, he hadn't felt that way before.

The next four years were full of contrasts for Ted and Norma, fun and problems, happiness and worries. Gee, there wasn't anything like a nice family. But, gosh, you really have to pay for it, too. In addition to the extra work two young boys made, Norma felt she should get as many music students as possible. Also, she sewed more and did all the washing herself. She bought fewer clothes for herself. Sometimes she resented this need to pinch and save, but this feeling never stayed with her long.

Ted gradually began to get used to being around home much of his spare time. He took pride in being a good baby-sitter, but sometimes there was too much of it. He did enjoy playing with the boys and making things for them. They were awfully cute and full of fun. He liked to take them out where other people could see them and would know they were his.

The parents kept healthy, but it seemed that one of the boys always had a cold or something worse. Lots of money went to the druggist and the doctor. And sleep--gosh, sometimes they were up two and three times a night. They seemed tired so much of the time; no wonder they were so "rough" on each other sometimes.

Church began to be more important to them again. They hadn't been too active or regular when they were first married. After all, though, the children should be reared properly. Besides, when you begin to feel more settled yourself, you can see the importance of religion. So they gradually became more interested and more active. In fact, they were fast becoming one of the most faithful and active young couples in the First Baptist Church.

Money was really short during these years. Norma did what she could with teaching voice, but they both agreed that her main job was with the children. They both thought it strange that at a time when they had the worst money problems they seemed to have fewer of the other troubles. True, Norma was unhappy at times at not using her abilities to produce much needed income. Besides, she missed the work and contacts of a full-time music teacher.

When Jimmy was four, Ted changed from the post office employment to work with an insurance firm. He could see that the post office had no future. Besides, his new boss thought he was a fine prospect as an insurance salesman. And he did well at it too,--right from the start he had more income than he had earned at the post office.

Norma often worried about how to rear the children. There were so many articles. She tried to read as many as possible and to follow them. Actually, she sometimes felt that she and Ted were awfully poor parents. They lost their tempers so often at each other and at the children. Ted didn't worry so much about this. He believed more in the good "old-fashioned" way of handling kids, anyway. They had some bad arguments over this. Usually Norma won out.

4758

4758

SCHOOL AGE STAGE

Sometimes they yearned for the peace and freedom of the days when they were alone together. Life at home was so hectic so much of the time. Both of them were proud to see Jimmy enter first grade. But they certainly were not prepared for the differences school and growing up would bring to their living. Jimmy did well in school and seemed to get more and more involved with activities that took him away from home. Cub Scouts and then Boy Scouts, junior band and then the town band--and so it went. Tommy was a real live wire. In school, he made things really hum. His grades were not as good as Jimmy's but he had even more friends. Often Ted and Norma asked him why he couldn't do as well as Jimmy, but it seemed to do no good.

While the boys were in the grades, Ted improved his income considerably. Norma could work almost full time at her music again, too. So they could afford such things as a new car, new household appliances, and even the Country Club. Money wasn't such a problem anymore, though they still had to watch it carefully.

TEEN-AGE STAGE

By the time Jimmy started his eighth grade, his father was an officer in the church, was very active in the Chamber of Commerce and Rotary Club, and had begun to push out a bit at the waist line. After all, he was now approaching forty. Gosh, but what a thought! He laughed about it, but it bothered him some, too. Now he watched the softball games. And he had to admit that Jimmy could outlast him in most athletic activities. He hated to think of growing old, gosh, he felt as young as ever. But he was mighty proud of being able to branch out successfully with his own insurance business.

Norma was happy through these years. Ted was a wonderful husband, even if she did get awfully angry at him sometimes. She guessed she wasn't perfect either! She worked hard at keeping her school-girl figure, but admitted that all she could do was keep things under control. Her hair was beginning to turn gray, and that was hard to take, even if Ted said it made her more beautiful.

She had plenty to do, she found, with Jimmy beginning high school, her music pupils, her church responsibilities and trying to keep tab on the family. In fact, very soon she and Ted--mostly Ted--decided that she should drop her music teaching completely.

Oh! Those high school days. Ted and Norma had never seen anything like it--and never wanted to again. Once Tommy got that far along, too, home was a rat race. It seemed that they had hardly an evening a month when all of them were home. Ted had business, or church, or club, or lodge, or something else. Or Norma had recitals, or bridge club, or PTA, and the boys--well,

they got home to eat plenty at each meal, but otherwise were busy elsewhere. Now and then one of them would hang around long enough to see a television program.

And girls! Norma hadn't known up to this time that her own gender could be such a problem to a family with only sons. Jimmy started dating steadily when he was a sophomore and went through a whole series of "loves," each one very serious. Tommy poked fun at such goings-on (which only infuriated Jimmy and was the basis of many fights and squabbles) until he was a freshman; then he, too, had his string of females. But Tommy didn't get too serious with any of them. He changed girls at frequent intervals and seemed to enjoy it.

All through these high school years there seemed to be turmoil and commotion in the household. Arguments over which one of the four could have the car, who could use the bathroom first, whose interests got priority over the others--these were very common. Life was full of excitement about dates, games, elections, contests, and parties.

Norma tried hard to keep some kind of order. She pleaded for evenings with the family all together and alone. But the three men seemed to let life carry them along at its furious clip, and Norma could do little about it.

Things died down a little when Jimmy went off to college. (Norma was 42, and Ted 43--they could hardly believe it. Nor could they easily grasp the thought that they now had a son going to college, and another well along in high school.) Tommy was so active and noisy that Jimmy's absence wasn't too much of a catastrophe as far as family activity--or the lack of it--was concerned. Home didn't change too much.

But when Tommy left, it was as if the cyclone which hit the home had suddenly left, and now a deadness prevailed everywhere! It hit Ted hard, as he admitted, but for Norma it was awful. Now she was sorry that she had given up her work with music.

She became depressed at times. Unfortunately, she began going through the menopause shortly after Tommy left for his freshman year at college. She didn't suffer much physically, but all of a sudden she felt old and useless. Maybe she was only 45, but the best of life seemed to have gone. She tried to busy herself with church work, club, and other activities. They all helped. But she now found that PTA, in which she had been very active, had much less interest for her. In fact, she wondered if she should belong, now that her boys were out of school.

She thought of teaching music again, but Ted said that it would be a reflection on his ability to support her and the boys. Finally, she compromised by taking over the directorship of the church choir. This helped a lot.

In the meantime, Ted was really busy with his work. He won an award from his insurance company for the biggest percentage increase of the year in the entire state. He was mighty proud of that and wasted no chance to let people know about it. He knew Norma was having a tough time and that he ought to spend more time with her, but he just had to keep active in his

expanding business and the things related to it, such as Rotary, lodge, church, club, and special events like conventions.

Norma resented his concentration on work and neglect of her, but she said nothing to Ted. Church activities and club did bring them together at times. And besides, she was gradually beginning to feel better about things. By the time Tommy was in his sophomore year at college, she was pretty much her old cheery self. But even then, a lump often came to her throat at the stillness and neatness of her home and at the many hours which were empty unless she made special plans to occupy them with some activity.

We shall now look in the 70's to anticipate what this decade may hold for Ted and Norma.

Jimmy had always planned to come back to the insurance business with his dad. So, when he graduated from college, he and his father were both very happy about the new partnership. Within a year, Jimmy married his college sweetheart, Nancy, whose home was a farm about 400 miles away. These two had their first child, Joanne, three years later.

Ted was now 51 and Norma 50. As Ted said, "Gosh, we're still young and here we are--grandparents." The thought made him happy, and it also made him sad. He felt quite mixed up at times. But he was so very busy that he did not have much time to fret about such things. Norma was very happy at having this new interest--a real, live, dear, sweet, little human being. She had always wanted a girl of her own. She made it a point not to interfere with Jimmy and Nancy as they reared their little Joanne, but she found it hard to practice this resolve.

She worried quite a bit about the kind of mother-in-law she was being. If only a grandmother could enjoy her children and in-laws and their babies without having to worry all the time about what other people would say! Ted was very happy about being a grandfather. He was proud of his ability to bring up a family and furnish them with all their needs, including a good business which his grandchildren could have some day. He didn't want his sons or their children to work like he did.

Tommy, meanwhile, had finished college with a fair average and had gone to South America to work for an oil company. He wrote that he liked it but he didn't write often. Norma worried about him and wished that he would keep in closer touch with home. After three years in South America, he returned to the U.S.A. where he settled down in New York with his oil company and married a girl his folks had not met until a week before the wedding.

By this time the first grandchild was almost three years old. Jimmy and Nancy seemed to be happy. Norma, however, found this to be not the happiest time of her life, but she kept busy and was reasonably satisfied. Ted was going "great guns" as he termed it.

4761

A year later something new was added! Ted had a fairly severe heart attack and the doctor told him that unless he became inactive in the business, he probably would have only a few years to live; if he were careful, he might easily live another twenty or thirty. At this time, Ted was 55 and Norma 54.

In his usual abrupt and decisive way, Ted agreed and immediately set to work turning the business over to Jimmy. He spent several weeks going over everything with Jimmy. Then he and Norma took a vacation trip which lasted over a month. If they were reasonably careful, he told Norma, his insurance and the business would give them a pretty good income the remainder of their lives.

When they returned, Ted began to drop into the office in the mornings. He became very restless. At first he tried to putter around the yard and garden at home, and to otherwise occupy himself, but he made little progress. As he himself said, "Damned if I realized how everything would hit me all at once."

Norma was concerned because he was so irritable and nervous. He even lost his good appetite. They were really quite unhappy at home. Ted spent a lot of time with the grandchildren. He tried so many other things. Finally, he told Jimmy that he would just have to work most of the day.

This was arranged, much against the advice of Norma, Jimmy, and the doctor. Things went well for over two years. Ted was happy again; he and Norma were quite happy with each other; everything was rosy. Then came in the second heart attack. That finished work for Ted.

Now Ted and Norma are 57 and 56 respectively. They are settling down to a more quiet life but still struggling at the thought of being labeled "old." They have much time together, and enjoy most of it. Ted, however, is still very restless and dissatisfied. Norma worries over his health, both physical and mental; but she thinks he is getting better, at least in the way he feels about things.

What does the future hold for Ted and Norma and family? The old saying still is true: "Only time will tell."

4762

SECTION ONE: ALLOCATION OF RESOURCES
UNIT III: Needs and Wants and Family Life Cycle
III-3. Wants Vs. Needs[1]

(See Suggested Learning Experience No. 15, p. 15 in Part One)

EDITOR'S NOTE: These pages have been planned as an individual learning experience to stimulate thought about using money as a resource.

Have you ever stopped to ask yourself why you buy what you buy, how you decide what you need? Have you consciously thought about money as a means to an end, a resource to satisfy wants and needs?

Using the hypothetical situations described below, test yourself to see which of the items pictured on pp. 61-62 you would select. Pretend that you are in a store, make your selection and then ask yourself why you made the choice you did. If you do not select one of the items on these pages, then think of something you would buy, given the particular situation.

1) You are shopping on a Saturday afternoon with a friend. You do not have any purchases in mind, but the two of you are wandering through stores. Do you see any items you might buy?
2) You have gone shopping to purchase a new outfit to wear to a sports event. You have something at home to wear in case you cannot find anything. What would you purchase?
3) Someone has just given you $100 as a gift. Which of these items would you buy? If you do not see anything here you would select, what would you like to buy with the money?
4) You have received $20 back on your income tax. What would you purchase? What would you like if you have more money?

Now ask yourself:

Why did you make the choice you did?
Is the item selected filling a need? If so, what need? If not, why did you select it?
Can you distinguish whether it was a want or a need? How would you define a need? A want?
Would you use the item to reach some goal?
Will the desire for this item be fulfilled by its purchase or will the desire recur at a future date?
How did you decide which of these items to purchase? Was it done by a conscious decision-making process, or did unconscious forces affect you? Will acquiring this item lead to the desire for other things.

According to Maslow, all human beings have basic needs which motivate behavior. These are:
The need for food, clothing, shelter.

4758
4763

The need for safety and security.
The need for love and belongingness.
The need for self-respect and self-esteem.
The need for self-actualization.

The basic needs which we have can be limited to the necessities of life. Wants are unlimited, and economics is based on the belief that they are insatiable over a long period of time. Wants sometimes are categorized as all the items which we have been accustomed to having in our lives, as well as all things desired. Most of what we want is a want, and not a need. Wants are physical (sound, sight, healthfulness), psychological (creativity, gregariousness), and social (approval of a group).

All human beings have wants and needs in common. How individuals interpret and fulfill them depends upon many variables:
*Climate *Age *Sex *Stage of family life cycle *Resources available for food, clothing, shelter, etc. *Income *Occupation *Cultural background *Group *Values *Goals *Customs, etc.

Although we are not consciously aware of it, conscious consideration of any items to fulfill wants or needs involves a mental process of decision-making. The steps involved are:

*Recognizing the problem *Analyzing the problem *Seeking available alternatives *Considering each alternative *Making a decision and acting upon it.

Decisions may also be influenced by unconscious forces (desire for security, self-esteem, status, social approval, or to create a personal image), by advertising or by habit. The reason we tell ourselves--why we make a decision--may not be the real motive--we may rationalize (see article on "Impulse Buying" Forum, Fall/Winter, 1968).

SUMMARY

Perhaps one way to better manage resources is to understand oneself, one's needs and wants and how they influence decisions. Understanding and making conscious decisions may help to utilize resources more wisely and to make them go further.

It is oftentimes said that it is difficult to distinguish wants from needs--sometimes they overlap. Making a definite distinction between the two is not absolutely necessary for every purchase. But, if each individual were to take time to think through what he wants and clarify in his own mind why he wants these things, he might acquire a more accurate picture of his values, goals, and motives.

During the next few weeks, make a conscious effort to analyze those decisions you make about what you buy, as well as those decisions you make about what you don't buy. Ask yourself, are you becoming more aware of money as a resource--are you thinking about this resource as a means toward helping you achieve self-actualization?

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-2. Toward Self-Actualization: Managing Resources[1]

Dr. Dorothy Z. Price
College of Home Economics,
Washington State University

(See Suggested Learning Experience No. 5, p. 17 in Part One)

"How should I manage my money?" "How can energy be managed to prevent fatigue?"--These and other similar questions may seem to be pertinent to problems today and are frequently asked and contemplated. However, it might be advisable to reconsider whether these are really the most relevant approaches to problems facing individuals and families today. Should the focus be on techniques of managing specific resources or on management of all resources according to the type of problem faced? That this is more than a semantical difference becomes apparent when results or potential results of these two approaches are compared. It must be remembered that research in this area is relatively sparse, and therefore the conclusions must be viewed as tentative hypotheses. However, evidence, even though sparse, is beginning to suggest implications of special interest in family living.

Our society has reached a point where sufficient material resources are available to satisfy basic physiological, and possibly the security, needs of all. It is obvious that this has not occurred, but the cause is distribution rather than resource scarcity. This potential should free people from an overriding concern with the range of problems focusing on satisfaction of these lower basic needs. Other types of needs emerge and our primary concern shifts to the satisfaction of these needs. Higher need satisfaction, including need for love and belonging, for self-esteem, and finally for self-actualization, is likely to lead to many problems of different types than those stemming from lower need predominance.

These problems are more apt to be social in nature. They focus on value selection and change, general goals or patterns of life, integration of different individual roles and integration of unique individuals within a working group. Human resources take on special importance. Even material resource use may take a somewhat different approach. Efficiency and specialization, which are somewhat relevant in technical decisions where accomplishment of a clearly specified task is paramount, are no longer of primary value.

Social problems can be approached in a manner similar to that used in solving technical problems, and this frequently is done. This can mean

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. p. 2.

4769

that resources are manipulated, rather than managed. Manipulation refers to the control of resources in order to serve one's own purposes. If we consider this in terms of material resources the results may not be too alarming, though in some situations, they may be questionable. However, in terms of human resources, the question of manipulation rather than management, takes on great importance. This is especially true if we are concerned with self-actualization, which is the realization by an individual of his own highest capacities. If human resources in any group are manipulated rather than managed, it is difficult to see how any need for self-actualization can even emerge; the environment becomes one which discourages the search for one's own identity.

It should be stressed that manipulation of human resources is not necessarily an indication of lack of concern for others; it is more apt to stem from a lack of awareness of the real problems which exist and the magnitude of their importance. In families, value and role problems calling for social decisions may be approached through technical means. Family members are manipulated or controlled as material resources toward efficient achievement of goals, already selected or dictated, either by another family member or an outside group or institution. This is frequently done with the best of intentions, but is a tragic example of an efficient decision-making technique applied to the wrong type of problem.

Recent studies of students by Keniston give some indication of possible results of these differing methods of working with human resources. In families of alienated students (those who had chosen to drop out of society, such as the hippies), domination by an overcontrolling mother prevailed. The mother-child relationship is characterized by maternal control and intrusiveness and children join the mother in an alliance which depreciates the father. These students who appear to be pushed in a certain direction tend, not only to reject parental values, but generally see individual life as purposeless. In families of committed students (those working toward change or reform, such as some student activists), family life was unusually equalitarian, permissive, democratic and highly individualized. Free dialogue and discussion of all feelings was actively supported and children were encouraged to make up their own minds and to stand firm against group pressures. The mother was a highly individuating force, who pushed the children to independence and autonomy.

On the basis of limited evidence, these two groups seem to provide a timely contrast between the possible results of manipulation of human resources and failure to deal with social decision on one hand, and the management of human resources and active involvement with social decision on the other hand.

If management has as its end goal the encouragement of self-actualization, then everyday use of resources must focus on the setting of an environment which will encourage the emergence and satisfaction of this need. This, of course, means that basic physiological needs, needs for security, love and self-esteem must first be satisfied to some degree. Satisfaction of these needs requires the awareness of different types of problems and the use of resources in a way relevant to those problems. It requires the ability to be other-concerned rather than other-directed. It requires the ability to manage human resources by creating an environment in which each individual

4770

is encouraged to seek out and justify his own values and to discover his own highest capabilities, rather than to work to achieve a goal which has been pre-set for him; this is the route to self-actualization.

Finally any discussion of managing resources in order to encourage self-actualization must consider, at least briefly, the self-actualizing person himself. Studies, especially by Maslow and Rogers, indicate the characteristics prevalent in a self-actualizing individual. He is not the well-rounded person who is well-adjusted to his society. He is not the "all-around good-guy" who wins popularity contests. He may even be considered eccentric or radical. Rogers points out that this is not a life for the faint-hearted, because it involves the courage to be and to become committed and involved fully in the stream of life. Life will be enriching, exciting, challenging and meaningful, but it will not be easy or simple.

In a society when so many advances have allowed us to concentrate on the individual, we should be free to emphasize the humanness of man ("humanistic management," as identified by Fromm). The logical place to start is the family, where major decision--social decision--should be solved by social approaches, and not be ignored or approached technically, and where human resources used in these decisions should be managed and not manipulated.

(See Suggested Learning Experience No. 13, p. 18 in Part One)

According to a recent report, by the age of seventy the ordinary person has spent his time as illustrated below.

NUMBER OF YEARS	DEGREES
20 years of sleeping	103
20 years working	103
7 years in sports	36
5 years in shaving and dressing	25
7 years at the movies, theater, and other amusements	36
1 year on phone	5
2 1/2 years eating and sitting at table	13
2 1/2 years smoking and chewing gum	13
3 years waiting for one thing or another	16
2 years playing cards and games	10
	360

[1]Adapted from Tips and Topics in Home Economics. Lubbock, Texas: College of Home Economics, Texas Tech University. Spring, 1961. Vol. 1, No. 2.

4772

* Most of the family's money goes to food and incidentals (non-food items).
* There is no record of recent purchases.
* Basic problem is lack of money by the end of the month. Has to cut short the clothing expenses in order to have enough money left for emergencies.
* All purchases made by cash.
* No savings plan established at this time.
* No insurance plans.
* Medical and dental expenses paid by welfare.
* Emergency fund available through welfare if need arises.
* Food stamp program is U.S. Department of Agriculture program administered by Welfare Department. Allotted amount can be used only for food.

DICK HARRISON

Dick Harrison (17 years old). Indianapolis, Indiana.

Present Status: Senior in high school.

Family: Two brothers, father and mother at home.

Employment: Works twelve hours a week, as stock boy in a drugstore. In the summer he works at the same drugstore and paints with an uncle.

Income: $25 per week during school year, $55 per week in summer.

Information from Interview:

* Dick pays for his lunches, clothes, books, dates and records with money he earns.
* He does not receive an allowance--parents occasionally buy clothes for him, but do not have him on a clothing budget.
* Uses the family car. Father pays for maintenance and insurance. Sometimes Dick pays for gas--about $2 per week.
* Figures he sometimes spends $30 per week on clothes. Usually spends $5 on records, $8 on dates and entertainment per week.
* His biggest problem in relation to money is that he can never seem to keep enough cash on hand.
* If he needs more money he draws it out of his bank account or borrows from parents or older brother.
* Does not have charge accounts. Would possibly like one but is afraid that he might overspend the account.
* Does not spend much time shopping--likes to shop for sweaters, slacks, shoes. Mainly, shops alone and is not influenced by anyone in his shopping.
* Interests are jazz music, reading, girls (occasionally), people in general. (Is president of his Family Living Class.)
* Future plans--to attend Purdue in fall. Is saving some for education--feels he should be able to help himself to some extent.
* Has life insurance which his parents pay for.
* When asked if he is consulted in the family's financial planning, he said: "Yes, they ask how I feel."
* Feels young people are wise in handling money in most cases.

4774

4774

THE AUSTINS

Fred and Brenda Austin (52 and 47 years old). Town in Wisconsin.

Children: Two boys, ages 15 and 13.

Employment: Husband works as a lab technician for a paper company. Wife has worked part-time as a waitress. (She is overweight, and it is believed that this is one of the reasons for her leaving work. Women do not usually work outside the home in this town unless they are head of the household.)

Background: Live in an industrial city of 10,500 people. He is of German background; she is Dutch. Both have high school diplomas. He was born and raised in this town; she was brought up five miles away. He works in the same mill his father worked in, but has a different job.

Income: Around $8,000 before taxes.

Weekly expenses:

Housing	$50.00	(Will soon own home)
Household Operation	10.00	
Food	25.00	
Clothing	6.00	
Car	7.00	(Purchased new car last year; traded in old one. He gets ride to work to avoid taking car. Money includes gas plus money for rides.)
Entertainment	2.00	
Insurance	2.25	(Mill carries term insurance based on $1,000 of earnings)
Medical	1.00	(Covered with mill's health insurance)
Savings	0.00	(Have funds in paper-mill savings plan)
Other	0.00	

Information from Interview:

* They feel most of their money goes for food and taxes.
* Most recent purchases (outside regular purchases) were the car and camping equipment. (Wife stated that they often rent a cabin in the summer, but she spends more time cleaning than enjoying vacation.)
* They do not anticipate any unusual purchase over the next few months.
* Problem with money is that they don't feel they have enough. If they had more they would spend it and live better.
* Mr. Austin pays the bills and does much of the buying.
* They use both cash and charge to purchase items. Will use charge when it is for appliances.

* Have no savings or investment plan.
* Future plans are education of their sons.
* Health is important to them.
* Oldest boy has a paper route. Money he earns is his to use, but he must save.
* They often go out on Friday nights for fish plates, or visit relatives for a change of pace.
* Mr. Austin is somewhat jealous of a younger brother who got an education and is teaching.

MARY GALLAGHER

Mary Gallagher (25 years old). Denver, Colorado.

Employment: Teaches English in a secondary school. Has been teaching here two years. Before coming to Denver she taught in Chicago for two years.

Background: Mary grew up around Chicago but went to college in Colorado. Decided to leave the Chicago area after two years of teaching and join friends in Colorado. Her father is an industrial worker--he is from Ireland. Mother works in local retail store--grew up in Chicago. Parents did not want Mary to leave home, but she felt it would be more fun in Colorado--plus she likes to ski.

Income: Around $8,200 before taxes. Take-home pay $6,233.

Monthly Expenses:

Housing	$120	(Shares new apartment with another girl--rent includes utilities)
Food	80	(Eats out a couple of times a week)
Clothing	100	(Varies, but this is average for dress, slacks, shoes)
Car or Transportation	50	(Auto expenses--gas--insurance)
Entertainment	50	(Approximately)
Insurance	10	
Medical	5	
Savings	0	
Household Help	20	
Drycleaning & Laundry	12	
Other	20	(Sends to younger sister who is in college)

Information from Interview:

* Feels most of her money goes for clothes and food.
* Has charges at local department stores. Felt she wanted to buy nice gifts for her family this past Christmas, and is paying off a $150 bill in one store on a monthly basis.
* Wants to buy a $400 stereo for the apartment in next few months. Not sure how she will buy it. Parents never used credit--always cash. She's worried and feels she should pay off her other bills first.
* Problem she has with money is that she feels she lives from paycheck to paycheck. Is paid twice a month--first check goes for rent and bills; second check to enjoy.

4776

* Does not have a savings plan--keeps saying she will start the next month.
* Skis in the winter and shares a ski house with friends. Pays $120 for the season plus $6 per weekend for food. Has her own equipment and spends $100 for season tow ticket.
* Has a very small life insurance policy.
* Family is important to her. Is helping a sister who is in college. Also, having fun is important to her.
* In future--would like to be married soon. Dating a young engineer now, but not sure if they will marry. She may go to graduate school.
* Flies home twice a year. Parents came to visit her last summer so will fly home only once this year.

THE LOPEZES

Raul and Rosa Lopez (31 and 25 years old). New York City.

Children: Four (2 girls, ages 11 and 3; 2 boys, 10 and 9).

Employment: He works in a venetian blind manufacturing plant and earns $65 a week (take-home pay). She is a homemaker and is attending school two nights a week to get her high school diploma and to study English. She works three hours every morning as a translator and assistant in a welfare program.

Background: Mr. Lopez came from Puerto Rico when he was 13; she was younger. They met in New York and were married when she was 13. His family is still in Puerto Rico--father owns land and has given each son a plot. Raul would like to return to Puerto Rico--feels his parents have a more comfortable life than he does. She wants to remain in New York--feels that things are not as good in Puerto Rico and that there is nothing to do. Her mother lives in New York and does not want to go back to Puerto Rico.

Income: $260 per month take-home pay. $73 per month supplementary welfare.

Monthly Expenses:

Housing	$57.50	(4-room apartment in city housing project)
Household Operation	8.20	(Gas and electricity)
Food	65-68.00	
Clothing		Varies ($28 per month on shoes for children)
Transportation	8.00	(Husband's carfare)
Entertainment	0.00	(Church socials, which do not cost anything)
Medical	5.00	($10 visit at local clinic)
Savings	0.00	

Other..... 3.00 (TV repair occasionally approximately $32 per year)

Information from Interview:

* Rosa's hobby is knitting; buys yarn at $1.20 per skein regularly. Paid $6 for yarn for skirt and blouse.
* Feel that most of their money goes for food and clothing. Besides regular purchases, last year they bought a second-hand dining room set and washing machine. They were purchased with cash from someone who was moving. They plan to buy paint for the apartment ($30) and fabric for curtains ($15) over the next few months.
* Do not feel they need to rationalize any spending--all purchases fill real and specific needs.
* Purchases for house or selves are paid with cash. Furniture was bought two years ago on credit from a dealer in the neighborhood.
* Saving is done by keeping any money which is extra and hiding it at home.
* Have no insurance.
* Future plans are to see children through school. Hope children will go to college, but children feel they should work when they graduate to help out at home.
* Important to them that their children get along in school.
* Rosa hopes that husband's income will increase as he is at job longer (at present job 1 1/2 years). If income is increased, hope for an easier time managing money.
* Boys belong to Kadets (2 uniforms each, at $17 each). Feel it teaches them about America, discipline, neatness, drilling. Group of boys 8-14 meet two nights a week.
* When Rosa was asked amount spent on clothing, she gave a detailed list of all family clothes.

THE SMITHS

Bill and Barbara Smith (50 and 45 years old), New York City.

Children: Three (2 boys 13, 6; girl 11).

Employment: He is a Science Editor of a national publication; she is a dress designer. Both enjoy their jobs very much. Neither is interested in retirement, and they want to be able to work beyond 65--both have confidence in their abilities to continue earning indefinitely.

Background: Couple has been married 23 years. Husband feels his parents were "completely irresponsible" about money, and feels his attitudes are influenced by this. Wife states that her ideas about earning power and money that are important come from feelings of the"pinch" during the depression. Both went to college in New York. From 1945-1956 they lived in Europe where he was a free-lance writer; she worked in couturier houses as a designer. Feel they had their free time then; do not want free time at retirement age.

Monthly Expenses:

Housing.....$240 (8-room apartment)

4778

Household Operation.....	30	(Phone, gas, electricity)
Food.....	240	(Including household supplies)
Clothing.....		(No budget--purchased as needed)
Car/Transportation.....	110	($50 car rental, $12.50 weekly for fare and $10.00 extra for weekends and getting around in city)
Entertainment.....	40	
Insurance.....	6	(Comprehensive household $73 per year)
Medical.....	125	($1500 per year)
Savings.....		Vary
Vacation Home.....	22	(Maintenance fee--$265 per year)
Household Help.....	124	

Information from Interview:

* Feel most of their money goes for rent and food.
* Recent purchases made were a vacation house and furniture, and a $200 tuition down-payment for daughter for private school.
* Anticipate buying $300 more in furniture for country home.
* Felt they had "unchecked leaks" in money management, so hired an accountant to review income, living expenses, etc.; realized they were expecting to do too much with amount of money they had.
* Bill feels he needs to rationalize some of the impulse buying he does; recently purchased a $75 drawing without a second thought.
* Have savings plan for taxes and schooling.
* Bill not currently carrying life insurance; changed job, and policy being reassessed.
* Future plans: To continue in careers, be prepared financially to help children in their growth (private school if necessary, camp if thought beneficial, etc.).
* Growth of family members as individuals in a mutually beneficial unit is important to them.
* If had more money, would travel.
* No planned program for children's education; parents will assist to a certain extent; children will be able to contribute; state schools considered a good idea. Can't worry about college now because have expense of private schools--will wait and see what happens.
* Outstanding debt--owe dentist $1000. Not too concerned--will pay as they feel they can.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-5. Self-Actualization Through Management of Resources[1]

(See Suggested Learning Experience No. 15, p. 18 in Part One)

EDITOR'S NOTE: We held another of our Forum's Forums to discuss in depth the theme of the issue--"Self-Actualization Through Management of Resources." Each of the "Forum" members represented a different point of view and is a specialist in one of the many areas which are all a part of management of resources and the development of the individual.

The "Forum" was conducted differently this time. We used the case studies (found on the preceding pages) as a starting point for our discussion. The morning session of our "Forum" was very philosophical and inspirational. In the afternoon, we selected three of the case studies and reviewed them for indications of family values, goals, and management.

Dr. Beatrice Paolucci, Professor, Family and Child Sciences at Michigan State University, served as moderator.

Some points which came out of the morning discussion were:

* Consumers need more information about what motivates their buying, as well as what are the actual costs.
* Many people today have only day-to-day goals; they are not future oriented and do not look any further than a short time span from the present. Spending is often done day-to-day, without knowing where it is leading.
* Cultural differences must be understood when evaluating a spending plan. Any part of a culture which adds meaning and value to the lives of the individuals within that culture is significant. (An example cited was that for some low income families being buried in splendor is very important; therefore, insurance is maintained for burial purposes.)
* We need to assist people with an understanding of the overall value system in the larger society. The individual has a right to differ in his values--striving for something which is real for him. When people find that consequences differ, their values will change.
* At one time, people found their identity through their work. Young people today do not feel that it is all important to produce. They want to perform in different ways--such as production of an atmosphere where creativity can take place and competent individuals can develop.
* An understanding of the self is basic to achieving self-actualization.
* To achieve self-actualization, the individual has to maintain himself physiologically and psychologically. As educators, we are obliged to start with people where they are at the nutrition level if need be. Any of the aspects of maintaining and developing the individual can be taught through means which would be appropriate for a particular culture.

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. pp. 8-9.

4780

* People should have a knowledge of values, but they also need to know what their physiological and psychological needs are.
* Self-actualization is the ultimate that an individual can reach within a society.
* What is a human being? What kind of society can we make, given the environment now present?
* Space is important in the development of personality.
* There is a need for standards to measure aspects of human development. We have established standards in certain areas: nutrition (caloric intake, protein, etc.), sanitation, clothing (through research on space-suits we have more information on maintaining body temperature, ability to move, etc.), space (amount of space required for growth), etc. But, we need more information and standards to help measure whether or not people are achieving goals in line with particular cultures.
* The use of money is reflective of what is important to people at a given point in their lives.
* Some people think of money as a goal--not a resource. Or they may consider money their only resource and believe that it can do everything for them. The concept of money needs to be re-evaluated; money should be a helper to achieve a goal--not an end in itself.
* Mass media help to make consumers aware of the many alternatives available to them as well as to create needs. People need to learn to discriminate about the information they get in light of their own values and goals.
* At the poverty level, time and energy are spent keeping alive. For the large number of people in the United States who have been freed from just surviving, the inner resources have not developed to any kind of full potential.
* People are managing well if they are achieving satisfaction and meeting their own goals.
* Teaching should be viewed as a reciprocal relationship. Teaching is not an input procedure--the teacher is learning also. There is a difference between teaching and allowing learning to take place.

Some evaluations and questions which arose during the discussion of the case studies were:

THE JONES FAMILY

* Basic to any use of resources is an understanding of one's basic philosophy of life.
* Free medical care is a community resource.
* It is felt that the money is probably not balancing out because of the condition of the mother.
* There are omissions in terms of basic expenditures--no mention of cleaning or school supplies. Since the woman is on welfare she may not have told some of her expenditures to the caseworker.
* The amount of money this woman receives could be re-evaluated. What foods could be purchased for the $76 a month for this family of 6? Are there community resources to supplement this? How can a family be taught to use creatively $5 a month for entertainment?

4781

* When expenditures are recalled, certain spending is remembered--but is it a true picture?
* Is the mother hampering her children? Chances are the 11 year old assumes much of the responsibility for the other children when the mother is ill. Human resources are sometimes removed in an urban society; in families of previous generations, an aunt or grandmother would probably have been present to help the mother.
* The society decides upon the amount of money a family will receive from welfare. What does this tell us about the values of the society?
* Any management problem should be approached from--what is available (human, spiritual, medical, community resources, etc.) or what could be available?
* This woman has aspirations to help herself. She is using a community resource (the Work Incentive Program) in order to train to be a clerk-typist.

THE LOPEZ FAMILY
* It is difficult to tell from this case study if money is being used as a tool to buy intangibles--such as love and revenge.
* In the Pureto Rican family it is very important to both marriage partners that the male dominate. The balance of their relationship may be thrown off--she is going to school and also wants to remain the the United States. What is this doing to the balance of power in this family?

THE AUSTIN FAMILY
* One of their future goals is the education of their children, but they have no savings plan.
* The exploration of whether there will be a difference in housing costs when they own their own home would make an interesting project.
* Health is also important to this family but they do not spend much money on food. It may be that the foods they eat are not expensive. Does this have anything to do with their background?
* There is no mention of how they paid for the car.
* The area where a family lives influences costs.
* There are forces working against the middle income family--they may not be able to take advantage of community housing.
* What are the constraints upon a family because of income, position, locale, etc.?
* What kinds of planning does it take to operate on a weekly, semi-weekly, monthly or seasonal basis?

GENERAL THOUGHTS
* All the cases have similar spending--spend for basics. What are the common problems they have?
* Would people be more likely to self-actualize if society provided a basic income to low income families?
* In order to analyze the cases and possible alternatives these families may have, the values, goals and resources of each family have to be uncovered.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-6. An Economist and Anthropologist Comment on Use of Resources[1]

(See Suggested Learning Experience No. 15, p. 18 in Part One)

EDITOR'S NOTE: We were interested in what families did not include, as much as in what they did include. In fact we asked Dr. Gordon Bivens, an economist from the University of Missouri, and Dr. Ethel Alpenfels, an anthropologist of New York University, if they would comment on these case studies. We think you will find their discussion interesting and "food for thought" for what areas of financial planning might need to be strengthened in teaching the management of resources.

DR. GORDON E. BIVENS, PROFESSOR OF FAMILY ECONOMICS
UNIVERSITY OF MISSOURI

PLANNED SPENDING OR A "HAPPENING"?

One gets the feeling that in these cases there is little actual planning of spending...that it somehow just happens. If so, and if this implies that the families aren't really thinking through their spending on the basis of underlying goals and values, then a real challenge exists--that of helping them to help themselves advance toward goal achievement by taking hold of their spending and using it as a tool to achieve their goals. In other words, to look upon spending as something that, within limits at least, can be tamed, controlled and disciplined to serve their larger purposes in life. But, on to some of the specifics...

THE FAMILIES AND FOOD, CLOTHING AND HOUSING...

Despite several families feeling that most of their money went for food and clothing, clothing expenditures for the families ranked third, fourth or fifth in their spending rather than first or second. Blowing up the importance of clothing expenditures may be due to some of these purchases involving relatively large outlays, forgetting that such expenditures may be infrequent. Food for families, on the other hand, did rank either as their largest or second largest expenditure.

It is curious that the families did not sense how large a chunk housing took, especially if household operation is included. Even though these case families apparently did not recognize it, housing ranks as their first or second largest expenditure; this was true even for the single girl!

In addition, household operation (utilities, cleaning supplies, probably telephone in some cases and related expenditures) ranked as the third- or fourth-ranking expenditure. This insensitivity to housing expenditures may

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. pp. 10-11.

4784

be due to lack of awareness or to a feeling of complacency that "Oh, well, what can I do about it anyway?" But, it seems it is an area of spending on which attention could well be focused.

THE SINGLE INDIVIDUALS AND CLOTHING...

The single individuals' spending for clothing was relatively large, as one might expect. And it may point out an interest area on which to "hang" one's teaching, extending out from there to other areas. Also, it may be that the clothing area is one in which increased planning and understanding might result in just as great pleasure resulting from decreased expenditures for clothing, leaving more money for other things.

WHEELS NO BIG DEAL??...

For the case study families, expenditures for transportation were either relatively unimportant in their way of life, or they were underreporting how much they spent for transportation. In no case were they reporting more than about 6 per cent for transportation; but even at the time of the U.S. survey of 1961, transportation expenditures were about 15 per cent of the total. For the individuals (Mary Gallagher and Dick Harrison), transportation was relatively more important.

WHOOPS! WHAT HAPPENED?...

In no case did the families and individuals in these case studies report spending for personal care--barber shops, beauticians, etc. Could this be because of their feeling that these might be considered as frivolous? Or, is it just that they aren't aware of such expenditures? For urban families any single consumers in 1961 (the last nationwide consumer expenditure survey), 3 per cent of all expenditures for for these purposes.

Although some of the cases reported recreation and related expenditures, others did not. And, even when reported it seems possible that the amount may be low. In 1961, recreation spending made up about 4 per cent of total expenditures for U.S. urban families and single consumers. That represented $218, or about $4 a week. The Austins reported $2 per week, the Lopezes nothing. The Smiths reported $10 per week, but that probably represents no more than 2 per cent of their total spending. As would be expected, the single individuals had a larger amount going for recreation.

Reading materials (even newspapers) and other educational expenditures (such as school-related expenses, including school lunches and supplies) generally were not reported by the families. Each of these areas was about 1 per cent of total spending in the 1961 survey. It may be that these case study families actually are that much different; or it may be that they simply are overlooking such expenditures.

AND, NO CHRISTMAS, BIRTHDAYS, OR OTHER OCCASIONS?

Giving to church and charities as well as to individuals (family and friends) was not reported in any of the cases except Mary Gallagher's help to her sister. This omission seems strange since, in 1961, nearly $300 was used for this purpose for all urban families and single consumers. Of course, gifts and contributions aren't usually considered expenditures as such, like food, clothing, and other current consumption spending, but neither is insurance, and some of these case families did report that.

Some other expenditure areas which often are omitted or underreported include: professional and occupational expenses (dues, etc.), hobby-related expenditures, home furnishings (even for replacement, let alone additional), payments on autos and household appliances.

CREDIT FREE?

In those cases where credit was being used, it appears that the families were not considering a separate expenditure for the amount paid for the use of the credit--this may suggest an area needing to be brought to their attention.

OVERALL...

These cases probably are not terribly different from many families and single individuals, although no claim is made for their representativeness. It would appear that one way to help these case families and individuals help themselves would be to make them more aware of how they currently are spending. Further, to consider whether, in fact, their pattern of spending is justified (in light of their goals and values), or if they might want to reassess it and adjust their spending...using less here, more there...to conform more nearly to a clarified picture of what is truly important to them. Naturally, many might decide that their current spending allocations actually are in line with their goal rankings; but, if that isn't the case, helping them to recognize it and do something about it would be rendering a real service.

DR. ETHEL J. ALPENFELS, PROFESSOR OF ANTHROPOLOGY
NEW YORK UNIVERSITY

(Dr. Alpenfels reviewed the three case studies discussed by the "Forum," pages 73, 69, and 71--The Lopez, Jones and Austin families.)

SPENDING PATTERN SEEMS TYPICAL

These families seem in certain ways to be fairly representative of families in similar economic circumstances. The large amount spent for food is to be expected in families with several small children.

These three case studies show a constant struggle for survival with chronic shortages of cash, absence of savings and low wages, reinforced by a strong feeling of helplessness and a constant hope that things will "get better" when the husband earns more money, or when there is more money available.

CULTURAL DIFFERENCES

The Lopez family, however, does not seem to be representative of Puerto Rican families living in New York City. This may be due to the fact that both husband and wife have been in the states since pre-adolescence. In some ways, however, Mrs. Lopez' night school attendence, her careful records of money spent on clothing (she listed all items of family clothing in her interview), and both parents' concern about school and free education, are usual among Puerto Ricans, especially Puerto Rican women.

Her husband's wish to return to the island and an almost martyr complex on Mrs. Lopez' part, is often found among Puerto Rican migrants. Mr. Lopez is looking at a dream, which is probably not realistic, and is remembering his childhood better than it was.

On the other hand, the Austins in Wisconsin do not seem to be comparable with the other families. They live in a small town and seem to be living close to a subsistence level, because they choose to do so in order to finish paying for their home. In this locale, owning a home is important, followed by car ownership for transportation to relatives' homes, church and school affairs. Such communities are now building community colleges, and whether this is true or not, the Austins expect their sons to save money or to work their way through college. They are fairly representative of mid-western families in this respect. The status symbol of owning a home will continue to drain the family budget until the Austins own it, and, until then, other items of expenditure will suffer.

CULTURE OF POVERTY

The Jones family (Washington, D.C.), perhaps more than any of the others, displays a strong feeling of dependence as well as helplessness in handling expenditures. This is representative of what anthropologists call the "culture of poverty." The high rent and excessive expense for utilities is often found in slum areas. These expenditures seem out of proportion to the amount spent on food and clothing. This they share with other low income families. In this family, the cultural profile, including even the therapy treatment of the mother, may be found in any large city. Abandonment of mother and children, a mother-centered family, unemployment and undoubtedly secondhand clothing and furniture are accompanied by a chronic shortage of cash. It does not seem possible that the mother can feed a family of five small children on $76 in food stamps, and it is not surprising that she makes no attempt to keep records, to plan or to consider goals for the future. She is lucky to survive in the present.

4787

SOME GENERALIZATIONS

Except for the Austins in Wisoncsin, the families seem to be alienated and marginal to any national institutions except that of public assistance. They did not mention having money in the bank, and there was no mention of the community. They all indicate political apathy and mistrust of the government (high taxes quoted by the Austins).

They seem to be making little attempt to plan for their future, either in their homes or their communities. They are not future-oriented.

The families seem to share the widespread value in our country--that of concern for material things. For example: the careful record of money spent for clothing kept by Mrs. Lopez, the remarks about the home by the Austins, the feeling that they spent most of their money on clothing. All of these indicate a concern with "outward respectability." Far less attention is paid to the inner person, the education, the personality and the dignity of the individual.

UNIT IV: Resources
IV-7. Analysis of Case Study Families[1]

(See Suggested Learning Experience No. 15, p. 18 in Part One)

The following learning experiences are suggestions for using the case studies (pages 69-75), the discussion from the "Forum" (pages 76-79) and the reviews of the economist and anthropologist (pages 80-84). There are numerous ways of using this material to encourage individual or group analysis of the families and their money management, resources, values, etc. The article on pages 89-92 gives a review of background information on resources.

The following chart may be used to compile information drawn from the case studies. The learning experiences outlined on page 86 are suggestions for applying this information.

	What values, goals, aspirations seem apparent?	What conflicts seem to be present?	What information has been left out that you would like to know?	What resources are they using?
The Austins				
The Joneses				
The Lopezes				
The Smiths

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-8. Understand Self-Actualization[1]

(See Suggested Learning Experience No. 15, p. 18 in Part One)

* What did these families overlook (or not think about) when they reported their spending plan? Why do you think they omitted these things?

* What additional resources could each of these families use which they do not seem to be taking advantage of at this time?

* How does your evaluation of each family compare with those reviewed by the "Forum" members?

* Dr. Alpenfels (anthropologist) and Dr. Bivens (economist) considered the case studies from their viewpoints. Using one of the families and considering their money management, resources, self-actualization and needs and goals, show how the two points of view can be applied to give a better understanding of this family. What other points of view might also be brought to bear? Are there any statements with which you disagree?

* Based on the facts presented in the case studies, write a descriptive story of one of the families or one of the single persons. If a classmate writes up the same family, compare your story to his. How are your personal values, opinions and background reflected in this exercise? [To the teacher: If you have participated in any sensitivity training, you are probably aware that this technique is used to demonstrate that people impose their own values and past experience to make judgments on a situation.]

Management of resources should be flexible to withstand emergencies that may occur unexpectedly. If you were these families, how would you manage your resources under the following situations:

The Austin home burns, not completely, but with extensive damage to the kitchen and living room.

How can they manage their resources to cope with this emergency until the rooms are repaired? What adjustments will need to be made in their spending? What resources, other than money, will they need to consider using?

Mrs. Jones' welfare payments are re-evaluated and she will receive $30 more per month.

How do you think she will use this additional money? How would you advise her to utilize this increased resource?

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. p. 13.

Mr. Lopez has decided that it would be better for his family to return to Puerto Rico. He will use the land his father gave him to farm.

How will the family react? Do you agree that his decision is the best way for his family to manage its resources?

Dick Harrison's father has lost his job. Dick has made plans to attend college in the fall but does not have the tuition money.

Do you think he can still manage to reach his goal? How?

Bill Smith impulsively buys another painting ($150 this time). Part of this money was to have gone for furniture for their summer home.

What will be Barbara's reaction? (How about role playing this one?)

Mary Gallagher decides to marry the engineer she's been dating. She would like a big wedding (her parents can give her $500 toward it). She would still like to buy the $400 stereo and extensive trousseau.

If you were Mary, what factors would you think through? Can she manage her resources to achieve her goals? What resources and how? Will she need to re-evaluate her goals?

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-9. Using Resources to Achieve Goals & Self-Actualization[1]

(See Suggested Learning Experience No. 7, p. 10 in Part One)

The following is a suggested learning experience to help students identify resources and select goals which will lead a hypothetical young person to self-actualization. The drawings at the bottom of the page are ideas for presenting this information on the bulletin board.

1) Ask a few students to write a story about a young person, mentioning resources, goals, background, etc.

2) Then ask these students to present their story to the class--if there are any questions about this hypothetical person, the class can ask the authors. From this story, the class can then analyze the goals, resources, and what this person wants to become.

3) The following may be placed on the bulletin board:

* A picture of the hypothetical person.
* The goals this person wants to reach (e.g., to be a football coach, to be a husband and father, to be a member of the Town Council, etc.).
* The number of sub-goals needed to achieve each of these goals (e.g., for the football coach it may be--being on the high school football team, furthering his education, etc.).
* Resources needed to achieve each of these sub-goals and the final goal could be listed next to the sub-goals or discussed.
* Alternate routes to achieving the goals could be evaluated considering the resources this person has (e.g., considering his resources, could this person by-pass the second sub-goal and go right to the goal of being a coach; could he by-pass all 3 sub-goals? How?).
* The number of goals and sub-goals and the routes will vary depending upon the individual.

USING WHAT I HAVE TO BECOME ALL THAT I CAN BECOME

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. p. 13.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-10. Resources--What Do We Mean?[1]

Helen D. Turner, Acting Director, Division of Home Economics
Federal Extension Service, U.S. Department of Agriculture

(See Suggested Learning Experience No. 16, p. 19 in Part One)

"Something that lies ready for use or can be drawn upon in an emergency." (Webster New World Dictionary) But for what use? The purpose or need determines the kind of and extent of the resources available. Roughly, resources are tangible like money, property, tools, facilities or intangible like knowledge, skills, information, services.

To accomplish a particular purpose may require the use of both tangible and intangible resources.

MONEY

Suppose you need a new dress and the one you want costs $75. If you have $75 in your purse, the transaction is simple. The resource is money. But suppose you don't have enough cash--do you have a bank account on which you can write a check? Again a simple transaction; a check is used in lieu of money. Your bank account is your resource.

Still want that dress? You may have no checking account and no money but you do have a job with future earnings. Your future earnings become your resource for obtaining the dress if you decide to open a charge account with the store and pay for the dress later. "Credit" is your resource. You can wear that dress before it's paid for, drive a new car, buy a house, make investments that will help you "make millions." Credit must be recognized as one of the very important resources available to individuals, families and businesses.

Money, a bank account or credit then are financial resources for acquiring that $75 dress. However, if none are available to you, there are alternate resources that would help you acquire a new dress. Can you sew well enough to construct a comparable garment?

KNOWLEDGE AND SKILLS

Knowledge, skills and abilities are often overlooked when listing personal or family resources. What should be included are those resources which you or other family members can acquire as well as those skills already mastered.

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. pp. 16-17.

4793

If you can paint a house, put a new washer in the bathroom faucet, replace the spark plugs in your car, fill out an income tax form, write a book, paint a landscape, you may find that these skills and abilities are your most important resources. They may be substituted for money in acquiring needs or wants, or they may be the means by which money is obtained.

The use of skills as an alternative resource for acquiring goods or services for which money is usually required hinges on the amount of time and energy one possesses. Both are considered by management experts to be somewhat interchangeable with money.

TIME

Time is a limited resource and the only one which is equally and universally available to all. The decisions one makes as to how it will be spent will determine how far it will go. If you choose to make that new dress rather than spending $75 for it, and you have the skill to do a creditable job, the next question you must ask yourself is, "Do I have enough uncommitted time to accomplish the task?" If not, what adjustments can be made--what can I give up--temporarily or permanently to free time--could someone else take over part of my responsibilities? In this case you are drawing on someone else's time resource to supplement your own. Most of us are guilty of wasting this resource in small amounts, and we constantly complain of not "having time" to read, to write friends, to take part in community activity, etc. A friend of mine never wastes minutes--the brief waits for a friend to appear, a meeting to begin or her turn at the hairdresser are used to dash off brief notes to friends all over the world. She doesn't bother with long letters but keeps close contact with frequent short communication.

ENERGY

Energy as a resource is a variable--available to all but in differing amounts. Some seem endowed with greater amounts of energy than are others. Illness, loss of sleep, emotional crises and depression among other things can temporarily reduce one's natural store of energy. Age and chronic illness permanently reduce it. The amount of energy one has (or thinks he has) has a direct effect on his use of time. A person with a lot of energy accomplishes more in a given period of time. He works faster, can continue longer without rest and moves quickly from one task to another.

Both time and energy are involved in most decisions about use of money. Also, judicious use of time and energy may determine how much money we have.

COMMUNITY RESOURCES

A discussion of what is meant by resources can't overlook the community in which we live. Depending on its size, the resources upon which we can draw are almost unlimited. Some we must pay for--thus using one resource to acquire another. Some are "free" in that there is no direct dollar cost; for these we share in the tax dollars which pay the cost. Some of these resources may be used instead of personal time and energy such as laundries, drycleaners, car washes and restaurants.

4794

Others provide education--knowledge and skills for children and adults--these include public schools, community colleges, vocational schools, universities, public libraries, trade schools, Cooperative Extension Service.

Community resources important to all are the health services and facilities available--doctors and dentists, hospitals, clinics, public health services.

Museums, art galleries, concerts and theaters are resources which provide both entertainment and cultural experiences.

Police and fire departments and city sanitation departments are invaluable resources for our health and safety.

We use public transportation (buses, airlines, railroads, taxis) with no real thought of its value as a resource. It "lies ready to use when needed"--for business, pleasure or in an emergency.

Or consider the magnificent resource of the whole system of modern highways on which we operate our private automobiles to get us from place to place. Over them goods are carried in trucks to fill stores and markets. Of course you and I pay for highways with our tax dollars but how would you like to build your own or drive over the paths made by earlier travelers?

If it's entertainment or recreation you want, consider the many parks, playgrounds, tennis courts, swimming pools, spots for fishing, camping, hiking, picnicking that are reasonably accessable to most of us.

Commercially provided are sporting events, bowling alleys, golf courses, movie theaters, live theaters and a myriad of other recreational opportunities.

NATURAL RESOURCES

Then there is that whole area of "natural resources" upon which we draw as a nation. Some are held in common by all of us in that they are government-owned; others are individually owned and exploited, often with government control. The land which grows the food we eat, the forests, the lakes and streams, the oil and minerals underground, the wild birds and animals that help provide the balance of nature as well as a continual source of pleasure are invaluable to us all.

The present programs to clean up and to prevent future pollution of air, water and land are an example of how important these natural resources are to us and to generations to follow. One has only to drive out on a Sunday afternoon to observe the appalling litter that is fast obliterating the beauty of the landscape and filling brooks and streams.

MISCELLANEOUS

How does the above begin to cover all resources? Not covered are assets

4795

such as life insurance, property, savings accounts and investments. The brightness of a midsummer day, the beauty of a spring morning, the quiet of a pine forest and the joy of a mountain stream probably don't count on an economist's list of resources, but I can't leave them off. They go along with friendship and the love and confidence of family.

And finally resources include the inner strengths in each of us--courage that forces men to move forward in spite of danger, perseverance, emotional stability in a crisis, kindness, courtesy and respect. Some are inherited--basic intelligence and aptitudes are examples. Others such as our values, attitudes and motivations are a part of our environment. Intangible as they are, those resources within us probably determine how much we acquire and how we use all other resources available.

We feel rich indeed when we list personal or family resources in terms of the above definition.

4796

4796

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-11. Managing Resources to Achieve Goals[1]

Dr. Helen M. Thal, Assistant Director
Educational Division
Institute of Life Insurance

(See Suggested Learning Experience No. 16, p. 19 in Part One)

Any reader of Peanuts knows Charlie Brown, and has observed him in his role as manager. His anguish and frustrations are only too familiar as he sends his baseball team out to the diamond. His goal is clearly defined and absolute--to win--even once. He has identified his resources, that motley band of players including reluctant Snoopy in the outfield, crabby Lucy as shortstop, and Linus, Peppermint Patty and Schroeder completing the lineup. Charlie Brown, on the pitcher's mound, starts each game with his plans, organization and strategy well in mind, only to be thwarted by the ineptness of the outfielder or the clumsiness of the shortstop. The result is another no-hit game. Always it is Charlie Brown who must bear the shame and humiliation. He would be the first to agree that managing resources to achieve a goal is no ordinary run-of-the-mill chore; it's hard work, takes brains and there is no end to the unexpected events that can happen. It was ever thus for managers.

Three singularly important concepts are involved here, and each is sufficiently complex in and of itself: management, resources, and goals. Management, of course, implies the presence of the other two, so that actually we are talking about the function of management. If no goals are present, or if no resources exist, no management is called for.

It would appear, therefore, that management is the concept about which we are presently concerned. If that be so, we are further concerned with decision-making and resource allocation, both significant components of management.

Because management takes place only after goals have been identified (or problems defined), the first set of decisions relates to the goals themselves. To know what it is we are aiming for, and to have these objectives well in mind, gives purpose and meaning to everything else we do toward their accomplishment. This is no mean trick, because most individuals and families have multiple goals, and even when given an order or priority, we find often that goals are in conflict with needs or with immediate wants or emergencies. Unlike Charlie Brown, whose goals are so sharply identified, so clean in their simplicity, so uncomplicated and without intervening con-

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. pp. 18-19.

4797

flicting goals, most of us engaged in goal achievement meet our first frustration at this point of decision-making: deciding which goals come first--or to put it another way--categorizing our wants and making some compromises.

There would be no need for this kind of mental exercise if our resources were unlimited. Here is the point at which Charlie Brown is undone. His resources are limited in every way you might measure them: he doesn't have enough members on the team; none of them are notably skilled in the art of baseball; their interest and enthusiasm for the game leave something to be desired. No matter how Charlie Brown shifts his players around (allocates his resources), there just are not enough there to win the game.

It seems less than fair to mark Charlie Brown down for poor management. He uses what he has to try to get what he wants, but what he has just isn't enough. Is it possible that his goal is unrealistic? With his available resources, would he do better to turn to basketball or hockey? At least he would have enough players to complete a team.

Goal achievement, then, begins with identification of goals that are realistic and with a realistic determination of the available resources. One of the causes among real life people for failure in management is our tendency to be over ambitious in our goals. You may have experienced this yourself at one time or another; you set out to save a given amount in a specified period of time, only to discover that you can't do it because there are too many other demands on your income; demands that you had failed to consider initially.

Skillful goal setters and achievers have learned from experience how to identify their objectives, and have given themselves a series of sub-goals that eventually contribute to final accomplishment of the major goal. The intervening successes in achieving the sub-goals lend impetus and encouragement. Any small victory is a reward.

Management begins with decisions related to one's goals. Next, the manager considers his resources and another series of decisions must be made. One thing we learn very quickly as far as resources are concerned is that they are limited. There never is enough time; or the skills needed to do a job are inadequate; or all the equipment to facilitate the job is not available or not in working order, or not adequate for the task at hand; or funds are short. Now the manager really knows what it is to be frustrated. This may be the very point at which he throws in the towel and gives up, or turns for help to a credit agency, if it's a money matter, or to a community agency that can provide the means to help him over the hump.

Knowing how to utilize these limited resources to best advantage takes practice. Doesn't everything? It also takes patience. And it demands one's attention and honest appraisal. To overestimate (over-measure) the available resources, or to add another set of demands to an already overburdened resource inventory, will lead to nothing. But it is a trap we have all fallen into at one time or another. We overestimate the time available or understimate the time needed to do the task; we make a financial commitment at a time when our income is already overtaxed.

4798

That resources are interchangeable is one characteristic that can help us enormously as we make decisions about their use or allocation. It is possible to use one's skill or the special talents of other family members to redecorate the living room, thus saving some money. If, however, time is at a premium or skills are limited, then money is used to secure skills and services of somebody else. That money can be replaced by using other resources to accomplish other tasks. Too often in a prosperous society we assume that money will do everything and, consequently, we get out of the habit of putting other resources to work.

Because money is so often the resource we think of first, and because so many family and individual goals are dependent on income, it deserves special attention.

Managing money begins with knowing what our funds must do. It's a matter of goals again. Right away we recognize that a certain amount of money is necessary to meet the needs of day-to-day living. Food, clothing and shelter must be provided. We might classify medical and dental care in this set of needs, and the costs involved in operating the household. But what may be a need for one household may be a want for another, so further classification infringes upon family goals and values. Beyond the specific needs, however, are the special wants that exist. Some of these are short-range--a vacation, or a record album, or a guitar or a car. By careful planning these wants can be realized within the foreseeable future.

Another set of wants also exists in family life. These wants may not be realized for many years--owning a home, sending children to college, owning a vacation home, creating a retirement income. Even if these wants, which may become needs at a later time, are designated for the future, the money manager must consider them and make provision for them years in advance.

In making that provision, he is committing a portion of today's income for use at a much later time. At the same time, he may be committing future income to meet the needs that exist at the present. For example, any purchase of goods on a credit plan is a commitment to use income not yet earned. The purchase of a car might involve monthly payments for the next 24 months, which means 24 payments of a fixed amount out of income yet to be earned. Any time that such commitments are made, the family or individual will have just that much less per month for other things.

In setting goals, whether short or long range, the manager or management team must understand that it is not simply the use of this week's income that is being planned, but that the anticipated earnings of a lifetime are involved. The style and quality of life are at stake. Goal setting, when viewed in this way, is a rather sobering piece of family business, for decisions are made as to what you want to achieve, what you want to become and what you want for the other family members.

Once goals have been determined, and these will be multiple, the process of handling the money can be fairly simple. Well, maybe not so simple at first, but in time and with practice it does become easier. It's a skill that can be learned, a fact which should give us some comfort and reasurance.

* Know exactly how much money you have to work with each week or each month. Just exactly what is your take-home pay? What other money comes into the family coffers--rents, interest, payments to other family members, etc.?

* Know your fixed obligations that must be paid on a regular basis. These will include your rent or mortgage payments, any installment loan payments, insurance premiums, pledges or commitments to a church or charitable organization, taxes--in short, any and all payments you make on a regular basis and in a fixed amount. Your commitments to future goals will demand regular set-asides, and these should be included as a fixed expense; otherwise you may never have the satisfaction of achievement.

* Know your flexible expenses. Here you become concerned with the day-to-day living costs that are yours to control. Your food and clothing bills are flexible in that you can set your own limits according to your own standards and your family needs; such operating costs as the telephone bill is manageable, personal allowances for family members, household operating costs, personal upkeep--all of these, while important, are controllable.

* Know that emergencies are a fact of life. So be prepared. An emergency fund saves the family budget. This will be the fund you draw on when the hot water heater bursts, or the garage door is blown off in a blizzard or when some other minor disaster or momentous event occurs. It is helpful to look on this not as a disaster fund, but as an opportunity fund, providing the cash to take advantage of a particularly attractive sale, or to permit participation in an event that contributes to professional growth and development.

These are the four elements that make up the money management plan that will lead eventually to goal achievement. Each of these is related, one to the other. When one element of the plan is changed, the change is reflected throughout the plan. Consider, for example, what will obviously happen if an additional fixed obligation is assumed: corners will have to be cut in other areas. Or if income is increased, it will be reflected throughout the plan, or vice-versa.

The serious money manager, intent on achieving a series of goals, acquires four skills that improve her operating plan and hasten the achievement of goals.

* Skill in the market place. Careful buying habits, comparison shopping, buying what is needed, avoiding impulse purchasing as much as possible, knowing where to go for what in order to secure value for your dollars--all these add up to money saved.

* Skill in thrift. It's almost an old-fashioned notion--thrift. But when considered as a part of the money management plan, it extends the dollar value of one's income. Actually, thrift is a form of conservation. It is the conserving of one's goods, which means caring for them, getting as much

ccrb 4800

use out of them as possible so as to avoid replacement frequently. It also means a systematic plan for saving money. The key to any savings plan is its regularity, not the amount. No matter how modest the set-aside is in amount, if tended to each week or each month, the rate of growth will be astonishing.

* Skill in using consumer credit. With prevalence of credit cards and with the countless opportunities available for buying now and paying later, it is not surprising that families or individuals find themselves in trouble. It is such a tempting way to get what you want when you want it. As every school boy knows (or we hope he knows!), consumer credit is not a free commodity. When the time comes to use it, therefore, it is well to know (a) that the purpose of using it is worth the added cost; (b) that the credit agency of your choice offers the most favorable rate; (c) that you are ready and willing to commit yourself to an extended time period during which payments will have to be made.

* Skill in using financial institutions. What institutions offer you the most favorable interest rates on your savings? Which kind of checking account is most advantageous for you? Which lending institution offers the least expensive loan plans? What life and health insurance plans are most suitable for your needs? What institution in your community can provide you with the most favorable mortgage plan? Where should you turn for help in planning an investment program? The answers to these questions lend support and help to the management of financial resources.

Knowing the four elements of a management plan, and acquiring the special skills as suggested here, are the principles that will bring about satisfaction and lead to goals that are important to the family. But one further understanding will be of special help if acquired early in the game. Know yourself and your family. Although money is an inanimate commodity, it is tied to the intimate on-going activities of the family. In managing it, you soon realize you are managing other human beings, including yourself.

To secure the most utility and satisfaction from your dollars, therefore, you must be honest in your own self-analysis and understanding. We each have our whims, our weaknesses, our self-interests and our tendencies for self-indulgence. On the other hand, we each have our strengths. We can look ahead and see where we are going; we are confident about our futures; we are capable of self-direction; we are concerned about others; we want to contribute to a better community. All of these aspects of our individual personalities are reflected in the management of our financial resources.

Charlie Brown, manager, experiences little satisfaction as a result of his efforts. His gain has been his insight into the frailties of the human race, and his philosophical understanding of his own financial practices: "Happiness is thirty-five cents for the movie, fifteen cents for popcorn and a nickel for a candy bar."

4801

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IV: Resources
IV-12. Help!![1]
(Case Situation)

(See Suggested Learning Experience No. 20, p. 19 in Part One)

Judy, a busy career girl, dashed home from the office at five o'clock Friday afternoon. It was a hot, stickly day; and her numerous appointments left not a moment to spare. Judy was tired and exhausted. In fact, she had barely had time to swallow her scanty lunch of vegetable soup and a glass of milk.

"What I need," Judy thought to herself, "is a good, hearty, nutritious dinner to boost me on the way, but I've accepted a date at seven o'clock for the Firemen's Ball and I must shower and freshen up. I know we won't be eating out this evening, either."

After rummaging around in the kitchen, Judy found she had these foods on hand:

In the Refrigerator	In the Cupboard
Meats and meat substitutes:	Flour
Chuck roast	Sugar
Ground beef	Spices
Eggs	Spaghetti
Chicken	Macaroni
Dairy products:	Wheaties
Milk	Coffee and tea
Cheese	Rice
Butter	Bread
Fresh fruits and vegetables:	Canned peas
Apples	Canned pork and beans
Peaches	Canned chicken noodle soup
Carrots	Canned fruit cocktail
Lettuce	Box of Jello
Tomatoes	Instant vanilla pudding
Green beans	Chocolate cake mix

"How I will ever manage and still have my apartment in order by the time Jack arrives leaves me in a real quandry," sighed Judy with a questioning look in her eyes.

What Now?

Judy's neighbor, Sally, was taking care of a five-year-old niece on the evening of the Fireman's Ball. Her neice was an active little girl who loved to play with dolls--walking dolls, talking dolls, girl dolls, boy

---

4802

1084

dolls, dolls whose eyes opened and closed, dolls that said "Ma Ma," old dolls, new dolls--just any kind of dolls, so Sally decided to get one of her dolls out of the storage closet.

Just as she was reaching her favorite old Raggedy Ann doll from the very top shelf, the chair on which she was perched slipped from under her. Sally tumbled to the floor and broke her ankle. At least, it sure felt that way. Immediately, she limped to Judy's apartment and frantically knocked on the door.

"Oh, Judy," she said when Judy answered. "I just fell and I know I broke my ankle. No one is home except my niece, and I must see a doctor. Could you possibly take me?"

It was already 5:15 and Judy knew she had to be ready to go out by seven. She had just taken her shower, slipped into her lounge clothes, and was ready to start dinner--but Sally was in distress and needed help immediately. All the physicians would have gone home for dinner, and the nearest hospital was three miles from the apartment. It would take at least an hour to get there and back during the rush hour. And Sally's niece--her parents lived eight or ten miles away.

"Oh, what shall I do; oh, what shall I do?" thought Judy.

DIRECTIONS: Think about what you would do, if you were Judy, to adjust to this emergency.

Write a detailed time plan--beginning at 5:00 p.m. and ending at 7:00 p.m. of what you would do, if you were Judy. Before beginning the plan, answer the following questions:

1. What is/are Judy's specific goal/s for this time period?

2. What, according to this description, does Judy seem to value?

3. What resources does she have available to her?

4. What might she fix to eat?

V-3. Henry Buys a Hot Rod[1]

(See Suggested Learning Experience No. 10, p. 24 in Part One)

Henry will graduate from high school in two months. He can hardly wait! Not only will he be free of lessons and teachers, but he will own his own car. He has worked summers and after school since he was in the eighth grade. He has $1573.29 in the bank. His grandparents have promised to add $500 to that as a graduation present to enable him to get a better car. He eats, sleeps, and dreams cars. His thoughts are a kaleidoscope of brands, essential features, optionals, and prices.

Use the decision-making process to help Henry select the car that will give him greatest satisfaction for his investment. Complete the chart on p.105. [NOTE TO TEACHER: To keep this chart current, consult some of the boys in your class who keep up-to-date on the availability and costs of items included.]

Did you use all the money? If not, why not? What immediate expenses do you expect Henry to incur due to his purchase of the car?

If you did use all the money, how will he pay all the costs involved in completing the transfer of ownership?

---

V-4. Mrs. Howe Goes to the Circus[1]

(See Suggested Learning Experience No. 11, p. 24 in Part One)

Mrs. Howe is a homemaker with two daughters, 8-year old Amy and 12-year old Sue, who want to to to a town 40 miles away on Saturday afternoon to a circus. The afternoon performance begins at 3:30. Mrs. Howe is expecting guests on Sunday. She must do the following household tasks before she can take the girls to the circus:

wash and dry two loads of clothes
vacuum all the floors
dust the furniture
mop the kitchen and bathroom
change linens on two beds
prepare lunch
prepare at least part of the food for Sunday dinner
leave something started for supper
burn the trash
sweep the back porch
clean the lavatories in the bathroom

Mrs. Howe has these major appliances: washer, dryer, vacuum cleaner, electric range with automatic controls, refrigerator, and dishwasher.

Using the decision-making process, follow the outline below to help Mrs. Howe reach her goals.

A. State her central goal.

State her satellite goals.

B. What are her resources in addition to the appliances listed?

C. What are her limitations?

D. Outline a work plan for her, listing tasks in the order that you think would make most efficient use of her time, energy and other resources.

In this outline indicate (1) the jobs that can be dovetailed, (2) jobs that each of the girls could do, and (3) specific menus you would prepare for lunch, supper, and the company dinner. List Mrs. Howe's tasks and those of each girl separately.

E. How did your plan differ from those of your classmates? How would you explain these differences?

V-7. Case Analysis on Decision-Making[1]

(See Suggested Learning Experience No. 21, p. 26 in Part One)

OBJECTIVE: Analyze decisions and make rational decisions concerning real-life situations.

The Story of the Trapp Family Singers. Maria Augusta Trapp.

I. A. Describe the interrelatedness of values, goals, and standards.
   B. Explain the role of values in determining personal and family behavior.
   C. Identify basic values held by the Trapp Family Singers.
   D. In what way did the values you cited affect the goals and standards of the Trapps?
   E. Give examples of major goals held by the Trapp family and indicate the values from which they stemmed.
   F. Provide examples of values that were in conflict.

II. A. Explain how standards are determined.
   B. Provide one example from Maria's experiences illustrating how environment and economic conditions influenced her standards.

III. A. Classify Maria's resources into human and material categories.
   B. Select a major goal of Maria's and analyze according to:
      (1) What human resources were available to help accomplish this goal?
      (2) What human resources were available but not used?
      (3) Why do you perceive that these resources were not used?
   C. Using the same goal as above, answer the following questions:
      (1) What material resources did the goal require?
      (2) Were there any material resources that were not used?
      (3) Why do you think these resources were not used?
      (4) Give three examples of how Maria substituted human resources for her lack of material resources.
      (5) Suggest possible ways that Maria might have expanded her resources.

IV. A. Explain the following statement and cite examples from Trapp Family Singers illustrating it: "A value is always important to the person who holds it; it is desirable and satisfying; it has the ability to develop a self-creative way; and it tends to

VI-2. Honeymoon or House[1]

(See Suggested Learning Experience No. 6, p. 30 in Part One)

Jim and Sally are planning to be married. They are both working. He makes $6,000 per year and she makes $4,800. They have decided to buy a home instead of renting an apartment or house. Their jobs are secure and they would like to live in this city permanently. The financial counselor at the Savings and Loan Agency where they are borrowing money to finance their home purchase has advised them that they can afford to pay $110 or $120 per month for a home even if Sally decides to quit working. They are very excited over this prospect because they would like to begin a family in two or three years.

Jim has $3,000 in savings. The financial counselor tells him that if he makes a down payment of $2,000, he should arrange to pay the balance over a period of 30 years. If Jim should decide to pay $3,000 down, however, he could pay for his home in 25 years at a total saving of almost $8,000.

Jim planned to spend part of this savings on an extravagant Caribbean honeymoon. Sally was really looking forward to this.

I. Planning Phase
   A. What is Jim's problem?
   B. What values does he seem to hold?
   C. What goal is probably most important to him?
   D. As he begins to plan, he considers these alternatives:
      1. Pay $2,000 on the house and go on the honeymoon.
      2. Pay the entire $3,000 down on the house.
      3. Pay $2,500 down; go on a less extravagant honeymoon.
      4. Pay $2,000 down; go on a less extravagant honeymoon and buy some furnishings for their new home.
   E. Answer the following questions about any three of the foregoing alternatives.
      1. What would be the results or outcome of following this alternative?
      2. Would he reach his goal? (The one you stated in C)--if not, what goal would he reach?
      3. What resources would he have to use? Does he have enough of these resources to be successful in carrying out this plan? Would the outcome be worth the resource cost? Why?
      4. How might his feelings, values, and previous experiences influence his decision?
      5. What other steps would need to be taken--or decisions made?

   Which one do you think he should choose and why?

II. Controlling Phase
   You have decided which alternative you would choose and have given reasons for your choice. Anticipate some problems that Jim and Sally

---

[1]Developed by Mrs. Mary Lois Scott, Home Economics Teacher-Coordinator, Wellington, Texas.

may yet face before their marriage, and arrive at the small decisions you think they should make to cope with these problems and still reach their goals. You might suggest some other expenditures they may wish to make to help them reach appropriate decisions regarding these expenditures. One of them may require medical care, or some other emergency may arise that they had not anticipated. Suggest the controlling decisions you think they should make in each instance.

III. Evaluating Phase

Assume that they have carried out the decisions they made. Do you think their resources were used effectively?--with satisfaction? How have the decisions that were made and carried out in this plan affected future decisions or created additional decisions? Do you think they would be satisfied with the consequences of the decisions made in this situation? Why?

SECTION ONE: ALLOCATION OF RESOURCES
UNIT VI: Management Process
VI-3. Management Roulette[1]

(See Suggested Learning Experience No. 7, p. 30 in Part One)

PLAYERS NEEDED:

Four students play individually at each table. A dealer is chosen in each group. The teacher is final judge of any answer about which there is a question.

MATERIALS NEEDED:

Thirty-two cards (about 3 x 5) for each group of four players with one management term written on each card.

OBJECT OF THE GAME:

The object of the game is to score as near 88 points as possible when completing two hands of Management Roulette.

PREPARATION FOR GAME:

1. The thirty-two cards are divided into two equal stacks called Group I and Group II as illustrated on p. 119.
2. Note that one term in each group is repeated; for example, in Group I the term "Consumer" is used twice.
3. Each group also contains a series of three related management terms; for example, Group I contains three terms related to decision-making. Mark each of these three cards "Series Card."

RULES FOR GAME:

1. Two hands are played in each game. The first hand is played using cards from Group I; the second hand is played using cards from Group II.
2. For the first hand, deal each player four cards from Group I.
3. Each player looks at the cards in his hand.
4. Players should use some means of determining which player goes first. All play moves to the left or counterclockwise around the table.
5. After looking at the four cards, each player in turn will place a card from his hand on the table in front of him, face up, as he does one of the following:
   a. Defines a management term on his card (5 points)
   b. Gives the antonym of the term on the card if this term has appeared in this game before (10 points)
   c. Defines a term which is the first part of a series listed on the card (5 points)
   d. Defines a term which is the second part of a series (10 points)
   e. Defines a term which is the third part of a series (20 points)

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

6. If the player gives the incorrect answer, he forfeits the card to the player on his left. The forfeited card is then placed face down on the table until all other cards have been played.
7. Play continues until all cards in players' hands have been played or forfeited.
8. Each player in turn then has one chance to correctly define or give the antonym of the forfeited cards in his stack (1 point for each correct definition or antonym).
9. Each card is now discarded, whether or not the term is correctly defined.
10. Play continues until all cards are played.
11. The second hand is played using cards in Group II.

SCORING SYSTEM FOR GAME:

5 points for correctly defining a management term
10 points for correctly defining the antonym of a term
10 points for correctly defining the second term in a series
20 points for correctly defining the third term in a series
1 point for each correct definition or antonym of forfeited card (series cards also worth only 1 point now)

SECTION ONE: ALLOCATION OF RESOURCES
UNIT VII: Budget or Spending Plan
VII-5. My Husband and I Never Argue About Money[1]
"What, never? Well, hardly ever."
by Joyce Kissock Lubold

(See Suggested Learning Experience No. 22, p. 35 in Part One)

My husband and I decided early in the game that it is simply ridiculous for any mature couple to argue about money. "Either we've got it or we haven't," my husband pointed out. "That's right, dear," I said, admiring my bridegroom's clear thinking. "There really isn't any reason for the subject to come up."

And yet we found quite soon the subject did come up, and once up was very hard to get down again. I might mention at breakfast that Aunt Clara's birthday was arriving soon and that we should send her something nice considering all she had done for us. My husband would agree, adding that we didn't have to get her a diamond brooch, for heaven's sake. I would answer with sudden passion that I couldn't understand why he didn't like Aunt Clara, and...well, the point is that we both got off the subject.

We continued, nevertheless, in our determination not to argue about money. If a conversation drifted toward what we could not afford, we just stopped talking. We uncovered a number of things we could talk about, however. The Abominable Snowman, for instance. Or the development of design in the pottery of the Navaho Indians. Meanwhile, my husband bought the things he thought we needed, I bought the things I thought we needed, and we were happy as clams.

But over the years, in our Eden, a little seed of trouble began to grow. What happened increasingly was--we ran out of money. Neither of us, it seemed, could walk around with cash in our pockets. It was like an allergy--we couldn't stand the feel of it next to our skin. My own particular temptation was the toy store. Let me take $10 to buy sneakers for the children, and a kind of madness for new pickup trucks for my three youngsters comes over me. My husband fights his losing battles in the hardware store. He is not physically able to walk past a new yard tool, for example.

We decided that since we couldn't carry money without spending it, we wouldn't carry money at all. We opened charge accounts all around town. We charged the groceries, and the newspaper; we charged at the shoe store. My husband had a long talk with our baby-sitter, who seemed dazed at the idea but agreed to let us run a monthly account.

---

[1]Reprinted by permission from Joyce Kissock Lubold and Reader's Digest, August, 1962. pp. 58-60. Condensed by Reader's Digest from The Rotarian.

All through that happy cash-free month we warned each other about the Bill-Paying to come. The big evening arrived. At the dinner table, our eight-year-old said matter-of-factly, "Guess I'll study at Billy's tonight. You'll probably be fighting."

My husband and I looked at each other. "But you know Daddy and I never argue about money," I said.

"Yeah," he said kindly, "but I bet you will tonight. I better go over to Billy's."

"You stay here, son," my husband said sharply.

That night we paid the bills in almost total silence. Which wasn't easy. Because there were an awful lot of bills. I couldn't believe that a family of five had consumed this much in four weeks. My husband, breathing heavily, was apparently making the same discovery. I found an unexpected charge for lawn clippers that filled me with unreasoning rage. He choked back an exclamation of distress as he corrected a few really minor mistakes I had made in calculation. With tight smiles we stamped the envelopes, putting aside those which could not be mailed until another paycheck, and shut the desk.

"Well," my husband said, "the kids can't say we argued." His voice was taut.

"Just let them try," I said. So was mine.

We were miserable. We had spent too much, and we both knew it. In the days that followed we became more miserable still; our unnatural restraint made small angers work within our souls until they had to come out. Within a week I mentioned the lawn clippers disparagingly at least four times. My husband, meanwhile, found ways to turn innocent family conversations into little lectures on the Need for Economy.

That month trudged wearily on until he announced one morning at breakfast, "We'll pay the bills again tonight." Then he added to our son, with labored jocularity, "No need for you to leave, your mother and I won't argue."

The boy went on eating his cereal. "Maybe it'd be better if you did argue when you pay the bills," he said at last. "Instead of all the rest of the time."

Well, when a truly loving and open-minded couple hear a great truth, they recognize it. My husband and I looked at each other, and he said joyfully, "Boy, you go over to Billy's right after supper."

That evening we argued--about anything and everything. He brought up for scorn the wooden train I had bought for the baby who couldn't even push himself around yet. I referred to the bag of fertilizer that was so rich it burned the grass. He made a witty remark on the green shoes that didn't go with anything until I bought a dress that matched them. I let my voice get high and shrill. We pounded the table. We waved our arms. We stalked around the room, gesticulating. We had a grand time.

4830

4829

And when the last bill was paid, our voices quiet with fatigue, we walked into the kitchen for a cup of coffee. There was a kind of battlefield camaraderie.

My husband stretched luxuriously and grinned. "Boy, that sure cleared the air," he said. "You wait till next month, though. I know what we can afford to spend on the yard now, and I'm not going to spend a cent more. You won't have a chance to yell about anything."

"Neither will you, smart boy," I said. "I'm going to watch it like a hawk this month."

And then we looked at each other in astonishment. We'd stumbled on the answer to the whole thing!

And that's the way it has worked out for us. We've stuck to our basic rules: Don't talk about money. Don't argue about money. Don't carry it around. And schedule one rousing money fight every once in a while, just to clear the air.

This last rule has been hard to keep. The first few cleared the air so well that we don't really have enough to argue about any more.

So we made up one final rule: "Remember always that marriage is more important than money." And this last rule is one that all husbands and wives should keep.

4831

SECTION ONE: ALLOCATION OF RESOURCES
UNIT VII: Budget or Spending Plan
VII-6. The Morris's Spending Plan[1]

(See Suggested Learning Experience No. 34, p. 37 in Part One)

The take-home pay per month for Joe and Jean Morris is $483.50. The per cent of the income spent for various items may be different from the average percentage families spend because their children are young--six months and two years of age. Joe and Jean keep meat in the freezer as well as some garden produce from her parent's farm. The children's grandparents give them many items of clothing, consequently the family clothing costs are a little lower than average. They own one car.

Joe and Jean are high school graduates. She is a homemaker and he has just completed an auto-technical school. Both are 22. They have had a better start than many couples because her parents raise the meat and produce which Jean preserves for later use. Occasionally the Morrises use a charge account, but these occasions are infrequent. They have a regular savings plan.

Make a proposed spending plan for this couple. Apply the information you have studied.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT VII: Budgets or Spending Plans
VII-7. Steve and Kathy[1]

(See Suggested Learning Experience No. 35, p. 37 in Part One)

Introduction: The following situation has been devised to give students some practical experience in developing a spending plan and in coping with some of the unexpected expenditures all families face. This experience may help them to see that no degree of planning takes care of all contingencies for all time--that planning must be flexible.

Directions: Use the "in-basket, out-basket" technique to present the material to the students. Give them the story plus Problem I when you introduce the experience. At an assigned time interval, ask students to put Problem I responses in the "in-basket" and take Problem II from the "out-basket." You may wish to assign time limits for each problem, but some students may want to work at a faster pace than others so that your "in-" and "out-baskets" stay in constant use. You may wish to amplify the situations given, asking students to establish criteria for the selection of the items mentioned or to find the actual costs of these items in your locale.

The Story: Graduation night, June 1967, and Steve Parks wasn't graduating. Finishing school had not seemed very important until this year when he had made six credits! No one could believe that he would ever pass six subjects in one year! But somehow that just did not make up for the past three years of goofing off. He still lacked two credits for earning that diploma.

Steve stayed home from graduation exercises; he did not want to be around all his friends who were so excited about getting out of school. He might go out to the river for the all night party later, but for now he wanted to be alone. He knew he would not go back to school next fall. He would be nineteen in October. His parents were disappointed, but that was nothing new. He thought of all the times they had been disappointed before. How many times had he racked up the family car racing with his friends? He did not know how often the principal had called his mother in for a conference about his traunncy or misconduct, but he knew it was often.

Despite all this, his dad had financed a good used car for him just two weeks ago. Mr. Parks had said to him, "Son, this is as far as I'll go. It's yours if you earn the money to pay for it. Even if you wreck it, you have to pay for the car." For the first time in a long time, Steve knew his dad really meant what he said.

---

[1]Developed by Mrs. Mary Lois Scott, Home Economics Teacher-Coordinator, Wellington, Texas.

Summer dragged by interminably. Many of Steve's friends had gone to summer school or to a bigger town to work. Steve had a lot of time to think. His mother mailed in an application for correspondence courses for him to finish school. She looked so hopeful when the books and first lessons arrived that Steve could not let her down. He worked just enough to pass. Then he began to date Kathy Martin. Why had he not ever noticed her before? She was only one grade behind him and one of the cutest girls in school. She would be a senior this fall. There was no doubt about her graduating; she was an honor student.

Steve and Kathy were going steady by the end of September. She was so sweet and stupid in a funny way, especially for a girl who could be so smart. She did not nag or push or try to change anything about him. She helped him with the correspondence lessons, and now he had to finish them because it was important to her. She liked his car and helped him wash and wax and polish it as often as he did these things. He had not missed a payment on it, and he had a little money in the bank. Kathy made him feel great.

Just before Thanksgiving he asked her to marry him. He gave her a ring that cost $350. He paid $25 down on it.

Mr. and Mrs. Martin were incredulous when Steve and Kathy came to talk to them about being married, but Mr. and Mrs. Parks were not surprised. Kathy was supposed to go to college. This had been planned for years. Ultimately, the Martins gave in and agreed to a June wedding. In December, relatives of both families who lived far away wrote of their plans to come for visits during the holidays. "The perfect time for our wedding," begged Steve and Kathy, "when everybody can be here." The wedding was planned. On December 22, at 8:00 p.m. in the First Presbyterian Church, Steve and Kathy were married.

Kathy planned to stay in school while Steve continued working for his father. He was earning $250 a month which had been enough for a $55 car payment, gasoline, and dates. Now he had a $30 ring payment and household expenses. They were able to find a tiny, but clean, three-room house which they rented for $35 per month on the condition that they repaint and repair all the interior with materials furnished by the landlord. They did this and it was fun working on "their" house together. The Martins and Parkses helped them get enough furniture, of the attic variety, to start keeping house.

Steve and Kathy were determined to make things work out well. They were very happy together, and they wanted to disprove everyone's dire predictions that they would never make it. Steve worked 15 miles from home, so Kathy had to fix him a sack lunch. She rode to school with a friend who lived three houses down. She took her lunch, too. She looked forward to Saturday mornings when she could sleep late. It was very difficult to get up at 6:15 a.m. in order to fix Steve's breakfast and lunch and get him off to work by 7:00 a.m. Kathy was a very good cook. She had cooked supper almost every week night for the past two years because her mother did not get off work until 5:30. The evening and a good meal together was the best time of their day.

4834

Steve's grandmother had given them a used television set for a wedding gift. His uncle had rented a meat locker for them and bought a quarter of beef to go in it. Kathy's grandmother had already bought her a portable sewing machine for a combined graduation-Christmas gift. Her parents paid all the utility deposits to help them get started.

Even with all this help, Steve and Kathy realized that they must plan very carefully in order to live on what Steve earned. They allowed $70 a month for groceries, $20 for gasoline (since Steve had to drive to work), $11 for utilities, and $8 for recreation. Steve and Kathy felt it was very important that they get out with their friends at least once a week. This left $21 to take care of all other expenses.

Problem I

A. Analyze their spending plan. Answer the following questions to guide your thinking. What are their long-term goals? their short-term goals? What resources do they have that will help them reach these goals? What values are reflected by the goals they wish to reach and the way they use their resources? In your opinion, is their planning practical and workable?

   As they implement their plans, what suggestions would you make to help them control their spending plan and live within the limits they have set?

   As they live with this spending plan and evaluate it during the next few months, what changes do you think they will wish to make? Why?

B. In January, Kathy became pregnant. By the end of February, she was so badly nauseated, their secret was out, and Kathy had to drop out of school. The $21 left for miscellaneous expenses would not cover everything. Steve worked frantically to finish the correspondence courses so he could get a better job. By June 15 the last lesson had been returned and he passed the tests. July 1, Steve and Kathy moved to a larger town where he took a job paying $350 per month. This was not very much money, but he could advance to $500 per month in five years if he did well. He and Kathy decided this was their best opportunity.

Problem II

Make a spending plan for them based on this new salary. Consider how their needs, resources, and goals will be changing during this beginning stage of the family life cycle. Do you think there will be any shifting in the values that are most important to them? If so, what changes would you expect?

4836

4835

They found a nice little house for $65 per month. They also made payments of $25 per month toward the baby's birth since they did not have hospitalization insurance early enough to cover the baby's birth. Some of their friends thought it was foolish of them to take it out now, but they did so anyway.

Problem III

Everything went along smoothly until the middle of September when Steve had to buy two new tires. How will this extra expense affect their spending plan? Evaluate the status of their budget and work out some way whereby he can pay for these tires.

Problem IV

On October 26, Mary Jane Parks was born. She was a beautiful black-haired, 8-pound bundle of energy, but she was rather expensive. Steve and Kathy had already paid $100 which covered her prenatal care, but they still owed $200 for hospital and doctor expenses. Re-evaluate their spending plan and see if you can figure out any way whereby they can pay this debt within the next year. If the doctor and hospital allow them to make monthly payments, how much can they afford to pay each month? If all expenses have to be paid immediately, where can they go for help? List at least three sources. Give the terms each source would require. Which one would you choose? Why?

Problem V

At Christmas, Mr. and Mrs. Martin and Mr. and Mrs. Parks decided to give Steve and Kathy cash. They thought their children needed new clothes and a little "fling" of some kind. If you were Steve and Kathy, how would you spend the $200 gift? Why would you spend it for this? What values would this reflect?

Problem VI

In February, Steve had the flu. Medicine and doctor bills came to $45, but he got a $50 per month raise. What changes would you make in their spending plan? Why?

Problem VII

Steve and Kathy were very happy and extremely proud of Mary Jane, who was a very good baby. Kathy had a difficult time doing the laundry, however; since Steve had the car at work all day, she had to go to the laundromat in the evenings. Kathy disliked this because evenings were the only time the three of them could be together. In April, Steve bought a good used washer for $135. In your previous planning, had you saved enough money for him to pay for this? If not, how can he finance the washer? Revise the spending plan to accommodate the washer.

Problem VIII

In November, Kathy became pregnant again. This time only the prenatal care would have to be worked into the spending plan because their hospitalization

4835

4836

policy had been in effect over a year. Steve was doing well and received another $50 raise the first of December. Kathy was very proud of him. They both agreed that their little house was going to be too small for two children. Mary Jane needed a yard to play in, too. They went house hunting, and once again evaluated their spending plan and adjusted it to meet the anticipated changes in their style of life. What revisions do you think they had to make?

Evaluation:

You have been involved in applying the management process to a real-life situation. You have used the steps of planning, controlling, and evaluating to meet the changing needs of a young family. At each step you used the decision-making process of facing the problem; considering values, goals, resources, and needs; examining alternative actions and outcomes; and selecting a course of action. In each instance would you have been willing to live with the consequences of your chosen course of action? Discuss.

Explain the following statements: Management is a way of life. Management must be flexible.

Can you think of any other summary statements you could make about management or the decision-making process?

VIII-2. Savings Habits

(See Suggested Learning Experience No. 8, p. 42 in Part One)

"They say he has a fortune stashed away in American banks."

OBJECTIVE: To recognize some of the idiosyncrasies people reveal in their money saving habits.

1. What practice of the very wealthy is being lampooned by this cartoon?

2. Where are some of the most ridiculous places you have ever put your money for safekeeping? Why did you put it there?

3. What stories have you heard other people tell about this same thing? What reasons did they give for putting their money in the place they chose?

4. Explain this statement: Money just saved may be money lost.

VIII-3. The Money Tree

(See Suggested Learning Experience No. 9, p. 42 in Part One)

It was the first cool, crisp Saturday of fall. I lay with eyes closed in my favorite lounge chair under the tree beside my kitchen window and savored the "feel" of the day. Summer days skittered through my mind, and I was glad they were only memories. Beneath me lay buried the fruits of an arduous summer's work.

It all began on our first anniversary. We moved to the "north" place about thirty miles from home to combine a section of wheat and plow the wheat ground. What a lark, I thought at first, to be so far away from parents and in-laws, alone with my husband for nearly two weeks! Little did I realize the accommodations waiting for me in our "Second Honeymoon Haven." My kitchen was a shed room 6' x 8' and only 6 1/2' tall. My husband is 6' tall. He almost had to crawl in. My range and cooktop were a two-burner hot plate with a portable, non-thermostatically controlled, tin oven; my refrigerator, a 75 pound ice chest; our bedroom a tent; and our bathroom... 640 acres of land and a creek.

We were just as poor as we were estatically happy. I had just graduated from college with a degree in home economics. I could cook a holiday dinner for thirty-five people, manage a house without any effort or do any of the other things people expected of me, but this was something else!

Our first neighbors came to visit that evening at bedtime. I turned the covers back, and there, on my side of the bed, lay the biggest centipede I ever hope to see. Scott killed it, but I didn't close my eyes all night long. I was sure that anything that big had many little friends or relatives. That was the first of an endless series of spiders, scorpions, snakes and even crickets that chirped all night.

Days were much better. The only major annoyance was that all my "kitchen" windows (one) and doors (one) had to be closed when I cooked, to keep the excellent cross ventilation from blowing out the burners. This was my first opportunity to show off my cooking skills to Scott; we had shared a kitchen with his parents (their own!) for the past year. I made cakes, yeast rolls, homemade ice cream and every other good thing I could think of. Miraculously, by praying and keeping the door shut, everything turned out perfectly.

The two weeks were over so soon, I almost regretted their passing. We returned at least twice during the summer to plow the ground again. I felt like the only things I lacked being the original pioneer woman were the long dress, sunbonnet and brogan shoes.

One memorable pioneer-type misadventure I can never forget! We awoke one morning about 3:30 to the sound of rain falling, soft and gentle. The world smelled so sweet and fresh as the newly plowed ground became wet.

We feel asleep again with great contentment, knowing that morning would

CC8P

4840

bring a lazy, peaceful day. About 4:00 a.m. I felt a small drip and moved over a little. Scott had felt the same thing on his side, and he had moved over a little, too. We got up and moved the bed. The rain became a downpour, and we discovered we were under a true sieve! That tent leaked from every thread. We dressed and drove into town arriving at my mother's door about 4:45 a.m. If we had not been so wet and miserable, I think she would have disowned me.

We thought we were really wealthy when the wheat money came in, and Scott was paid for the plowing. We paid our car off, bought a range and refrigerator and had $800 left. At the end of May, I had signed a contract to teach school. No young couple, married just one year, had ever been so lucky!

What should we do with the $800? I wanted to put it in the bank, but Scott said, "No. The temptation to check on it will be too great." His father suggested that we put it in a savings account, but Scott vetoed that, too. We already knew what we were going to spend the money for. We were going to build a room onto our house so there would be space enough for a family after I taught a couple of years. Finally, it was decided. We would bury the money under the tree by our kitchen window! We wrapped the roll of bills carefully in layers of foil, put this in a plastic bag, sealed it in a clean pint jar, and buried it under that tree. We called the tree our money tree--a private joke that sent us into hysterics when mentioned in front of our friends.

One day I lay over the exact spot where our treasure was buried. I felt secure and happy just thinking about what it would provide for us. I dreamed of that new room and the child who would occupy it, and I squeezed back tears of happiness, thinking God for His blessings.

My prayers took a slightly different turn the next fall when we started building our room and decided we would now dig up the money and pay cash for our project. Scott dug in the exact spot where we had buried it--he thought--but no money. He dug a little deeper, then to this side and then to that side. At first it was funny, but after two whole hours had passed, I could hardly keep the tears back. We just knew someone had seen us hide the money and had stolen it while we were away from home. Scott finally plowed around that tree with the chisel plow, and the jar was uncovered, still sealed, with money intact. Again I thanked God for blessing two very foolish young people.

We have never had another money tree.

SUGGESTED QUESTIONS

Was Scott's reasoning sound in the way he chose to safeguard his money? Give reasons for your answer.

Do you know of other people who have chosen to save their money in an unconventional manner? Give examples.

Compare what Scott's total savings would have been in one year's time if he had (a) put the $800 in the bank, (b) put it in a savings account at the current interest rate compounded annually, or (c) put it in a savings and loan account at the current interest rate compounded quarterly.

If you were Scott, where would you have put your money? Why?

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IX: Credit
IX-2. How to Shop for Credit[1]

(See Suggested Learning Experience No. 13, p. 48 in Part One)

Credit is available from many sources and in a variety of forms. To make the best use of this resource, the consumer will have to be willing to shop, compare, ask intelligent questions, evaluate and finally use credit with discretion.

To use credit wisely it is important to understand the many different forms of credit available.

WHAT KINDS OF CREDIT ARE THERE?

There are basically three kinds of credit--service, sales and cash credit.

Service Credit--this form of credit is often not thought about as a kind of credit, but the use of electricity, telephone, gas, etc. consumed one month and paid for at the end of that month is credit which the utility companies extend to consumers for the use of their product.

Sales Credit--this form of credit, offered by retail stores, appliance dealers, etc. and often called retail credit, has many forms:

(1) Regular or Thrity Day Charge Account--goods purchased during one month are itemized and billed at the end of the month (with cycle billing the billing period will fall at different times during the month, depending upon the last name or account number).

Payment is due upon receipt or 10 to 15 days after the bill is received; there is no service charge if bills are paid within the time allotted.

(2) Ninety Day Account--is a variation of the regular charge. When a high priced item is purchased (e.g., furniture), a plan may be worked out so that the consumer can pay for the item in 90 days (3 equal monthly payments), and there is usually no service charge.

(3) Option or Revolving Account--with this type of account the consumer pays either the whole balance at the end of the month or a stated portion of the balance (the minimum amount stated must be paid). There is usually no service charge on items paid for the month following the month they were charged. If only a portion of the balance is paid, the following month a service charge is calculated as a per cent of the unpaid balance.

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. p. 20.

(4) Retail Bank Card--a bank or institution arranges with several retail stores to have one charge card which can be used in any one of the participating stores. The consumer is billed by the bank or institution on a revolving account with a 30 day option.

(5) Installment Sales--used for the purchase of big items (car, furniture, etc.), this type of credit requires a written contract with service charges and a payment schedule for each item bought. Title to the goods usually remains with the dealer or finance company until final payment is made.

Cash Loans--may be categorized by method of payment:

Term or Single Payment--repayment and interest on the loan are due in one lump sum, 30, 60, 90, or 120 days from the date of securing the loan.

Installment Loan--periodic payments (usually monthly) of principal and interest on the loan can be made over a 3 to 36 month period.

Checking Account with Overdraft--consumer arranges a credit limit with a bank, $300, $500...up to $5,000 which is available to be drawn against and allows the consumer to write a check for money he does not actually have on deposit. As the consumer draws from the overdraft part of this account, his checking account is credited with enough money to cover the overdraft. This money is then treated in a manner similar to a bank loan, and the consumer is billed for the overdraft (separate from his checking account). Repayment is made monthly according to the original agreement established with the bank.

The interest rate paid on any of these cash loans will depend upon existing laws, the institution extending the loan and whether or not security was pledged.

WHERE DOES ONE GO FOR CREDIT?

Sales Credit is available through retail stores and other dealers (auto, appliance, etc.).

Cash loans are available from:
Banks--most commercial bank loans are for 3 years or less; collateral may be required.

Savings and Loan Associations and Building and Loan Associations--are similar to commercial banks but are usually used for mortgages.

Consumer Finance Companies--personal finance or small loan companies usually deal in small or modest-size loans.

Savings Bank Passbook Loans--the passbook is retained as a security on a loan; the bank still pays interest on the balance in the savings account.

Credit Unions--these consumer cooperative lending agencies are available to benefit their members.

Life Insurance Policies--Money can be borrowed on the cash values of certain policies.

Pawnbroker--a pawnbroker gives a consumer money and a ticket for an item of value; the ticket can be redeemed within a certain period of time by repaying the same amount of money as originally obtained.

WHAT DOES CREDIT COST?

As of July 1, 1969, credit costs legally must be stated in dollar amounts and annual percentage rates which may be used by the consumer for comparative shopping.

WHAT ABOUT CONTRACTS?

For any kind of installment credit or cash loans a contract must be drawn up and signed. The consumer should read this contract carefully and be sure that all information about the sale is stated and that all blank spaces are filled in. Information needed is:

- Description of item being sold
- Cash price
- Credit service charge (in dollars and annual percentage rates)
- Other charges, if any (insurance and excise tax, etc.)
- Total credit for down payment, trade in, etc.
- Description of any security taken
- Amount of each payment--when and where?
- Penalty for nonpayment

The consumer should not sign any contract he does not understand--and should not be embarrassed to ask more questions.

WHAT QUESTIONS SHOULD THE CONSUMER ASK?

The consumer may want to ask himself some questions about his credit transaction:

- What is his current level of debt?
- Does he have a cash reserve in case there is an emergency?
- Has he done some comparative shopping to be sure he's aware of the credit cost he's paying?
- Has he asked questions about credit?
- What is the best form of credit for each individual situation?
- What are all the commitments in the contract?
- Would it be better to use savings for this item?
- How much can be paid from his income each month and still have enough money for emergencies and daily living?

4846

The consumer should ask questions of the person extending credit (some of these pertain to sales credit, others to cash loans):

Would there be a difference in price if he paid now in cash or paid a larger down payment?
How will the service charges vary for different periods of time--paying off in six months as opposed to one year?
Are there additional charges? If so, what are they and why must they be paid?

IX-5. Cashless, Checkless Society of the Future[1]

(See Suggested Learning Experience No. 19, p. 49 in Part One)

Hugo: A typical high school graduate
Mother: Hugo's mother

(Hugo comes in humming "Can't Buy Me Love." Stops, looks down at ring, then at bill and back and forth. Finally he slinks over to the computer and slips in the bill, pensively. The computer lights up, makes noises, and in general goes wild. The numbers go up on the computer. Mother comes running in.)

Mom: What's happening? (Boy frantically trying to fix the computer. Somehow he makes it stop. Mother gasps as she sees the ring.) Hugo, what is this about?

Hugo: (Slowly putting out ring) It's for Hermine.

Mom: The one you've known for three weeks? (Hugo nods head happily) Where...the...money? How much?

Hugo: Oh, a mere $350. It's all right Mom, I charged it on our credit card. There it was--"instant cash" (snaps fingers). I couldn't resist. The jeweler said he was going to give me this special deal. It seems as if the ring was just returned by this guy who got turned down and they hadn't even had time to put it back in the display case. So, it was selling for cut rate, and since I was the first to come in, he'd let me have a chance to get it before anyone else.

Mom: Hugo, that instant cash is actually a loan from the bank...a loan that has to be paid back at an interest rate of 1-1/2% per month--18% per year. Not to mention the service charges. (Hugo beginning to look sick. Mom looks at ring closely.) And Hugo, are you sure this ring is genuine?

Hugo: Well, it...<u>looks</u> real.

Mom: If it isn't, the bank won't recognize any disputes we have about it with the jeweler. Didn't you know that? (Turns around to the computer.) Hugo, you've exceeded your credit limit!!

Hugo: Won't the bank cover it?

Mom: If the credit limit is ever exceeded, all we own becomes payable on demand. (Both look shocked. Hold heads in hands.) (Phone rings.)

---

[1]Developed by students of Mrs. Albie Rasmussen, Department of Family Economics, Justin Hall, Kansas State University, Manhattan, Kansas 66502.

Hugo: (Answers phone, pause) Yes...yes...yes...yes...(hangs up) Mom... she accepted...she accepted!

Mom: Who? What?

Hugo: The guy's girl who originally bought the ring. And the guy, he wants this ring back--sentimental value or something, I guess.

Mom: (Now also getting excited) So the jewelers will take the ring back?

Hugo: Yes! And the jeweler said he'd give me a real good deal on another ring for all my trouble.

Mom: Hugo!

Hugo: Relax, Mom. I was lucky this time and I'm not going to be trying this again until I've looked at this credit card business and shopped around for the best deal in a ring. (Walks out saying) I wonder if she'll settle for my class ring temporarily.

(Mother smiles and shakes her head.)

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IX: Credit
IX-6. The Signature[1]
by Betty K. Gipson

(See Suggested Learning Experience No. 26, p. 50 in Part One)

This play involves the purchase of a sewing maching. From it you will learn the value of your signature, the significance of a contract, and the importance of seeking information before making a large purchase. In addition, you will learn about the existence of two resources in your community which can aid the family with financial legal problems.

THE CHARACTERS:

Mrs. Helen Bates	Sewing machine salesman
Mary Bates, daughter, age 15	Manager, sewing machine company
Mrs. Vera Wise, a neighbor	

(Mrs. Bates is sitting at the kitchen table drinking a cup of coffee and looking at the ads in the morning paper, and her daughter, Mary, is washing the breakfast dishes.)

MRS. BATES: Mary, stop washing the dishes and come here. There's an ad in the morning paper for a sewing machine for only $75. Have you heard of a Dynamic sewing machine?

MARY: No. We don't have that kind at school.

MRS. BATES: We could use a sewing machine, but I don't know anything about a Dynamic sewing machine.

MARY: My home ec. teacher says you shouldn't buy anthing from a company that you're unfamiliar with. She says you should look up the information on brand names when you're not sure of quality. You're supposed to look it up in some book.

MRS. BATES: What's the name of the book?

MARY: Gosh, I don't remember. IT REALLY DOESN'T MATTER.

MRS. BATES: Well, I'm going to call the company and ask them to send out a salesman. After all, I'm certain that the newspapers wouldn't let a dishonest company place an ad in the paper. Mary, I'm going next door to use the phone.

(It is the next morning. Mrs. Wise, the neighbor, Mrs. Bates, and Mary are talking to the salesman from the Dynamic Sewing Machine Company. The salesman has just finished a demonstration of the machine and is showing them a picture of a zigzag sewing machine in a desk cabinet.)

---

1C8p

4852

MRS. BATES: This machine certainly seems to be a good buy for $75. I've seen similar zigzag machines in local department stores for three times that price. But Mary says they don't have any Dynamic machines in her sewing class at school and that her teacher never heard of this company.

SALESMAN: Really? I'm surprised! THIS IS A NATIONALLY ADVERTISED MACHINE. IT'S ADVERTISED IN ALL THE LEADING MAGAZINES. I can see you know a real value when you see one. It's a real pleasure talking to such a smart homemaker. A smart homemaker like you could really save money making the children's clothing and making things to make the apartment attractive. So, your daughter takes home economics. This sewing machine would really help improve her grades. What kind of grades do you make, Mary?

MARY: They could be better, but I sometimes make a good grade.

SALESMAN: Just as I thought. With a machine you could improve and maybe even begin to sew for others and make a little spending money for yourself. How does that sound to you?

MARY: Swell! I can always use more spending money. Not to mention better grades. Mother, wouldn't the desk cabinet look pretty in my room?

MRS. BATES: Yes, it would. What do you think, Vera?

MRS. WISE: Well, it certainly is a lovely machine. But how can you possible sell it for $75? I just don't know...

SALESMAN: LOW OVERHEAD AND VOLUME SALES. But, to get back to you, Mrs. Bates. I have to hurry; I have another appointment.

MRS. BATES: I'd sure like to have the machine, but I'll have to talk it over with my husband tonight. Can you come back tomorrow?

SALESMAN: I'm sorry, Mrs. Bates, but we only have a few of this model for sale and I couldn't promise to have one left to sell tomorrow. I have several other calls to make this morning, and if I sell out, then you will be out of luck. I'm afraid you'll have to make up your mind now.

MRS. WISE: Helen, I wouldn't let him rush me into anything. Talk to Fred tonight, and let Mary find out more about the machine from the library.

MARY: (Who fears she won't get the machine if her mother waits to talk to her father) Mother, I'm sure this is a good machine. It sews as well as any machine I've ever used. Besides, I need a sewing machine.

4853

MRS. BATES: Well, I don't know, Mary.

SALESMAN: You and your daughter have been so nice to me, Mrs. Bates, I sure hate to see you lose out on this bargain. Wait! I just had an idea about how you can save the machine until tomorrow and still have a chance to talk to your husband. IT WON'T COST YOU ANYTHING. To have us hold a machine for you, all you have to do is sign this contract and give me a $25 deposit. Then, if your husband doesn't like the machine, we'll tear up the contract, refund your deposit, and pick up the machine. YOU HAVE NOTHING TO LOSE. You know there are plenty of other ladies in this building who would like to own this machine. Also, if you sign now and save the company the added expense of sending another salesman back, we'll give you a $12 buttonhole attachment. Think of the money you can earn making buttonholes for the neighbors. Your husband will certainly be proud of you.

MRS. BATES: Mary, what do you think? I really hate to lose out on such a bargain.

MARY: Mother, I CAN'T SEE WHAT HARM CAN BE DONE IN MERELY SIGNING A CONTRACT. After all, he says he'll tear it up if you aren't satisfied. I know that buttonhole attachments are expensive. That would mean you're getting the machine for $63. And you said it was a bargain at $75. I DON'T SEE HOW YOU CAN AFFORD TO SAY NO. Besides, the machine would look nice in my bedroom.

MRS. BATES: Well, if you think so, Mary. I'll sign.

MRS. WISE: Helen, I don't think you should sign until you know more about the company and talk to Fred first.

MRS. BATES: Didn't you hear the salesman say that this was a nationally advertised company? He wouldn't mislead me about something like that. (Mrs. Bates signs the contract.)

(Several days later Mrs. Bates' sewing machine is delivered. Much to her surprise and disappointment the machine is not like the one the salesman demonstrated. The machine is in a portable case and does not do a zigzag stitch. She calls Mary and Mrs. Wise to come and see the machine.)

MRS. BATES: This isn't the machine I ordered. The delivery man left this payment book showing I owe 12 monthly payments of $8 each. My goodness, that's $96 more. The company must have made a mistake. I've seen machines like this in stores for $35 to $40.

MRS. WISE: This certainly isn't the machine the salesman showed you. I thought the machine he showed you was too nice to sell for $75. You should have checked on the company.

MRS. BATES: I don't need advice now.

MARY: Mother, what are we going to do?

4854

4854

MRS. BATES: I'm going to call the company. I'm sure they delivered the wrong machine.

(Mrs. Bates calls the company.)

MRS. BATES: Is this the Dynamic Company? I'm Mrs. Bates. Your company delivered the wrong machine to me this morning. They delivered a portable, plain-stitch machine, instead of a zigzag, desk-cabinet machine. I ordered the $75 model. They left a cheaper model. Also, the payment book shows me owing you a balance of $96. The machine only cost $75, and I already paid $25. How can I owe you $96 more?

MANAGER: Mrs. Bates, that $75 was the cash price of the sewing machine. What you are paying is the time or installment price, and it comes to a total of $121. It was all on the paper you signed. If you ordered a $75 machine, then you ordered our cheaper model portable. The model you described is our deluxe model which we sell for $350. Now if you aren't satisfied with the cheaper model, we would be happy to send out our deluxe model. Of course, if you just want a cabinet, we have them for $100 to $250. Just let me know what we can do to satisfy you.

MRS. BATES: Well, I guess you'd better come and pick up your machine. My husband wasn't too happy about my buying the machine in the first place, and I know we can't afford to spend any more on a machine now. So come and pick the machine up and refund my deposit. The salesman said you would tear up the contract if I changed my mind.

MANAGER: I can't believe our salesman told you that. He didn't have authority to make such an agreement with anyone. You will either have to live up to your contract or I'll have to turn this matter over to our lawyer.

MRS. BATES: YOU CAN'T DO THAT!

MANAGER: I'm sorry, Mrs. Bates. We not only can but we will if you make it necessary. When you sign a contract, you make yourself legally responsible to the conditions set up in the contract. Nowhere in our contract did we agree to refund your money or agree to allow you to return the machine. We can't be held responsible for any verbal conditions or promises made by our salesman.

(Mrs. Bates hangs up and returns to Mary and Mrs. Wise.)

MRS. WISE: Well, Helen, what did he say?

MRS. BATES: He said he had not made a mistake, and that he'd sue me if I

4855

didn't pay for the machine. I guess there is nothing I can do. I'm just stuck with the machine.

MRS. WISE: I know what I'd do. I'd call the Better Business Bureau. They might be able to help you.

(Mrs. Bates calls the Better Business Bureau and tells them what has happened. The Better Business Bureau tells Mrs. Bates they have had similar complaints about this company, and had she called prior to her purchase they could have been of help to her. They would have warned her of the bad reputation of this company and told her of the things the Dynamic Company had done to other homemakers. They advise that it would do no good for them to follow through on her complaint because they had been unable to help in prior cases. They suggest she contact a lawyer. Mrs. Bates has returned to the kitchen where Mary and Mrs. Wise are sitting.)

MRS. BATES: I called the Better Business Bureau and they said it was too late for them to be of any help. They said I should see a lawyer. But I can't afford a lawyer. Besides, I'm afraid of lawyers. Lawyers scare me like doctors. Lawyers are for criminals. I'm no criminal...I'm just not going to pay them one cent. I'LL SHOW THEM! It's better to lose $25 than lose $96. I'll just not tell your father anything.

MRS. WISE: Helen, I really think you should see a lawyer. I don't think that the Dynamic Company is just going to let you stop paying them. I've heard that the legal aid office will help people with their problems if they can't afford a lawyer. Why don't you go see them?

MRS. BATES: No! I've made up my mind. I'm just not going to pay them anything, and I'm not going to worry Fred about all this. I'll show them.

(Several months have gone by and Mrs. Bates has continued to refuse to seek legal advice or pay for the sewing machine. She has received several bills and notices from the Dynamic Company, and has just thrown them away. On this day a notice of suit was delivered from the court, addressed to her and her husband. The notice advised that they were being sued for the unpaid balance on the sewing machine, costs of court, interest on the installments, and attorneys' fees. The notice advised that they had five days to comply with these demands or file an answer setting up any defenses.)

(The scene is Mrs. Bates' kitchen. She and Mrs. Wise are talking.)

MRS. WISE: Helen, Mary asked me to come over right away. She said you were upset. What's wrong?

MRS. BATES: A man just delivered this court notice. What in the world am I going to do?

MRS. WISE: Is it about the sewing machine?

MRS. BATES: Yes. I should have listened to you and seen a lawyer. Do you think it's too late, now?

MRS. WISE: I don't know, but if I were you, I'd go find out.

(Mrs. Bates went to the legal aid office. The attorney reviewed her financial situation and determined she was entitled to legal aid services. The attorney contacted the attorney for the Dynamic Company and advised of his intention to defend their suit, alleging fraud. The Dynamic Company, fearing the adverse publicity of a court hearing, dismissed the suit and refunded Mrs. Bates' money.)

SUGGESTED QUESTIONS

FUNCTION OF QUESTIONS:	QUESTIONS
To assist student in identifying with the Bates family	1. Does this seem to be a true story?
	2. Which character do you like best?
To clarify values and goals	3. What do you think Mrs. Bates' goals were?
	4. At what time in the story did you understand the goals of Mrs. Bates, Mary, and Mrs. Wise?
To identify legal problems	5. What do you consider to be the real legal problem caused by the purchase of the sewing machine?
To identify the cause of the problem	6. What actually caused the problem?
	7. What advice can you give Mrs. Bates about the use of her signature?
To determine the effect of the problem	8. How might this problem affect the family?
	9. What might have happened if Mrs. Bates had not gone to a lawyer?
To develop the ability to analyze the problem	10. Now that you have studied the problems which can result from the unwise use of one's signature, what advice would you give people who are about to make a purchase involving the signing of a contract?

To increase knowledge of the use of community resources	11. What community resources could Mrs. Bates have used which might have prevented this problem?
	12. How many community resources can you name and locate which are available to a family in need?
To develop economic efficiency	13. If Mrs. Bates really needed a machine, how could she have managed to make the purchase on her family income? Did she use the best method available to her?
	14. Do you think Mary was of any help to her mother when she needed advice?
	15. What do you think Mary could have done to help her mother avoid this problem?
To develop a sense of security in regard to use of law	16. Do you think it was fair for Mary's mother to have to get a lawyer? Why?

CONCEPTS AND GENERALIZATIONS

A. The signature:

1. A lack of knowledge concerning the value of one's signature and the responsibilities associated with the signing of one's signature may result in serious problems for the individual and his family.

2. When you place your signature on a contract or agreement, it means that you accept the conditions set forth in the contract and are therefore legally responsible for the contents included in the contract.

3. Seeking advice before making a major purchase or signing any agreements may help avoid problems associated with the signing of contracts.

B. Contracts:

1. A contract is an agreement between two or more persons, and holds the parties responsible for those terms included in the agreement.

2. A knowledge of the mechanics of signing a contract can lead to a more intelligent approach to management of family affairs.

3. An awareness of the risks involved in making purchases from companies with which one is unfamiliar can help prevent problems. There are added risks involved in signing contracts with such companies.

4857

4858

4. Familiarity with the contents of a contract and the reputation of the person or company involved aids one in deciding whether to sign a contract.

5. There are agencies in the community such as the Better Business Bureau and the Legal Aid Society which can advise one concerning contracts.

6. A person who is contracting is bound only by what is actually written in the contract, unless fraud is involved. He is not held responsible for any oral agreements made at the time the contract is signed.

C. Resources:

1. There are many agencies and resources in the community to advise and help a family with its problems, and to aid in decision-making.

2. For those families which lack sufficient financial means, there are usually community agencies such as a legal aid office which offer their services without charge.

D. Consumer guides:

1. If in doubt concerning the reputation of a company, community agencies, such as the Better Business Bureau, can provide helpful information.

2. Having all the facts that pertain to a given situation will help one in making a more intelligent decision.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IX: Credit
IX-7. Credit As a Resource--
Understanding the Uniform Consumer Credit Code[1]

(See Suggested Learning Experience No. 29, p. 50 in Part One)

EDITOR'S NOTE:

Currently, there has been so much talk about credit legislation to protect consumers, that we asked a credit expert to explain the latest proposed legislation in terms of what it will mean to consumers.

At the present time, consumer credit is treated under a vast number of laws which vary in each state. In our fast-moving and mobile economy, there have been attempts in the past few years to help the consumer and businessman alike with more uniform regulations in the area of credit. For the consumer, who is moving from state to state more often, uniformity in regulations would mean that once the regulations were understood in one state, they would be consistent wherever the consumer went. For the businessman, who is using computers in all aspects of his work, uniformity would eliminate the multiplicity of forms and procedures which are required since rates and laws vary from state to state.

The federal legislation which has passed last year and which will become effective July 1, 1969, is the Truth-in-Lending Act. One of the requirements under this act is that consumers will be given the price of credit in dollars as well as in annual percentage rate. It is felt that by comparing annual percentages, shopping for credit will be easier for the consumer. This bill will help to clarify many areas of credit sales and loans (i.e., regulate credit advertising, restrict amount of garnishment of wages, etc.), but there are still regulations which vary from state to state that the law may not cover.

In the last few years, pressure for consumer protection legislation has raised its head. In fact, it was primarily through the work of the Truth-in-Lending hearings that the existence of credit abuses came to light, and spotlighted to legislators the need for remedial legislation.

For the past six years a group of lawyers, judges, economists and law professors, with advice from consumer-oriented and industry-oriented people, have been working to draft a new credit law, designed to bring all consumer credit transactions (either credit sales or cash loans) under one comprehensive code. This project of credit legislation is known as the Uniform Consumer Credit Code (referred to as the "Code"). This proposed law, in order to go into effect in any state, will need to be passed by that individual state.

---

[1]Reprinted by permission from Penney's Forum. New York, New York: J.C. Penney Company, Inc. Fall/Winter, 1969. p. 21.

At the present time there is a hodgepodge of existing state service charge and interest rate ceilings. (The Federal legislation requires the statement of rate but has not established ceilings.) The existing state rates vary depending on the creditor, the debtor and the nature of the transaction, i.e., credit sales of autos, personal loans, F.H.A. loans, revolving store charge accounts, etc. Under the "Code" these would be replaced by a single set of maximum rate ceilings covering all consumer credit transactions along with a full disclosure of service charges (dollar amount and annual per cent).

If enacted in any state, the "Code" would replace numerous overlapping and conflicting laws and regulations that now govern individual credit transactions. State Legislatures will be taking a good look at the "Code" this year, and for some years to come. The Federal Act specifies that if a state passes a law which requires similar disclosures, the state law will apply and the control of credit will move from federal to the state governments. (As a project, students may want to investigate whether or not the "Code" is being considered in your state--is it being considered as it was originally proposed or have there been amendments added?)

Consumer protection provisions in this proposed credit code follow.

Features and what they mean to the consumer:

Home Solicitation Sales:
Consumer has a three day "cooling off" period to cancel any high-pressure sales made in the home. Seller may charge a cancellation fee of 5% of the cash price, but not exceeding the amount of cash down payment.

Referral Sales Eliminated:
This provision eliminates the practice in which the buyer is encouraged to purchase merchandise (sometimes of questionable quality) on the assumption that he will be able to avoid paying by merely supplying the seller with the names of friends or relatives who may be called on by the seller.

Prohibition of Garnishments Prior to Judgment:
Eliminates practice in which an unsuspecting buyer signs a paper, in advance, giving the seller or lender the right to go to the buyer's employer and make deductions from his pay (garnishment), without obtaining a judgment from the courts. Under the "Code" the seller must get court permission to take wages.

Garnishment Limitation:
Assures the consumer (debtor) a minimum wage which will remain free of garnishment. Employers are also prohibited from discharging employees because of garnishments.

Use of Negotiable Instruments:
Imposes much greater responsibility upon financial institutions engaged in buying consumer sales contracts from appliance dealers, motor vehicle

dealers and other sellers of consumer and agricultural goods. (Financial institutions purchase the contract from the dealer and then usually send a booklet of payment statements to the buyer; the buyer then deals with the financial institution.) Under the "Code" the consumer can bring charges against the finance company or the original dealer if he feels he has a case (i.e., faulty merchandise).

Balloon Payments:
Sometimes a note or sales contract is set up so that there are smaller payments each month until the last payment ($20 per month and then $50 for the last payment). If the consumer is not in a position to pay the larger final payment he might be unable to refinance the final large payment (balloon) at reasonable finance charges. The "Code" will permit him to refinance at terms no less favorable than those in the original contract.

Cross-Collateral Limitations:
Limits the extent to which a seller can repossess any property not related to the specific sale. If a consumer has purchased a TV and had $50 or more to pay on it when he buys a refrigerator from the same dealer, a new contract is written for the refrigerator. The next $50 paid goes toward the TV and if the payments can not be met on the refrigerator the dealer cannot take title of the TV. That contract is closed.

Deficiency Judgments:
If a TV is bought for $500 and is repossessed after $100 worth of payments have been made, the dealer can require that the original buyer pay the difference between the resale price (e.g., $200) and the amount paid so far when repossessed (e.g., $500 - $100 = $400, resale $200; therefore there is a $200 deficiency). Under the "Code" dealers cannot seek a court order for deficiency of money owed if the original selling price was less than $1,000.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IX: Credit
IX-8. Steve and Kathy--Their Use of Credit

(See Suggested Learning Experience No. 46, p. 52 in Part One)

You may wish to review the story of Steve and Kathy on p. as you prepare to solve this problem.

Steve and Kathy are faced with a major decision. Their 1965 Impala is in need of repairs that may cost as much as $500. They can't decide if it would be wiser to have the repairs made or to buy a better car.

Use the decision-making process to help them decide what to do.

Consider their goals, values, resources, and style of life. Consider the alternatives and possible outcomes of each alternative. Choose the alternative that seems best to you and tell why this seems like a good idea.

Put your plan into action. For either alternative, give this information: amount of money needed, sources you would contact for a loan, terms you could get, security required, repayment schedule you think they could handle, precautions you would observe, and any other information you consider important in this transaction.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT IX: Credit
IX-9. Credit Baseball[1]

(See Suggested Learning Experience No. 50, p. 53 in Part One)

Preparation

Write a question suitable for a review of the credit unit on the front of each note card given to you. On the back of the card, write the answer to your question and a reference that would substantiate your answer. Use one card for each question and answer. Put all the cards together.

Set up a baseball diamond with bases at appropriate points in the room, or set it up on a bulletin board. You may wish to cut four construction paper or felt bases and a number of baseballs evenly divided between two colors. Arrange baseballs (separating colors) on each side of the lower edge of the bulletin board.

Directions for Playing

1. Divide into two teams.
2. Draw for the first team up to bat. This team may choose the color of ball it wants and then put one ball on home plate.
3. Send one team member up to bat.
4. The pitcher (teacher or student) draws a question from the box and throws (reads) it to the batter who has a few seconds to answer. The batter may give one answer; only the first answer will be accepted.
5. If the answer is incorrect the batter has made an out, and he sits down. If the answer is correct, the batter moves the ball to first base and returns to his seat.
6. This continues with each right answer moving the ball to the next base until home plate is reached and the team scores.
7. Place balls (the "score") in the upper corner of the bulletin board to keep an accurate tally of scores before you at all times.
8. Each time a right answer is given, leave that card out so that the question will not be repeated during this class period.
9. One strike constitutes an out. If each batter is allowed three strikes, the game moves too slowly. Do, however, allow a team three outs before the next team comes to bat.
10. If a question is answered incorrectly, return the card to the box.
11. Play as many innings as time permits as long as enthusiasm is high and students are learning.

---

[1]Adapted from game developed by Connie Evans, Homemaking Teacher, Dalton, Nebraska.

SECTION ONE: ALLOCATION OF RESOURCES
UNIT X: Insurance
X-1. Insurance Pre-Test
Insurance ABC's: Risk-Sharing and Planning[1]

(See Suggested Learning Experience No. 1, p. 55 in Part One)

Do you understand the terms given below?

In the space before each term, place the letter of the statement that best describes the term.

_____1. premium	A. Insurance covering losses from destruction or damage of property and losses resulting from lawsuits.
_____2. insurance	B. The amount paid by a person for insurance coverage.
_____3. economic risk	C. A means of protection against loss by sharing the cost of risks with many people.
_____4. property and liability insurance	D. A happening that may present the possibility of financial loss.
_____5. personal insurance	E. Protection against costs of illness and accident and loss of income because of illness, accident, or death.

Do you face risks?

None of us can escape the possibility of risks in our everyday life. Let us consider how we, individually, may be involved in economic risk--risks that may result in loss of things of value or that may affect our personal health and well-being.

a. Divide a sheet of paper into two parts and then print the following headings:

Risks that I face Ways to avoid or reduce the seriousness of each risk

---

[1]Reprinted from Policies for Protection. New York, New York: Institute of Life Insurance, 1969. pp. 5, 29.

b. On the left side of your sheet, list the risks you that might face during a full week, covering time you spend at school, at home, at part-time work, and during your recreational hours.
c. On the right side of your sheet, indicate how you might be able to prevent these risks or reduce the seriousness of their effects. Indicate in each instance if it would be worthwhile to be protected by insurance.

Do you agree or disagree with the following statements?

After each statement, place a check mark in the column you feel is correct.

	Agree	Disagree
1. Insurance is made possible because large numbers of people are willing to share the cost of the same kind of risk.	____	_____
2. Some of our risks are shared by paying taxes for protection that is provided by local fire and police departments.	____	_____
3. Most of us can afford to buy insurance to protect us against every possible loss.	____	_____
4. Well-planned income replacement will provide a family with adequate protection as their needs change.	____	_____
5. Protection against the loss of income because of illness, accident, or death is obtained by purchasing property and casualty insurance.	____	_____
6. It is easier for a person to decide how much life and health insurance he needs than it is for him to determine the amount of auto or fire insurance he should carry.	____	_____
7. If a family is covered by enough insurance, it can prevent or avoid economic risks.	____	_____
8. A man without the responsibility of a wife and family never has to worry about income replacement.	____	_____

INSURANCE ABC'S: RISK SHARING AND PLANNING

Answers to Pre-Test

DIRECTIONS: Check your answers to each of the following questions.

Do you understand the terms given on p. 161? Correct answers are:

1. B
2. C
3. D
4. A
5. E

Do you agree or disagree with the statements on p. 162? Correct answers are:

1. Agree
2. Agree
3. Disagree
4. Agree
5. Disagree
6. Disagree
7. Disagree
8. Agree

SECTION ONE: ALLOCATION OF RESOURCES
UNIT X: Insurance
X-2. Life Is a Risky Business[1]

(See Suggested Learning Experience No. 2, p. 55 in Part One)

It is a typical spring morning in Centerville. On Sycamore Drive, the sidewalks are strewn with tricycles, scooters, and various other toy vehicles--indicating that this is a street where small children play. Mr. Mowbray, who lives at 416, is mowing his lawn. He has been home from work for a few days because of an accident at work and is just getting back on his feet. On the vacant lot across the street from the Mowbray home, a hotly contested ball game is in progress.

Mrs. Jenkins is burning trash just behind her garage. There was a lot of junk in that garage, and this seemed like a good day to clean it out.

Andy Patterson, 17, is backing the car out of the driveway. It was a great day for Andy when he received his driver's license last month. Right now there are many things on his mind--the play at school in which he is trying out for a part, the chance of getting a summer job at the local drug store, and, most important of all, his plans for buying a car of his own.

Mr. Barton who retired last year after 40 years in the office of the Brick and Tile Company, is resting in his favorite chair on his new screened-in back porch.

Thoughts of danger are far from anyone's mind this bright morning. But even on this pleasant street, dangers and risks of all kinds are lurking.

[NOTE TO TEACHER: At this point the students could have been asked to complete the story. For this teacher's objectives, though, it seemed more effective to lead into a discussion, with such questions as:

1. Can you name some of the dangers?
2. What is meant by a risk?
3. How can risks be shared?

This should make the concept of insurance clearer than it often is to students, and they could proceed to analyze the kinds of insurance needed by the people on Sycamore Street. Perhaps their curiosity would be piqued enough for them to ask questions about costs of insurance and about the policies. If students were asked to make recommendations regarding how various people on the street should react to an insurance salesman's call, they could be led to high levels of cognition.]

SECTION ONE: ALLOCATION OF RESOURCES
UNIT X: Insurance
X-3. $100,000 or Nothing--A Story About Life Insurance[1]
by Allan Vogelsang

(See Suggested Learning Experience No. 7, p. 56 in Part One)

"I don't know what to do, Nancy," Lynda complained as she sipped her cup of coffee. "I had this $100,000 life insurance policy on my ex-husband for three years, you know. Well, now that he's dead," she paused and dabbed daintly at her completely dry eyes with a pink tissue, "the insurance company refuses to pay me the money!"

"Gosh, Lyn, how awful for you!" Nancy commiserated, reaching out and squeezing Lynda's hand, sympathetically. "Why won't they pay? Did they say?"

"Oh, they said all right. They gave me a list!"

"A list! Were there that many reasons?" Nancy was incredulous.

"I'll say!" Lynda replied, disgustedly. "They started out by reminding me that I lied to them on the application when I said George had never had a heart attack."

"You didn't."

"Sure I did. How else could I have gotten that much insurance?"

"I often wondered," Nancy admitted. "But you said they sent you a list. What else was on it?"

"Oh, they said something about my not having an 'insurable interest' in dear old George when he died," Lynda replied. "You know. 'Cause we were divorced by that time."

"Is that bad? The insurable interest bit, I mean."

"I guess so. They said I had to have it to collect. But then, that was only part of it. It seems that since Goerge committed suicide, the policy is void anyway--or so they say." Lynda lowered her head dejectedly.

"You poor dear, to have to listen to that from those mean insurance people!" Nancy said, consolingly, while filling Lynda's nearly empty cup with fresh coffee. "Sugar?"

---

[1]Reprinted from Illinois Teacher for Contemporary Roles. Urbana, Illinois: Division of Home Economics Education, University of Illinois, Vol. XIII, No. 2, November-December, 1969. pp. 75-76.

"No, thanks, hon. I like it black. Especially when I'm upset like this." Lynda lifted her cup. Setting the cup back on the coffee table, she continued. "And, as if that weren't bad enough, they found out that George was 45 years old instead of only 35, as I'd told them. According to them, that makes the policy void, too."

"Well," Nancy said, "if I were you, I'd fight them. Go get yourself a good lawyer!"

"Oh, what's the use?" Lynda said in a tired voice. "I forgot to pay the premium on January 25, and George went and killed himself on January 30--the louse! That means, or so the insurance company told me, that the policy wasn't in force at the time of old Georgie's death." She gazed around the room, sadly taking note of all the material wealth which belonged to Nancy rather than to her. Mentally she had already spent about half of the hundred thousand. She said, "Boy, I could almost taste that bundle!" She lifted her cup, which had been refilled again by that excellent hostess, Nancy, and drank.

[NOTE TO TEACHER: The story can be followed by a role playing session between Lynda and her attorney. The attorney could be the teacher, a resource person, or a student who had been primed for the role by previous reading and discussion with appropriate persons.

In the role playing session, Lynda and the class learn the following regarding the insurance company's disclaimer of liability:

1. The fact that Lynda lied about her husband's heart attach would not be relevant after three years because of the "Incontestable Clause."

2. The divorce would not release the company from liability because an insurable interest is not necessary at the death of the person whose life was insured, provided it was present when the policy was first taken out.

3. The sucide clause usually provides that the company will pay for death from this cause after the policy has been in force for two years.

4. The misstatement of George's age only reduces the amount payable to the beneficiary to that which would be payable for the amount of premium paid. It does not void the policy.

5. The fact that George killed himself after the premium was due does not excuse the company from paying, because his death occurred within the thrity-day grace period.

The "attorney" would have real insurance policies to support his statements which would be shown or read to the class. If some companies' policies differ on these points, this would be pointed out. State insurance laws vary. Contact your state insurance commissioner in the capital of your state.]

SECTION ONE: ALLOCATION OF RESOURCES
UNIT X: Insurance
X-4. Dollars for Health (Script)

1. Dollars for Health

   Presented by the
   Health Insurance Institute

   Developed with the cooperation of:
   Dorothy W. Hamilton
   Chairman, Social Studies Department
   Milford High School
   Milford, Connecticut

   Justine B. O'Reilly
   Supervisor, Home Economics
   Portland Public Schools
   Portland, Oregon

   Enos C. Perry
   Director, Bureau of Business Education
   Board of Education
   Chicago, Illinois

2. We Americans lead active lives.

3. We're probably the healthiest people the world has ever known.

   Nonetheless, loss of health is still an ever-present threat to all of us.

4. This year, for example, nearly one out of eight Americans will be hospitalized.

   Many problems are created by ill health. Perhaps you'll have a better understanding of these problems after viewing episodes in the lives of the three young people we just met.

5. Let's begin with the football player, Ike Brandon. His particular story does not take place on an athletic field.

6. Instead, we find him in a hospital bed. Ike, of all people!

7. Why...this fellow never even got hurt on the football field. "Iron Ike," the school paper calls him.

8. But the wagon his brother left on the back stairs last week proved more dangerous than a guard's tackle...

9. ...and in no time at all, Ike's iron leg became a plaster "autograph album."

10. Unluckily, Ike has a compound fracture. No more football this year. No dancing, or running around with the gang, either.

11. And what about school work? Even with help, he'll have a job keeping up. There's something else, too...

...What would you think a broken leg can cost these days--excluding the valuable, authentic signatures, of course?

12. In Ike's complicated case, these are the costs:

Semi-private room and board	
8 days @ $30.00 per day	$240.00
Operating room	45.00 & up
Anesthesia	15.00 & up
Laboratory	50.00
X-ray examinations	50.00
Plaster and drugs	30.00 (est.)
Emergency room	10.00
Recovery room	10.00
Hospital costs	$450.00
Fee for orthopedic surgeon	250.00 & up
Total cost	$700.00

$700 for a broken leg! Ike's leg can't be made of iron. It must be solid gold. Where will all that money come from?

13. It's Ike's father, a mechanic, who must provide the answer.

To Mr. Brandon, $700 is a large sum, even if he is the best paid man in his shop.

14. Fortunately, the Brandons have insurance protection, even against the cost of broken legs.

15. Therefore, Ike's accident will merely mean a few rearrangements of family plans.

16. This year, for instance, they'll have to skip the vacation trip to grandma's.

17. But no great sacrifices are called for...even to meet medical expenses.

...The money was there when it was needed.

18. What type of insurance do you think Mr. Brandon has which takes care of Ike's leg?...

19. Now let's turn to Ginny Todd. Indirectly, Ginny has been made very much aware of medical costs.

20. Her married sister, Sue, is about to have her first baby.

21. Occasionally Ginny sits in on what Sue's husband, Al, calls "planning sessions."

22. Estimated medical costs of expected baby:

Doctor fees including delivery	$200
Hospital	250-300
12 prenatal check-ups	100
Miscellaneous laboratory fees, etc.	15 and up
Labor-Delivery room	45 and up
Anesthesia	6 and up
Medicine	10-30

23. Ginny never realized how maternity expenses mount up. And that's not all...

24. There are the bassinet, baby clothes, and a hundred other items.

    Of course, there were many months to prepare, so everything has been budgeted in advance.

25. According to the plan, Sue and Al buy the things they need bit by bit.

26. They count on many hand-me-downs, too.

27. Like most young families, Sue and Al must make every penny count. But...they'll have no trouble with hospital expenses...

    ...the hospital plan at Al's office helps take care of these expenses.

28. In what ways has Al provided financially for the birth of their child?

29. And now let's find out about Ted Brennan, the third member of the trio.

30. Ted certainly knows about ill-health, for his father recently had a heart attack.

31. Since his father is a dentist, the disability is especially unfortunate, for a dentist's job is strenuous.

32. It means being on his feet, concentrating intensely, often as much as 10 hours a day.

    Though he gets some assistance, Dr. Brennan does all the important work himself.
